Ships shall be registered at the Port to which they belong. — No such registry shall hereafter be made, or certificate thereof granted, by any person or persons herein-before authorised to make such registry and grant such certificate, in any other port or place than the port or place to which such ship or vessel shall properly belong, except so far as relates to such ships or vessels as shall be condemned as prizes in any of the islands of Guernsey, Jersey, or Man, which ships or vessels shall be registered in manner herein-after directed; but that all and every registry and certificate made and granted in any port or place to which any such ship or vessel does not properly belong shall be utterly null and void to all intents and purposes, unless the officers aforesaid shall be specially authorised and empowered to make such registry and grant such certificate in any other port by an order in writing under the hands of the commissioners of his Majesty's customs, which order the said commissioners are hereby authorised and empowered to issue, if they shall see fit; and at every port where registry shall be made in pursuance of this act, a book shall be kept by the collector and comptroller, in which all the particulars contained in the form of the certificate of the registry herein-before directed to be used shall be duly entered; and every registry shall be numbered in progression, beginning such progressive numeration at the commencement of each and every year; and such collector and comptroller shall forthwith, or within 1 month at the farthest, transmit to the commissioners of his Majesty's customs a true and exact copy, together with the number, of every certificate which shall be by them so granted. — § 10.

Port to which Vessels shall be deemed to belong. — Every ship or vessel shall be deemed to belong to some port at or near to which some or one of the owners, who shall make and subscribe the declaration required by this act before registry be made, shall reside; and whenever such owner or owners shall have transferred all his or their share or shares in such ship or vessel, the same shall be registered *de novo* before such ship or vessel shall sail or depart from the port to which she shall then belong, or from any other port which shall be in the same part of the United Kingdom, or the same colony, plantation, island, or territory as the said port shall be in: provided always, that if the owner or owners of such ship or vessel cannot in sufficient time comply with the requisites of this act, so that registry may be made before it shall be necessary for such ship or vessel to sail or depart upon another voyage, it shall be lawful for the collector and comptroller of the port where such ship or vessel may then be to certify upon the back of the existing certificate of registry of such ship or vessel, that the same is to remain in force for the voyage upon which the said ship or vessel is then about to sail or depart: provided also, that if any ship or vessel shall be built in any of the colonies, plantations, islands, or territories in Asia, Africa, or America, to his Majesty belonging, for owners residing in the United Kingdom, and the master of such ship or vessel, or the agent for the owner or owners thereof, shall have produced to the collector and comptroller of the port at or near to which such ship or vessel was built, the certificate of the builder required by this act, and shall have made and subscribed a declaration before such collector and comptroller of the names and descriptions of the principal owners of such ship or vessel, and that she is the identical ship or vessel mentioned in such certificate of the builder, and that no foreigner, to the best of his knowledge and belief, has any interest therein; the collector and comptroller of such port shall cause such ship or vessel to be surveyed and measured in like manner as is directed for the purpose of registering any ship or vessel, and shall give the master of such ship or vessel a certificate under their hands and seals, purporting to be under the authority of this act, and stating when and where and by whom such ship or vessel was built, the description, tonnage, and other particulars required on registry of any ship or vessel, and such certificate shall have all the force and virtue of a certificate of registry under this act, during the term of 2 years, unless such ship shall sooner arrive at some place in the United Kingdom; and such collector and comptroller shall transmit a copy of such certificate to the commissioners of his Majesty's customs. — § 11.

Persons residing in foreign Countries may not be Owners. — No person who has taken the oath of allegiance to any foreign state, except under the terms of some capitulation, unless he shall afterwards become a denizen or naturalised subject of the United Kingdom by his Majesty's letters patent or by act of parliament, nor any person usually residing in any country not under the dominion of his Majesty, his heirs and successors, unless he be a member of some British factory, or agent for or partner in any house or copartnership actually carrying on trade in Great Britain or Ireland, shall be entitled to be the owner, in whole or in part, directly or indirectly, of any ship or vessel required and authorised to be registered by virtue of this act; save and except that it shall be lawful for any person who was a member of the company of merchants trading to the Levant seas at the time of its dissolution, and who was a resident at any of the factories of the said company, to continue to hold any share or shares in any British registered ship of which at the time of such residence he was an owner or part owner, although such person shall continue to reside at any of the places where such factories had existed prior to the dissolution of the said company. — § 12.

Declaration to be made by subscribing Owners previous to Registry. — No registry shall henceforth be made or certificate granted until the following declaration be made and subscribed, before the person or persons herein-before authorised to make such registry and grant such certificate respectively, by the owner of such ship or vessel if such ship or vessel is owned by or belongs to 1 person only, or in case there shall be 2 joint owners, then by both of such joint owners if both shall be resident within 20 miles of the port or place where such registry is required, or by 1 of such owners if 1 or both of them shall be resident at a greater distance from such port or place; or if the number of such owners or proprietors shall exceed 2, then by the greater part of the number of such owners or proprietors if the greater number of them shall be resident within 20 miles of such port or place as aforesaid, not in any case exceeding 3 of such owners or proprietors, unless a greater number shall be desirous to join in making and subscribing the said declaration, or by 1 of such owners if all, or all except 1, shall be resident at a greater distance :—

“ I A. B. of [place of residence and occupation] do truly declare, that the ship or vessel [name] of [port or place], whereof [master's name] is at present master, being [kind of built, burden, &c. as described in the certificate of the surveying officer], was [when and where built, or, if prize or forfeited, capture and condemnation as such], and that I the said A. B. [and the other owners' names and occupations, if any, and where they respectively reside, viz. town, place, or parish, and county, or if member of and resident in any factory in foreign parts, or in any foreign town or city, being an agent for or partner in any house or copartnership actually carrying on trade in Great Britain or Ireland, the name of such firm, foreign town, or city, and the names of such house and copartnership] am [or are] sole owner [or owners] of the said vessel, and that no other person or persons whatever hath or have any right, title, interest, share or property therein or thereto; and that I the said A. B. [and the said other owners, if any] am [or are] truly and bond-

fide a subject [or subjects] of Great Britain; and that I the said A. B. have not [nor have any of the other owners, to the best of my knowledge and belief] taken the oath of allegiance to any foreign state whatever [except under the terms of some capitulation, describing the particulars thereof]; or that since my taking [or his or their taking] the oath of allegiance to [naming the foreign states respectively to which he or any of the said owners shall have taken the same] I have [or he or they hath or have] become a denizen [or denizens, or naturalised subject or subjects, as the case may be] of the United Kingdom of Great Britain and Ireland by his Majesty's letters patent or by an act of parliament [naming the times when such letters of denization have been granted respectively, or the year or years in which such act or acts for naturalisation have passed respectively]; and that no foreigner, directly or indirectly, hath any share or part interest in the said ship or vessel.”

Provided always, that if it shall become necessary to register any ship or vessel belonging to any corporate body in the United Kingdom, the following declaration, in lieu of the declaration herein-before directed, shall be taken and subscribed by the secretary or other proper officer of such corporate body; (that is to say,)

“ I A. B. secretary or officer of [name of company or corporation] do truly declare, that the ship or vessel [name] of [port] whereof [master's name] is at present master, being [kind of built, burden, &c. as described in the certificate of the surveying

officer], was [when and where built, or, if prize or forfeited, capture and condemnation as such], and that the same doth wholly and truly belong to [name of company or corporation].” — Sect. 15.

Addition to Declaration in case the required Number of Owners do not attend. — In case the required number of joint owners or proprietors of any ship or vessel shall not personally attend to make and subscribe the declaration herein-before directed to be made and subscribed, then and in such case such owner or owners, proprietor or proprietors, as shall personally attend and make and subscribe the declaration aforesaid, shall further declare that the part owner or part owners of such ship or vessel then absent is or are not resident within 20 miles of such port or place, and hath or have not, to the best of his or their knowledge or belief, wilfully absented himself or themselves in order to avoid the making the declaration herein-before directed to be made and subscribed, or is or are prevented by illness from attending to make and subscribe the said declaration. — § 14.

Vessels to be surveyed previous to Registry. — Previous to the registering or granting of any certificate of registry as aforesaid, some one or more person or persons appointed by the commissioners of customs (taking to his or their assistance, if he or they shall judge it necessary, one or more person or persons skilled in the building and admeasurement of ships) shall go on board of every such ship or vessel as is to be registered, and shall strictly and accurately examine and admeasure every such ship or vessel as to all and every particular contained in the form of the certificate herein-before directed, in the presence of the master, or of any other person who shall be appointed for that purpose on the part of the owner or owners, or in his or their absence by the said master; and shall deliver a true and just account in writing of all such particulars of the built, description, and admeasurement of every such ship or vessel as are specified in the form of the certificate above recited to the collector and comptroller authorised as aforesaid to make such registry and grant such certificate of registry; and the said master or other person attending on the part of the owner or owners is hereby required to sign his name also to the certificate of such surveying or examining officer, in testimony of the truth thereof, provided such master or other person shall consent and agree to the several particulars set forth and described therein. — § 15.

Mode of Admeasurement to ascertain Tonnage. — For the purpose of ascertaining the tonnage of ships or vessels, the rule for admeasurement shall be as follows; (that is to say,) the length shall be taken on a straight line along the rabbet of the keel, from the back of the main stern-post to a perpendicular line from the fore part of the main stem under the bowsprit, from which subtracting $\frac{2}{5}$ ths of the breadth, the remainder shall be esteemed the just length of the keel to find the tonnage; and the breadth shall be taken from the outside of the outside plank in the broadest part of the ship, whether that shall be above or below the main wales, exclusive of all manner of doubling planks that may be wrought upon the sides of the ship; then multiplying the length of the keel by the breadth so taken, and that product by $\frac{1}{2}$ the breadth, and dividing the whole by 94, the quotient shall be deemed the true contents of the tonnage. — § 16.

Mode of ascertaining Tonnage when Vessels are afloat. — In cases where it may be necessary to ascertain the tonnage of any ship or vessel when afloat, according to the foregoing rule, the following method shall be observed; (that is to say,) drop a plumbline over the stern of the ship, and measure the distance between such line and the after part of the stern-post at the load water-mark, then measure from the top of the plumb line, in a parallel direction with the water, to a perpendicular point immediately over the load water-mark at the fore part of the main stem, subtracting from such measurement the above distance, the remainder will be the ship's extreme, from which is to be deducted 3 inches for every foot of the load draught of water for the rake abaft, also $\frac{2}{5}$ ths of the ship's breadth for the rake forward, the remainder shall be esteemed the just length of the keel to find the tonnage; and the breadth shall be taken from outside to outside of the plank in the broadest part of the ship, whether that shall be above or below the main wales, exclusive of all manner of sheathing or doubling that may be wrought on the side of the ship; then multiplying the length of the keel for tonnage by the breadth so taken, and that product by $\frac{1}{2}$ the breadth, and dividing by 94, the quotient shall be deemed the true contents of the tonnage. — § 17.

Engine-room in Steam Vessels to be deducted. — In each of the several rules herein-before prescribed, when used for the purpose of ascertaining the tonnage of any ship or vessel propelled by steam, the length of the engine-room shall be deducted from the whole length of such ship or vessel, and the remainder shall, for such purpose, be deemed the whole length of the same. — § 18.

Tonnage when so ascertained to be ever after deemed the Tonnage. — Whenever the tonnage of any ship or vessel shall have been ascertained according to the rule herein prescribed (except in the case of ships or vessels which have been admeasured afloat), such account of tonnage shall ever after be deemed the tonnage of such ship or vessel, and shall be repeated in every subsequent registry of such ship or vessel, unless it shall happen that any alteration has been made in the form and burden of such ship or vessel, or it shall be discovered that the tonnage of such ship or vessel had been erroneously taken and computed. — § 19.

Bond to be given at the Time of Registry. — At the time of the obtaining of the certificate of registry as aforesaid, sufficient security by bond shall be given to his Majesty, his heirs and successors, by the master and such of the owners as shall personally attend, as is herein-before required, such security to be approved of and taken by the person or persons herein-before authorised to make such registry and grant such certificate of registry at the port or place in which such certificate shall be granted, in the penalties following; (that is to say,) if such ship or vessel shall be a decked vessel, or be above the burden of 15 tons, and not exceeding 50 tons, then in the penalty of 100*l.*; if exceeding the burden of 50 tons and not exceeding 100 tons, then in the penalty of 300*l.*; if exceeding the burden of 100 tons and not exceeding 200 tons, then in the penalty of 500*l.*; if exceeding the burden of 200 tons and not exceeding 300 tons, then in the penalty of 800*l.*; and if exceeding the burden of 300 tons, then in the penalty of 1,000*l.*; and the condition of every such bond shall be, that such certificate shall not be sold, lent, or otherwise disposed of to any person or persons whatever, and that the same shall be solely made use of for the service of the ship or vessel for which it is granted; and that in case such ship or vessel shall be lost, or taken by the enemy, burnt, or broken up, or otherwise prevented from returning to the port to which she belongs, or shall on any account have lost and forfeited the privileges of a British ship, or shall have been seized and legally condemned for illicit trading, or shall have been taken in execution for debt and sold by due process of law, or shall have been sold to the Crown, or shall under any circumstances have been registered *de novo*, the certificate, if preserved, shall be delivered up, within 1 month after the arrival of the master in any port or place in his Majesty's dominions, to the collector and comptroller of some port in Great Britain or of the Isle of Man, or of the British plantations, or to the governor, lieutenant-governor, or commander-in-chief for the time being of the islands of Guernsey or Jersey; and that if any foreigner, or any person or persons for the use and benefit of any foreigner, shall purchase or otherwise become entitled to the whole or to any part or share of or any interest in such ship or vessel, and the same shall be within the limits of any port of Great Britain, or of the islands of Guernsey, Jersey, or Man, or of the British colonies, plantations, islands, or territories aforesaid, then and in such case the certificate of registry shall, within 7 days after such purchase or transfer of property in such ship or vessel, be delivered up to the person or persons herein-before authorised to make registry and grant certificate of registry at such port or place respectively as aforesaid; and if such ship or vessel shall be in any foreign port when such purchase or transfer of property shall take place, then that the certificate shall be delivered up to the British consul or other chief British officer resident at or nearest to such foreign port; or if such ship or vessel shall be at sea when such purchase or transfer of property shall take place, then that the certificate shall be delivered up to the British consul or other chief British officer at the foreign port or place in or at which the master or other person having or taking the charge or command of such ship or vessel shall first arrive after such purchase or transfer of property at sea, immediately after his arrival at such foreign port; but if such master or other person who had the command thereof at the time of such purchase or transfer of property at sea shall not arrive at a foreign port, but shall arrive at some port of Great Britain, or of the islands of Guernsey, Jersey, or Man, or of his Majesty's said colonies, plantations, islands, or territories, then that the certificate shall be delivered up, in manner aforesaid, within 14 days after the arrival of such ship or vessel, or of the person who had the command thereof, in any port of Great Britain, or of the islands of Guernsey, Jersey, or Man, or of any of his Majesty's said colonies, plantations, islands, or territories: provided always, that if it shall happen that at the time of registry of any ship or vessel the same shall be at any other port than the port to which she belongs, so that the master of such ship or vessel cannot attend at the port of registry to join with the owner or owners in such bond as aforesaid, it shall be lawful for him to give a separate bond, to the like effect, at the port where such ship or vessel may then be, and the collector and comptroller of such other port shall transmit such bond to the collector and comptroller of the port where such ship or vessel is to be registered, and such bond, and the bond also given by the owner or owners, shall together be of the same effect against the master and owner or owners, or either of them, as if they had bound themselves jointly and severally in one bond. — § 20.

When Master is changed, new Master to give similar Bond. — When and so often as the master or other person having or taking the charge or command of any ship or vessel registered in manner herein directed shall be changed, the master or owner of such ship or vessel shall deliver to the person or persons herein authorised to make such registry and grant such certificates of registry at the port where such change shall take place the certificate of registry belonging to such ship or vessel, who shall thereupon indorse and subscribe a memorandum of such change, and shall forthwith give notice of the same to the proper officer of the port or place where such ship or vessel was last registered pursuant to this act, who shall likewise make a memorandum of the same in the book of registers, which is hereby directed and required to be kept, and shall forthwith give notice thereof to the commissioners of his Majesty's customs: provided always, that before the name of such new master shall be indorsed on the certificate of registry he shall be required to give and shall give a bond in the like penalties and under the same conditions as are contained in the bond herein-before required to be given at the time of registry of any ship or vessel. — § 21.

Bonds liable to same Duties of Stamps as Bonds for Customs. — All bonds required by this act shall be liable to the same duties of stamps as bonds given for or in respect of the duties of customs are or shall be liable to under any act for the time being in force for granting duties of stamps. — § 22.

Certificate of Registry to be given up by all Persons, as directed by the Bond. — If any person whatever shall at any time have possession of and willfully detain any certificate of registry granted under this or any other act, which ought to be delivered up to be cancelled according to any of the conditions of the bond herein-before required to be given upon the registry of any ship or vessel, such person is hereby required and enjoined to deliver up such certificate of registry in manner directed by the conditions of such bond in the respective cases and under the respective penalties therein provided. — § 23.

Name of Vessel which has been registered never afterwards to be changed. — It shall not be lawful for any owner or owners of any ship or vessel to give any name to such ship or vessel other than that by which she was first registered in pursuance of this or any other act; and the owner or owners of all and every ship or vessel which shall be so registered shall, before such ship or vessel, after such registry, shall begin to take in any cargo, paint or cause to be painted, in white or yellow letters, of a length of not less than 4 inches, upon a black ground, on some conspicuous part of the stern, the name by which such ship or vessel shall have been registered pursuant to this act, and the port to which she belongs, in a distinct and legible manner, and shall so keep and preserve the same; and if such owner or owners or master or other person having or taking the charge or command of such ship or vessel shall permit such ship or vessel to begin to take in any cargo before the name of such ship or vessel has been so painted as aforesaid, or shall willfully alter, erase, obliterate, or in anywise hide or conceal, or cause or procure or permit the same to be done (unless in the case of square-rigged vessels in time of war), or shall in any written or printed paper, or other document, describe such ship or vessel by any name other than that by which she was first registered pursuant to this act, or shall verbally describe, or cause or procure or permit such ship or vessel to be described, by any other name to any officer or officers of his Majesty's revenue in the due execution of his or their duty, then and in every such case such owner or owners or master or other person having or taking the charge or command of such ship or vessel shall forfeit the sum of 100*l.* — § 24.

Builder's Certificate of Particulars of Ship. — All and every person and persons who shall apply for a certificate of the registry of any ship or vessel shall and they are hereby required to produce to the person or persons authorised to grant such certificate a true and full account, under the hand of the builder of such ship or vessel, of the proper denomination, and of the time when and the place where

such ship or vessel was built, and also an exact account of the tonnage of such ship or vessel, together with the name of the first purchaser or purchasers thereof which account such builder is hereby directed and required to give under his hand on the same being demanded by such person or persons so applying for a certificate as aforesaid, and shall also make and subscribe a declaration before the person or persons herein-before authorised to grant such certificate that the ship or vessel for which such certificate is required is the same with that which is so described by the builder as aforesaid. — § 25.

Certificate of Registry lost or mislaid. — If the certificate of registry of any ship or vessel shall be lost or mislaid, so that the same cannot be found or obtained for the use of such ship or vessel when needful, and proof thereof shall be made to the satisfaction of the commissioners of his Majesty's customs, such commissioners shall and may permit such ship or vessel to be registered *de novo*, and a certificate thereof to be granted; provided always, that if such ship or vessel be absent and far distant from the port to which she belongs, or by reason of the absence of the owner or owners, or of any other impediment, registry of the same cannot then be made in sufficient time, such commissioners shall and may grant a licence for the present use of such ship or vessel, which licence shall, for the time and to the extent specified therein, and no longer, be of the same force and virtue as a certificate of registry granted under this act: provided always, that before such registry *de novo* be made, the owner or owners and master shall give bond to the commissioners aforesaid, in such sum as to them shall seem fit, with a condition that if the certificate of registry shall at any time afterwards be found, the same shall be forthwith delivered to the proper officers of his Majesty's customs to be cancelled, and that no illegal use has been or shall be made thereof with his or their privacy or knowledge; and further, that before any such licence shall be granted as aforesaid, the master of such ship or vessel shall also make and subscribe a declaration that the same has been registered as a British ship, plying the port where and the time when such registry was made, and all the particulars contained in the certificate thereof, to the best of his knowledge and belief, and shall also give such bond and with the same condition as is before mentioned: provided also, that before any such licence shall be granted, such ship or vessel shall be surveyed in like manner as if a registry *de novo* were about to be made thereof; and the certificate of such survey shall be preserved by the collector and comptroller of the port to which such ship or vessel shall belong; and in virtue thereof it shall be lawful for the said commissioners and they are hereby required to permit such ship or vessel to be registered after her departure, whenever the owner or owners shall personally attend to take and subscribe the declaration required by this act before registry be made, and shall also comply with all other requisites of this act, except so far as relates to the bond to be given by the master of such ship or vessel; which certificate of registry the said commissioners shall and may transmit to the collector and comptroller of any other port, to be by them given to the master of such ship or vessel, upon his giving such bond, and delivering up the licence which had been granted for the then present use of such ship or vessel. — § 26.

Persons detaining Certificate of Registry to forfeit 100l. — In case any person who shall have received or obtained by any means, or for any purpose whatever, the certificate of the registry of any ship or vessel (whether such person shall claim to be the master or to be the owner or one of the owners of such ship or vessel, or not), shall wilfully detain and refuse to deliver up the same to the proper officers of customs, for the purposes of such ship or vessel, as occasion shall require, or to the person or persons having the actual command, possession, and management of such ship or vessel as the ostensible and reputed master, or as the ostensible and reputed owner or owners thereof, it may and shall be lawful to and for any such last-mentioned person to make complaint on oath of such detainer and refusal to any justice of the peace residing near to the place where such detainer and refusal shall be, in Great Britain or Ireland, or to any member of the supreme court of justice or any justice of the peace in the islands of Jersey, Guernsey, or Man, or in any colony, plantation, island, or territory to his Majesty belonging in Asia, Africa, or America, or in Malta, Gibraltar, or Heligoland, where such detainer and refusal shall be in any of the places last mentioned; and on such complaint the said justice or other magistrate shall and is hereby required, by warrant under his hand and seal, to cause the person so complained against to be brought before him to be examined touching such detainer and refusal; and if it shall appear to the said justice or other magistrate, on examination of such person or otherwise, that the said certificate of registry is not lost or mislaid, but is wilfully detained by the said person, such person shall be thereof convicted, and shall forfeit and pay the sum of 100l., and on failure of payment thereof he shall be committed to the common gaol, there to remain without bail or mainprize for such time as the said justice or other magistrate shall in his discretion deem proper, not being less than 3 months nor more than 12 months; and the said justice or other magistrate shall and he is hereby required to certify the aforesaid detainer, refusal, and conviction to the person or persons who granted such certificate of registry for such ship or vessel, who shall, on the terms and conditions of law being complied with, make registry of such ship or vessel *de novo*, and grant a certificate thereof conformably to law, notifying on the back of such certificate the ground upon which the ship or vessel was so registered *de novo*; and if the person who shall have detained and refused to deliver up such certificate of registry as aforesaid, or shall be verily believed to have detained the same, shall have absconded, so that the said warrant of the justice or other magistrate cannot be executed upon him, and proof thereof shall be made to the satisfaction of the commissioners of his Majesty's customs, it shall be lawful for the said commissioners to permit such ship or vessel to be registered *de novo*, or otherwise, in their discretion, to grant a licence for the present use of such ship or vessel in like manner as is herein-before provided in the case wherein the certificate of registry is lost or mislaid. — § 27.

Ship altered in certain Manner to be registered de novo. — If any ship or vessel, after she shall have been registered pursuant to the directions of this act, shall in any manner whatever be altered so as not to correspond with all the particulars contained in the certificate of her registry, in such case such ship or vessel shall be registered *de novo*, in manner herein-before required, as soon as she returns to the port to which she belongs, or to any other port which shall be in the same part of the United Kingdom, or in the same colony, plantation, island, or territory as the said port shall be in, on failure whereof such ship or vessel shall, to all intents and purposes, be considered and deemed and taken to be a ship or vessel not duly registered. — § 28.

Vessels condemned as Prize, &c. — The owner or owners of all such ships and vessels as shall be taken by any of his Majesty's ships or vessels of war, or by any private or other ship or vessel, and condemned as lawful prize in any court of admiralty, or of such ships or vessels as shall be condemned in any competent court as forfeited for breach of the laws for the prevention of the slave trade, shall, for the purpose of registering any such ship or vessel, produce to the collector and comptroller of customs a certificate of the condemnation of such ship or vessel, under the hand and seal of the judge of the court in which such ship or vessel shall have been condemned (which certificate such judge is hereby authorised and required to grant), and also a true and exact account in writing of all the particulars contained in the certificate herein-before set forth, to be made and subscribed by one or more skilful person or persons to be appointed by the court then and there to survey such ship or vessel, and shall also make and subscribe a declaration before the collector and comptroller that such ship or vessel is the same vessel which is mentioned in the certificate of the judge aforesaid. — § 29.

Prize Vessels not to be registered at Guernsey, Jersey, or Man. — No ship or vessel which shall be taken and condemned as prize or forfeiture as aforesaid shall be registered in the islands of Guernsey, Jersey, or Man, although belonging to his Majesty's subjects residing in those islands, or in some one or other of them; but the same shall be registered either at Southampton, Weymouth, Exeter, Plymouth, Falmouth, Liverpool, or Whitehaven, by the collector and comptroller at such ports respectively, who are hereby authorised and required to register such ship or vessel, and to grant a certificate thereof in the form and under the regulations and restrictions in this act contained. — § 30.

Transfers of Interest to be made by Bill of Sale.—When and so often as the property in any ship or vessel, or any part thereof, belonging to any of his Majesty's subjects, shall, after registry thereof, be sold to any other or others of his Majesty's subjects, the same shall be transferred by bill of sale or other instrument in writing, containing a recital of the certificate of registry of such ship or vessel, or the principal contents thereof, otherwise such transfer shall not be valid or effectual for any purpose whatever, either in law or in equity: provided always, that no bill of sale shall be deemed void by reason of any error in such recital, or by the recital of any former certificate of registry instead of the existing certificate, provided the identity of the ship or vessel intended in the recital be effectually proved thereby.—§ 31.

Property in Ships to be divided into Sixty-four Parts or Shares.—The property in every ship or vessel of which there are more than one owner shall be taken and considered to be divided into 64 equal parts or shares, and the proportion held by each owner shall be described in the registry as being a certain number of 64th parts or shares; and no person shall be entitled to be registered as an owner of any ship or vessel in respect of any proportion of such ship or vessel which shall not be an integral 64th part or share of the same; and upon the first registry of any ship or vessel, the owner or owners who shall take and subscribe the declaration required by this act, before registry be made, shall also declare the number of such parts or shares then held by each owner, and the same shall be so registered accordingly: provided always, that if it shall at any time happen that the property of any owner or owners in any ship or vessel cannot be reduced by division into any number of integral 64th parts or shares, it shall and may be lawful for the owner or owners of such fractional parts as shall be over and above such number of integral 64th parts or shares into which such property in any ship or vessel can be reduced by division to transfer the same one to another, or jointly to any new owner, by memorandum upon their respective bills of sale, or by fresh bill of sale, without such transfer being liable to any stamp duty: provided also, that the right of any owner or owners to any such fractional parts shall not be affected by reason of the same not having been registered: provided also, that it shall be lawful for any number of such owners, named and described in such registry, being partners in any house or copartnership actually carrying on trade in any part of his Majesty's dominions, to hold any ship or vessel, or any share or shares of any ship or vessel, in the name of such house or copartnership, as joint owners thereof, without distinguishing the proportionate interest of each of such owners, and that such ship or vessel, or the share or shares thereof so held in copartnership, shall be deemed and taken to be partnership property to all intents and purposes, and shall be governed by the same rules, both in law and equity, as relate to and govern all other partnership property in any other goods, chattels, and effects whatsoever.—§ 32.

Only Thirty-two Persons to be Owners of any Ship at One Time.—No greater number than 32 persons shall be entitled to be legal owners at one and the same time of any ship or vessel, as tenants in common, or to be registered as such: provided always, that nothing herein contained shall affect the equitable title of minors, heirs, legatees, creditors, or others, exceeding that number, duly represented by or holding from any of the persons within the said number, registered as legal owners of any share or shares of such ship or vessel: provided also, that if it shall be proved to the satisfaction of the commissioners of customs that any number of persons have associated themselves as a joint stock company, for the purpose of owning any ship or vessel, or any number of ships or vessels, as the joint property of such company, and that such company have duly elected or appointed any number, not less than 3, of the members of the same to be trustees of the property in such ship or vessel or ships or vessels so owned by such company, it shall be lawful for such trustees or any 3 of them, with the permission of such commissioners, to make and subscribe the declaration required by this act before registry be made, except that, instead of stating therein the names and descriptions of the other owners, they shall state the name and description of the company to which such ship or vessel or ships or vessels shall in such manner belong.—§ 33.

Bills of Sale not effectual until produced to Officers of Customs.—No bill of sale or other instrument in writing shall be valid and effectual to pass the property in any ship or vessel, or in any share thereof, or for any other purpose, until such bill of sale or other instrument in writing shall have been produced to the collector and comptroller of the port at which such ship or vessel is already registered, or to the collector and comptroller of any other port at which she is about to be registered *de novo*, as the case may be, nor until such collector and comptroller respectively shall have entered in the book of such last registry, in the one case, or in the book of such registry *de novo*, after all the requisites of law for such registry *de novo* shall have been duly complied with, in the other case (and which they are respectively hereby required to do upon the production of the bill of sale or other instrument for that purpose), the name, residence, and description of the vendor or mortgagor, or of each vendor or mortgagor, if more than 1, the number of shares transferred, the name, residence, and description of the purchaser or mortgagee, or of each purchaser or mortgagee, if more than 1, and the date of the bill of sale or other instrument, and of the production of it; and further, if such ship or vessel is not about to be registered *de novo*, the collector and comptroller of the port where such ship is registered shall and they are hereby required to indorse the aforesaid particulars of such bill of sale or other instrument on the certificate of registry of the said ship or vessel, when the same shall be produced to them for that purpose, in manner and to the effect following; *viz.*

"Custom-house [port and date; name, residence, and description of vendor or mortgagor] has transferred by [bill of sale or other instrument] dated [date; number of shares] to [name, residence, and description of purchaser or mortgagee]."

A. B. Collector.
C. D. Comptroller."

And forthwith to give notice thereof to the commissioners of customs; and in case the collector and comptroller shall be desired so to do, and the bill of sale or other instrument shall be produced to them for that purpose, then the said collector and comptroller are hereby required to certify, by indorsement upon the bill of sale or other instrument, that the particulars before mentioned have been so entered in the book of registry, and indorsed upon the certificate of registry as aforesaid.—§ 34.

Entry of Bill of Sale to be valid, except in certain Cases.—When and so soon as the particulars of any bill of sale or other instrument by which any ship or vessel, or any share or shares thereof, shall be transferred, shall have been so entered in the book of registry as aforesaid, the said bill of sale or other instrument shall be valid and effectual to pass the property thereby intended to be transferred as against all and every person and persons whatsoever, and to all intents and purposes, except as against such subsequent purchasers and mortgagees who shall first procure the indorsement to be made upon the certificate of registry of such ship or vessel in manner herein-after mentioned.—§ 35.

When a Bill of Sale has been entered for any Shares, Thirty Days shall be allowed for indorsing the Certificate of Registry, before any other Bill of Sale for the same shall be entered.—When and after the particulars of any bill of sale or other instrument by which any ship or vessel, or any share or shares thereof, shall be transferred, shall have been so entered in the book of registry as aforesaid, the collector and comptroller shall not enter in the book of registry the particulars of any other bill of sale or instrument purporting to be a transfer by the same vendor or mortgagor or vendors or mortgagees of the same ship or vessel, share or shares thereof, to any other person or persons, unless 30 days shall elapse from the day on which the particulars of the former bill of sale or other instrument were entered in the book of registry; or in case the ship or vessel was absent from the port to which she belonged at the time when the particulars of such former bill of sale or other instrument were entered in the book of registry, then unless 30 days shall have elapsed from the day on which the ship or vessel arrived at the port to which the same belonged; and in case the particulars of 2 or more such bills of sale or other instruments as aforesaid shall at any time have been entered in the book of registry of the said ship or vessel,

the collector and comptroller shall not enter in the book of registry the particulars of any other bill of sale or other instrument as aforesaid unless 30 days shall in like manner have elapsed from the day on which the particulars of the last of such bill of sale or other instrument were entered in the books of registry, or from the day on which the ship or vessel arrived at the port to which she belonged, in case of her absence as aforesaid; and in every case where there shall at any time happen to be 2 or more transfers by the same owner or owners of the same property in any ship or vessel entered in the book of registry as aforesaid, the collector and comptroller are hereby required to indorse upon the certificate of registry of such ship or vessel the particulars of that bill of sale or other instrument under which the person or persons claims or claim property, who shall produce the certificate of registry for that purpose within 30 days next after the entry of his said bill of sale or other instrument in the book of registry as aforesaid, or within 30 days next after the return of the said ship or vessel to the port to which she belongs, in case of her absence at the time of such entry as aforesaid; and in case no person or persons shall produce the certificate of registry within either of the said spaces of 30 days, then it shall be lawful for the collector and comptroller, and they are hereby required, to indorse upon the certificate of registry the particulars of the bill of sale or other instrument to such person or persons as shall first produce the certificate of registry for that purpose, it being the true intent and meaning of this act that the several purchasers and mortgagees of such ship or vessel, share or shares thereof, when more than 1 appear to claim the same property, or to claim security on the same property, in the same rank and degree, shall have priority one over the other, not according to the respective times when the particulars of the bill of sale or other instrument by which such property was transferred to them were entered in the book of registry as aforesaid, but according to the time when the indorsement is made upon the certificate of registry as aforesaid: provided always, that if the certificate of registry shall be lost or mislaid, or shall be detained by any person whatever, so that the indorsement cannot in due time be made thereon, and proof thereof shall be made by the purchaser or mortgagee, or his known agent, to the satisfaction of the commissioners of his Majesty's customs, it shall be lawful for the said commissioners to grant such further time as to them shall appear necessary for the recovery of the certificate of registry, or for the registry *de novo* of the said ship or vessel under the provisions of this act; and thereupon the collector and comptroller shall make a memorandum in the book of registers of the further time so granted, and during such time no other bill of sale shall be entered for the transfer of the same ship or vessel, or the same share or shares thereof, or for giving the same security thereon. — § 36.

Bills of Sale may be produced after Entry at other Ports. — If the certificate of registry of such ship or vessel shall be produced to the collector and comptroller of any port where she may then be, after any such bill of sale shall have been recorded at the port to which she belongs, together with such bill of sale, containing a notification of such record, signed by the collector and comptroller of such port as before directed, it shall be lawful for the collector and comptroller of such other port to indorse on such certificate of registry (being required so to do) the transfer mentioned in such bill of sale, and such collector and comptroller shall give notice thereof to the collector and comptroller of the port to which such ship or vessel belongs, who shall record the same in like manner as if they had made such indorsement themselves, but inserting the name of the port at which such indorsement was made: provided always, that the collector and comptroller of such other port shall first give notice to the collector and comptroller of the port to which such ship or vessel belongs of such requisition made to them to indorse the certificate of registry, and the collector and comptroller of the port to which such ship or vessel belongs shall thereupon send information to the collector and comptroller of such other port, whether any and what other bill or bills of sale have been recorded in the book of the registry of such ship or vessel; and the collector and comptroller of such other port, having such information, shall proceed in manner directed by this act in all respects to the indorsing of the certificate of registry as they would do if such port were the port to which such vessel belonged. — § 37.

If upon Registry de novo any Bill of Sale shall not have been recorded, the same shall then be produced. — If it shall become necessary to register any ship or vessel *de novo*, and any share or shares of such ship or vessel, shall have been sold since she was last registered, and the transfer of such share or shares shall not have been recorded and indorsed in manner herein-before directed, the bill of sale thereof shall be produced to the collector and comptroller of his Majesty's customs, who are to make registry of such ship or vessel, otherwise such sale shall not be noticed in such registry *de novo*, except as herein-after excepted: provided always, that upon the future production of such bill of sale, and of the existing certificate of registry, such transfer shall and may be recorded and indorsed as well after such registry *de novo* as before. — § 38.

Upon Change of Property, Registry de novo may be granted. — If upon any change of property in any ship or vessel, the owner or owners shall desire to have the same registered *de novo*, although not required by this act, and the owner or proper number of owners shall attend at the Custom-house at the port to which such ship or vessel belongs for that purpose, it shall be lawful for the collector and comptroller of his Majesty's customs at such port to make registry *de novo* of such ship or vessel at the same port, and to grant a certificate thereof, the several requisites herein-before in this act mentioned and directed being first duly observed and complied with. — § 39.

Copies of Declarations, &c., and of Extracts from Books of Registry admitted in Evidence. — The collector and comptroller of customs at any port or place, and the person or persons acting for them, respectively, shall, upon every reasonable request by any person or persons whomsoever, produce and exhibit for his, her, or their inspection and examination any oath or declaration sworn or made by any such owner or owners, proprietor or proprietors, and also any register or entry in any book or books of registry required by this act to be made or kept relative to any ship or vessel, and shall, upon every reasonable request by any person or persons whomsoever, permit him, her, or them to take a copy or copies or an extract or extracts thereof respectively; and the copy and copies of any such oath or declaration, register or entry, shall, upon being proved to be a true copy or copies thereof respectively, be allowed and received as evidence upon every trial at law, without the production of the original or originals, and without the testimony or attendance of any collector or comptroller, or other person or persons acting for them respectively, in all cases, as fully and to all intents and purposes as such original or originals, if produced by any collector or collectors, comptroller or comptrollers, or other person or persons acting for them, could or might legally be admitted or received in evidence. — § 40.

Vessels or Shares sold in the Absence of Owners without formal Powers. — If the ship or vessel, or the share or shares of any owner thereof who may be out of the kingdom, shall be sold in his absence by his known agent or correspondent, under his directions either expressed or implied, and acting for his interest in that behalf, and such agent or correspondent who shall have executed a bill of sale to the purchaser of the whole of such ship or vessel, or of any share or shares thereof, shall not have received a legal power to execute the same, it shall be lawful for the commissioners of his Majesty's customs, upon application made to them, and proof to their satisfaction of the fair dealings of the parties, to permit such transfer to be registered, if registry *de novo* be necessary, or to be recorded and indorsed, as the case may be, in manner directed by this act, as if such legal power had been produced; and also if it shall happen that any bill of sale cannot be produced, or if, by reason of distance of time, or the absence or death of parties concerned, it cannot be proved that a bill of sale for any share or shares in any ship or vessel had been executed, and registry *de novo* of such ship or vessel shall have become necessary, it shall be lawful for the commissioners of his Majesty's customs, upon proof to their satisfaction of the fair dealings of the parties, to permit such ship or vessel to be registered *de novo* in like manner as if a bill of sale for the transfer of such share or shares had been produced: provided always, that in any of the cases herein mentioned, good and sufficient security shall be given to produce a legal power or bill of sale within a

reasonable time, or to abide the future claims of the absent owner, his heirs and successors, as the case may be; and at the future request of the party whose property has been so transferred, without the production of a bill of sale from him or from his lawful attorney, such bond shall be available for the protection of his interest, in addition to any powers or rights which he may have in law or equity against the ship or vessel, or against the parties concerned, until he shall have received full indemnity for any loss or injury sustained by him. — § 41.

Transfer by way of Mortgage. — When any transfer of any ship or vessel, or of any share or shares thereof, shall be made only as a security for the payment of a debt or debts, either by way of mortgage, or of assignment to a trustee or trustees for the purpose of selling the same for the payment of any debt or debts, then and in every such case the collector and comptroller of the port where the ship or vessel is registered shall, in the entry in the book of registry, and also in the indorsement on the certificate of registry, in manner herein-before directed, state and express that such transfer was made only as a security for the payment of a debt or debts, or by way of mortgage, or to that effect; and the person or persons to whom such transfer shall be made, or any other person or persons claiming under him or them as a mortgagee or mortgagees, or a trustee or trustees only, shall not by reason thereof be deemed to be the owner or owners of such ship or vessel, share or shares thereof, nor shall the person or persons making such transfer be deemed by reason thereof to have ceased to be an owner or owners of such ship or vessel, any more than if no such transfer had been made, except so far as may be necessary for the purpose of rendering the ship or vessel, share or shares, so transferred, available by sale or otherwise for the payment of the debt or debts for securing the payment of which such transfer shall have been made. — § 42.

Transfers of Ships for Security. — When any transfer of any ship or vessel, or of any share or shares thereof, shall have been made as a security for the payment of any debt or debts, either by way of mortgage or of assignment as aforesaid, and such transfer shall have been duly registered according to the provisions of this act, the right or interest of the mortgagee or other assignee as aforesaid shall not be in any manner affected by any act or acts of bankruptcy committed by such mortgagor or assignor, mortgagors or assignors, after the time when such mortgage or assignment shall have been so registered as aforesaid, notwithstanding such mortgagor or assignor, mortgagors or assignors, at the time he or they shall so become bankrupt as aforesaid, shall have in his or their possession, order, and disposition, and shall be the reputed owner or owners of the said ship or vessel, or the share or shares thereof, so by him or them mortgaged or assigned as aforesaid, but such mortgage or assignment shall take place and be preferred to any right, claim, or interest which may belong to the assignee or assignees of such bankrupt or bankrupts in such ship or vessel, share or shares thereof, any law or statute to the contrary thereof notwithstanding. — § 43.

Governors of Colonies, &c. may cause Proceedings in Suits to be stayed. — It shall and may be lawful for any governor, lieutenant-governor, or commander-in-chief of any of his Majesty's colonies, plantations, islands, or territories, and they are hereby respectively authorised and required, if any suit, information, libel, or other prosecution or proceeding of any nature or kind whatever shall have been commenced or shall hereafter be commenced in any court whatever in any of the said colonies, plantations, islands, or territories respectively, touching the force and effect of any register granted to any ship or vessel, upon a representation made to any such governor, lieutenant-governor, or commander-in-chief, to cause all proceedings thereon to be stayed, if he shall see just cause so to do, until his Majesty's pleasure shall be known and certified to him by his Majesty, by and with the advice of his Majesty's privy council; and such governor, lieutenant-governor, or commander-in-chief is hereby required to transmit to one of his Majesty's principal secretaries of state, to be laid before his Majesty in council, an authenticated copy of the proceedings in every such case, together with his reasons for causing the same to be stayed, and such documents (properly verified) as he may judge necessary for the information of his Majesty. — § 44.

*Penalty of 500*l.* on Persons making false Declaration, or falsifying any Document.* — If any person or persons shall falsely make declaration to any of the matters herein-before required to be verified by declaration, or if any person or persons shall counterfeit, erase, alter, or falsify any certificate or other instrument in writing required or directed to be obtained, granted, or produced by this act, or shall knowingly or wilfully make use of any certificate or other instrument so counterfeited, erased, altered, or falsified, or shall wilfully grant such certificate or other instrument in writing, knowing it to be false, such person or persons shall for every such offence forfeit the sum of 500*l.* — § 45.

How Penalties are to be recovered. — All the penalties and forfeitures inflicted and incurred by this act shall and may be sued for, prosecuted, recovered, and disposed of in such manner, and by such ways, means, and methods, as any penalties or forfeitures inflicted or which may be incurred for any offences committed against any law relating to the customs may now legally be sued for, prosecuted, recovered, and disposed of; and the officer or officers concerned in seizures or prosecutions under this act shall be entitled to and receive the same share of the produce arising from such seizures as in the case of seizures for unlawful importation, and to such share of the produce arising from any pecuniary fine or penalty for any offence against this act as any officer or officers is or are now by any law or regulation entitled to upon prosecutions for pecuniary penalties. — § 46.

REPORT, in commercial navigation, a paper delivered by the masters of all ships arriving from parts beyond seas to the Custom-house, and attested upon oath, containing an account of the cargo on board, &c. — (See *antè*, p. 657.)

REPRISALS. Where the people of one nation have unlawfully seized and detained property belonging to another state, the subjects of the latter are authorised, by the law of nations, to indemnify themselves, by seizing the property of the subjects of the state aggressing. This is termed making reprisals; and commissions to this effect are issued from the Admiralty. — (See **PRIVATEERS**.)

RESPONDENTIA. See **BOTTOMRY AND RESPONDENTIA**.

REVENUE AND EXPENDITURE. Though not properly belonging to a work of this sort, we believe we shall do an acceptable service to our readers by laying before them the following comprehensive Table of the revenue and expenditure of the United Kingdom in 1830, 1831, and 1832. It contains more information in a brief space than most parliamentary papers. It was originally framed according to the suggestion, and printed upon the motion of Mr. Pusey; and there are not very many members who have left so useful a memorial of their parliamentary career.

RHUBARB (Du. *Rhubarber*; Fr. *Rhubarbe*, *Rubarbe*; It. *Rabarbaro*, *Reo-barbaro*; Sp. *Ruibarbo*; Rus. *Reven*; Arab. *Rawend*; Chin. *Ta-hwang*), the root of a plant, a native of China and Tartary. Three varieties of rhubarb are known in the shops; viz. Russian, Turkey, and East Indian or Chinese rhubarb. The first two resemble each other in every respect. They are, in fact, the same article, being both derived from Tartary. The portion destined for the Petersburg market being selected and sorted at Kiachta, acquires the name of Russian rhubarb; while the portion that is sent from Tartary to Smyrna and other places in Turkey, is called Turkey rhubarb. The best pieces only are sent to Petersburg; and according to the contract with the government, on whose account it is bought, all that is rejected must be burnt; and that which is approved undergoes a second cleaning before being finally packed up for Petersburg. The best pieces of Russian and Turkey rhubarb are roundish, and perforated with a large hole, of a reddish or yellow colour on the outside, and when cut or broken exhibit a mottled texture, and alternate streaks of red and grey. Its odour is peculiar; and its taste nauseous, bitter, and astringent. It should not be porous, but rather compact and heavy. East Indian or Chinese rhubarb is in oblong flat pieces, seldom perforated; has a stronger odour, and is more nauseous to the taste than the other; it is heavier, more compact, breaks smoother, and affords a powder of a redder shade. — (*Thomson's Dispensatory*; *Ainslie's Mat. Indica*, &c.)

The total quantity of rhubarb imported in 1831 amounted to 140,395 lbs.; of which 6,901 lbs. came from Russia, and 133,462 from the East Indies. Of the quantity imported, 40,124 lbs. were retained for home consumption. The price of rhubarb in bond varies from 2s. per lb. for the inferior East Indian, to 8s. for the best Russian.

RICE (Fr. *Riz*; It. *Riso*; Arab. *Arutz*; Hind. *Chawl*), one of the most valuable of the cereal grasses, the *Oryza sativa* of botanists. It is raised in immense quantities in India, China, and most Eastern countries; in the West Indies, Central America, and the United States; and in some of the southern countries of Europe. It, in fact, occupies the same place in most intertropical regions as wheat in the warmer parts of Europe, and oats and rye in those more to the north. Forming, as it does, the principal part of the food of the most civilised and populous Eastern nations, it is more extensively consumed than any other species of grain. It is light and wholesome, but is said to contain less of the nutritive principle than wheat. When rough, or in its natural state in the husk, it is called *paddy*. There is an immense variety in the qualities of rice. That which is principally exported from Bengal has received the name of *cargo* rice. It is of a coarse reddish cast, but is sweet and large grained, and is preferred by the natives to every other sort. It is not kiln-dried, but is parboiled in earthen pots or caldrons, partly to destroy the vegetative principle, so that it may keep better, and partly to facilitate the process of husking. Patna rice is more esteemed in Europe than any other sort of rice imported from the East. It is small grained, rather long and wiry, and remarkably white. But the rice raised on the low marshy grounds of Carolina is unquestionably very superior to any brought from any part of India.

The produce of lands naturally or artificially irrigated is, as far as rice is concerned, from 5 to 10 times greater than that of dry land having no command of water: and hence the vast importance of irrigation in all countries where this grain is cultivated. But it is worthy of remark, that, owing to the not unfrequent occurrence of severe droughts, there is a greater variation in the crops of rice than in those of any other species of grain. Those who, like the Hindoos, depend almost entirely on it for subsistence, are, consequently, placed in a very precarious situation. There can be no doubt that famines are at once more frequent and severe in Hindostan than in any other quarter.

A few years ago, England was principally supplied with cleaned rice from Carolina. Latterly, however, the imports of Carolina rice have been much reduced. An improved method of separating the husk, which throws out the grain clean and unbroken, has recently been practised in this country; and as the grain, when in the husk, is found to preserve its flavour and sweetness better during a long voyage than when shelled, large quantities are now imported rough from Bengal and the United States. Unquestionably, however, the oppressive discriminating duty of 14s. a cwt. on American and other foreign cleaned rice has done more than any thing else to increase the imports of rough grain; and the fact of the duty on paddy from Bengal being only 1d. per quarter, while that on paddy from Carolina is 2s. 6d. a bushel, sufficiently accounts for the increased imports from the former.

The consumption of rice increased rapidly after the reduction of the duty on the cleaned and rough grain from India in 1828. In 1830, the entries for home consumption amounted to 153,652 cwt. of cleaned, and 189,249 cwt. of rough grain. But, contrary to our anticipations in the former edition of this work, the consumption has since materially fallen off. The entries for home consumption in 1832 amounted to only 111,461 cwt. of clean, and 179,627 cwt. of rough grain, or paddy; and, during last year (1833), there was a still further decline. Mr. Cook ascribes this diminution to the reduction that has taken place in the price of wheat, which has fallen from 64s. 3d. in 1830 to 52s. 11d. in 1833. Mr. C. farther mentions that, in bad seasons, when grain is soft and damp, the millers consider it advantageous to grind a certain proportion of rice with it. — (*Milburn's Orient. Com.*; *Ainslie's Mat. Ind.*; *Cook's Com. of Great Britain* in 1833; and *private information*.)

The price of rice in bond in the London market, in January, 1834, was as under:—

	<i>L. s. d.</i>	<i>L. s. d.</i>	
Rice, Carolina, new, per cwt.	0 12 0	1 1 0	Duty on paddy, the produce of, and imported from, British possessions, 1d. per quarter.

Bengal, white, do.	0 15 6	0 16 0	Duty on American and other foreign places of growth, 15s. per cwt. — Bengal, and other sorts, 1s. per cwt.
cargo, and ordinary	0 9 0	0 12 0	

RIGA, a city of European Russia, the capital of Livonia, situated on the Duna, about 9 miles from the sea, in lat. $56^{\circ} 56' 5''$ N., lon. $24^{\circ} 0' 4''$ E. Population about 47,000.

Harbour. — A light-house has been erected on Fort Comet, on the western side of the mouth of the river. It has 2 lights: the first, elevated about 104 feet (English) above the level of the sea, may be seen, under favourable circumstances, at the distance of 4 leagues; and the second, elevated about 243 feet, may be seen at the distance of 24 leagues. The bar at the mouth of the river has usually from 12 to 13 feet water; and vessels drawing more than this frequently load and unload part of their cargoes by means of lighters at Bolderaa, a small town on the west side of the river, near its mouth. There is a fairway beacon without the bar, in 5 fathoms water; and within the channel, is buoyed with black and white buoys; the black being left on the right or starboard side when entering, and the white on the larboard. Vessels bound for Riga take pilots at Bolderaa, who carry them to their anchorage. No ballast is allowed to be discharged, except at Poderague. Regulations as to clearing, &c. similar to those at Petersburg. — (*Coulier sur les Phares*, 2d ed.; and *Regulations published by the Russian Authorities*.)

Trade. — Owing to its advantageous situation near the mouth of a great navigable river, the trade of Riga is very extensive; being, of the Russian towns on the Baltic, in this respect second only to Petersburg. The trade is chiefly carried on by foreign merchants, particularly by the English. The principal exports are corn, hemp and flax, linseed, iron, timber, masts, leather, tallow, &c.; the imports are salt, cloth and cotton stuffs, silks, wine, sugar, coffee, and groceries of all sorts, indigo, dye woods, salted herrings, &c.

The mast trade is very extensive. The burghers of Riga send persons who are called mast brokers into the provinces to mark the trees, which are purchased standing. They grow mostly in the districts which border on the Dnieper, are sent up that river to a landing place, transported 30 versts to the Duna, when, being formed into rafts of from 50 to 200 pieces, they descend the stream to Riga. The tree which produces the largest masts is the Scotch fir. Those pieces which are from 18 to 25 inches in diameter are called masts; under those dimensions, spars, or, in England, Norway masts, because Norway exports no trees more than 18 inches in diameter. Great skill is required in distinguishing those masts that are sound from those which are in the least internally decayed. They are usually from 70 to 80 feet in length.

Hemp is brought from the Ukraine and Poland, and requires 2 years in its passage to Riga. The barks in which it is conveyed are from 250 to 300 tons burden, covered with mats sloping like a pent-house roof, and have a false bottom. They ascend the Dnieper and the Duna; but on account of numerous shoals, can only pass the Duna in the spring, or about 3 weeks after the snow begins to melt; and, if they miss that time, are delayed till autumn. The hemp exported from Riga is considered the best in Europe, and is generally about 30 per cent. dearer than that exported from Petersburg. Riga hemp is chiefly used for the shrouds and stays of men-of-war. — (*Coxe's Travels in the North of Europe*, 5th ed. vol. ii. p. 241.)

The best kind of flax shipped from Riga is grown in White Russia, and is called Druara rakitzer; its colour is very white, and the threads long, fine, and loose, but it has sometimes black spots: the next quality, coming from the province of Trockie in Lithuania, is called Lithuanian rakitzer, and is very little inferior to Druana, but its colour is a little brown; of this kind the best sort is Thiesenhausen. The best kind of Courland flax shipped from Riga is Marienburgh; that grown in Livonia is of inferior quality. There are two kinds of linseed: that of the last crop, which is used for sowing; and that of former years, for crushing. To prevent deception, the year of its growth is stamped on the barrel by sworn inspectors (*brackers*). Some hemp-seed is occasionally shipped, mostly to Holland. Riga wheat is very inferior to that of Dantzic. Two descriptions are shipped — one the growth of Russia, the other of Courland; the last is much the best, being larger bodied and of a brighter colour than the Russian; still, however, it makes but indifferent flour. Oats are of a good quality, and are largely exported; peas are also occasionally exported.

In shipping masts, the rest of the cargo generally consists of deals and wainscot logs; the latter are much exported to England, and are very superior. Tallow is not so cheap here as at Petersburg.

Money. — For the monies of Riga, see PETERSBURGH. The current rixdollar of Riga = 3s. 14d. sterling; hence 1*l.* sterling = 6 rixdollars 36 groschen currency; the Riga dollar being divided into 90 groschen.

Weights and Measures. — The commercial pound is divided into 2 marcs, or 32 loths; and also into halves, quarters, &c. It contains 6,452 English grains. Hence 100 lbs. of Riga = 92.17 lbs. avoirdupois = 41.8 kilog. = 86.32 lbs. of Hamburg = 84.64 lbs. of Amsterdam. The lispound = 20 lbs.; the ship pound = 20 lispounds.

The loof is the measure for grain: 48 loofs = 1 last of wheat, barley, or linseed; 45 loofs = 1 last of rye; and 60 loofs = 1 last of oats, malt, and beans. According to Dr. Kelly, the loof = 19375 Winchester bushel; and, consequently, the last of wheat = 11.625 quarters. Nellenbrecher does not value the loof quite so high as Dr. Kelly.

The fuder, the measure for liquids, is divided into 6 ahms, 24 ankers, 120 quarts, or 720 stoofs. The anker = 104 English wine gallons.

The foot of Riga = 10.79 English inches. The ell = 2 feet; the clafter = 6 feet.

I. Account of the Quantities of the Principal Articles exported from Riga during each of the Three Years ending with 1833.

IV. Ships despatched from Riga during the Six Years ending with 1832.

Years.	1827.	1828.	1829.	1830.	1831.	1832
Ships.	1,378	1,180	1,351	1,215	1,573	1,483

RIO DE JANEIRO, the capital of Brazil, situated in lat. $22^{\circ} 54' 15''$ S., lon. $43^{\circ} 15' 50''$ W. Population about 160,000. The harbour of Rio is one of the finest in the world, both as respects capaciousness and security for all sorts of vessels. In coming from the N.E. it is usual to make Cape Frio, in lat. $23^{\circ} 1' 18''$ S., lon. $42^{\circ} 3' 19''$ W., being about 4 leagues nearly E. of Rio. The entrance to the harbour is marked by a remarkable hill in the form of a sugarloaf, 900 feet high, close to its west side; while on the east, or opposite side of the bay, at the distance of about $1\frac{1}{2}$ mile, is the fort of Santa Cruz. But the wood-cut in the next page, taken from a chart published by order of the Brazilian authorities, gives a much better idea of this noble harbour than could be obtained from any description.

Entrance to the Harbour. — Vessels bound for Rio, coming from the N., should, after rounding Cape Frio, steer due W., keeping about 3 leagues from the coast, until they come within 5 or 6 miles of the *Ilha Rasa*, or Flat Island, lying almost due S. from the mouth of the harbour, at the distance of about 3 leagues. A light-house, the lantern of which is said to be elevated nearly 300 feet above the level of the sea was erected on this island in 1829. The light is a revolving one, finishing its revolution in 3 minutes, and exhibiting alternately a white and a red light. There is also a light-house in the fort of Santa Cruz, the light of which is fixed and elevated about 50 feet above the level of the sea. — (*Coutier sur les Phares*, 2d ed.) Having got within 5 or 6 miles of the *Ilha Rasa*, ships may enter by day or by night, the dotted line in the cut marking the fair-way into the harbour. There are no pilots to be met with; and as there are no hidden dangers of any kind, their services are not wanted. On entering, vessels must pass within hail of Fort Santa Cruz, to be ready to answer any questions that may be put to them. They then proceed to Fort Vilganhon, below or opposite to which they must bring to, or come to anchor, allowing no boats to come alongside, but those of the government, until they have received *pratique*, when they will be permitted to proceed to the usual place of anchorage for the merchant shipping.

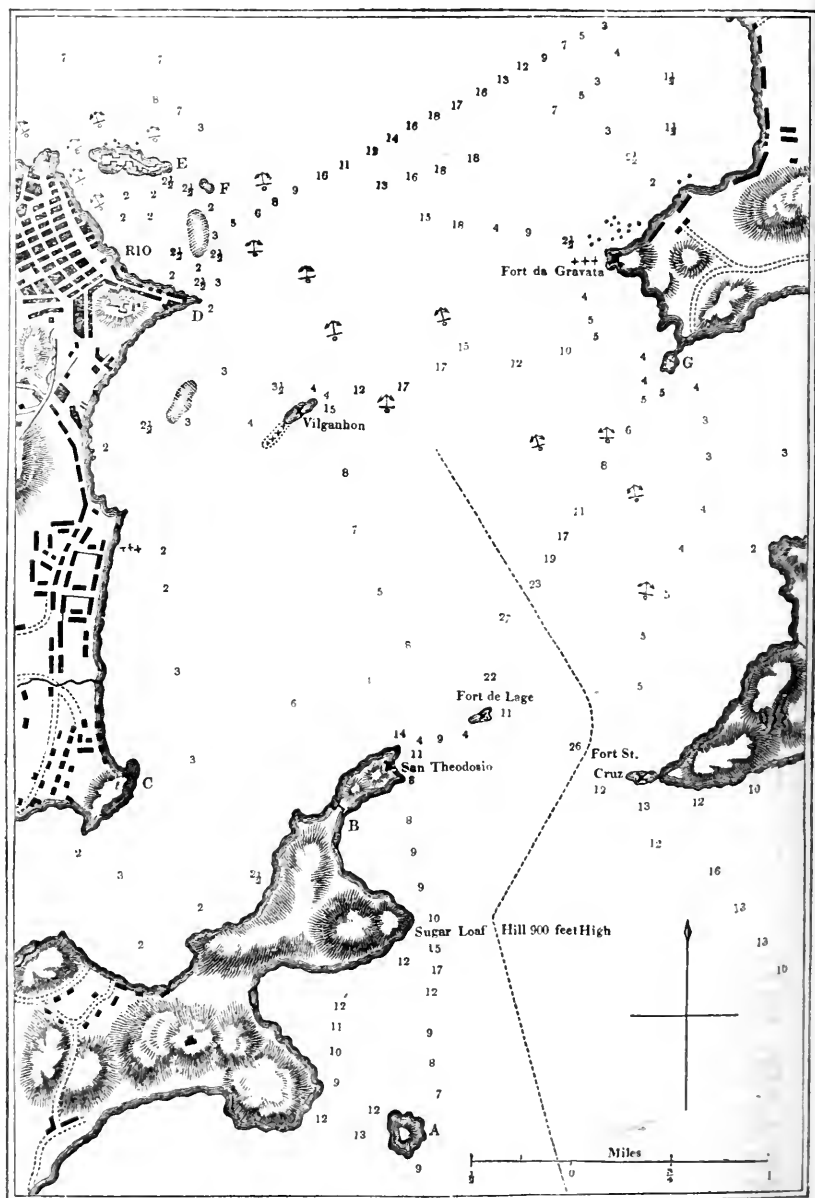

The sea breeze generally sets in about 11 A.M., and lasts till about sunset. It is strong enough to enable ships to overcome the ebb. High water at full and change at 2 in the afternoon.

Trade. — The trade of Rio is extensive, and has increased rapidly of late years. The principal articles of export are coffee, sugar, cotton, hides, rum, tallow, indigo, coarse cotton cloths, gold, diamonds, precious stones, tobacco, cabinet and dye woods, rice, &c. The imports consist principally of cottons, hardware, flour, dried fish, linens, woollens, soap and candles, wines, oils, &c. Until 1830, slaves formed one of the principal articles of import into Rio and other Brazilian ports; so many as 45,000 having been imported in one year, of which Rio received the greater proportion. But, according to a convention entered into with this country, this infamous traffic should have ceased in February, 1830: whether it has really done so is more than we can undertake to affirm.

Comparative Monthly and Yearly Statement of the Coffee, Sugar, and Hides exported from Rio de Janeiro, during the Six Years ending with 1832.

The increase in the exports of sugar and coffee from Brazil during the last 10 years has been quite unprecedented. In 1822, the total export of sugar from the empire was only 40,000 tons, whereas it now amounts to about 75,000 tons. In 1821, the quantity of coffee exported from Rio did not exceed 7,500 tons; but in 1833 it amounted to more than 4 times that quantity, or to about 35,000 tons! The exports of cotton

have also increased, but not so rapidly. The imports of cotton from Brazil to England in 1831, were 31,695,761 lbs., being between a 7th and an 8th of the total quantity we imported that year. In 1832, the imports declined to 20,109,560 lbs.

A considerable part of the extraordinarily rapid increase of the sugar and coffee cultivation in Brazil must be ascribed to the facility with which slaves have recently been imported; and it is possible that the cessation of their importation, supposing the convention to that effect to be executed, may check, for a while, the extension of cultivation in Brazil.

We have derived the following statements, as to the trade of Brazil, from the highest mercantile authority. Of their accuracy there can be no more question than of their interest and importance:—

“Unfortunately, the government of Brazil does not publish any official statements of the trade of the different ports, not even of the amount of exports or imports, so that information on these points can only be drawn from private sources.

“The imports are chiefly from Great Britain, consisting principally of our cotton, linen, woollen, hardware, and other manufactures, amounting annually to about 4,000,000*l*. The remainder of the imports consist of wines, brandies, &c. from Portugal and the Mediterranean; flour from the United States; cod fish from ditto and Newfoundland; with a comparatively small amount of French, German, Swiss, and Indian manufactures, and tea; the latter chiefly through the United States.

“The duties on all imports, without exception, are 15 per cent. on the tariff value, which averages about 20 per cent. on the real value of British goods: those on exports vary at the different ports, and on every description of produce. On coffee they amount to about 10 per cent.; on sugar, 12 per cent. ($\frac{1}{2}$ being paid by the planter). The export duty on cotton has lately been reduced from 20 to about 3 per cent.

“There are no commercial or discount banks in any part of Brazil; but at Rio there is one of issue, the whole of its transactions being with the government.

“The usual mode of selling goods in Brazil is on an open credit of 4 to 8 months, and sometimes even 12 months, the parties paying by weekly or monthly instalments, as they effect sales, generally exceeding the stipulated credit, by 2, 3, and even 6 months, according to the state of markets, without allowing any charge for interest. On the other hand, all produce is bought by the foreign merchants for *cash down*, or, if any credit be given, the usual extra charge is 1 per cent. per month; in fact, the whole commerce of the country is on British capital.

“The usual commissions are, 5 per cent. on the sale of goods; 2½ ditto for guarantee; with 2½ per cent. for the purchase and shipment of produce in return; 5 per cent. when purchased by credits on London: the usance being 60 days after sight.

“The currency of Brazil is chiefly paper and copper, of a very depreciated and base kind, and varying in almost every province. The par of exchange, when the silver currency was maintained, was 67½*d*. and the current rate always above it, say from 70*d*. to 72*d*.; but *now*, owing to the introduction of paper and copper, the exchange has fallen, at Rio, to 36*d*., Bahia 32*d*., Pernambuco 38*d*., and Maranham

* Bag of coffee about 1 cwt. 1 qr. 14 lbs.

† Case of sugar about 15 cwt.

40*d.*; and, at one period, the exchange at Rio fell as low as 20*d.*, owing to the extensive issue of paper by the bank.

"The great difficulties under which our trade with Brazil labours are,—1st. The prohibitory duties chargeable on sugar and coffee, the chief productions of the country; which admit to consumption only cottons and hides, the latter not being wanted; so that, with an export of nearly 4,000,000*l.*, we have no direct means of return for 1-4th the amount, the other 3-4ths being forced into the hands of the Americans, Germans, Swedes, &c. who thus get employment for their shipping, and carry on an extensive commerce, entirely upon British capital, whilst the British merchant is compelled to transfer his property into their hands for 5 or 6 months, as the only means of getting payment for the manufactures he has exported; at the same time that the British consumer at home is compelled to pay, exclusive of the heavy duties, a decidedly higher price for sugar and coffee than is paid by the consumers of any other European state.

"The 2d grievance is the wretched state of the currency in Brazil, which occasions fluctuations in the exchange of from 10 to 20 per cent. in 2 or 3 months, and even 50 per cent. in the course of the year; so that the actual proceeds, in sterling, of any goods sold on credit can never be guessed at till the money is received; there being no discount banks or means of realisation, till the expiration of the credit.

"The Brazilian Regency have at length recommended their currency to the immediate attention of the Assembly; but it may be doubted whether they have either courage or honesty to take any effectual means to eradicate the evil: this can only be done by a return to a gold and silver standard, and a new coinage, calling in the old, one half of which is debased."—(13th of August, 1833.)

	6 foreign.
North of Europe	37
Cape of Good Hope, and Cape Verd Islands	12 British.
	3 French.

From slave settlements	55 Portuguese & Brazilian.
South America	81
Total	410

In 1832, there arrived at Rio 591 vessels; and in 1833, 620. Of the arrivals during the last-mentioned year, 241 were English, including packers, and 161 American. Perhaps not more than 2-3*d.* of the 620 ships would load at Rio; many calling in quest of freights, and for orders, stores, &c. The returns do not include the native coasting vessels.

In order still better to illustrate the trade of Brazil, we take leave to subjoin the following details from *Mr. Cutclough's Travels in South America*. They are neither, however, so recent, nor of such authority, as those already laid before the reader:—"The colonial system, which was strictly preserved until the arrival of the court, kept the country in a state of ignorance of many of those beautiful articles of English manufacture, now so greedily purchased by all. The Brazil trade may be considered as entirely in the hands of the British, as if an exclusive monopoly existed in their favour. Brazil takes from us every thing she requires, excepting wine from Portugal; and the importance of this trade to England may be well conceived, when it is mentioned, that, after the East and West Indies and the United States, it forms the greatest mart for our fabrics, and one that is most rapidly increasing.

"In 1820, the imports of British manufactures amounted to 1,800,000*l.*; in 1821, to 2,230,000*l.* The exports of 1820 were 950,000*l.*; in 1821, 1,300,000*l.*; showing a great and progressive increase.

"Of the amount of imports, about *three fifths* are brought to the capital, owing to the greater consumption, and from its being in communication with the mines, the most inhabited districts of the interior.

"The other nations trading to Brazil exhibit a poor figure after Great Britain. By far the most active of them—the United States—exported to Brazil only to the amount of 320,000*l.*, chiefly in flour, fish, and minor articles. It is impossible to say what may happen, but at present it does not appear that England has much to fear in this quarter. The immense command of capital which our merchants possess strikes all foreigners with astonishment, and forces them to abandon all idea of competition. The trade carried on by the rest of the world amounts, in the aggregate, to little: that of France being chiefly confined to articles of dress and fashion; and of Sweden, to a few ship-loads of iron annually.

"The trade expressly confined to Brazilian vessels is the coasting and African. This latter traffic, it is well known, is now restricted, by treaty, to that part of Africa south of the line, which comprehends, in

fact, almost the whole of the Portuguese possessions. The importation of negroes varies in amount; but of late years it cannot be estimated, on an average, at less than 51,000 into Rio de Janeiro only. It affords too great a return of gain to be easily abandoned; more especially when, strange to say, patriotic feelings are considered, in this instance, to go hand in hand with profit; and when it is imagined, that the moment the trade is prohibited, the prosperity of the country must decay. When it is considered that this number is annually received into the capital, and that there are 3 other ports trading to the same extent, and that scarcely $\frac{2}{3}$ of the negroes taken from the coast live to be landed, the number of negroes carried away by this outlet only in the course of the year appears prodigious.

"Many years since, a considerable capital was employed in the whale fishery. The black whale was extremely common near the mouth of the harbour; but an increasing traffic has driven this animal to the southward, and the only establishments at present are in the province of St. Catharine's. It forms another of the royal monopolies; and, in 1820, was farmed by some Frenchmen.

"The other trade carried on in Brazilian bottoms is very much confined to that with the mother country; its dependencies, as Madeira; and its possessions in Africa and the East. The traffic with China is still continued, but no longer in that way which made Portugal at one time the envy of all maritime nations.

"The internal trade is very much confined to the products of the district of the mines; and is carried on by means of large troops of mules, some of which, from the western provinces of Goaz and Matto Grosso, are 4 months on the journey. It is not easy to learn with accuracy the produce of the diamond mines; as they are worked by government, and strictly monopolised: much smuggling consequently prevails. In some years, the quantity recovered by government has amounted to as much as 4,000 octavas of 18 carats; but these are years of rare occurrence: taking the average, however, of some years, the number of octavas would come to near 1,200. In this quantity there would be, of course, many of large size, adding immensely to their value. It is calculated that about the same quantity is smuggled; and there are strong reasons to suppose, that if no difficulties were thrown in the way, owing to the facility with which they are obtained, the produce of Brazil diamonds, in every way as fine as the Oriental, would have considerable effect on the demand.

"With respect to the quantity of gold which comes from the mines, it is immersed in a certain degree of obscurity. The 1-5th due to government is the principal cause that I could never ascertain, in any mine which I visited, its exact produce. I shall have another opportunity of saying more on this head, and explaining why the produce of gold mines is on the decrease, which I certainly conceive to be the case.

"No silver is produced in Brazil. As there is lead, it would be too much to affirm that none exists; but probably the quantity would be trifling. The silver coin is mostly Spanish dollars, restamped into 3-patac pieces, by which a considerable profit is obtained on each.

"The quantity of precious stones shipped is now very considerable. In most cases they are sent to a losing market; being, in fact, more valuable in Brazil than in London or Paris. Aquamarines — (see BERYL) — of a very large size have been found. In January, 1811, one was found in the Riberao das Americanas, near the diamond district, which weighed 15 lbs.; and in the same place, in the October following, one was discovered weighing 4 lbs. Topazes of fine quality, but seldom large, amethysts, and chrysolites, are also articles of exportation; and at times some fine specimens of these gems are to be met with in the jewellers' shops.

"Correctly speaking, there are no trading companies in Rio de Janeiro: there is a society for effecting maritime assurances, but no other.

"The Bank of Brazil has had very extensive concessions made in its favour, and ought to be in a flourishing state. It has the power of issuing notes; and all disputed monies and property of the deceased and absent (*mortos e ausentes*) must be placed in its hands, and 2 per cent. per annum charged for the care and trouble. This, in addition to the interest which might be obtained for the deposit, would alone, in an active mercantile country, form no inconsiderable revenue. Specie is prohibited from being carried coastwise: merchants who wish to deposit cash in one of the northern ports, where the largest purchases are made, are therefore forced to take hand bills, and pay a premium for them, varying from 3 to 5 per cent.

"Some enormous capitals have been amassed; but generally the speculations of the native merchants are conducted on a very limited scale.

"The legal rate of interest is 6 per cent.; but money can seldom be obtained under 12." — (*Cald-cleugh's Travels in South America*, vol. i. pp. 53 — 59.)

Population of Brazil. — The magnitude of the population of Brazil is involved in great uncertainty. One of the latest estimates is as follows: — Portuguese and creoles, 9,04,000; free mestizos, 600,000; enslaved mestizos, 250,000; free negroes, 180,000; enslaved negroes, 2,500,000; Indians, 450,000; making in all, 5,280,000. — (*Weimar Almanac*, for 1832.) But we incline to think that this estimate is rather beyond the mark.

ROADS, pathways formed through the country with more or less art and care, for facilitating the transit of individuals, carriages, &c. between different places. They are of every variety of form — from rude, narrow, rugged, and unformed paths, carried over mountains, interrupted by every petty rivulet, and almost impracticable to any but foot passengers, to smooth, broad, and level ways, formed of solid materials, winding round or cut through mountains, and carried over swamps and rivers at an immense expense, and admitting of the easy passage of carriages and of all sorts of goods.

The laying out of improved roads, and their construction, forms an important part of what is denominated the science of civil engineering. But as it would be quite foreign to our purpose to enter into any details as to the formation of roads, we shall satisfy ourselves with laying before the reader the following statements as to their importance in a commercial point of view.

Importance and Utility of improved Roads. — Next to the introduction of money, and weights and measures, the formation of good roads and bridges gives the greatest facility to commerce, and contributes more powerfully, perhaps, than any thing else to the progress of improvement. They have been denominated national veins and arteries; and the latter are not more indispensable to the existence of individuals, than improved communications are to a healthy state of the public economy. It were vain to attempt to point out in detail the various advantages derived from the easy means of communication that exist in Great Britain. There is not a single district that is not indebted to others for a large part of its supplies, even of some of the bulkiest commodities. Besides the coal, metals, minerals, timber, corn, &c. conveyed from one part of the empire to another by sea, immense quantities are conveyed from place to place in the interior, by roads

and canals; and every improvement effected in the means of conveyance has obviously the same effect upon the cost of commodities that have to be conveyed, as an improvement in the methods by which they are raised or manufactured.

Wherever the means of internal communication are deficient in a country, the inhabitants must unavoidably disperse themselves over the surface. Cities were originally founded by individuals congregating more, perhaps, for the purpose of national defence and protection, than for any other cause. But in countries where good government is established, and property is secure, men resort to cities only from a sense of the advantages they afford. The scale on which business is here conducted presents facilities that cannot be elsewhere afforded for making a fortune; and the extent to which the subdivision of employments is carried opens a field for the exercise of all sorts of talent; at the same time that it improves and perfects all sorts of arts, whether subservient to industrious or scientific pursuits, or to those of pleasure and dissipation. It is this that attracts the aspiring, the industrious, the gay, and the profligate, to cities, — that fills them with the best and the worst part of the species. The competition that takes place in a great town, — the excitement that is constantly kept up, the collision of so many minds brought into immediate contact, and all endeavouring to outstrip each other in their respective departments, — develops all the resources of the human mind, and renders a great city a perpetually radiating focus of intelligence and invention. There are, however, considerable clogs upon the continued increase of cities. The food and fuel made use of by the inhabitants, and the raw products on which their industry is to be exerted, must all be brought from the country; and according as the size of the city increases, the distances from which its supplies must be brought become so much the greater, that ultimately the cost of their conveyance may be so great as to balance or more the peculiar advantages resulting from a residence in town. Hence the impossibility of a large or even a considerable city existing any where without possessing extensive means of communication either with the surrounding country, or with other countries; and hence, too, the explanation of the apparently singular fact, of almost all large cities having been founded on or near the sea, or a navigable river. Had London been an inland town, 50 miles from the shore, it is abundantly certain that she could not have attained to one third her present size; but the facilities afforded, by her admirable situation on the Thames, for the importation of all sorts of produce from abroad, as well as from other parts of England, will enable her, should her commerce continue to prosper, to add to her colossal magnitude for centuries to come.

But all towns cannot be founded on the sea coast, or the banks of navigable rivers; and the growth of those in inland situations must, in all cases, depend on their means of communicating with the surrounding country. Without our improved roads, the great inland manufacturing towns with which England is studded, such as Manchester, Leeds, Birmingham, Sheffield, Bolton, Preston, &c., could not exist. They enable the inhabitants to obtain the rude products of the soil and the mines almost as cheap as if they lived in country villages. There is thus nothing, or next to nothing, to detract from the advantages which the inventive and enterprising artisan may expect to realise from resorting to these great hives of industry. And, owing to the gigantic scale on which all sorts of industry are conducted in them, the scope afforded for the employment of the most powerful machines, and the appropriation of particular sets of workmen to every separate process, however minute, manufacturing industry is carried to a degree of perfection that almost exceeds belief.

The influence that the growth of a large town has upon agriculture is great and striking. "In the neighbourhood," says Dr. Paley, "of trading towns, and in those districts which carry on a communication with the markets of trading towns, the husbandmen are busy and skilful, the peasantry laborious: the land is managed to the best advantage, and double the quantity of corn or herbage (articles which are ultimately converted into human provision) raised from it, of what the same soil yields in remoter and more neglected parts of the country. Wherever a thriving manufactory finds means to establish itself, a new vegetation springs up around it. I believe it is true, that agriculture never arrives at any considerable, much less at its highest, degree of perfection, when it is not connected with trade; that is, when the demand for the produce is not increased by the consumption of trading cities." — (*Moral Philosophy*, book vi. c. 11.)

But the fact of their being mainly conducive to the growth of cities, is not the only advantage which improved roads confer upon agriculture. Without their aid it would be impossible to carry to distant places sufficient supplies of such bulky and heavy articles as lime, marl, shells, and other manures necessary to give luxuriance to the crops of rich soils, and to render those that are poor productive. Not only, too, would inferior roads lessen the market for farm produce, and consequently the quantity raised, but a larger proportional number of horses or other cattle would be required to convey the diminished produce to market. It is plain, therefore, that good roads are both directly and indirectly a prime source of agricultural improvement; — directly, by

increasing the quantity and reducing the cost of manure, and by increasing the quantity and reducing the cost of conveying farm produce to market; and indirectly, by providing for the growth and indefinite extension of cities and towns, that is, of the markets for agricultural produce.

Increased speed of conveyance is one of the principal advantages that have resulted from the formation of good roads, the invention of steam packets, &c. Suppose that it takes 2 days to travel by an uneven, ill-made road between any 2 places; and that, by improving the road, the journey may be accomplished in 1 day: the effect is the same as if the distance were reduced $\frac{1}{2}$; and there is not only a great saving of time to travellers, but also a great saving of cost from the more speedy conveyance of commodities. This latter is a point of much more importance than is commonly supposed. It is not possible to form any correct estimate of the value of the products that are constantly in the act of being carried from place to place in Great Britain and Ireland. It is certain, however, that it is very great; and every additional facility of conveyance, by bringing such products more rapidly to their destination, and enabling them to be sooner applied to the purposes for which they are intended, renders large quantities of capital available for industrious purposes, that would otherwise be locked up.

Mode of defraying Costs of Roads. — Roads of one sort or other must, of course, exist in every country emerged from barbarism, — but in England, the statute of the 28th of Philip and Mary, which is still in force, is the first legislative enactment in which a regular provision was made for the repair of the roads. The preamble to this statute declares, that the roads were tedious and noisome to travel on, and dangerous to passengers and carriages; and, therefore, it enacts, that in every parish 2 surveyors of the highways shall be annually chosen, and the inhabitants of all parishes obliged, according to their respective ability, to provide labourers, carriages, tools, &c. for *four* days each year, to work upon the roads, under the direction of the surveyors. This system, though in many respects exceedingly defective, was at the time justly considered a great improvement, and answered pretty well till the reign of Charles II., when, owing to the increase of carriages, particularly about London, it became necessary to adopt more efficient measures for the formation and repair of roads; and the plan of imposing tolls upon those who made use of them began then to be adopted. But this system was not carried into full effect, and placed upon a solid footing, till about 1767, when it was extended to the great roads to all parts of the country; the contributions of labour under the act of Philip and Mary being then appropriated entirely to the cross or country roads. A money payment is also very frequently made instead of a contribution in labour.

When the plan for extending turnpike roads from the metropolis to distant parts of the country was in agitation, the counties in the neighbourhood of London petitioned parliament against it, alleging that the remoter counties would be able, from the comparative cheapness of labour in them, to sell their produce in London at a lower rate than they could do; and that their rents would be reduced, and cultivation ruined, by the measure! Luckily this interested opposition proved ineffectual; and instead of being injurious to the counties adjoining the metropolis, the improvement of the roads has been quite as beneficial to them as to those at a distance, inasmuch as, by providing for the indefinite extension of the city, it has rendered it a far better market for their peculiar productions, than it would have been had its growth been checked, which must have been the case long ago, had the improvements in question not been made.

The plan of making and repairing roads by contributions of labour is not peculiar to England, but was at one period general all over Europe. By an act of the Scotch parliament, passed in 1669, all persons engaged in husbandry were obliged to labour 6 days each year, before or after harvest, upon the public roads; the farmers and landlords being, at the same time, obliged to furnish horses, carts, &c. according to the extent of land occupied by them. The inconveniences of such a system are many and obvious. Those who get no pay for their work, and who perform it against their will, waste their time and industry; and there is, besides, a great loss incurred by the interruption of the regular pursuits of the labourer. A sense of these disadvantages led, in the early part of the reign of George III., to a commutation of the labour contribution for a money tax on land, rated according to its valuation in the cess books. This measure has been productive of the best effects. Previously to its taking place, the roads, even in the best cultivated districts of Scotland, were in the worst possible state; now, however, they are about the very best in Europe.

A similar system has been followed on the Continent. When Turgot entered on his administration, he sent a circular letter to the road surveyors and engineers of the different provinces of France, desiring them to transmit estimates, framed on the most liberal scale, of the sums of money for which the usual repairs might be made on the old roads, and the ordinary extent of new ones constructed. The average of the estimates showed that a money contribution of about 10,000,000 livres a year would suffice for

these objects; whereas Turgot showed, that the execution of these repairs and constructions, by contributions of forced labour, or *corvées*, cost not less than 40,000,000 livres! — (*Art. Taxation, Supp. to Ency. Brit.*)

There is still, however, a great deal of labour performed on the cross and country roads of England, under the system established by the act of Philip and Mary. Its continuance is most probably to be ascribed to the want of any ready means for its commutation.

It is the duty of government to furnish assistance towards the formation of roads and bridges in parts of the country where they are necessary, and where the funds required for their formation cannot otherwise be obtained. But it is in such cases extremely desirable, in order to prevent government from being deceived by interested representations, that those more immediately concerned in the undertaking should be bound to contribute a considerable portion of its expense. This has been done in the case of the Highland roads. Down to a very recent period, large tracts in the Highlands were quite inaccessible, and were, consequently, in a great measure shut out from all improvement; while the rugged nature of the country and the poverty of the inhabitants rendered any attempt to construct improved roads an undertaking beyond their means. Under these circumstances, government came forward and engaged to advance $\frac{1}{2}$ the expense of making roads and bridges in certain districts, on condition that the landlords and others interested should advance the other $\frac{1}{2}$, and that the work should be executed under the direction of parliamentary commissioners and engineers. This arrangement has been highly beneficial. Through its means about 600 miles of excellent roads have been constructed; and in consequence of the easy means of communication they afford, a spirit of improvement has been excited even in the wildest and least frequented districts.

Dr. Smith seems to have inclined to the opinion, that the roads of a country would be better attended to, and more economically managed, were they placed under the control of government, than when they are left to be planned and superintended by private individuals. But this opinion does not seem to rest on any good foundation. It is, perhaps, true that a few of the great roads between the principal towns of a county might be better laid out by government surveyors, than by surveyors appointed by the gentlemen of the different counties through which they pass. But these great roads bear but a very small proportion to the total extent of cross and other roads with which every county either is, or ought to be, intersected; and, besides, it is abundantly certain, that when the formation of the great roads is left, as in Great Britain, to the care of those who, either by themselves or their tenants, have to defray the greater part of the expense of their construction and repair, they will be managed, if not with greater skill, at least with far more economy than if they were intrusted to the agents of government. M. Dupin has set this matter in the clearest point of view, in the remarks he has made on the administration of the roads in France and England. In the former they are entirely under the control of government; and the consequence is, that while there is a useless expenditure upon a few great roads, the cross roads are almost entirely neglected, and the facilities of internal intercourse are incomparably inferior to ours.

Sir Henry Parnell, who has published by far the best treatise on road-making in the English language, while he approves of the system of local trusts, proposes that measures should be taken for increasing the responsibility of the trustees, and that every trust should be obliged to submit its accounts to the inspection of some public Board. We have no doubt that this plan would be in several respects advantageous. Perhaps, however, the object in view, in making accounts be submitted to a public Board, might be attained by the erection of local tribunals for their inspection. We should be extremely jealous of any plan, how advantageous soever in other respects, that might lead to the employment of government surveyors generally in the laying out of roads, or to any material abridgment of the powers of the private trusts.

Length of Roads, Cost, &c. — The following details, taken from the report of the committee of the House of Lords on turnpike road trusts, show that, in 1829, the total length of the different paved streets and turnpike roads in England and Wales amounted to 19,798 miles; that the direct expenditure by the trustees, on account of these roads, during the same year, was about 1,500,000*l.*, and the revenue about 1,455,000*l.* But, exclusive of this pecuniary outlay, the value of the work performed on these roads by parishes, and not brought into the charge, is estimated at 100,000*l.*; making the whole expenditure 1,600,000*l.* The length of the various cross roads and other highways is estimated at about 95,000 miles.

Summary Statement of Roads, in England and Wales.

Length of turnpike roads	- - - - - miles, 19,798	Land purchased or damages paid for in getting materials	- - - - - £. 56,263
Number of turnpike trusts	- - - - - 1,119	Repairs to toll-houses, gates, &c.	- - - - - 63,968
Acts of parliament passed	- - - - - 3,783	Salaries to clerks, surveyors, law bills, printing, advertising, stationery, and incidental charges	- - - - - 196,025
Toll gates	- - - - - 4,871	Payments comprising part of the debts or accounts of former years, &c. (as deducted from the accounts delivered to the clerk of the peace)	- - - - - 245,737
Debt	- - - - - £. 7,304,803	The gross expenditure for the year 1829, as delivered to the clerk of the peace by the clerks of the roads	- - - - - 1,678,051
<i>Income in 1829.</i>		Interest not brought into charge in the accounts delivered to the clerk of the peace, but included in the current expenditure	- - - - - 65,274
Income from tolls	- - - - - £. 1,709,011	The net current expenditure of the several turnpike road trusts for the year 1829	- - - - - 1,499,568
— parish compositions received	- - - - - 59,915	<i>Expenditure</i>	
— fines	- - - - - 288	Income	- - - - - £. 1,499,568
— incidental causes	- - - - - 38,648		- - - - - 1,455,291
Rents of toll-gates and parish tolls	- - - - - 59,542	<i>Expenditure above income</i>	
compositions due, but unpaid	- - - - - 7,883		- - - - - £. 44,277
Total income for the year	- - - - - £. 1,156,295		
<i>Expenditure in 1829.</i>			
Interest paid on mortgage debt	- - - - - £. 256,629		
Manual labour	- - - - - 305,175		
Team labour, improvements, materials, and contracts,	- - - - - 578,457		

Tolls.—In fixing the rate of tolls, great care should be taken to keep them as low as possible. When they are either too much multiplied, or too high, they have a very pernicious influence. They then operate as a most oppressive and unequal tax on commerce; and obstruct that intercourse they are intended to promote. The same remark is applicable to all sorts of dock and harbour dues, light-house dues, &c. When confined within due bounds, they cannot justly be objected to; for nothing can be fairer than that those who benefit by such increased facilities and security in the prosecution of their business should pay for them. But whenever they exceed the proper limits, they tempt the navigator to resort to ports where the charges are lower, and to direct his course through more insecure but less costly channels.

Improvement of Roads.—It is not easy for those accustomed to travel along the smooth and level roads by which every part of this country is now intersected, to form any accurate idea of the difficulties the traveller had to encounter a century ago. Roads were then hardly formed; and, in summer, not unfrequently consisted of the bottoms of rivulets. Down to the middle of last century, most of the goods conveyed from place to place in Scotland, at least where the distances were not very great, were carried, not by carts or wagons, but on horseback. Oatmeal, coals, turf, and even straw and hay, were conveyed in this way! At this period, and for long previous, there was a set of single-horse traffickers (cadgers), that regularly plied between different places, supplying the inhabitants with such articles as were then most in demand, as salt, fish, poultry, eggs, earthenware, &c.: these were usually conveyed in sacks or baskets, suspended one on each side the horse. But in carrying goods between distant places, it was necessary to employ a cart, as all that a horse could carry on his back was not sufficient to defray the cost of a long journey. The time that the *carriers* (for such was the name given to those that used carts) usually required to perform their journeys, seems now almost incredible. The common carrier from Selkirk to Edinburgh, *thirty-eight* miles distant, required a *fortnight* for his journey between the two places, going and returning! The road originally was among the most perilous in the whole country; a considerable extent of it lay in the bottom of that district called Gala-water, from the name of the principal stream, the channel of the water being, when not flooded, the track chosen as the most level, and easiest to travel in.

Even between the largest cities, the means of travelling were but little superior. In 1678, an agreement was made to run a coach between Edinburgh and Glasgow, — a distance of 44 miles,—which was to be drawn by *six* horses, and to perform the journey from Glasgow to Edinburgh and back again in *six* days. Even so late as the middle of last century, it took $1\frac{1}{2}$ day for the stage coach to travel from Edinburgh to Glasgow, — a journey which is now accomplished in $4\frac{1}{2}$ or 5 hours.

So late as 1763, there was but one stage coach from Edinburgh to London, and it set out only once a month, taking from 12 to 14 days to perform the journey. At present, notwithstanding the immense intercourse between the two cities by means of steam packets, smacks, &c., 6 or 7 coaches set out each day from the one for the other, performing the journey in from 45 to 48 hours.—(*Robertson's Rural Recol.* pp. 39—41.)

The effects of this extraordinary improvement in the means of travelling have been as striking on the manners as on the industry of all classes. The remark of Dr. Smith, that “man is the least transportable species of luggage,” is no longer true as applied to Great Britain. During spring, the metropolis is crowded with visitors of all ranks and orders from the remotest provinces; and during summer and autumn vast numbers of the citizens are spread over the country. Hence it is, that manners as well as prices are reduced nearly to the same standard. A respectable family in Penzance or Inverness live very much in the same way as a respectable family in London. Peculiarities of all sorts have disappeared; every thing is, as it were, brought to a level; the fashions

* Exclusive of parish labour, valued at 100,000*l.*

and opinions of the metropolis are immediately diffused over every part of the country, while those that originate in the latter powerfully influence the former.

(These details have been partly borrowed from the treatise on *Commerce*, published by the Society for the Diffusion of Useful Knowledge, contributed by the author of this work.)

ROPE consists of hemp, hair, &c. spun into a thick yarn, of which several strings are twisted together by means of a wheel. When made very small, it is called a cord; and when very thick, a cable. All the different kinds of this manufacture, from a fishing-line, or whip-cord, to the cable of a first-rate ship of war, go by the general name of cordage. — (See *CABLE*.)

ROSEWOOD (Ger. *Rosenholz*; Fr. *Bois du rose, de Rhode*; It. *Legno rodie*; Sp. *Leno de rosa*; Port. *Pão de rosado*) is produced in Brazil, the Canary Islands; in Siam, whence it is pretty largely exported by the Chinese; and in other places. It is in the highest esteem as a fancy wood. The width of the log imported into this country averages about 22 inches, so that it must be the produce of a large tree. Rosewood has a slightly bitterish, somewhat pungent, balsamic taste, and fragrant smell, whence its name. It should be chosen sound, heavy, of the deepest colour, in the largest pieces that can be procured, and of the most irregular knotty grain. The small, light-coloured and large shivered pieces should be rejected. The more distinct the darker parts are from the purple red, which forms the ground, the more is the wood esteemed. It is usually cut into veneers of 9 to an inch. — (*Milburn's Orient. Com.*, &c.)

Rosewood is one of the dearest as well as most beautiful of the fancy woods. Its price in bond varies from about 120*l.* to 125*l.* per ton; so that it is principally used in veneering. Its consumption has more than trebled since 1820. At an average of the 3 years ending with 1822, the entries for home consumption were 277 tons a year, whereas they amounted, during the 3 years ending with 1832, to 912 tons a year! This increase is principally to be ascribed to the reduction of the duty, in 1826, from 20*l.* to 10*l.* a ton, — a wise and judicious measure, by which the revenue as well as the consumption has been considerably increased.

ROSIN. "This substance is obtained from different species of fir; as the *Pinus abies, sylvestris, larix, balsamea*. It is well known that a resinous juice exudes from the *pinus sylvestris*, or common Scotch fir, which hardens into tears. The same exudation appears in the *pinus abies*, or spruce fir. These tears constitute the substance called *thus*, or frankincense. When a portion of the bark is stripped off these trees, a liquid juice flows out, which gradually hardens. The juice has obtained different names, according to the plant from which it comes. The *pinus sylvestris* yields common turpentine; the *larix*, Venice turpentine — (see *TURPENTINE*); the *balsamea*, balsam of Canada — (see *BALSAM*), &c. All these juices, which are commonly distinguished by the name of turpentine, are considered as composed of two ingredients; namely, oil of turpentine, and rosin. When the turpentine is distilled, the oil comes over, and the rosin remains behind. When the distillation is continued to dryness, the residuum is known by the name of common rosin, or *colophonium*; but when water is mixed with it while yet fluid, and incorporated by violent agitation, the mass is called *yellow rosin*. During winter, the wounds made in the fir trees become incrustated with a white brittle substance, called *barras* or *galipot*, consisting of rosin united to a small portion of oil. The yellow rosin, made by melting and agitating this substance in water, is preferred for most purposes, because it is more ductile, owing, probably, to its still containing some oil. The uses of rosin are numerous and well known." — (*Thomson's Chemistry*.)

ROTTERDAM, on the north bank of the Maese, in lat. 51° 55' 19" N., lon. 4° 29' 14" E. Population about 60,000. Rotterdam is the second commercial city of Holland. It is more advantageously situated than Amsterdam; being nearer the sea, and the canals which intersect it are so deep as to admit of the largest vessels coming up to the quays and warehouses of the merchants. Its commerce, during the last 15 years, has increased more rapidly than that of any town in Holland. The exports and imports are similar to those of Amsterdam. The white Zealand wheat shipped here is of a peculiarly fine quality; and it is the best market for madder and Geneva. Our imports of madder from the Netherlands, in 1831, amounted to about 18,726 cwt., most of which came from Rotterdam. — (See *MADDER*.) Geneva is sold by the aam; but, for the convenience of smuggling to England, it is divided into ankers and $\frac{1}{2}$ ankers. The legitimate imports of Geneva from the Netherlands, in 1831, amounted to 210,038 gallons.

N. B. — The channel from the sea to Rotterdam is exhibited in the chart of the Dutch coast in the map of Europe in this work.

Monies, Weights, and Measures. — See the article *AMSTERDAM*, for an account of the current monies, weights, and measures of Holland.

Two different commercial lbs. were formerly used at Rotterdam: one was the Amsterdam weight, 100 lbs. of which = 108.93 lbs. avoirdupois; the other, used by retailers, was 5 per cent. lighter, 100 lbs. of it being = 103.48 lbs. avoirdupois.

The Rotterdam last of corn = 10.612 Winchester bushels. The aam = 40 English wine gallons very nearly.

A hogshead of flax-seed contains from $7\frac{1}{2}$ to 8 Winchester

bushels. Rock salt is sold per great hundred of 401 maaten, containing from 21 to 22 tons. Coals per hoed = $\frac{1}{2}$ a chaldron of Newcastle.

The liquid measures were divided in the same manner as at Amsterdam, but were larger; thus, 100 stoops of Rotterdam were = 67 $\frac{1}{2}$ English wine gallons. Brandies were sold per 30 vierfels; whale oil, per 90 stoops; vegetable oils per 500 stoops.

The ell is the same as at Amsterdam. 100 feet of Rotterdam = 109 $\frac{1}{2}$ feet of Amsterdam, or 102 English feet.

Statement of the Quantities of the principal Articles imported into Rotterdam, and of the Stocks on Hand, in 1832 and 1833. — (From the *Circular of Labouchere and Co.*)

RUBY, a precious stone, very highly esteemed; but under this name a variety of minerals have not unfrequently been sold, which differ essentially in their characters.

The *Oriental Ruby* is, in fact, a red variety of the sapphire. When perfect, its colour is a cochineal red, presenting a richness of hue the most exquisite and unrivalled: it is, however, in general, more or less pale, and often mixed with blue; hence it occurs rose red, peach blossom red, and lilac blue, passing into the amethyst. It is harder than any other mineral, except the diamond. Easily frangible. Specific gravity from 3.916 to 4.283. Infusible before the blowpipe. Oriental rubies of 10 carats are extremely rare and valuable. One of 22 grains was sold for 160*l.* Rubies in lots, Indian cut, or small sizes, and of different qualities, are at all times to be had, and sell at from 15*s.* to 65*s.* a carat; but a perfect stone of a carat, or 6 grains, may be deemed rare, and falls little short of the value of the diamond: nay, in some cases, rubies of 2, 3, or 4 carats, if very fine, are much scarcer, and even more valuable, than diamonds of equal weight. The finest ruby in England, or, perhaps, in Europe, is in the collection of the late Mr. Hope, author of "Anastasis."

There are two other species of ruby, the *Spinelle* and *Balaïs*. When perfect, the *Spinelle* is a gem of great value and scarcity. Its colour is a fine full carmine or rose red, but it never presents that rich mellow tinge that attends the *Oriental ruby*. It is also inferior to the latter in hardness and specific gravity. Stones of 3 carats and upwards are very rare and valuable.

The *Balaïs Ruby* is a pale variety of the spinelle. It varies in colour from light red to yellowish red. Though not so rare as the spinelle, it is by no means common. It is much admired for its agreeable tinge of colour; and, when pure and perfect, fetches a very high price; though considerably less than the other varieties.

Rubies are not found in any considerable quantity except in Ava. — (See *SAPPHIRE*.) — (*Mawe on Diamonds*, 2d ed. pp. 90. 101.; *Thomson's Chemistry*.)

RUM, a well known and highly esteemed spirituous liquor, imported from the West Indies, of which it forms one of the staple products. It is obtained, by means of fermentation and distillation, from molasses, the refuse of the cane juice, and portions of the cane, after the sugar has been extracted. The flavour and taste peculiar to rum are derived from the essential oils carried over in distillation. When the distillation has been carelessly performed, the spirit contains so large a quantity of the grosser and less volatile part of the oil as to be unfit for use till it has attained a considerable age. When it is well rectified, it mellows much sooner. Rum of a brownish transparent colour, smooth oily taste, strong body and consistence, good age, and well kept, is the best. That of a clear, limpid colour, and hot pungent taste, is either too new, or mixed with other spirits. Jamaica rum is the first in point of quality; the Leeward Island rum, as it is called, being always inferior to it, both in flavour, strength, and value. The price of the latter is usually 20 per cent. below that of the former. We import all our rum in puncheons, containing from 84 to 90 gallons each. It is customary, in some of the West India islands, to put sliced pine-apples in puncheons of rum: this gives the spirit the flavour of the fruit; and hence the designation, *pine-apple rum*.

Rum is said to be much adulterated by the retail dealers in England, sometimes with corn spirit; but if done with molasses spirit, the tastes of both are so nearly allied, that the cheat is not easily discovered.

Consumption of, and Duties upon, Rum, &c.—The following Tables show the quantity of rum consumed in Great Britain and Ireland since 1800, the rates of duty charged upon it, and the produce of the duties; the quantities derived from our different colonies last year, and the countries to which the excess of imports has been again exported, &c.

I. Account, stated in *Imperial Proof Gallons*, of the Rum annually entered for Home Consumption in the United Kingdom, from 1800 to 1832, both inclusive, distinguishing England, Ireland, and Scotland; the Rates of Duty payable respectively thereon; the Produce of the Duties; and the Price of Rum in Bond since 1814. (This account has been prepared partly from published, and partly from unpublished *official* documents. The column of prices has been supplied principally by Mr. Cook.)

Though rum has not been so much over-taxed as brandy, geneva, and wine, still it seems pretty clear that even, in its case, taxation has been carried far beyond its proper limits. During the 3 years ending with 1802, when the duty in Great Britain was about 9s. a gallon, and in Ireland 6s. 8 $\frac{3}{4}$ d., the consumption of the United Kingdom amounted to 3,150,000 gallons a year; while, notwithstanding the great increase of population, during the 3 years ending with 1823, when the duty in Great Britain was 13s. 11 $\frac{1}{2}$ d. a gallon, and in Ireland 12s. 8 $\frac{3}{4}$ d., the annual consumption amounted to only 2,307,000 gallons! The reduction of the duty in 1826 to 8s. 6d. increased the consumption from about 2,500,000 to above 3,600,000 gallons in 1830. But 6d. having been added to the duty in 1830, the consumption, influenced no doubt partly by this, but probably also by other circumstances, has since declined. The great demand for rum from 1811 to 1815 was occasioned chiefly by the high price and inferior quality of the British spirits that were then manufactured.

The decrease in the consumption of rum in Ireland is most striking. Unfortunately, however, this is not the only instance the sister kingdom affords of the destructive effects of oppressive taxes. The excessive additions made to the duties on brandy, wine, sugar, &c. since 1805, have had similar effects; the quantity of these articles consumed in Ireland being *decidedly less now than it was 30 years ago!* — (See BRANDY, SUGAR, &c.) Exorbitant taxes have gone far to deprive the Irish of every comfort; and, consequently, to take from them some of the most powerful incentives to industry and good conduct. The poverty of the people has set at nought the calculations of our finance ministers; every increase of taxation in Ireland having produced a diminution of revenue and an increase of crime! Surely it is high time to abandon so odious a system; particularly after the experience of the beneficial effects that have resulted from the diminution of the spirit duties. As a means of raising revenue, the taxation of Ireland is utterly ineffective; but the wit of man never contrived any thing better fitted to produce barbarism and disaffection.

Rum, the produce of the British possessions in America, is not liable to the duty charged on sweetened spirits, unless the actual strength exceed the strength denoted by Sykes's hydrometer by more than 10 degrees per cent.; and in lieu of such duty there shall be charged upon every degree per cent. more than 8 pence, and not more than 10 degrees, by which the actual strength shall exceed the strength denoted

by Sykes's hydrometer, a duty of 9s. 6d. : provided, that if the importer cannot make a perfect entry thereof for payment of duty on the actual strength, he may demand in writing, upon the entry, that trial be made of the actual strength (he paying the expenses of such trial), instead of entering such rum for the payment of duty upon any stated number of such excessive degrees of strength : provided also that all trials of actual strength of such rum shall be made by some skilful person appointed by the commissioners of customs for such purpose. — (7 Geo. 4. c. 48. § 31.)

Rum, the produce of the British plantations, must be imported in casks containing not less than 20 gallons. — (3 & 4 Will. 4. c. 52.) But rum in casks capable of containing 20 gallons, may be imported on the officer being satisfied that the deficiency has been wholly occasioned by absorption or leakage, and not by abstraction. — (Customs Min. 24th of March, 1831.)

Rum in bonded warehouses may be drawn off into casks containing not less than 20 gallons each, as stores for ships, and may be delivered into the charge of the searcher, to be shipped as stores for any ship, without entry or payment of duty, the same being duly borne upon the victualling bill of such ships respectively. — (3 & 4 Will. 4. c. 57.)

Rum of the British plantations in bonded warehouses may also be drawn off into reputed quart or reputed pint bottles, for the purpose of being exported from the warehouse. — (3 & 4 Will. 4. c. 57.)

On applications referring to a former order allowing the admixture of rums of different strengths for exportation, and praying that the rum remaining in the vats after the operation of racking might be admitted for home consumption, the Board were of opinion that the request might be complied with, to the extent of an ullage of 20 gallons, the legal quantity allowed to be exported, and that the duty should be paid, according to the strength, at the time of delivery of the said rum. — (Min. Com. Cus. 27th of Sept. 1837.)

Before any rum shall be entered as being the produce of any British possession in America, or of the Mauritius, the master of the ship importing the same must deliver a certificate of origin to the collector or comptroller, and subscribe a declaration that the goods are the produce of such place. — (3 & 4 Will. 4. c. 52. § 37.; see *ante*, 660.)

RUSSIA COMPANY, a regulated company for conducting the trade with Russia. It was first incorporated by charter of Philip and Mary, sanctioned by act of parliament in 1566. The statute 10 & 11 Will. 3. c. 6. enacts, that every British subject desiring admission into the Russia Company shall be admitted on paying 5*l*.; and every individual admitted into the Company conducts his business entirely as a private adventurer, or as he would do were the Company abolished.

Table of Duties payable to the Russia Company.

	s.	d.			s.	d.
Aniseed	-	-	the cwt.	-	0	3
Ashes, pearl and pot	-	-	the ton	-	0	9
Books, bound	-	-	the cwt.	-	0	3
unbound	-	-	the cwt.	-	0	2
Bristles	-	-	the dozen lbs.	-	0	0½
Castoreum	-	-	the lb.	-	0	1
Caviare	-	-	the cwt.	-	0	2
Cor dage	-	-	the cwt.	-	0	2
Down	-	-	the 100 lbs.	-	0	4
Feathers, bed	-	-	the cwt.	-	0	4
Flax	-	-	the ton	-	0	9
Hair, cow or ox	-	-	the cwt.	-	0	2
Hemp	-	-	the ton	-	0	7
Hides, of cows or horses, undressed each	-	-	-	-	0	0½
red or Muscovy	-	-	each	-	0	1
Iron	-	-	the ton	-	0	5

Staves	-	-	the 120	-	0	1
Tar	-	-	the last	-	0	2
Wainscot logs	-	-	the load	-	0	2

All goods not enumerated, pay 1-8th per cent. *ad valorem* on the declaration of the importer.

RUSSIA LEATHER (Fr. *Cuir de Russie*; Ger. *Juften*; It. *Cuojo di Russia*; Pol. *Jachta*; Rus. *Juft*, *Youft*; Sp. *Moscovia*), the tanned hides of oxen and other kine, denominated by the Russians *youfts*, or *juffs*, — a designation said to be derived from their being generally manufactured in pairs. The business of tanning is carried on in most towns of the empire, but principally at Moscow and Petersburg. Russia leather is soft, has a strongly prominent grain, a great deal of lustre, and a powerful and peculiar odour. It is principally either red or black : the former is the best, and is largely used in this and other countries in bookbinding; for which purpose it is superior to every other material. The black is, however, in very extensive demand in Russia; large quantities being made up into boots and shoes. The process followed by the Russians in the preparation of this valuable commodity has been frequently described; but notwithstanding this circumstance, and the fact that foreigners have repeatedly engaged in the business in Russia, with the intention of making themselves masters of its details, and undertaking it at home, the efforts made to introduce the manufacture into other countries have hitherto entirely failed. One of the best tests of genuine Russia leather is its throwing out a strong odour of burnt hide upon being rubbed a little. — (Ricard, *Traité Général du Commerce*, tome i. p. 275. ed. 1781.)

We borrow from Mr. Borrisow's work on the *Commerce of Petersburg* the following details with respect to this article: — Russia leather forms one of the principal export commodities of Petersburg.

But since the ports of the Black Sea have been opened, the exports of leather from this port have considerably decreased; Italy, the principal consumer, supplying its wants from Odessa and Taganrog, more easily, cheaply, and expeditiously than from Petersburg. The chief exportation from the latter is to Prussia, Germany, and England. Frankfort on the Maine and Leipzig are of great importance as respects the trade in Russia leather, on account of the fairs held in them.

Juffs are never bought on contract, but always on the spot at cash prices. It nevertheless often happens that agents, in order to secure a lot of juffs, pay a certain sum in advance, and settle for the amount at the first market prices; no prices being fixed in the months of January, February, March, and sometimes even April.

Juffs are assorted or *braked* when received, according to their different qualities, into *Gave*, *Rosval*, *Majja*, and *Domashna*. The three first sorts are again divided into *heavy* and *tight Gave*, *heavy* and *tight Rosval*, &c. *Domashna* is the worst, and consequently the cheapest sort. It often happens that juffs are bought unsorted, and then the prices are regulated according as the quantity of *Domashna* contained in the lot is greater or less. Persons well acquainted with the nature of Russia leather prefer purchasing it in this state.

Juffs are sold by the pood, which consists, as it is commonly expressed, of $4\frac{1}{2}$, $4\frac{1}{2}$, $5\frac{1}{2}$, and $5\frac{1}{2}$ hides. By this is understood, that so many hides make a pood, calculated upon the whole lot; and it is to be observed that the lightest juffs are esteemed the best in quality. Heavy juffs, or those of 4 and $4\frac{1}{2}$ hides, are shipped for Italy: the Germans, on the contrary, prefer the lighter sort.

Juffs are packed in rolls, each containing 10 hides; and from 10 to 15 of these rolls are packed together in a bundle, which is well secured by thick matting. There are red, white, and black juffs; but the red are most in demand. Their goodness is determined by their being of a high red colour, of equal size, and unmixed with small hides: they must also be free from holes, well stretched, and equally thin. In a well finished lot, no thick head or feet parts should be found. If spots resembling flowers are seen on the red hides, it is an additional sign of their good quality; and they are then called *bloomed juffs*. The inside should be clean, soft, and white, and, when taken in the hand, should feel elastic. The best connoisseurs of Russia leather can nearly determine the quality by the smell alone.

Great attention must be paid, in shipping juffs, to secure them from being wetted, as damp air alone is sufficient to injure them.

Sixty rolls of juffs make a last; 88 poods nett weight, when shipped for Italy, make a last; and 44 poods a ton in England.

The exports of juffs from Russia, in 1831, were 463 bales, 261,240 skins, and 80,000 poods. Their aggregate value was 3,464,209 roubles.

RYE (Ger. *Roggen*, *Rocken*; Du. *Rog*, *Rogge*; Fr. *Seigle*; It. *Segale*, *Segala*; Sp. *Centeno*; Rus. *Rosch*, *Sel*, *Jar*; Lat. *Secale*), according to some, is a native of Crete; but it is very doubtful if it be found wild in any country. It has been cultivated from time immemorial, and is considered as coming nearer in its properties to wheat than any other grain. It is more common than wheat in many parts of the Continent; being a more certain crop, and requiring less culture and manure. It is the bread corn of Germany and Russia. In Britain it is now very little grown; being no longer a bread corn; and, therefore, of less value to the farmer than barley, oats, or peas.—(*Loudon's Ency. of Agriculture*.)

For the regulations as to the importation and exportation of rye, see CORN LAWS AND CORN TRADE.

S.

SABLE (Ger. *Zoel*; Fr. *Zibelline*; It. *Zibellino*; Rus. *Sohol*), an animal of the weasel tribe, found in the northern parts of Asiatic Russia and America, hunted for the sake of its fur. Its colour is generally of a deep glossy brown, and sometimes of a fine glossy black, which is most esteemed. Sable skins have sometimes, though very rarely, been found yellow, and white. The finer sorts of the fur of sables are very scarce and dear.—(See FUR TRADE.)

SADDLES (Fr. *Selles*; Ger. *Sattel*; It. *Selle*; Rus. *Sidla*; Sp. *Selles*), seats adapted to the horse's back, for the convenience of the rider. Those made in England are reckoned the best. Sherborne and Lynn are particularly remarkable for this manufacture. The hogskins, which, when tanned, are used for the seat of the saddle, are mostly imported from Russia.

SAFFLOWER, or **BASTARD SAFFRON** (Ger. *Safflor*; Du. *Saffloer*, *Basterd Saffran*; Fr. *Cartame*, *Saffran batard*; It. *Zaffrone*; Sp. *Alazor*, *Azafran bastardo*; Rus. *Polerroi*, *Prostoi schaffran*), the flower of an annual plant (*Carthamus tinctorius* Lin.) growing in India, Egypt, America, and some of the warmer parts of Europe. It is not easily distinguished from saffron by the eye, but it has nothing of its smell or taste.

The flowers, which are sometimes sold under the name of *saffranon*, are the only parts employed in dyeing. They yield two sorts of colouring matter: one soluble in water, and producing a yellow of but little beauty; the other is *resinous*, and best dissolved by the fixed alkalis: it is this last which alone renders safflower valuable in dyeing; as it affords a red colour exceeding in delicacy and beauty, as it does in costliness, any which can be obtained even from cochineal, though much inferior to the latter in durability. The colour of safflower will not bear the action of soap, nor even that of the sun and air for a long time; and being very costly, it is principally employed for imitating upon silk the fine scarlet *ponceau* of the French) and rose colours dyed with cochineal upon woollen cloth.

The fine rose colour of safflower, extracted by crystallised soda, precipitated by citric acid, then slowly dried, and ground with the purest talc, produces the beautiful *rouge* known by the name of *rouge végétale*.

Safflower should be chosen in flakes of a bright pink colour, and of a smell somewhat resembling tobacco. That which is in powder, dark coloured, or oily, ought to be rejected.—(*Hasselquist's Voyages* Eng. ed. p. 252; *Bancroft's Permanent Colours*, vol. i. pp. 286—289; *Milburn's Orient. Com.*)

Of 2,772 cwt. of safflower imported in 1831, 2,436 came from the East Indies; but we occasionally import considerable quantities from the United States and Egypt. The price of safflower in bond varies from 6*l.* to 9*l.* 10*s.* a cwt.

Notwithstanding the limited use of safflower, its recent history may be quoted in illustration of the beneficial effects of moderate duties. At an average of the 3 years ending with 1822, when the duty was 8*s.* 9*d.* a cwt., the entries for home consumption were at the rate of 1,997 cwt. a year. In 1823, the duty was reduced to 5*s.*, and in 1826 to 2*s.* 6*d.* a cwt.; and at an average of the 3 years ending with 1832, the entries for home consumption were 2,116 cwt. a year. The duty has since been reduced to 1*s.* a cwt.

SAFFRON (Ger. *Saffran*; Du. *Safran*; It. *Zafferano*; Sp. *Saffron*; Fr. *Azafran*; Rus. *Schafra*), a sort of cake prepared from the stigmas, with a proportion of the style, of a perennial bulbous plant (*Crocus sativus* Lin.) cultivated to a small extent in Cambridgeshire. It is also imported from Sicily, France, and Spain; but the English, as being fresher, more genuine, and better cured, is always preferred. When good, saffron has a sweetish, penetrating, diffusive odour; a warm, pungent, bitterish taste; and a rich, deep orange red colour. It should be chosen fresh, in close, tough, compact cakes, moderately moist, and possessing in an obvious degree all the above mentioned qualities. The not staining the fingers, the making them oily, and its being of a whitish yellow or blackish colour, indicate that it is bad, or too old. Saffron is used in medicine, and in the arts; but in this country the consumption seems to be diminishing. It is employed to colour butter and cheese, and also by painters and dyers. — (*Thomson's Dispensatory*; *London's Ency. of Agriculture*.)

SAGAPENUM (Arab. *Sugbenj*), a concrete gum-resin, the produce of an unknown Persian plant. It is imported from Alexandria, Smyrna, &c. It has an odour of garlic; and a hot, acrid, bitterish taste. It is in agglutinated drops or masses, of an olive or brownish yellow colour, slightly translucent, and breaking with a horny fracture. It softens and is tenacious between the fingers, melts at a low heat, and burns with a crackling noise and white flame, giving out abundance of smoke, and leaving behind a light spongy charcoal. It is used only in medicine. — (*Thomson's Dispensatory*.)

SAGO (Malay, *Sagu*; Jav. *Sagu*), a species of meal, the produce of a palm (*Metroxylon Sagu*) indigenous to and abundant in such of the Eastern islands as produce spices, where it supplies a principal part of the farinaceous food of the inhabitants.

The tree, when at maturity, is about 30 feet high, and from 18 to 22 inches in diameter. Before the formation of the fruit, the stem consists of an external wall about 2 inches thick, the whole interior being filled up with a sort of spongy medullary matter. When the tree attains to maturity, and the fruit is formed, the stem is quite hollow. Being cut down at a proper period, the medullary part is extracted from the trunk, and reduced to a powder like sawdust. The filaments are next separated by washing. The meal is then laid to dry; and being made into cakes and baked, is eaten by the islanders. For exportation, the finest sago meal is mixed with water, and the paste rubbed into small grains of the size and form of coriander seeds. This is the species principally brought to England, for which market it should be chosen of a reddish hue, and readily dissolving in hot water into a fine jelly. Within these few years however, a process has been invented by the Chinese for refining sago, so as to give it a fine pearly lustre; and the sago so cured is in the highest estimation in all the European markets. It is a light, wholesome, nutritious food. It is sent from the islands where it is grown to Singapore, where it is granulated and bleached by the Chinese. The export trade to Europe and India is now principally confined to that settlement. — (*Ainslie's Mat. Indica*; *Crawford's East. Archip.* vol. i. pp. 383—393., vol. iii. p. 348.; *Bell's Review of the Commerce of Bengal*, &c.)

The consumption of sago has been about trebled during the last dozen years; having amounted to 1,379 cwt. a year at an average of the 3 years ending with 1822, and to 3,859 cwt. a year at an average of the 3 years ending with 1832. This large increase is wholly ascribable to the reduction in the interval of the oppressive duties by which the article was formerly loaded. — (*Papers published by the Board of Trade*.) The price of common sago in bond varies from 12*s.* to 1*l.*; while pearl sago fetches from 15*s.* to 1*l.* 15*s.* a cwt.; but the price is liable to great fluctuation.

SAIL, a coarse linen or canvass sheet attached to the masts and yards of ships, the blades of windmills, &c., to intercept the wind and occasion their movement.

Foreign sails, when imported by, and fit and necessary for, and in the actual use of any British ship, are exempted from duty; but when otherwise disposed of, they pay a duty of 20 per cent. *ad valorem*. — (*9 Geo. 4. c. 76. § 12.*)

Sails and cordage of British manufacture, exported from Great Britain to the colonies, and afterwards imported into the United Kingdom, are in all cases, other than those in which they are imported *by bill of store*, to be deemed foreign; and such sails and cordage, although not liable to duty so long as the vessel continues to belong to the colony, become subject to the duties in question as soon as the vessel becomes the property of persons residing in this country. — (*Treasury Order*, 29th of Jan. 1828.)

SALEP, a species of powder prepared from the dried roots of a plant of the orchis kind (*Orchis mascula* Lin.). That which is imported from India is in white oval pieces, hard, clear, and pellucid, without smell, and tasting like tragacanth. As an article of diet, it is said to be light, bland, and nutritious. The plant thrives in England, but it is not cultivated to any extent; and very little is imported. — (*Ainslie's Mat. Indica*; *Milburn's Orient. Com.*)

SALMON (Ger. *Lachs*, *Salz*; Fr. *Saumon*; It. *Sermone*, *Salamone*; Sp. *Salmon*; Rus. *Lemga*). This capital fish is too well known to require any description. It is found only in northern seas, being unknown in the Mediterranean and other warm regions. In this country it is an article of much value and importance. It is exceedingly abundant in Japan and Kamtschatka.

"Salmon fisheries," Marshall observes, "are copious and constant sources of human food; they rank next to agriculture. They have, indeed, one advantage over every other internal produce, — their increase does not lessen other articles of human subsistence. The salmon does not prey on the produce of the soil, nor does it owe its size and nutritive qualities to the destruction of its compatriot tribes. It leaves its native river at an early state of growth; and going, even naturalists know not where, returns of ample size, and rich in human nourishment; exposing itself in the narrowest streams, as if nature intended it as a special boon to man. In every stage of savageness and civilisation, the salmon must have been considered as a valuable benefaction to this country."

Being rarely caught, except in estuaries or rivers, the salmon may be considered in a great degree as private property. The London market, where the consumption is immense, is principally supplied from the Scotch rivers. The Tweed fishery is the first in point of magnitude of any in the kingdom; the take is sometimes quite astonishing, several hundreds having been frequently taken by a single sweep of the net! Salmon are despatched in fast sailing vessels from the Spey, the Tay, the Tweed, and other Scotch rivers, for London, packed in ice, by which means they are preserved quite fresh. When the season is at its height, and the catch greater than can be taken off fresh, it is salted, pickled, or dried for winter consumption at home, and for foreign markets. Formerly, such part of the Scotch salmon as was not consumed at home, was pickled and kitted after being boiled, and was in this state sent up to London under the name of Newcastle salmon; but the present method of disposing of the fish has so raised its value, as to have nearly deprived all but the richer inhabitants in the environs of the fishery of the use of salmon. Within the memory of many now living, salted salmon formed a material article of household economy in all the farm-houses in the vale of the Tweed; inasmuch, that in-door servants used to stipulate that they should not be obliged to take more than two weekly meals of salmon. Its ordinary price was then 2s. a stone of 19 lbs.; but it is now never below 12s., often 16s., and sometimes 42s. a stone! This rise in the price of the fish has produced a corresponding rise in the value of the salmon fisheries, some of which yield very large rents. The total value of the salmon caught in the Scotch rivers has been estimated at 150,000*l.* a year. There are considerable fisheries in some of the Irish and English rivers; but inferior to those of Scotland. — (*London's Ency. of Agriculture*; *General Report of Scotland*, vol. iii. p. 327.)

Decrease of the Supply of Salmon, Poaching, &c. — The decrease of salmon in the English and Scotch rivers, particularly of late years, is a fact as to which there can be no manner of doubt. Much unsatisfactory discussion has taken place as to its causes, which are, probably, of a very diversified character. A good deal has been ascribed to the increase of water machinery on the banks of the different rivers; but we hardly think that this could have much influence, except, perhaps, in the case of the smaller class of rivers. *Weirs*, or salmon traps, have also been much objected to; though, as we have been assured, with still less reason. On the whole, we are inclined to think that the falling off in the supply of this valuable fish is principally to be ascribed to the temptation to over-fish the rivers, caused by the extraordinary rise in the price of salmon; to the prevalence of poaching; and, more than all, to the too limited duration of the *close time*. In 1828, after a great deal of discussion and inquiry, an act was passed (9 Geo. 4. c. 39.), which has done a good deal to remedy these defects — in so far, at least, as respects the Scotch fisheries. The rivers are to be shut from the 14th of September to the 1st of February; and every person catching or attempting to catch fish during that period is to forfeit not less than 1*l.* and not more than 10*l.* for every offence, besides the fish, if he have caught any, and such boats, nets, or other implements, as he may have made use of. Pecuniary penalties are also inflicted upon poachers and trespassers; and provision is made for the watching of the rivers. We understand that this act has had a very good effect; though it is believed that it would be better were the *close time* extended from the 1st of September to the middle of February.

It is enacted by stat. 1 Geo. 1. st. 2. c. 18., that no salmon shall be sent to any fishmonger or fish-seller in England, of less than 6 lbs. weight, under a penalty of 5*l.* The 58 Geo. 3. c. 43. authorises the justices at quarter sessions to appoint conservators of rivers, and to fix the beginning and termination of the *close time*. The penalty upon poaching and taking fish in *close time* is by the same act fixed at not more than 10*l.* and not less than 5*l.*, with forfeiture of fish, boats, nets, &c.

SALONICA, a large city and sea-port of European Turkey, at the north-east extremity of the gulf of the same name, in lat. 40° 38' 47" N., lon. 22° 57' 13" E. Population estimated at 70,000. There is no port at Salonica, but there is excellent anchorage in the roads opposite to the town. The access to them is by no means difficult. Pilots, however, are, for the most part, employed; and of these, some are always on the look-out. During that period of the late war when the anti-commercial system of Napoleon was at its height, Salonica became a great *dépôt* for British goods; whence they were conveyed to Germany, Russia, and other parts of Europe. At all times, however, Salonica has a considerable trade. The exports principally consist of wheat, barley, and Indian corn, timber, raw cotton, wool, raw silk, wax, and tobacco. The average exportation of cotton is said to be about 100,000 bales; of tobacco about 30,000 bales; each bale containing about 275 lbs. The export of wool is said to amount to about 1,000,000 lbs. The imports are sugar, coffee, dye woods, indigo, muslins, printed calicoes, iron, lead, tin, watches, &c.

Arrivals. — In 1831, there arrived at Salonica 535 vessels, of the burden of 31,205 tons.

Money, Weights, and Measures. — Accounts are kept in piastres of 40 paras, or 120 aspers. The coins are those of Constantinople; which see.

The weights and measures are the same as those of Smyrna, except that the kisloz, killow, or corn measure of Salonica, = 378 kisloz of Smyrna.

SALT (Ger. *Salz*; Du. *Zout*; Fr. *Sel*; It. *Sale*; Sp. *Sal*; Rus. *Sol*; Lat. *Sta*; Arab. *Mell*; Chin. *Yen*; Hind. *Nimmuck*; Per. *Nun*), the *chloride of sodium* of modern chemists, has been known and in common use as a seasoner and preserver of food from the earliest ages. Immense masses of it are found in this and many other countries, which require only to be dug out and reduced to powder. In that state it is called

rock-salt. The water of the ocean also contains a great deal of salt; to which, indeed, it owes its taste, and the power which it possesses of resisting freezing till cooled down to 28.5°. When this water is sufficiently evaporated, the salt precipitates in crystals. This is the common process by which it is obtained in many countries. There are various processes by which it may be obtained quite pure. Common salt usually crystallises in cubes. Its taste is universally known, and is what is strictly denominated *salt*. Its specific gravity is 2.125. It is soluble in 2.82 times its weight of cold water, and in 2.76 times its weight of boiling water. — (*Thomson's Chemistry*.)

Besides its vast utility in seasoning food, and preserving meat both for domestic consumption and during the longest voyages, and in furnishing muriatic acid and soda, salt forms a glaze for coarse pottery, by being thrown into the oven where it is baked; it improves the whiteness and clearness of glass; it gives hardness to soap; in melting metals, it preserves their surface from calcination, by defending them from the air, and is employed with advantage in some assays; it is used as a mordant, and for improving certain colours; and enters more or less into many other processes of the arts. Many contradictory statements have been made as to the use of salt as a manure. Probably it may be advantageous in some situations, and not in others.

Salt Mines, Springs, &c. — The principal salt mines are at Wielitka in Poland, Catalonia in Spain, Altemonte in Calabria, Jászow in Hungary, in many places in Asia and Africa, and in Cheshire in this country. The mines at Wielitka are upon a very large scale; but the statements that have frequently been published of their containing villages, inhabited by colonies of miners who never saw the light, are altogether without foundation. These mines have been wrought for more than 600 years. — (*Coke's Travels in the North of Europe*, vol. i. p. 149. 8vo. ed.)

The salt mines in the neighbourhood of Northwich in Cheshire are very extensive. They have been wrought since 1670; and the quantity of salt obtained from them is greater, probably, than is obtained from any other salt mines in the world. In its solid form, when dug from the mine, Cheshire salt is not sufficiently pure for use. To purify it, it is dissolved in sea water, from which it is afterwards separated by evaporation and crystallisation. The greater part of this salt is exported.

Salt springs are met with in several countries. Those in Cheshire and Worcestershire furnish a large proportion of the salt made use of in Great Britain. The brine, being pumped up from very deep wells, is evaporated in wrought iron pans from 20 to 30 feet square and 10 or 12 inches deep, placed over a furnace.

Most of the salt used in Scotland previously to the repeal of the duty, was obtained by the evaporation of sea water nearly in the way now mentioned; but several of the Scotch salt works have since been relinquished.

In warm countries, salt is obtained by the evaporation of sea water by the heat of the sun; and the crystals of salt made in this way are more perfect, and purer, from the greater slowness of the process. French salt is manufactured in this mode, and it has always been in considerable demand in this and other countries; but the principal imports of foreign salt into Great Britain at present are from Portugal. They amount, at an average, to from 300,000 to 350,000 bushels a year.

Consumption of Salt. — The consumption of salt in this country is immense. Necker estimated the consumption in those provinces of France which had purchased an exemption from the *gabelle* (*Pays francs rédimés*) at about 19½ lbs. (Eng.) for each individual. — (*Administration des Finances*, tome ii. p. 12.) From all that we have been able to learn on the subject, we believe that the consumption of the people of this country may be estimated a little higher, or at 22 lbs.; the difference in our food and habits, as compared with the French, fully accounting for this increased allowance. On this supposition, and taking the population at 16,700,000, the entire consumption will amount to 363,000,000 lbs., or 161,000 tons.

Exclusive of this immense home consumption, we annually export about 10,000,000 bushels, which, at 56 lbs. a bushel, are equivalent to 250,000 tons. The Americans are the largest consumers of British salt; the exports to the United States in 1831 having amounted to 3,150,000 bushels. During the same year we exported to the Netherlands, 1,924,601 bushels; to the British North American colonies, 1,359,630 do.; to Russia, 1,191,806 do.; to Prussia, 624,110 do., &c.

The cheapness of this important necessary of life is not less remarkable than its diffusion. Its present cost may be estimated, at a medium, at from 1s. to 16s. a ton.

Duties on Salt. — In ancient Rome, salt was subjected to a duty *vectigal salinarum*; see *Burman, Dissertatio de Vectigalibus Pop. Rom.* c. 6.; and it has been heavily taxed in most modern states. The *gabelle*, or code of salt laws, formerly established in France, was most oppressive. From 4,000 to 5,000 persons are calculated to have been sent annually to prison and the galleys for offences connected with these laws, the severity of which had no inconsiderable share in bringing about the Revolution. — (*Young's Travels in France*, vol. i. p. 598.) In this country, duties upon salt were imposed in the reign of William III. In 1798, they amounted to 5s. a bushel; but were subsequently increased to 15s. a bushel, or about forty times the cost of the salt! So exorbitant a duty was productive of the worst effects; and, occasioned, by its magnitude, and the regulations for allowing salt duty free, to the fisheries, a vast deal of smuggling. The opinion of the public and of the House of Commons having been strongly pronounced against the tax, it was finally repealed in 1823.

That the repeal of so exorbitant a duty has been productive of great advantage, no one can doubt; but seeing that a large revenue must be raised, we question whether government acted wisely in totally relinquishing the tax. Had the duty been reduced to 2s. or 2s. 6d. a bushel, and no duty free salt allowed for the fisheries, but a drawback given on the fish exported, a revenue of 1,000,000l. a year might have been derived from this source with little injury. It was not the nature of the salt tax, but the absurd extent to which it had been carried, that rendered it justly odious. When at the highest, it produced about 1,500,000l. a year.

SALTPETRE, or NITRATE OF POTASH (Ger. *Salpeter*; Fr. *Nitre, Salpêtre*; It. *Nitro, Salnitro*; Sp. *Nitro, Salitre*; Rus. *Senitra*; Lat. *Nitrum*; Arab. *Ubbir*; Hind. *Shorah*), a salt well known in commerce, and of very great importance. It may be regarded both as a natural and an artificial production; being found on the surface of the soil in many parts of India, Egypt, Italy, &c.; but in these and other places all that is known in commerce is obtained by an artificial process, or by lixiviating earth that has been formed into *nitre* beds. The saltpetre consumed in England is brought from Bengal in an impure state, but crystallised, in bags, each containing 164 lbs. Saltpetre forms the principal ingredient in the manufacture of gunpowder; and is used in various arts. It is also of great utility in the commerce of India, from its fur-

nishing a large amount of dead weight for the shipping engaged in it. Saltpetre possesses considerable antiseptic power. That which is of the best quality and well refined, is in long transparent crystals; its taste is sharp, bitterish, and cooling; it flames much when thrown upon burning coals; it is very brittle; its specific gravity is 1.933. It is not altered by exposure to the air.

Beckmann contends, in a long and elaborate dissertation (*Hist. of Invent.* vol. iv. pp. 525—586. Eng. ed.), that the ancients were unacquainted with saltpetre, and that their *nitrum* was really an alkaline salt. But, as saltpetre is produced naturally in considerable quantities in Egypt, it is difficult to suppose that they could be entirely ignorant of it; though it would appear that they had confounded it with other things. It has been known in the East from a very early period. Beckmann concurs in opinion with those who believe that gunpowder was invented in India, and brought by the Saracens from Africa to the Europeans; who improved its manufacture, and made it available for warlike purposes. — (Vol. iv. p. 571.)

The consumption of saltpetre during periods of war is very great. Its price is consequently liable to extreme fluctuation. In remarking on the varieties in the price of saltpetre, Mr. Tooke observes, "It reached its greatest height in 1795, viz. 170s. a cwt.; in 1796, it fell at one time to 45s., and rose again to 96s. It seems to have been affected considerably by the scale of hostilities on the Continent. But in consequence of the discoveries in chemistry, by which the French were enabled to dispense with a foreign supply, and by the increased importation from India to this country, by which we were enabled to supply the rest of the Continent at a reduced cost, the price declined permanently after 1798-9, when it had reached 145s.; and never after was so high as 140s., except during the short interval of speculation in exports during the peace of 1814, and again upon the breaking out of the war terminated by the battle of Waterloo." The price of saltpetre in the London market varies at this moment (January, 1834) from 32s. to 40s. a cwt.

We are indebted for the following comprehensive statement of the importation, consumption, &c. of East Indian saltpetre to *Mr. Cook's State of the Commerce of Great Britain in 1833*:—

Imports, Deliveries, Prices, and Stocks of East Indian Saltpetre during the 10 Years ending with 1833.

Years.	Imports.			Deliveries.			Average Price during the Year.	Stock.
	By the E. I. Company.	By the Private Trade.	Total.	For Export.	Quantity charged with Duty.	Total.		
1821	<i>Tons.</i> 1,570	<i>Tons.</i> 6,170	<i>Tons.</i> 7,740	<i>Tons.</i> 2,650	<i>Tons.</i> 6,780	<i>Tons.</i> 9,430	<i>L. s. d.</i> 1 1 4	<i>Tons.</i> 12,320
1825	1,720	3,160	4,880	2,550	5,620	8,170	1 5 3	9,950
1826	1,700	4,860	6,560	2,620	6,100	8,720	1 1 10	8,250
1827	1,630	8,870	10,500	2,560	7,590	9,730	1 3 4	7,850
1828	2,100	8,110	10,210	3,130	8,590	12,040	1 4 1	5,570

1833	3,250	6,310	9,560	950	7,750	8,700	1 15 0	4,660
Average of 10 years	2,505	6,413	8,722	2,066	7,115*	9,511		

Within the last 3 years, a new species of saltpetre, under the denomination of *nitrate of soda*, has been received from South America. The imports of it have increased from 70 tons in 1831, to 1,450 in 1833. Though not applicable to all the purposes for which East Indian saltpetre is used, it is rather preferred by vitriol makers, and by some other classes of manufacturers. The deliveries of this description for home consumption have been in 1831, 70 tons; in 1832, 680 do.; and in 1833, 1,210. — (*Cook, in loc. cit.*)

SALVAGE, as the term is now understood, is an allowance or compensation made to those by whose exertions ships or goods have been saved from the dangers of the seas, fire, pirates, or enemies.

The propriety and justice of making such an allowance must be obvious to every one. It was allowed by the laws of Rhodes, Oleron, and Wisby; and in this respect they have been followed by all modern maritime states. At common law, the party who has saved the goods of another from loss or any imminent peril has a *lien* upon them, and may retain them in his possession till payment of a reasonable salvage.

1. *Salvage upon Losses by Perils of the Sea.* — If the salvage be performed at sea, or within high or low water mark, the Court of Admiralty has jurisdiction over the subject, and will fix the sum to be paid, and adjust the proportions, and take care of the property pending the suit; or, if a sale be necessary, direct it to be made; and divide the proceeds between the salvors and the proprietors according to equity and reason. And in fixing the rate of salvage, the court usually has regard not only to the labour and peril incurred by the salvors, but also to the situation in which they may happen to stand in respect of the property saved, to the promptitude and alacrity manifested by them, and to the value of the ship and cargo, as well as the degree of danger from which they were rescued. Sometimes the court has allowed as large a proportion as a *half* of the property saved as salvage; and in others, not more than a *tenth*.

The crew of a ship are not entitled to salvage, or any unusual remuneration for the extraordinary efforts they may have made in saving her; it being their duty as well as interest to contribute their utmost upon such occasions, the whole of their possible service being pledged to the master and owners. Neither are passengers entitled to claim any thing for the *ordinary assistance* they may have been able to afford to a vessel in distress. But a passenger is not bound to remain on board a ship in the hour of danger, provided he can leave her; and if he perform any *extraordinary services*, he is entitled to a proportional recompense.

* Including from 600 to 1,000 tons annually exported in a refined state.

In the case of valuable property, and of numerous proprietors and salvors, the jurisdiction and proceedings of the Court of Admiralty are well adapted to further the purposes of justice. But, as the delay and expense necessarily incident to the proceedings of a court sitting at a distance from the subject will often be very burdensome upon the parties, in cases where the property saved is not, perhaps, very considerable, the legislature has endeavoured to introduce a more expeditious and less expensive method of proceeding.

The first act for this purpose is the 12 Ann. stat. 2. c. 18. It appears from the preamble, that the infamous practices, once so common, of plundering ships driven on shore, and seizing whatever could be laid hold of as lawful property — (see *WRECK*), — had not been wholly abandoned; or that, if the property was restored to the owners, the demand for salvage was so exorbitant, that the inevitable ruin of the trader was the immediate consequence. To remedy those mischiefs in future, it was enacted, “that if a ship was in danger of being stranded, or being run ashore, the sheriffs, justices, mayors, constables, or officers of the customs, nearest the place of danger, should, upon application made to them, summon and call together as many men as should be thought necessary to the assistance, and for the preservation, of such ship in distress, and her cargo; and that if any ship, man-of-war, or merchantman, should be riding at anchor near the place of danger, the constables and officers of the customs might demand of the superior officers of such ship the assistance of her boats, and such hands as could be spared; and that, if the superior officer should refuse to grant such assistance, he should forfeit 100*l*.”

Then follows the section respecting salvage. It enacts, “that all persons employed in preserving ships or vessels in distress, or their cargoes, shall, within 30 days after the service is performed, be paid a *reasonable reward* for the same, by the commander, master, or other superior officer, mariners, or owners, of the ship or vessel so in distress, or by any merchant whose vessel or goods shall be so saved; and, in default thereof, the said ship or vessel so saved shall remain in the custody of the officers of customs until all charges are paid, and until the officers of the customs, and the master or other officers of the ship or vessel, and all others employed in the preservation of the ship, shall be *reasonably gratified* for their assistance and trouble, or good security given for that purpose: and if any disagreement shall take place between the persons whose ships or goods have been saved, and the officer of the customs, touching the monies deserved by any of the persons so employed, it shall be lawful for the commander of the ship or vessel so saved, or the owner of the goods, or the merchant interested therein, and also for the officer of the customs, or his deputy, to nominate 3 of the neighbouring justices of the peace, who shall thereupon adjust the *quantum* of the monies or gratuity to be paid to the several persons acting or being employed in the salvage of the said ship, vessel, or goods; and such adjustment shall be binding upon all parties, and shall be recoverable in an action at law; and in case it shall so happen, that no person shall appear to make his claim to all or any of the goods that may be saved, that then the chief officer of the customs of the nearest port to the place where the said ship or vessel was so in distress shall apply to 3 of the nearest justices of the peace, who shall put him or some other responsible person in possession of the said goods, such justices taking an account in writing of the said goods, to be signed by the said officer of the customs; and if the said goods shall not be legally claimed within the space of 12 months next ensuing, by the rightful owner thereof, then public sale shall be made thereof; and, if perishable goods, forthwith to be sold, and, after all charges deducted, the residue of the monies arising from such sale, with a fair and just account of the whole, shall be transmitted to her Majesty’s exchequer, there to remain for the benefit of the rightful owner, when appearing; who, upon affidavit, or other proof made of his or their right or property thereto, to the satisfaction of one of the barons of the coif of the exchequer, shall, upon his order, receive the same out of the exchequer.”

By a subsequent statute, 26 Geo. 2. c. 19, it is enacted, “that in case any person or persons, not employed by the master, mariners, or owners, or other person lawfully authorised, in the salvage of any vessel, or the cargo or provision thereof, shall, in the absence of the person so employed and authorised, save any such vessel, goods, or effects, and cause the same to be carried, for the benefit of the owners or proprietors, into port, or to any near adjoining Custom-house, or other place of safe custody, immediately giving notice thereof to some justice of the peace, magistrate, or Custom-house or excise officer, or shall discover to such magistrate or officer where any such goods or effects are wrongfully bought, sold, or concealed, then such person or persons shall be entitled to a *reasonable reward* for such services, to be paid by the masters or owners of such vessels or goods, and to be adjusted, in case of disagreement about the *quantum*, in like manner as the salvage is to be adjusted and paid by 12th Anne, or else as follows: —

“And be it further enacted, that, for the better ascertaining the salvage to be paid in pursuance of the present act and the act before-mentioned, and for the more effectually putting the said acts into execution, the justice of the peace, mayor, bailiff, collector of the customs, or chief constable, who shall be nearest to the place where any ship, goods, or effects shall be stranded or cast away, shall forthwith give public notice for a meeting to be held as soon as possible, of the sheriff or his deputy, the justices of the peace, mayors, or other chief magistrates of towns corporate, coroners, or commissioners of the land tax, or any 5 or more of them, who are hereby empowered and required to give aid in the execution of this and the said former act, and to employ proper persons for the saving ships in distress, and such ships, vessels, and effects, as shall be stranded or cast away; and also to examine persons upon oath, touching the same, or the salvage thereof, and to adjust the *quantum* of such salvage, and distribute the same among the persons concerned in such salvage, in case of disagreement among the parties or the said persons; and that every such magistrate, &c. attending and acting at such meeting, shall be paid 4*l*. a day for his expenses in such attendance, out of the goods and effects saved by their care or direction.

“Provided always, that if the charges and rewards for salvage directed to be paid by the former statute and by this act, shall not be fully paid, or sufficient security given for the same, within 40 days next after the said services performed, then it shall be lawful for the officer of the customs concerned in such salvage to borrow or raise so much money as shall be sufficient to satisfy and pay such charges and rewards, or any part thereof then remaining unpaid, or not secured as aforesaid, by or upon one or more bill or bills of sale, under his hand and seal, of the ship or vessel, or cargo saved, or such part thereof as shall be sufficient, redeemable upon payment of the principal sum borrowed, and interest upon the same at the rate of 4*l*. per cent. per annum.”

An act of the 53 Geo. 3. c. 87, continued and extended by the 1 & 2 Geo. 4. c. 76, contains some regulations supplying defects in former statutes. They enact, that goods of a perishable nature, or so much damaged that they cannot be kept, may, at the request of any person interested or concerned in the same, or in saving thereof, be sold with the consent of a justice, the money being deposited in the hands of the lord of the manor, and an account of the sale transmitted to the deputy vice-admiral. They also authorise the passage of horses, carts, carriages, &c. to the part of the sea coast where a vessel may be wrecked, over the adjoining lands, if there be no road leading as conveniently thereto, under penalty of 10*l*., the damages to be settled by two justices in the event of the parties not agreeing. — (1 & 2 Geo. 4. §§ 27, 29, 30.)

It is ordered by the same statute, that no lord of the manor, or other person claiming to be entitled to wreck or goods, shall appropriate or dispose of the same until he shall have caused to be given in writing to the deputy vice-admiral of that part of the coast, or to his agents if they reside within 50 miles, if not, then to the corporation of the Trinity House, a report containing an accurate and particular description of the wreck or goods found, and of the place where and time when found, and of any marks thereon, and

of such other particulars as may better enable the owner to recover them, and also of the place where they are deposited, and may be found and examined by any person claiming any right to them, nor until the expiration of 1 whole year and a day after the expiration of such notice: the deputy vice-admiral, or his agent, is, within 48 hours of receiving such report, to transmit a copy thereof to the secretary of the corporation of the Trinity House, upon pain of forfeiting, for every neglect to transmit such account, 50*l.* to any person who shall sue for the same; and the secretary is to cause such account to be placed in some conspicuous situation for the inspection of all persons claiming to inspect and examine it. — (1 & 2 Geo. 4. c. 75. § 96.)

It is further ordered by the same statute, that pilots and others taking possession of anchors, cables, or other wrecked or left materials upon the coast, or within any harbour, river, or bay, shall send notice thereof, within *twenty-four* hours, to the nearest deputy vice-admiral, or his agent, delivering the articles at such place as may be appointed, under pain of being deemed receivers of stolen goods. The deputy vice-admiral, or his agent, may also seize *such articles as have not been reported to him*, and is required to keep and report them to the Trinity House as aforesaid; and if he seize them without previous information, he is to have 1*3d* of the value; if he seize in pursuance of information, the third is to be divided between him and the informer. If the articles are not claimed within a year and a day, they are to be sold, and the money applied as directed by the act of Queen Anne (12 Ann. stat. 2. c. 18., previously quoted), the deputy vice-admiral, or his agent, and the person who may have given information, being in such cases entitled to the salvage allowed upon unclaimed property. And it is further enacted, that if any dispute shall arise between the salvors of any goods found, lodged, and reported as aforesaid, and the owners thereof, as to the salvage to be paid in respect of the same, it is to be determined by the decision of 3 justices; or if they differ, by their nominee, who is to be a person conversant with maritime affairs. Masters and others bound to foreign parts, finding or taking on board anchors, goods, &c., knowing them to be found, are to enter the same in the log book, with the place and time of finding, and to transmit a copy of such entry, by the first possible opportunity, to the Trinity House, and to deliver up the articles on their return home, which, if not claimed, are to be sold within a year and day, according to the aforementioned statute of Anne. Masters selling such articles incur a penalty of not less than 30*l.* and not more than 100*l.*

Pilots, boatmen, or other persons, conveying anchors and cables to foreign countries, and disposing of them there, are to be adjudged guilty of felony, and may be transported for 7 years.

The same statute authorises 3 justices, or their nominee, to decide upon all claims made by boatmen, pilots, and other persons, for services of any description (except pilotage) rendered by them to any ship or vessel, whether in distress or not.

Parties dissatisfied with the award of the justices or their nominee may appeal to the Court of Admiralty; but the justices are in such cases to deliver the goods to the proprietors, or their agent, on their giving good security for double their value. This act does not extend to Scotland.

None of the previously mentioned acts have any force within the *Cinque Ports*; but the Lord Warden is directed by stat. 1 & 2 Geo. 4. c. 76. to appoint 3 or more substantial persons in each of these towns, who are authorised to decide upon all claims for services of any sort or description rendered to any vessel, or for saving or preserving, within the jurisdiction, any goods or merchandise wrecked, stranded, or cast away, or for bringing anchors or cables ashore, &c. No commissioner can act for any other place than that in which, or within a mile of which, he is resident. Either party may, within 8 days of the award, declare his intention of bringing the matter before some competent Court of Admiralty; selecting, as he may judge best, the Admiralty of England or that of the Cinque Ports. The provisions in this statute have been justly eulogised by Lord Tenterden, for the cheap and easy means they afford for settling such questions.

It is impossible, as Mr. Justice Park has observed (*Law of Insurance*, c. 8.), to suppose 2 instances of loss by shipwreck, or other peril of the sea, so similar to each other, that the trouble, danger, and expense of the salvors should be exactly equal; and it would, consequently, be contrary to the first principles of justice to award the same sum for all possible cases of salvage. There was, therefore, no other resource but to appoint competent persons to decide as to the allowance due in any case of salvage that might arise, after taking the various circumstances with respect to it into account.

2. *Salvage upon Recapture.* — It was the practice of our courts, previously to any regulations on the subject, to order restitution of ships or goods, if retaken before condemnation, to be made to the original owners, on payment of a *reasonable salvage* to the recaptors; but by stat. 43 Geo. 3. c. 160. it has been adjudged, that “if any ship or vessel taken as prize, or any goods therein, shall appear, in the Court of Admiralty, to have belonged to any of his Majesty’s subjects, which were before taken by any of his Majesty’s enemies, and at any time afterwards retaken by any of his Majesty’s ships, or any privateer, or other ship or vessel under his Majesty’s protection, such ships, vessels, and goods shall, in all cases (save as hereafter excepted), be adjudged to be restored, and shall be accordingly restored, to such former owner or owners, he or they paying for salvage, if retaken by any of his Majesty’s ships, *one eighth* part of the true value thereof, to the flag officers, captains, &c., to be divided as the same act directs; and if retaken by any privateer, or other ship or vessel, *one sixth* part of the true value of such ships and goods, to be paid to the owners, officers, and seamen of such privateer or other vessel, without any deduction; and if retaken by the joint operation of one or more of his Majesty’s ships, and one or more private ships of war, the judge of the Court of Admiralty, or other court having cognisance thereof, shall order such salvage, and in such proportions, to be paid to the captors by the owners, as he shall, under the circumstances of the case, deem fit and reasonable; but if such recaptured ship or vessel shall appear to have been cast forth by the enemy as a ship or vessel of war, the said ship or vessel shall not be restored to the former owners, but shall in all cases, whether retaken by any of his Majesty’s ships or any privateer, be adjudged lawful prize for the benefit of the captors.”

This act is decidedly more favourable to the merchants than the old law, which adjudged that all ships recaptured after sentence of condemnation should be the property of the captors.

In the case of neutral ships captured by an enemy, and retaken by British men-of-war or privateers, the Courts of Admiralty have a discretionary power of allowing such salvage, and in such proportions, as, under the circumstances of each particular case, may appear just; but there is no positive law or binding regulation to which parties may appeal, for ascertaining the rate of such salvage. “The maritime law of England,” says Lord Stowell, “having adopted a most liberal rule of restitution on salvage, with respect to the recaptured property of its own subjects, gives the benefit of that rule to its allies, till it appears that they act towards British property on a less liberal principle; in such a case, it adopts their rule, and treats them according to their own measure of justice.” — (1 Rob. Adm. Rep. 54.)

Salvage is one of those charges which are usually provided against by insurance. When, however, the salvage is very high, and the object of the voyage is so far defeated, the insured is, by the laws of this and all other maritime nations, allowed to abandon, and to call upon the insurer as for a total loss. — (See ANABANDONMENT.)

For further information with respect to salvage, see *Abbott on the Law of Shipping*, part iii. c. 10.; *Park on Insurance*, c. 8.; and *Marshall on Insurance*, book i. c. 12. § 8.

SAMPLE, a small quantity of a commodity exhibited at public or private sales, as a specimen. Sugars, wool, spirits, wine, coffee, and, indeed, most species of merchandise, are sold by sample. If an article be not, at an average, equal to the sample by which it is sold, the buyer may cancel the contract, and return the article to the seller.

Subjoined is a list of most articles that may be warehoused, and of the quantities that may be taken out as samples. — (*Customs Min. Oct. 11. 1825.*)

Alkali or barilla, 5 lbs. per pile 5 tons.	exceeding 1½ lb.) to be charged with duty on delivery of the packages.	Salep - 1 oz. per package.	
Aloes - 2 oz. per package.	Isinglass - ½ lb. per package	Sarsaparilla - 1 oz. do.	
Arzol - ½ lb. do.	Juice of lemons, ½ pint do.	Saltpetre - ½ lb. do.	
Arrow root - ½ lb. do.	Lac dye - 1 oz. do.	Seed, anised - 1 oz. per package.	
Balsam capivi - 2 oz. do.	Lead, black - 1 lb. do.	clover - 2 oz. do.	
Bark, Jesuit's, - ½ lb. do.	Lemon peel - ½ lb. each entry.	caraway - 2 oz. do.	
in general, - ½ lb. do.	Liquorice juice - ½ lb. per package.	lac - 1 oz. do.	
except Jesuit's ½ lb. do.	root - ½ lb. do.	mustard - 1 oz. do.	
Brimstone, rough, 2 lbs. per pile.	Madder, manu- factured - ½ lb. do.	Senna - 1 oz. do.	
in rub, - ½ lb. per package.	root - ½ lb. do.	Shumac - 1 lb. per lot 10 bags.	
Casia - ½ lb. do.	Oil of almonds - 1 oz. do.	Silk, raw - 2 oz. per package.	
Cantharides - 2 oz. do.	anised - 1 oz. do.	thrown waste - 1 oz. do.	
Caprs - ½ lb. do.	bay - 1 oz. do.	Smalts - 1 oz. do.	
Cochineal - 2 oz. do.	juniper - 1 oz. do.	Spirits - ½ pint per cask.	
dust - 2 oz. do.	olive - ½ pint per cask.	Sugar, foreign	
Cocoa nut oil ½ pint each cask.	palm - 1 oz. per package.		4 oz. per box not ex- ceeding 5 cwt.
Coffe - 2 oz. per bag.	rosemary - 1 oz. per package.		8 oz. per box or chest, exceeding 5 cwt.
Coloquintida - 2 oz. per package.	spike - 1 oz. do.		1½ lb. per hoghead.
Cocculus Indicus, 1 oz. do.	thyme - 1 oz. do.	1½ lb. per tierce.	
Cotton - 4 oz. do.	Orange peel - ½ lb. do.	British plantation	
Cream of tartar, 1 lb. do.	Orchella - 2 oz. do.		½ lb. molasses per hhd. or cask.
Currants - ½ lb. do.	Orrice root - ½ lb. do.	Tallow - 4 lbs. per lot 10 pcks.	
Essence of berg- amot or lemon - 1 oz. do.	Pepper - 1 oz. per bag.	Tapioca - 1 oz. per package.	
Euphorbium - 1 oz. do.	Pimento - 2 oz. do.	Turmeric - 2 lbs. per pile.	
Feathers, bed - 4 lb. per lot 6 bags.	Radix contra- yerva - 1 oz. per package.	Valonia - 3 lbs. per lot.	
Galls - 1 lb. do.	golanga - 2 lb. per pile.	Wax, bees' - ½ lb. per package.	
Gentian - ½ oz. do.	ipeacacu- anhae - 1 oz. per package.	Wine - ½ pint.	
Ginger - 8 oz. do.	seneka - 1 oz. do.	Wool, cotton	
Granilla, see Co- chineal.	Raisins - ½ lb. each mark.	sheep or lambs' - 1 lb. do.	
Gum Arabic - 1 lb. per package.	Rhubarb - 1 oz. per package.	Spanish - 1 lb. do.	
Senegal - ½ lb. do.	Rice - ½ lb. do.	Yarn, mohair - ½ lb. do.	
tragacanth, 2 oz. do.	Saffron - ½ oz. do.	cotton - ½ lb. do.	
other gum, 2 oz. do.	Sago - 2 lbs. per pile.	Mother of pearl 7 shells per lot of 10 packages.	
Honey - 4 oz. do.		Vermicelli - 1 oz. per package.	
Jalap - 1 oz. do.			
Indigo - ½ lb. do.			
Any further quantity (not			

SANDAL WOOD, the wood of a tree (*Santalum album* Lin.) having somewhat of the appearance of a large myrtle. It is of a deep yellow colour, and yields an agreeable perfume. The tree, when cut down, is usually about 9 inches in diameter at the root, but sometimes considerably more. After being felled, it is barked, cut into billets, and buried in a dry place for about a couple of months, during which time the white ants eat off the outer wood, without touching the heart, which is the sandal. It is then taken up and sorted, according to the size of the billets. The deeper the colour, and the nearer the root, the higher is the perfume. Reject such pieces as are of a pale colour, small, decayed, or have white wood about them; and take especial care that it be not mixed with wood resembling sandal, but without its perfume. — (*Milburn's Orient. Com.*)

Sandal wood is extensively employed by the Hindoos as a perfume, in their funeral ceremonies. But the Chinese are its principal consumers. They manufacture it into fans, and small articles of furniture, and use it, when ground into powder, as a cosmetic. During the year ended the 31st of March, 1832, there were imported by British vessels into Canton, 6,338 piculs (39½ tons) of sandal wood, valued at 74,471 dollars (see *ante*, p. 237.); and the imports in some years are more than twice this amount. The average importation into Calcutta is about 200 tons a year. It grows principally in Malabar, in the mountainous country at a little distance from the low sea coast; in Timor; and in the Fejee Islands in the South Sea. Calcutta is principally supplied from Malabar, while China derives the larger portion of her supplies from Timor and the other islands. It is seldom brought to Europe, except by individuals for their own use, or as presents for their friends. — (*Bell's External Com. of Bengal*, pp. 49. and 85.; *Crawford's Indian Archipelago*, vol. i. p. 519., vol. iii. p. 421. &c.)

SANDARACH, a resinous substance, commonly met with in loose granules a little larger than a pea, of a whitish yellow colour, brittle, inflammable, of a resinous smell, and acrid aromatic taste. It exudes, it is said, in warm climates, from cracks and incisions in the common juniper bush. It is used as a varnish, dissolved in spirits of wine. — (*Ainslie's Mat. Indica.*)

SAPAN WOOD is obtained from a species of the same tree that yields the Brazil wood (*Casalpinia Sapan* Lin.). It is a middle-sized forest tree, indigenous to Siam, Pegu, the Philippine Islands, &c. It has been employed for dyeing in the greater part of Asia for many centuries. It found its way into Europe some time before the discovery of America; but very little is now imported. Its colouring matter differs but little from that of Brazil wood, but the best sapan wood does not yield more than half the quantity that may be obtained from an equal weight of Brazil wood, and the colour is not quite so bright. — (*Bancroft on Colours*, vol. ii. p. 329.) Its price in the London market varies from 8*l.* to 14*l.* a ton.

SAPPHIRE (Ger. *Sapphir*; Du. *Saffiersteen*; Fr. *Saphir*; It. *Zuffiro*; Sp. *Safiro*, *Safir*; Rus. *Jachant*; Lat. *Sapphirus*), a precious stone in very high estimation. Colours blue and red; also gray, white, green, and yellow. It occurs in blunt-edged pieces, in roundish pebbles, and crystallised. Varies from transparent to translucent. Refracts double. After diamond, it is the hardest substance in nature. The blue variety, or sapphire, is harder than the ruby, or red variety. Brittle. Specific gravity 4 to 4.2.

It is found in Bohemia, Saxony, France, &c.; but the red sapphire, or Oriental ruby, is not found in any considerable quantity anywhere except in Ava. Next to diamond, sapphire is the most valuable of

the gems. The white and pale blue varieties, by exposure to heat, become snow white, and, when cut, exhibit so high a degree of lustre, that they are used in place of diamond. The most highly prized varieties are the crimson and carmine red; these are the Oriental *ruby* of the jeweller; the next is *sapphire*; and last, the yellow or Oriental *topaz*. The *asterias*, or star-stone, is a very beautiful variety, in which the colour is generally of a reddish violet, and the form a rhomboid, with truncated apices, which exhibit an opalescent lustre.*—(See R. 8v.)

Mr. Crawford gives the following details with respect to the sapphire and ruby mines of Ava:—"The precious stones ascertained to exist in the Burmese territory are chiefly those of the sapphire family, and the spinelle ruby. They are found at 2 places, not very distant from each other, called Mogant and Kyatpéan, about 5 days' journey from the capital, in an E.S.E. direction. From what I could learn, the gems are not obtained by any regular mining operations, but by digging and washing the gravel in the beds of rivulets or small brooks. All the varieties of the sapphire, as well as the spinelle, are found together, and along with them large quantities of corundum. The varieties ascertained to exist, are the Oriental sapphire; the Oriental ruby, or red stone; the opalescent ruby, or cat's eye ruby; the star ruby; the green; the yellow and the white sapphires; and the Oriental amethyst. The common sapphire is by far the most frequent, but, in comparison with the ruby, is very little prized by the Burmese, in which they agree with other nations. I brought home with me several of great size, the largest weighing no less than 3,630 grains, or above 907 carats. The spinelle ruby (zebu-gaong) is not unfrequent in Ava, but is not much valued by the natives. I brought with me to England a perfect specimen, both as to colour and freedom from flaws, weighing 22 carats. The sapphire and ruby mines are considered the property of the king; at least he lays claim to all stones that exceed in value a viss of silver, or 100 ticals. The miners, it appears, endeavour to evade this law by breaking the large stones into fragments. In the royal treasury, there are, notwithstanding, many fine stones of both descriptions. The year before our visit, the king received from the mines a ruby weighing 124 grains; and the year preceding that 8 good ones, but of smaller size. No stranger is permitted to visit the mines; even the Chinese and Mohammedans residing at Ava are carefully excluded."—(*Journal of an Embassy to the Court of Ava*, p. 442.)

SARCOCOLLA, a subviscid, sweetish, and somewhat nauseous gum-resin. It is brought from Arabia and Persia in small grains of a pale yellow colour; the whitest, as being the freshest, is preferred. It is but seldom imported.—(*Milburn's Orient. Com.*)

SARDINES, or **SARDINIAS** (Ger. *Sardellen*; Fr. *Sardines*; It. *Sardine*; Sp. *Sardinas*), a species of fish of the herring tribe, but smaller. They are taken in considerable quantities on our coasts, and are exceedingly plentiful on the coasts of Algarve in Portugal, Andalusia and Granada in Spain, and along the shores of Italy. The small sardines, caught on the coast of Provence, in France, are esteemed the best. From 1,000 to 1,200 fishing smacks are engaged in catching these fish on the coast of Brittany, from June to the middle of October. The French frequently cure them in red brine; and, when thus prepared, designate them *anchoisces*, or *anchovies sardines*. These are packed in vessels previously employed for holding wine, and exported to the Levant. When perfectly fresh, sardines are accounted excellent fish; but if kept for any time, they entirely lose their flavour, and become quite insipid.

SARDONYX, a precious stone, a variety of chalcodony.

The ancients selected this substance to engrave upon, no doubt from its possessing two peculiar and necessary qualities, viz. hardness and tenacity, by which it is capable of receiving the finest touch or stroke of the tool without chipping, and showing the art of the engraver to the highest perfection.—(*Mawe on Diamonds*, 2d ed. p. 121.)

SARSAPARILLA (Ger. *Sarsaparille*; Fr. *Salseparille*; It. *Salsapariglia*; Sp. *Zarzaparilla*), the root of the *Smilax Sarsaparilla*, a plant growing in South America and the West Indies. It is imported in bales. It is known in the London market by the names of Lisbon, Honduras, and Vera Cruz, but it is also brought from Jamaica. The Lisbon root, which is the produce of Brazil, has a reddish or dark brown cuticle, is internally farinaceous, and more free from fibre than the other kinds: the Honduras has a dirty brown, and sometimes whitish, cuticle; it is more fibrous, and has more ligneous matter than the Lisbon and Vera Cruz. It is in long, slender twigs, covered with a wrinkled brown cuticle, and has a small woody heart. The Jamaica differs from the others, in having a deep red cuticle of a close texture; and the red colour partially diffused through the ligneous part. The root is inodorous, and has a mucilaginous, very slightly bitter taste: the bark is the only useful part of the plant; the ligneous part being tasteless, inert, woody fibre.—(*Thomson's Dispensatory*.) The quantity imported in 1831 amounted to 176,854 lbs., of which 107,410 lbs. were retained for home consumption. The duty, which formerly varied, according as it was brought from a foreign country or a British possession, from 1s. 3d. to 1s. per lb., was reduced, in 1832, to 6d. per lb.

SASSAFRAS (Ger. and Fr. *Sassafras*; It. *Sassafrasso*; Sp. *Sassafras*), a species of laurel (*Laurus Sassafras*, Lin.), a native of the southern parts of North America, Cochin-China, and several of the Indian islands. Sassafras wood, root, and bark, have a fragrant odour, and a sweetish aromatic taste. The wood is of a brownish white colour; and the bark ferruginous within, spongy, and divisible into layers. Their sensible qualities and virtues depend on an essential oil, which may be obtained separate by distilling the chips or the bark with water. It is very fragrant, hot, and penetrating

* Professor Jameson says, in his *Mineralogy*, that some peculiarly beautiful sapphires are found in the Capelan mountains, in Pegu. But we do not believe that there are any such mountains in any part of the world; and, in point of fact, there are no mountains in Pegu, nor have any precious stones been ever found in it.

to the taste, of a pale yellow colour, and heavier than water. It is used only in the *materia medica*. Very little is imported. — (*Thomson's Dispensatory*.)

SAUNDERS (RED) (Arab. *Sundal-ahmer*; Hind. *Ruckut-chundum*), the wood of a lofty tree (*Pterocarpus santalinus*) indigenous to various parts of India, Ceylon, Timor, &c. The wood is brought to Europe in billets, which are very heavy and sink in water. It is extremely hard, of a fine grain, and a bright garnet red colour, which brightens on exposure to the air. It is employed to dye lasting reddish brown colours on wool. It yields its colouring matter to ether and alcohol, but not to water. The quantity imported is but inconsiderable. The price in bond varies at this moment (February, 1834) from 13*l.* to 14*l.* a ton. — (*Thomson's Dispensatory*; *Bancroft on Colours*, vol. ii. p. 236.)

SCAMMONY (Ger. *Shammonien*; Fr. *Scammonée*; It. *Scammonea*; Sp. *Escamonea*), a gum-resin, the produce of a species of convolvulus, or creeper plant, which grows abundantly in Syria. When an incision is made into the roots, they yield a milky juice, which, being kept, grows hard, and is the scammony of the shops. It is imported from Aleppo in what are called drums, weighing from 75 to 125 lbs. each; and from Smyrna in cakes like wax, packed in chests. The former is light and friable, and is considered the best; that from Smyrna is more compact and ponderous, less friable, and fuller of impurities. It has a peculiar heavy odour, not unlike that of old cheese; and a bitterish, slightly acid taste. The colour is blackish or bluish grey, changing to dirty white, or lathering when the surface is rubbed with a wet finger. Its specific gravity is 1.235. It is very liable to be adulterated; and when of a dark colour, heavy, and splintery, it ought to be rejected. It is used only in medicine. — (*Thomson's Dispensatory*.) The duty on scammony, which was formerly as high as 6*s.* 4*d.* per lb. was reduced in 1832 to 2*s.* 6*d.*

SCULPTURES, figures cut in stone, metal, or other solid substance, representing or describing some real or imaginary object. The art of the sculptor, or statuary, was carried to the highest pitch of excellence in ancient Greece. Fortunately, several of the works of the Grecian sculptors have been preserved; and serve at once to stimulate and direct the genius of modern artists.

Models, are casts or representations of sculptures.

The act 54 Geo. 3. c. 56. vests the property of sculptures, models, copies, and casts, in the proprietor for 14 years; provided he cause his name, with the date, to be put on them before they are published; with the same term in addition, if he should be living at the end of the first period. In actions for piracy, double costs to be given. The act 6 Geo. 4. c. 107. prohibits the importation, on pain of forfeiture, of any sculptures, models, casts, &c. first made in the United Kingdom.

SEAL (Lat. *Sigillum*), a stone, piece of metal, or other solid substance, generally round or elliptical, on which is engraved the arms, crest, name, device, &c. of some state, prince, public body, or private individual. It is employed as a stamp to make an impression on sealing wax, thereby authenticating public acts, deeds, &c., or to close letters or packets. Seals were very early invented, and much learning has been employed in tracing their history, and explaining the figures upon them. — (See particularly the work of *Hopkinson*, *De Sigillorum Prisco et Novo Jure*, 4to, 1612.) They are now very generally used.

The best are usually formed of precious stones, on which the crest or the initials of the person's name are engraved, set in gold. But immense numbers are formed of stained glass, and set in gilt copper. They are manufactured at London, Birmingham, &c., and are extensively exported.

SEAL FISHERY. The seal, an amphibious animal, of which there are many varieties, is found in vast numbers in the seas round Spitzbergen, and on the coasts of Labrador and Newfoundland. As it frequents the British shores, it is well known, and has been repeatedly described. Seals are principally hunted for their oil and skins. When taken in the spring of the year, — at which time they are fattest, — a full grown seal will yield from 8 to 12 gallons of oil, and a small one from 4 to 5 gallons. The oil, when extracted before putrefaction has commenced, is beautifully transparent, free from smell, and not unpleasant in its taste. The skin, when tanned, is extensively employed in the making of shoes; and when dressed with the hair on, serves for the covering of trunks, &c.

"To the Esquimaux the seal is of as much importance as bread to a European. Its flesh forms their most usual food; the fat is partly dressed for eating, and partly consumed in their lamps; the liver, when fried, is esteemed, even among sailors, as an agreeable dish. The skin, which the Esquimaux dress by processes peculiar to themselves, is made water proof. With the hair off, it is used as coverings, instead of planks, for their boats, and as outer garments for themselves; shielded with which, they can invert themselves and canoes in the water, without getting their bodies wet. It serves also for coverings for their tents, and for various other purposes. The jackets and trowsers made of seal-skin by the Esquimaux are in great request among the whale fishers for preserving them from oil and wet." — (*Scoresby's Arctic Regions*, vol. i. p. 510.)

Seals in fine weather prefer the ice to the water, and vast herds of them are frequently found lying on the field ice; the places where they are met with being thence called "seal meadows." The seal hunters endeavour to surprise them while sleeping, and to intercept their retreat to the water. They attack them with muskets and bludgeons, but principally the latter, they being easily despatched by a blow on the nose.

The seal fishery has long been prosecuted to a considerable extent in the northern seas by ships from the Elbe and the Weser; but very few ships have been sent out for *sealing* only from England, though occasionally some of the whale ships have taken large quantities of seals. Latterly, however, the seal fishery has been prosecuted on a large scale, and with extraordinary success, by vessels of from 60 to 120 tons each, having crews of from 16 to 30 men, fitted out from the ports of Newfoundland, Nova Scotia, &c. The business is attended with a good deal of risk, and instances frequently occur of the vessels being crushed to pieces by the collision of the fields of ice. We borrow the following details from Mr. Bliss's late tract on the *Trade, Statistics, &c. of Canada and our North American Possessions*.

"There is another department of the colonial fishery which has originated within no distant period, and is now becoming of great extent and importance. The large fields of ice which, in the months of March and April, drift southward from the Polar seas, are accompanied by many herds of seals: these are found sleeping in what are called the seal meadows of the ice, and are there attacked and slaughtered in vast numbers. For this purpose the fishers of Newfoundland, from which island these voyages are principally made, without waiting till the return of spring shall have opened their harbours, saw channels through the ice for their vessels, and set sail in quest of those drifting fields, through the openings of which they work a passage, attended with great difficulties and dangers, till they encounter their prey on the seal meadows. This bold and hazardous enterprise seems well compensated by its success. The number of seals thus taken is almost incredible, and is greatly on the increase. There were captured by the Newfoundland fishermen, in 1829, 280,613 seals; in 1830, 553,435; and in 1831, 748,735; making a total catch during these 3 years of no fewer than 1,582,783 seals! The number of vessels employed in the fishery from Newfoundland, in 1831, was 115; and in 1832, 159; being an increase of about 3,400 tons." — (p. 70.)

Subjoined is a statement of the prices of the different sorts of fish oil in London, in January, 1834.

Fish oils, cod, Newfoundland, per tun (Imp.)	L. s.		L. s.		Fish oils, southern fishery, pale, per tun (Imp.)	L. s.		L. s.	
	25	0	to	0		25	0	to	0
seal, brown and yellow	—	22	0	—	23	0	—	22	0
pale	—	25	10	—	26	0	—	68	0
whale, Greenland	—	21	10	—	22	0	—	70	0
					sperm	—	—	—	0
					yellow 22. to 0.	—	—	—	0
					head matter	—	—	—	0

Undressed seal skins are worth from 1s. to 1s. 6d. each.

See also *McGregor's British America*, 2d edit. vol. i. p. 197. &c. There is a good account of the seal in *Laing's Voyage to Spitzbergen*.

SEALING WAX (Ger. *Siegellack*; Fr. *Cire d'Espagne*, *Cire à cacheter*; It. *Cera Lacea*, *Cera di Spagna*; Sp. *Lacre*; Rus. *Surgutsch*), the wax used for sealing letters, legal instruments, &c. It is a composition of gum lac, melted and incorporated with resin, and afterwards coloured with some pigment, as vermilion, verditer, ivory black, &c.

SEAMEN, the individuals engaged in navigating ships, barges, &c. upon the high seas. Those employed for this purpose upon rivers, lakes, or canals, are denominated watermen.

A *British Seaman* must be a natural born subject of his Majesty; or be naturalised by act of parliament; or made a denizen by letters of denization; or have become a legal subject by the conquest or cession of some newly acquired territory; or (being a foreigner) have served on board his Majesty's ships of war, in time of war, for the space of 3 years. — (3 & 4 Will. 4. c. 54. § 16.) But his Majesty may, by proclamation during war, declare that foreigners who have served two years in the royal navy, during such war, shall be deemed British seamen. — (§ 17.)

Various regulations have been enacted with respect to the hiring of seamen, their conduct while on board, and the payment of their wages. These regulations differ in different countries; but, in all, they have been intended to obviate any disputes that might otherwise arise between the master and seamen as to the terms of the contract between them, to secure due obedience to the master's orders, and to interest the seamen in the completion of the voyage, by making their earnings depend on its successful termination.

1. *Hiring of Seamen*. — To prevent the mischiefs that frequently arose from the want of proper proof of the precise terms upon which seamen engaged to perform their service in merchant ships, it is enacted by statute (2 Geo. 2. c. 36.), "that it shall not be lawful for any master or commander of any ship or vessel bound to parts beyond the seas, to carry any seaman or mariner, except his apprentice or apprentices, to sea from any port or place where he or they were entered or shipped, to proceed on any voyage to parts beyond the seas, without first coming to an agreement or contract with such seamen or mariners for their wages; which agreement or agreements shall be made in writing, declaring what wages each seaman or mariner is to have respectively, during the whole voyage, or for so long time as he or they shall ship themselves for; and also to express in the said agreement or contract the voyage for which such seaman or mariner was shipped to perform the same;" under a penalty of 5*l.* for each mariner carried to sea without such agreement, to be forfeited by the master to the use of Greenwich Hospital. This agreement is to be signed by each mariner within 3 days after he shall have entered himself on board the ship; and is, when signed, conclusive and binding upon all parties. By a subsequent statute, these provisions have been extended to vessels of the burden of 100 tons and upwards, employed in the *coasting trade*. — (31 Geo. 3. c. 39.)

The following is the form of the articles of agreement required by statute (37 Geo. 3. c. 73.) to be entered into between the masters and mariners of ships engaged in the West India trade. It is substantially the same with that which previously was, and still continues to be, in common use for all ships employed in foreign trade.

Ship

IT is hereby agreed between the master, seamen, and mariners of the ship now bound for the port of _____ and the master or commander of the said ship, That, in consideration of the monthly or other wages against each respective seaman or mariner's name hereunto set, they severally shall and will perform the above-mentioned voyage; and the said master doth hereby agree with and hire the seamen and mariners for the said voyage at such monthly wages, to be paid pursuant to the laws of Great Britain; and they, the said seamen and mariners, do hereby promise and oblige themselves to do their duty, and obey the lawful commands of their officers on board the said ship or boats thereunto belonging, as become good and faithful seamen and mariners, and at all places where the said ship shall put in or anchor during the said ship's voyage, to do their best endeavours for the preservation of the said ship and cargo, and not to neglect or refuse doing their duty by day or night; nor shall go out of the said ship on board any other vessel, or be on shore under any pretence whatsoever, till the voyage is ended, and the ship discharged of her cargo, without leave first obtained of the master, captain, or commanding officer on board; and, in default thereof, they freely agree to be liable to the penalties mentioned in the act of parliament made in the 2d year of the reign of King George the Second, intituled "An Act for the better Regulation and Government of Seamen in the Merchants' Service;" and the act made in the 37th year of the reign of King George the Third, intituled "An Act for preventing the Desertion of Seamen from British Merchant Ships trading to his Majesty's Colonies and Plantations in the West Indies;" and it is further agreed by the parties to these presents, that 24 hours' absence without leave shall be deemed a total desertion, and render such seamen and mariners liable to the forfeitures and penalties contained in the acts above recited; that each and every lawful command which the said master shall think necessary to issue for the effectual government of the said vessel, suppressing immorality and vice of all kinds, be strictly complied with, under the penalty of the person or persons disobeying forfeiting his or their whole wages or hire, together with every thing belonging to him or them on board the said vessel: and it is further agreed, that no officer or seaman, or person belonging to the said ship, shall demand or be entitled to his wages, or any part thereof, until the arrival of the said ship at the above-mentioned port of discharge, and her cargo delivered, nor less than 20 days, in case the seaman is not employed in the delivery: and it is hereby further agreed between the master and officers of the said ship, that whatever apparel, furniture, and stores, each of them may receive into their charge, belonging to the said ship, shall be accounted for on her return; and in case any thing, shall be lost or damaged through their carelessness or insufficiency it shall be made good by such officer or seaman, by whose means it may happen, to the master and owner of the said ship: and whereas it is customary for the officers and seamen, on the ship's return home in the river, and during the time their cargoes are delivering, to go on shore each night to sleep, greatly to the prejudice of such ship and freighters: be it further agreed by the said parties, that neither officer nor seaman shall, on any pretence whatsoever, be entitled to such indulgence, but shall do their duty by day in discharge of the cargo, and keep such watch by night as the master or commander of the said ship shall think necessary, in order for the preservation of the above: and whereas it often happens that part of the cargo is embezzled after being delivered into lighters; and, as such losses are made good by the owners of the ships, be it therefore agreed, by these presents, that whatever officer or seaman the master shall think proper to appoint, shall take charge of the cargo in the lighters, and go with the same to the lawful quay, and there deliver his charge to the ship's husband, or his representative, or see the same safely weighed at the king's beam; and, in consequence of their true fidelity, such seamen shall be entitled to 2s. 6d. each lighter, exclusive of their monthly pay; and should it so happen that lighters are detained any considerable time at the quay before they can be unloaded, such officer and seaman so appointed shall in that case be entitled to 2s. 6d. for every 24 hours, exclusive of their monthly pay; that each seaman and mariner, who shall well and truly perform the above-mentioned voyage, (provided always, that there be no plunderage, embezzlement, or other unlawful acts, committed on the vessel's cargo or stores,) shall be entitled to their wages or hire that may become due to him pursuant to this agreement; that, for the due performance of each and every the above-mentioned articles and agreements, and acknowledgment of their being voluntary and without compulsion, or any other clandestine means being used, the said parties have hereunto subscribed their names, the day and month set opposite to their respective names.

Place and Time of Entry.	Men's Names.	Quality.	Witnesses to each Man's signing.	Pay in the River.		Wages per Month, or for the Voyage.	Whole Wages.
				Whole.	Half.		

The statutes do not render a verbal agreement for wages absolutely void; but impose a penalty on the master if a written agreement be not made. When a written agreement is made, it becomes the only evidence of the contract between the parties; and a seaman cannot recover any thing agreed to be given in reward for his services, which is not specified in the articles.

A seaman who has engaged to serve on board a ship, is bound to exert himself to the utmost in the service of the ship; and, therefore, a promise made by the master of a ship in distress, to pay an extra sum to a seaman, as an inducement to extraordinary exertion on his part, is held to be essentially void.

2. *Conduct of Seamen.* — It is essentially to the business of navigation that the most prompt and ready obedience should be paid to the lawful commands of the master. To this effect it is covenanted in the articles of agreement previously quoted, that "each and every lawful command which the said master shall think necessary to issue for the effectual government of the said vessel, suppressing immorality and vice of all kinds, be strictly complied with, under the penalty of the person or persons disobeying forfeiting his or their whole wages or hire, together with every thing belonging to him or them on board the said vessel."

In case of disobedience or disorderly conduct on the part of the seamen, the master may correct them in a reasonable manner. Such an authority is absolutely necessary to the safety of the ship and of those on board; but it behoves the master to act in such cases with great deliberation, and not to pervert the powers with which he is intrusted for the good of the whole to cruel or vindictive purposes. Masters abusing their au-

thority must answer at law for the consequences. In the case of actual or open mutiny by the crew, or any part of them, the resistance of the master becomes an act of self defence, and is to be considered in all its consequences in that point of view. The Ordinances of Oleron and Wisby declare that a mariner who strikes the master shall either pay a fine or lose his right hand; a singular as well as cruel alternative, unknown in modern jurisprudence.

But although the master may by force restrain the commission of great crimes, he has no judicial authority over the criminal, but is bound to secure his person and bring him before a proper tribunal. And all justices of the peace are empowered to receive informations touching any murder, piracy, felony, or robbery upon the sea, and to commit the offenders for trial. — (43 Geo. 3. c. 160.)

The *desertion* or absence without leave of seamen from a ship, while on a voyage to foreign parts, being attended with many bad consequences, has been provided against in all maritime laws. It was enacted in this country, by the 11 & 12 Will. 3. c. 7.,

“That all such seamen, officers, or sailors, who shall desert the ships or vessels wherein they are hired to serve for that voyage, shall for such offence forfeit all such wages as shall be then due to him or them.” By subsequent statutes (2 Geo. 2. c. 36., and 31 Geo. 3. c. 39.), it is enacted, that if, after having entered into the agreement previously referred to, a mariner deserts or refuses to proceed on the voyage, he forfeits to the owners all the wages then due to him, and a justice of the peace may, on complaint of the master, owner, or person having charge of the ship, issue a warrant to apprehend him; and in case of his refusal to proceed on the voyage, or of his not assigning a sufficient reason for such refusal, may commit him to hard labour in the house of correction for not more than *thirty* nor less than *fourteen* days. A mariner *absenting* himself from the ship without leave of the master or other chief officer having charge of the ship, forfeits *two* days’ pay for every such day’s absence, to the use of Greenwich Hospital. And in the case of foreign voyages, if, upon the ship’s arrival at her port of delivery here, he leaves her without a *written discharge* from the master or other person having charge of the ship, or if in the coasting trade he quits the ship before the *voyage is completed* and the cargo delivered, or before the expiration of the term for which he engaged, or before he has obtained a discharge in writing, he forfeits 1 month’s pay to the said hospital. But these provisions do not debar seamen from entering on board any of his Majesty’s ships.

In order still further to discountenance desertion, a penalty of 100*l.* is imposed by the 37 Geo. 3. c. 73. on every master or commander of any British merchant ship who engages any seaman or other person to serve on board such ship, in the event of such master or commander being aware, at the time, that such seaman or person had deserted from any other ship or vessel.

For an account of the penalties imposed on the master for leaving seamen in foreign countries, or refusing to bring them back, see MASTER.

Neglect of duty, disobedience of orders, habitual drunkenness, or any cause which will justify a master in discharging a seaman during the voyage, will also deprive the seaman of his wages.

If the cargo be embezzled or injured by the fraud or negligence of the seamen, so that the merchant has a right to claim satisfaction from the master and owners, they may, by the custom of merchants, deduct the value thereof from the wages of the seamen by whose misconduct the injury has taken place. And the last proviso introduced into the usual agreement signed by the seamen, is calculated to enforce this rule in the case of embezzlement either of the cargo or of the ship’s stores. This proviso, however, is to be construed individually, as affecting only the particular persons guilty of the embezzlement, and not the whole crew. Nor is any innocent person liable to contribute a portion of his wages to make good the loss occasioned by the misconduct of others.

The offences of running away with the ship, or voluntarily yielding her up to an enemy, or making a revolt, are punishable by death. The statute 11 & 12 Will. 3. c. 7. enacts,

“That if any commander or master of any ship, or any seaman or mariner, shall in any place, where the admiral hath jurisdiction, betray his trust and turn pirate, enemy, or rebel, and piratically and feloniously run away with his or their ship or ships, or any barge, boat, ordnance, ammunition, goods, or merchandises, or yield them up voluntarily to any pirate, or shall bring any seducing messages from any pirate, enemy, or rebel, or consult, combine, or confederate with, or attempt or endeavour to corrupt any commander, master, officer, or mariner, to yield up or run away with any ship, goods, or merchandises, or turn pirate, or go over to pirates; or if any person shall lay violent hands on his commander, whereby to hinder him from fighting in defence of his ship and goods committed to his trust, or that shall confine his master, or make or endeavour to make a revolt in the ship; shall be adjudged, deemed, and taken to be a *pirate, felon, and robber*, and being convicted thereof according to the directions of this act, shall have and suffer pain of death, loss of lands, goods, and chattels, as *pirates, felons, and robbers* upon the seas ought to have and suffer.”

The wilful destruction or loss of the ship is, in all countries, punishable by death. But doubts having been entertained whether the destruction of a ship that had been insured came within the scope of the previously existing statutes, they were repealed by the 43 Geo. 3. c. 113., and the following provision substituted in their stead:—

“That if any person or persons shall, from and after the *sixteenth* day of July, 1803, wilfully cast away, burn, or otherwise destroy, any ship or vessel, or in any wise counsel, direct, or procure the same to be done, and the same be accordingly done, with intent or design thereby wilfully and maliciously to prejudice any owner or owners of such ship or vessel, or any owner or owners of any goods laden on board the same, or any person or persons, body politic or corporate, that hath or have underwritten or shall underwrite any policy or policies of insurance upon such ship or vessel, or on the freight thereof, or upon any goods

taken on board the same, the person or persons offending therein, being thereof lawfully convicted, shall be deemed and adjudged a principal felon or felons, and shall suffer death as in cases of felony, without benefit of clergy."

3. *Payment of Seamen's Wages, &c.* — In order to stimulate the zeal and attention of seamen, it has been the policy of all maritime states to make the payment of their wages depend on the successful termination of the voyage. "*Freight is the mother of wages ; the safety of the ship the mother of freight.*" When, therefore, by any disaster happening in the course of the voyage, such as the loss or capture of the ship, the owners lose their freight, the seamen also lose their wages.

If a ship destined on a voyage out and home has delivered her outward bound cargo, but perishes in the homeward voyage, the freight for the outward voyage is due ; so in the same case the seamen are entitled to receive their wages for the time employed in the outward voyage and the unloading of the cargo, unless by the terms of their contract the outward and homeward voyages are consolidated into one. If a ship sail to several places, wages are payable to the time of the delivery of the last cargo. Upon the same principle, where money had been advanced to the owners in part of the freight outwards, and the ship perished before her arrival at the port of delivery, it was held that the seamen were entitled to wages in proportion to the money advanced.

If, after seamen have been hired, the owners of a ship do not think proper to send her on the intended voyage, the seamen are to be paid for the time during which they may have been employed on board the ship ; and in the event of their sustaining any special damage by breaking off the contract, it is but reasonable that they should be indemnified.

In the case of shipwreck, it is the duty of the seamen to exert themselves to the utmost to save as much as possible of the vessel and cargo. If the cargo be saved, and a proportion of the freight paid by the merchant in respect thereof, it seems, upon principle, that the seamen are also entitled to a proportion of their wages. And for their labour in saving the cargo, or the remains of the ship, they, as well as other persons, may be entitled to a recompence by way of *salvage*. The laws of Oleron rule, that if, in case of shipwreck, "the seamen preserve a part of the ship and lading, the master shall allow them a reasonable consideration to carry them home to their own country ; and in case they save enough to enable the master to do this, he may lawfully pledge to some honest persons such part thereof as may be sufficient for the occasion."

By the laws of Wisby, "the mariners are bound to save and preserve the merchandise to the utmost of their power, and whilst they do so (*ce-faisant*, according to the *French* translation), ought to be paid their wages, otherwise not." By the Hanseatic Ordinance, if a ship happens to be cast away, the mariners are obliged to save as much as in them lies, and the master ought to requite them for their pains to their content, and convey them at his own charge to their dwelling places ; but if the mariners refuse to assist their master, in such case they shall have neither reward nor wages paid them." It is not quite clear, from the language of these ancient ordinances, whether the payment directed to be made to seamen on those melancholy occasions, is to be a reward only for their labour in the salvage, or a recompence for their former services in the ship, for which, according to general principles, they are entitled to no payment, if no freight is earned. But Cleirac, in his *Commentary on the Laws of Oleron*, says, that by an ordinance of Philip II. of Spain, made in the year 1563, it is ordained, that the seamen shall save as much as they can from shipwreck ; and, in that case, the master is bound to pay them their wages, and to give them a further reward for their labour out of the goods. And the Hanseatic Ordinance of the year 1614 expressly directs, that if so much of the ship be saved as equals the value of the wages of the seamen, they shall be paid their whole wages. In like manner, the Ordinance of Rotterdam and the *French* Ordinance also expressly direct the payment of wages cut off the relics and materials of the ship. — (*Abbott on the Law of Shipping*, part iv. c. 2.)

"I have not been able," says Lord Tenterden, "to find any decision of an English court on the point, and the legislature has made no provision relating to it. As an inducement to the mariners to exert themselves in the hour of danger, it may not be unfit to hold out to them the prospect of obtaining their wages, if they save so much of the ship as shall be sufficient to pay them ; but their claim upon the ship seems not to extend to a case, wherein, according to the principles of the law upon which their claim is founded, no wages are payable to them." — (*Part iv. c. 2.*)

The laws of Oleron, Wisby, and the Hanse towns, direct, that if a seaman die during the voyage, wages shall be paid to his heirs : but it is not clear whether the sum thus directed to be paid is to be understood as meaning a payment proportioned to the time of his service, or the whole sum that he would have earned had he lived till the conclusion of the voyage. This question has not been judicially decided in England ; but by the act 37 Geo. 3. c. 73. it is ordered, that the wages due to any seaman, who has died on board any ship trading to the West Indies, shall be paid, within 3 months of

the arrival of such ship in Great Britain, to the receiver of the sixpenny duty for Greenwich Hospital, for the use of the seaman's executor or administrator. All masters neglecting or refusing to pay the same incur a penalty of 50*l.*, and pay double wages for each offence.

A seaman impressed from a merchant ship into the royal service, is entitled to receive the proportion of his wages due to him at the time of impressment, provided the merchant ship *arrive in safety* at the port of her discharge.

Policy requires that the wages of seamen should not be paid to them in foreign countries, as well to prevent desertion, as to preserve, for the benefit of their families, what might otherwise be spent in riot and debauchery. Conformably to this principle it has been enacted,

"That no master or owner of any merchant ship or vessel shall pay or advance, or cause to be paid or advanced, to any seaman or mariner, during the time he shall be in parts beyond the seas, any money or effects upon account of wages, exceeding *one moiety* of the wages which shall be due at the time of such payment, until such ship or vessel shall return to *Great Britain or Ireland*, or the plantations, or to some other of his Majesty's dominions, whereto they belong, and from whence they were first fitted out; and if any such master or owner of such merchant ship or vessel shall pay or advance, or cause to be paid or advanced, any wages to any seaman or mariner above the said moiety, such master or owner shall forfeit and pay *double* the money he shall so pay or advance, to be recovered in the High Court of Admiralty by any person who shall first discover and inform of the same." — (8 *Geo.* 1. c. 24.)

The time when wages should be paid has also been made the subject of parliamentary enactments. Thus, as to ships engaged in *foreign voyages*, it is ordered, that upon the arrival of any ship in *Great Britain* from parts beyond the seas, the master or commander shall be obliged to pay the seamen thereto belonging their wages, if demanded, in *thirty days* after the ship's entry at the Custom-house, except in cases where a covenant shall be entered into to the contrary; or at the time the seamen shall be discharged, which shall first happen, if demanded; deducting the penalties and forfeitures imposed by the act, "under the penalty of paying to each seaman or mariner that shall be unpaid, contrary to the intent and meaning of this act, *twenty shillings* over and above the wages that shall be due to each person, to be recovered by the same means and methods as the wages may be recovered; and such payment of wages aforesaid shall be good and valid in law, notwithstanding any action, bill of sale, attachment, or incumbrance whatsoever." — (2 *Geo.* 2. c. 36.)

And as to ships employed in the *coasting trade* in the manner before mentioned, it is enacted, that the master, commander, or person having charge of the ship, shall be obliged to pay the seamen their wages, if demanded, within *five days* after the ship shall be entered at the Custom-house, or the cargo be delivered, or at the time the seamen shall be discharged, which shall first happen, unless an agreement shall have been made to the contrary; in which case the wages shall be paid according to such agreement, deducting in every case the penalties imposed by this act, under the like forfeiture of *twenty shillings*, to be recovered in the same manner as with regard to ships coming from abroad; and such payment shall be good in law, "notwithstanding any action, bill of sale, attachment, or incumbrance whatsoever." — (31 *Geo.* 3. c. 39.)

Seamen have a threefold remedy for the recovery of wages; viz. against the ship, the owner, and the master; and they may proceed either in the admiralty courts or those of common law: in the former case all may join, and payment may be obtained out of the value of the ship. The contract remains in the custody of the master or owner, but they are bound to produce it when required, and it is conclusive evidence of the contract between the parties.

By the act 59 *Geo.* 3. c. 58., justices of the peace are authorised summarily to decide upon the complaint of any seaman as to the nonpayment of wages not exceeding 20*l.*; and if they find the claim well founded, may, in the event of its not being paid within 2 days, issue their warrant for the levy of the same by distress: parties dissatisfied may appeal to the admiralty.

4. *Payment to Greenwich Hospital.* — During the reign of George II. an establishment attached to Greenwich Hospital was erected (20 *Geo.* 2. c. 38.) "*for the relief and support of maimed and disabled seamen, and the widows and children of such as shall be killed, slain, or drowned, in the merchant service.*" To provide a fund for this charitable institution, every person serving in any merchant ship, or other private ship or vessel, belonging to any of his Majesty's subjects in *England*, (except apprentices under the age of 18, persons employed in boats upon the coasts in taking fish which are brought fresh on shore, or in boats within rivers, or upon boats on the coast, and pilots (except persons employed in the service of the *East India Company*, and who are not entitled to the benefit of this institution, being provided for by a fund established by the Company),) pays *sixpence per month*, which is deducted out of his wages by the master, and by him paid over to the persons appointed under the authority of the act at the port to which the ship belongs, before she shall be allowed to clear inwards. For the management and distribution of this fund, a corporation was created, composed chiefly of eminent merchants, with power to purchase land and erect an hospital, and to provide for seamen

rendered incapable of service by sickness, wounds, or other accidental misfortunes, and decrepit and worn out by age, either by receiving them into the hospital, or by pensions; and also to relieve the widows and children of seamen killed or drowned in the merchant service, provided the children are not of the age of 14 years; or, if of that age and upwards, are incapable of getting a livelihood by reason of lameness, blindness, or other infirmity, and are proper objects of charity; and to make reasonable allowances to those who shall lose an eye or limb, or be otherwise hurt or maimed, in fighting, defending or working their ships, or doing any other duty in their service, in proportion to their hurt; so far forth as the income and revenues of the charity will extend for these purposes. But no person is to be provided for as a worn-out seaman, who has not been employed in the merchant service *five* years, and paid the contribution. And in providing for this class, a preference is given to such as have served longest and contributed most.

In order to ascertain the times of service and payment of the contribution, the master must keep a *muster-roll* of the persons employed in the ship, and before its departure deliver a duplicate to the collector of these duties at the port; and, during the voyage, enter the time and place of discharge, quitting, and desertion, and of receiving other persons on board, and of any hurt, damage, death, or drowning; of which he must also deliver a duplicate at his return, under the penalty of 20*l.*, to the truth whereof he may be examined upon oath by the collector. And in case any person employed on board any ship or vessel shall, in doing his duty on shore or on board, break an arm or leg, or be otherwise hurt or maimed, he is to be properly relieved until sufficiently recovered to be sent to the place to which the ship belongs.

But, notwithstanding the *principle* of this charity is excellent, it has been alleged, and, we apprehend, on pretty good grounds, that the conditions under which merchant seamen are admitted to participate in its benefits are too onerous, that they have not reaped from it an advantage equivalent to the sacrifice it imposes on them, and that the expenses of collection have been quite enormous.

The last part of this statement is, indeed, completely borne out by the first of the subjoined documents, which shows that the expense of collection is, in future, to be reduced to a *half* of what it has hitherto been; and we have been well assured that the reduction may be safely carried a good deal further.

The second of the subjoined accounts shows that there is not at present a single seaman in Greenwich Hospital, except such as have served in the navy; a circumstance which, considering the number of men in the merchant service, the large sum (26,000*l.*) annually paid by them to the hospital, and the period that has elapsed since the termination of the war, strikes us as not a little extraordinary. The subject is one that seems to require a thorough investigation. Merchant seamen ought to participate, equally with those in his Majesty's service, in the benefits of an institution to which they contribute so largely.

I. An Account of the Money deducted out of the Wages of Seamen employed in the Merchant Service of the Country, for the Years 1828 and 1829; showing the Gross Amount collected, the Nett Money paid to Greenwich Hospital, and the Amount and Rate per Cent. paid for collecting the same in each Year, and for what Purposes employed.

	1828.			1829.

Number of Children of Merchant Seamen whose Fathers have never served in the Navy.	Number of Children of Merchant Seamen whose Fathers have also served in the Navy.	Remarks.
89	23	The original Greenwich Hospital school, to which the children of merchant seamen are eligible, consisted of 200 children, until, by a regulation of 1829, it was increased to 500.

Royal Hospital, Greenwich, 9th of April, 1831.

R. G. KEATS, Governor.

For further details with respect to this important subject, see *Lord Tenterden's* work on the *Law of Shipping*.

SEAWORTHY, a term applied to a ship, indicating that she is in every respect fit for her voyage.

It is provided in all charterparties, that the vessel chartered shall be "tight, staunch, and strong, well apparelled, furnished with an adequate number of men and mariners, tackle, provisions, &c." If the ship be insufficient in any of these particulars, the owners, though ignorant of the circumstance, will be liable for whatever damage may, in consequence, be done to the goods of the merchant; and if an insurance has been effected upon her, it will be void.

But whether the condition of seaworthiness be expressed in the charterparty or not, it is always implied. "In every contract," said Lord Ellenborough, "between a person holding himself forth as the owner of a lighter or vessel ready to carry goods for hire, and the person putting goods on board, or employing his vessel or lighter for that purpose, it is a term of the contract on the part of the lighterman or carrier implied by law, that his vessel is tight, and fit for the purpose for which he offers and holds it forth to the public: it is the immediate foundation and substratum of the contract that it is so: the law presumes a promise to that effect on the part of the carrier, without any actual proof; and every reason of sound policy and public convenience requires that it should be so."

Not only must the ship and furniture be sufficient for the voyage, but she must also be furnished with a sufficient number of persons of competent skill and ability to navigate her. And for sailing down rivers, out of harbours, or through roads, &c., where either by usage or the laws of the country a pilot is required, a pilot must be taken on board. But no owner or master of a ship shall be answerable for any loss or damage by reason of no pilot being on board, unless it shall be proved that the want of a pilot shall have arisen from any refusal to take a pilot on board; or from the negligence of the master in not heaving to, for the purpose of taking on board any pilot who shall be ready and offer to take charge of the ship. — (48 Geo. 3. c. 164.)

A ship is not seaworthy unless she be provided with all the documents or papers necessary for the manifestation of the ship and cargo. Neither is she seaworthy, if, during war, she be not supplied with the sails required to facilitate her escape from an enemy.

It is only necessary, to guarantee the owners from loss, that the ship should be seaworthy at the time of her departure. She may cease to be so in a few hours, and yet they may not be liable. The question to be decided in such cases always is, whether the ship's disability arose from any defect existing in her before her departure, or from a cause which occasioned it afterwards. But if a ship, within a day or two of her departure, become leaky or foundered at sea, or be obliged to put back, without any visible or adequate cause to produce such an effect — such as the starting of a plank or other accident to which the best ships are liable, and which no human prudence can prevent — the fair presumption is that she was not seaworthy when she sailed; and it will be incumbent on the owners to show that she was seaworthy at that time. They are liable for damage occasioned by every injury arising from any original defect in the ship, or from

had stowage : but they are not liable for any injury arising from the act of God, the king's enemies, or the perils of the sea.

It is further to be observed, that how perfect soever a ship may be, yet if, from the nature of her construction, or any other cause, she be incapable of performing the proposed voyage, with the proposed cargo on board, she is not seaworthy. *She must be, in all respects, fit for the trade in which she is meant to be employed.* And it is a wholesome rule that the owners should be held to a pretty strict proof of this.

It has been already observed, that any defect in point of seaworthiness invalidates an insurance upon a ship. There is not only an express but an implied warranty in every policy, that the ship shall be "tight, staunch, and strong, &c.;" and the reason of this is plain. The insurer undertakes to indemnify the insured against the *extraordinary and unforeseen perils of the sea*; and it would be absurd to suppose that any man would insure against those perils, but in the confidence that the ship is in a condition to encounter the *ordinary perils* to which every ship must be exposed in the usual course of the proposed voyage.

By the old law of France it was directed, that every merchant ship, before her departure from the place of her outfit, should be surveyed by certain sea officers appointed for that purpose, and reported to be seaworthy, "*en bon état de navigation*;" and that previous to her return, before she took her homeward cargo on board, she should be again surveyed. Valin has shown — (Tit. *Fret*, art. 12.), that very little confidence could be placed in these surveys, which, he tells us, were only made upon the external parts, for the ship was not unsheathed; and, therefore, her internal and hidden defects could not be disclosed. This practice seems now to be abandoned by the French; at least, there is no allusion to it in the *Code de Commerce*. It is, one should think, much better to leave the question as to the seaworthiness of the ship to be ascertained, as in England, after a loss has happened, by an investigation of the true cause of such loss, than to permit so important a question to be decided upon the report of officers without any motive to enquire carefully into her actual condition. A ship may, to all appearance, be perfectly capable of performing a voyage; and it is only after a loss has happened, that her latent defects can be discovered, and her true state at the time of her departure rendered manifest. Indeed, the survey made by the French was not deemed a conclusive proof that the ship was, at her departure, really seaworthy: it merely raised a *presumption* that such was the case; but it was still open to the freighter or the insurer to show the contrary.

For further information upon this point, the reader is referred to the able and excellent works of Chief Justice Abbott (*Lord Tenterden*) on the *Law of Shipping*, part iii. c. 3., and of Mr. Serjeant Marshall on *Insurance*, book i. c. 5. § 1.

SEGARS, or CIGARS. See TOBACCO.

SENA (Fr. *Séné*; Ger. *Sennablater*; It. *Senna*; Sp. *Sen*; Lat. *Cassia Senna*; Arab. *Sunū*). The plant (*Cassia Senna*) which yields the leaves known in commerce and the *materia medica* by the name of senna, is an annual, a native of Upper Egypt, and Bernou in Central Africa. The senna, after being collected in Upper Egypt, is packed up in bales, and sent to Boullac, where it is mixed with other leaves, some of which are nearly equally good, while others are very inferior. After being mixed, it is repacked in bales at Alexandria, and sent to Europe. A great deal of senna is imported from Calcutta and Bombay, under the name of East India senna; but it is originally brought to them from Arabia. — (*Thomson's Dispensatory*.) Senna is very extensively used in medicine. The total quantity imported in 1831 amounted to 250,296 lbs., of which 130,222 lbs. were retained for home consumption. Of the imports, 42,519 lbs. came directly from Egypt; 200,990 lbs. from the East Indies; and a small quantity at second hand from Italy and other places. The imports of senna from India in 1832 amounted to 464,917 lbs. The duty was reduced, in 1832, from 1s. 3d. to 6d. per lb.

SHAGREEN (Ger. *Schagrin*; It. *Chagrin*; Rus. *Schagrim*, *Shagren*), a kind of grained leather, used for various purposes in the arts. It is extensively manufactured at Astrakhan in Russia. — (See *Tooke's Russia*, vol. iii. p. 403.)

SHAMMY, or CHAMOIS LEATHER (Ger. *Sämischleder*; Fr. *Chamois*; It. *Camoscio*; Rus. *Samschanii*, *Koshi*), a kind of leather dressed in oil, or tanned, and much esteemed for its softness, pliancy, and capability of bearing soap without hurt. The real shammy is prepared of the skin of the chamois goat. But leather prepared from the skins of the common goat, kid, and sheep, is frequently substituted in its stead.

SHARKS' FINS, form a regular article of trade to China; and are collected for this purpose in every country from the eastern shore of Africa to New Guinea. In the Canton Price Currents they are as regularly quoted as tea or opium; and the price of

late years has been, according to quality, from 15 to 18 dollars per picul, equal to from 50s. to 60s. per cwt.

SHAWLS (Ger. *Schalen*; Fr. *Chals*, *Chales*; It. *Shavali*; Sp. *Schavalos*), articles of fine wool, silk, or wool and silk, manufactured after the fashion of a large handkerchief, used in female dress. The finest shawls are imported from India, where they are highly esteemed, and cost from 50 to 300 guineas. But the British shawls manufactured at Norwich, Paisley, and particularly Edinburgh, have recently been very much improved; and though still inferior, in point of quality, to the finest specimens brought from the East, they look well, and are much cheaper. The native shawl manufacture is of very considerable value and importance.

Cashmere Shawls.—The shawl manufacture is believed to have originated in the valley of Cashmere, the ancient Caspira, situated in the north-west of India, between the 34th and 35th degrees of N. latitude, and the 73d and 76th degrees of E. longitude. Though not so flourishing as it once was, the manufacture is still prosecuted in this province to a very considerable extent. The shawls are the very best that are made, possessing unequalled fineness, delicacy, and warmth. They are formed of the inner hair of a variety of the common goat (*capra hircus*), reared on the cold, dry table land of Thibet, elevated from 14,000 to 16,000 feet above the level of the sea. The goat thrives sufficiently well in many other countries; but in the sultry plains of Hindostan it has hardly more hair than a greyhound; and though in higher latitudes the hair is more abundant, it is for the most part shaggy and coarse. It is only in the intensely cold and dry climate of Thibet that it yields the peculiarly soft woolly hair that constitutes the material of the Indian shawl. We do not, therefore, suppose that the efforts to naturalise the shawl-goat in France will turn out well. On the contrary, we believe the chances of success would be about equal were an attempt made to breed beavers in a hot country, without water, or camels in a moist country, free from heat and drought.

The inner or fine wool is covered over and protected by a quantity of long shaggy hair, which is, of course, carefully separated from it before it is manufactured.

The genuine shawl wool has been imported into this country; and the finest Edinburgh and Paisley shawls have been produced from it. But it must be admitted that shawls have nowhere been made that can come, as respects quality, into successful competition with those of Cashmere. The manufacture has been established at Delhi and Lahore for some years; but notwithstanding it is carried on by native Cashmerians, and though the material employed be quite the same, the fabrics are said to want the fineness of those made in Cashmere, and to have a degenerated, coarse appearance. It is difficult to account for this superiority. It has been ascribed to some peculiar quality of the water in the valley of Cashmere; but it is most probably owing to a variety of circumstances, which, though each may appear of little importance, collectively give a character to the manufacture.

The following details as to the manufacture of Cashmere shawls are extracted from a recent number of an English paper published at Delhi:—

"The great mart for the wool of which shawls are made, is at Kilghet, which is said to be a dependency of Ladak, and situated 50 days' journey from the northern boundaries of Cashmere. There are 2 kinds of it: that which can be readily dyed is white; the other sort is of an ashy colour, which being with difficulty changed, or, at least, improved by art, is generally woven of its natural hue. About 2 lbs. of either are obtained from a single goat once a year. After the down has been carefully separated from the hairs, it is repeatedly washed with rice starch. This process is reckoned important; and it is to the quality of the water of their valley that the Cashmerians attribute the peculiar and inimitable fineness of the fabrics produced there. At Kilghet the best raw wool is sold for about 1 rupee a pound. By the preparation and washing referred to, it loses $\frac{1}{3}$, and the remainder being spun, 3 rupees' weight of the thread is considered worth 1 rupee.

"Shawls are made of various forms, size, and borders, which are wrought separately, with the view of adapting them to the different markets. Those sent to Turkey used to be of the softest and most delicate texture. Carpets and counterpanes are fabricated of the hair or coarser part of the wool. From a variety of causes, among others the destruction of the Janissaries, who dressed much in shawls, the loss of royalty in Cabul, and the ruined finances of Lucknow, it is certain that the demand for this elegant commodity has greatly declined of late years. Under the Mogul emperors, Cashmere found work for 30,000 shawl looms. In the time of the Afghan kings, the number decreased to 18,000. There are now not more than 6,000 employed. I should attribute little of this diminution to the sale of English imitations among the Asiatic nations. When these counterfeits first appeared, the pretty patterns and brilliancy of the colours took the fancy of some, but their great inferiority in the softness and warmth which marks the genuine shawl, soon caused the new article to be neglected. A camel-load of them was lately put up at outcry in Delhi, when scarcely a native would bid for one!

"The average value of shawls exported from Cashmere amounts annually to 1,800,000 rupees. Runjeet Singh takes $\frac{1}{3}$ in kind as part of the gross revenue of the province, which is about 25 lacs a year. His Highness is said to sell $\frac{1}{4}$ of what he thus receives, and to keep the remainder for his own court. Of the rest disposed of by him and left for sale in the valley, 7 lacs' worth go to Bombay and Western India; 3 to Hindostan, chiefly Oude; $\frac{1}{2}$ a lac each to Calcutta, Cabul, Herat, and Balk, whence some pass on to neighbouring countries.

"A curious calculation of the successive exactions from Cashmere to Bombay inclusive, which magnify the price of shawls, is herewith subjoined.

"Actual cost for materials and labour in making a pair of reel shawls:—

	Fd. rs.
Four Furrukabad seers of wool	12 8
Cleaning, washing, and spinning	50 0
Dyeing	11 0
Wages to weavers	261 6
Total	337 14
Duties on the same.—On sale and importation to Cashmere	3 14
On the thread	8 4
While the fabric is in the loom	125 0
Fees to chowdries, brokers, assessors, &c.	35 0
Total amount of duties in Cashmere	171 18
Duties from Cashmere to Amritsir	12 6
From Amritsir to Bombay	3 6½
At Bombay	70 0
Total from Amritsir to Bombay	85 12½

	Fd. rs.
Total from Kilghet to Bombay, 171 18 and 85 12½ =	252 30½
Prime cost	337 11
Proportion of carriage	0 12
Insurance	21 0
Total cost	610 56½

"A pair of such shawls might sell for 500 rupees at Amritsir, and in Bombay for 900. The amount of the imports, and the sums levied by each government, will appear more in relief if stated as they affect a camel-load in its progress. It consists of 14½ cutcha maunds, and contains, on an average, 2,000 shawls of different kinds, valued, on reaching Bombay, at 28,500 Furrukabad rupees.

"The government of Lahore exacts Fd. rs. 1,564 6; Patialah, 61 0; Biknervr, 15 0; Joudpore, 121 4; Bhownagur, 20 0;—total levied by native princes, 1,809 0; Bombay, (10 per cent. ad valorem) 2,850 0.—(Quoted in Mr. Montgomery Martin's *Asiatic Codes*, vol. i. p. 251.)

SHEEP (Ger. *Schafe*; Fr. *Brebis*, *Bêtes à laine*, *Moutons*; It. *Pecore*; Sp. *Pecora*, *Ovejas*; Rus. *Ovezü*; Lat. *Oves*). Of the domestic animals belonging to Great Britain, sheep, with the exception of horses, and, perhaps, cattle, are by far the most important.

They can be reared in situations and upon soils where other animals would not live. They afford a large supply of food, and one of the principal materials of clothing. Wool has long been a staple commodity of this country, and its manufacture employs an immense number of people. "The dressed skin," says Mr. Pennant, "forms different parts of our apparel; and is used for covers of books. The entrails, properly prepared and twisted, serve for strings for various musical instruments. The bones, calcined (like other bones in general), form materials for tests for the refiner. The milk is thicker than that of cows, and consequently yields a greater quantity of butter and cheese; and in some places is so rich, that it will not produce the cheese without a mixture of water to make it part from the whey. The dung is a remarkably rich manure; insomuch that the folding of sheep is become too useful a branch of husbandry for the farmer to neglect. To conclude; whether we consider the advantages that result from this animal to individuals in particular, or to these kingdoms in general, we may, with Columella, consider this, in one sense, as the first of the domestic quadrupeds."* — (*Pennant's British Zoology*.) The importation of sheep from a foreign country is prohibited under pain of forfeiture. — (6 Geo. 4. c. 107. § 52.) — (See CATTLE, and WOOL.)

The following Table exhibits a compendious view of the more prominent characteristics of the principal breeds of sheep in Great Britain:—

Names of Breeds.	Head.	Colour of Face and Legs.	Wool.	Wgt. of Wethrs. Fleeces. per Qr.		Age killed.
				Lbs.	Lbs.	
1. Teeswater	No horns	White face and legs	Long wool	9	28	2
2. Lincoln	No horns	White face and legs	Long wool	10	25	2
3. Dishley, or New Leicester	No horns	White face and legs	Long wool (fine)	8	22	2
4. Cotswold	No horns	White face and legs	Long wool (fine)	9	21	2
5. Romney Marsh	No horns	White face and legs	Long wool (fine)	8	22	2
6. Dartmoor, or Bampton	No horns	White face and legs	Long wool (fine)	9	25	2
7. Exmoor	Horned	White face and legs	Long wool (coarse)	6	16	2½
8. Black-faced, or Heath	Horned	Black face and legs	Long wool (coarse)	3	15	3½
9. Herford, Ryeland	No horns	White face and legs	Short wool (fine)	23	14	4
10. Morf, Shropshire	Horned	Black and speckled	Short wool (fine)	13	12	3½
11. Dorset	Horned	White and speckled	Short wool (fine)	5½	18	2
12. Wilt	Horned	White and speckled	Short wool (mid.)	3	20	3
13. Berks	No horns	Black and white	Long wool	7	18	2½
14. South Down	No horns	Speckled and white	Short wool	2½	18	2
15. Norfolk	Horned	Black and white	Short wool	2	18	3½
16. Herdwick	Horned	Speckled and white	Short wool	2	10	4½
17. Cheviot	No horns	White face and legs	Short wool	3	16	4
18. Dun-faced	No horns	Dun face and legs	Short wool	1½	7	4½
19. Shetland	No horns	Various coloured ditto	Fine cottony	1½	8	4
20. Spanish	Rams horn'd	White	Short wool (super.)	3½	14	2½
21. Ditto, cross	—	—	Short wool (fine)	2½	16	2

For details as to the number of sheep, the quantity and quality of wool, &c., see WOOL.

SHERRY. See WINE.

SHIPS. Nautical men apply the term ship to distinguish a vessel having 3 masts, each consisting of a lower mast, a topmast, and top-gallant-mast, with their appropriate rigging. In familiar language, it is usually employed to distinguish any large vessel, however rigged: but it is also frequently used as a general designation for all vessels navigated with sails; and it is in this sense that we now employ it.

Merchant Ships. — It is hardly possible to divide merchant ships into classes, at least with any degree of precision. Their size, shape, the mode of their rigging, &c. depend not merely on the particular trade for which they are destined, but on the varying tastes and fancies of their owners. The ships employed in the China trade, by the East India Company, are the largest merchantmen belonging to this country; the private traders to the East and West Indies rank next; then follow the whale ships, those engaged in the trade to the Baltic and Canada, the Mediterranean, and a host of others of every variety of burden and shape.

The reader will find, in the articles NAVIGATION LAWS, and REGISTRY, an account of the peculiar privileges enjoyed by British ships, of the conditions and formalities necessary to be observed in order to acquire and preserve these privileges, of the mode of transferring property in ships, &c. And in the articles CHARTERPARTY, FREIGHT, MASTER, OWNERS, SEAMEN, &c., the law with respect to ships and ship-owners, in their capacity of carriers or public servants, and the reciprocal duties and obligations of the masters and crews, is pretty fully expounded. In this place, therefore, we shall content ourselves with laying before the reader some official statements exhibiting the progress and present magnitude of the mercantile navy of Great Britain.

Increase of Shipping in England. — It would be to no purpose, even if our limits permitted, to enter into any details with respect to the shipping of England previously to the Revolution. Those who wish to examine the subject, will find most of the scattered

* Post majores quadrupedes ovilli pecoris secunda ratio est; quæ prima sit si ad magnitudinem utilitatis referas. Nam id præcipue contra frigoris violentiam protegit, corporibusque nostris liberaliora præbet velamina; et etiam elegantiam mensas jucundis et numerosis dapibus exornat. — (*De Re Rustica*, lib. vii. cap. 2.)

notices of contemporary writers collected by Anderson, in his "Chronological History of Commerce." The mercantile navy of England first became considerable in the reign of Elizabeth; and gradually increased under her successors, James I. and Charles I. At the Restoration, the British shipping cleared outwards amounted to 95,266 tons; but such was the increase of navigation during the reigns of Charles II. and James II., that, at the Revolution, the British ships cleared outwards amounted to 190,533 tons. The war terminated by the treaty of Ryswick, in 1697, checked this progress. But commerce and navigation have steadily advanced, with the exception of 2 short periods during the war of 1739, and the American war, from the beginning of last century down to the present day.

The first really authentic account of the magnitude of the commercial navy of England was obtained in 1701-2, from returns to circular letters of the commissioners of customs, issued in January of that year. From these it appears that there belonged, at the period in question, to all the ports of England and Wales, 3,281 vessels, measuring (or rather estimated to measure) 261,222 tons, and carrying 27,196 men and 5,660 guns. Of these there belonged to

	Vessels.	Tons.	Men.		Vessels.	Tons.	Men.
London - - -	560	84,882	10,065	Hull - - -	115	7,564	187
Bristol - - -	165	17,338	2,359	Whitby - - -	110	8,292	571
Yarmouth - - -	143	9,914	668	Liverpool - - -	102	8,619	1,101
Exeter - - -	121	7,107	978	Scarborough - - -	100	6,860	606

None of the other ports had 100 vessels; and there is some mistake in the returns as to the tonnage assigned to Newcastle and Ipswich. Of the Hull vessels, 89 were at the time laid up, which accounts for the small number of men in that port. — (*Macpherson's Annals of Commerce*, anno 1701.)

The following Table of the British and foreign shipping cleared outwards from 1663 to 1811, both inclusive, is taken from the last edition of *Mr. Chalmers's Comparative Estimate*. It gives a very complete view of the progress of the navigation of the country; and from the attention paid by the author to such subjects, and the facilities which his situation in the Board of Trade gave him for acquiring authentic information, its accuracy may be depended on.

I. Table of Ships cleared Outwards from 1663 to 1811.

N. B. — The falling off in the number of ships in 1827 is apparent only. But a ship, when once placed on them, remained till evidence was produced of her having been sold to foreigners, lost, or otherwise destroyed; so that a good many ships were at all times on the register, which, in fact, did not exist. The Registry Act passed in 1826 obliged all owners of ships to register them of new; when, of course, the names of those that had ceased to exist disappeared from the books. We have already noticed the enormous extent to which this sort of blunder was permitted to grow up in the United States. — (See *ante*, p. 845.)

VIII. An Account of the Number of Ships or Vessels belonging to the different Ports of the British Empire in 1832, stated in succession, agreeably to the Amount of Tonnage belonging to each; and specifying also the Number of the Crews. — (Obtained from the Custom-house, for this work.)

Ship-building. — The cost, including the outfit, of the ships built in 1832, may, we believe, be taken, at a rough average, at from 10*l.* to 12*l.* per ton, or 1*l.* at a medium, making their total value 1,302,235*l.* London, Sunderland, Newcastle, Liverpool, Hull, Yarmouth, &c. are the principal building ports. The business has increased with extraordinary rapidity at Sunderland; so much so, that while only 60 ships, of the burden of 7,500 tons, were built in that port in 1820, no fewer than 109 ships, of the burden of 24,519 tons, were built in it in 1832. Ships built at London, Liverpool, Bristol, and other western ports, are, however, in higher estimation than those built on the Tyne and the Wear, at least for those branches of trade where the best ships are required. Within the last few years, a great many steam boats have been built on the Clyde. — (As to building in the Isle of Man, see next paragraph.)

State of the Shipping Interest. — A great deal of evidence was taken by the Committee of the House of Commons on Trade, Manufactures, &c., in 1833, on the state of the shipping interest. The statements made by some of the witnesses differ very materially from those of others; but, on the whole, they go to show that it was then, and had been for some years, very much depressed. It is difficult, however, seeing the number of new ships that are every year built, not to suspect that the complaints of the ship owners are very much exaggerated. No doubt their profits are a good deal lower than they were during the war; but this, if it be really an evil, is one that is not peculiar to them, but equally affects agriculturists, manufacturers, and merchants; and is not even confined to this country, but extends to others. We have already shown the groundlessness of the clamour raised against the reciprocity treaties (*anté*, p. 822); and which, far from being injurious, have been signally beneficial to our commercial and shipping interests. It is believed that, owing to the peculiar facilities afforded by means of docks and other devices for the loading and unloading of ships, the employment of steam tugs to bring them quickly to their moorings and to take them to sea, and the greater economy and despatch that now pervade every department of the business, 3 ships are able to perform, and do, in fact, perform, as much work as was done by 4 at the end of the war! There has, in this way, been a virtual addition of 400,000 or 500,000 tons to our mercantile navy. And this surely is enough, without looking at any thing else, to account for the decline in the rate of freight since 1815.

The fall in the value of ships has been a consequence of the still greater fall in the value of the timber, iron, hemp, &c. of which they are constructed; and, however injurious to those who happened to have bought or built ships during the high prices, it is in no ordinary degree advantageous to the public, and to the ship owners that are now engaging in the trade. The heavy discriminating duties on Baltic timber are, in fact, the only real grievance under which our shipping interest labours. Were it not for them, ships might be built cheaper in England than in any other country. Such, however, is the vast importance to a maritime nation like this of being able to build ships at the lowest possible rate, that we think they ought to be allowed to be built in bond, or, if that would be inconvenient, that a drawback should be allowed of the duty on every article used in their construction. A measure of this sort would give to the shipping of England the same superiority, in point of cheapness, that is now enjoyed by our cottons; and would do more than any thing else to consolidate and strengthen the foundations of our maritime ascendancy. It is entirely owing to the operation of the duties that so many ships are now built in the colonies. They are very inferior to those built in England; and were the latter built in bond, or were the duties on the articles used in their construction drawn back, they would also be the cheapest of the two.

It may be worth mentioning, as illustrative of the singular anomalies that have been allowed to insinuate themselves into our commercial system, that timber may be imported into the Isle of Man, or into any other British possession, without regard to its origin, on payment of an *ad valorem* duty of 10 per cent. ! It is remarkable that advantage was not earlier taken of this anomaly, to build ships in the Isle of Man. Latterly, however, several vessels have been built in it; and it is clear that, unless it be placed on the same footing as the other parts of the empire, it will become the grand seat of the ship building business. We hope, however, that the equalisation will be made, not by extending our timber laws to the Isle of Man, but by giving to Britain and Ireland the same advantages as it enjoys. There cannot be a doubt that the equalisation of the timber duties would be one of the greatest improvements which it is possible to make in our commercial system.

Mercantile Navy of France. — We have elsewhere given (see *anté*, pp. 641, 642,) very full details with respect to the navigation and shipping of France; but the subjoined classified account of the shipping belonging to that kingdom on the 1st of January, 1830, 1831, and 1832, may not be unacceptable to our readers.

Account of the Mercantile Marine of France on the 1st of January of each of the Three Years ending with 1832.

(*Archives du Commerce*, tome iv. p. 139.)

SHIPS' PAPERS, the papers or documents required for the manifestation of the property of the ship and cargo, &c. They are of 2 sorts; viz. 1st, those required by the law of a particular country — as the certificate of registry, licence, charterparty, bills of lading, bill of health, &c. — (see these titles) — required by the law of England to be

on board British ships; and, 2dly, those required by the law of nations to be on board neutral ships, to vindicate their title to that character. Mr. Serjeant Marshall, following M. Hubner (*De la Saisie des Bâtimens Neutres*, tome i. pp. 241—252.), has given the following description of the latter class of documents:—

1. *The Passport, Sea Brief, or Sea Letter.*—This is a permission from the neutral state to the captain or master of the ship, to proceed on the voyage proposed, and usually contains his name and residence; the name, property, description, tonnage, and destination of the ship; the nature and quantity of the cargo, the place whence it comes, and its destination; with such other matters as the practice of the place requires. This document is indispensably necessary for the safety of every neutral ship. Hubner says, that it is the only paper rigorously insisted on by the Barbary corsairs; by the production of which alone their friends are protected from insult.

2. *The Proofs of Friendship.*—These ought to show that the ship really belongs to the subjects of a neutral state. If she appear to either belligerent to have been built in the enemy's country, proof is generally required that she was purchased by the neutral before, or captured and legally condemned and sold to the neutral after, the declaration of war; and in the latter case the *bill of sale*, properly authenticated, ought to be produced. M. Hubner admits that these proofs are so essential to every neutral vessel, for the prevention of frauds, that such as sail without them have no reason to complain if they be interrupted in their voyages, and their neutrality disputed.

3. *The Muster Roll.*—This, which the French call *rôle d'équipage*, contains the names, ages, quality, place of residence, and, above all, the *place of birth*, of every person of the ship's company. This document is of great use in ascertaining a ship's neutrality. It must naturally excite a strong suspicion, if the majority of the crew be found to consist of foreigners; still more, if they be natives of the enemy's country. — (See SEAMEN.)

4. *The Charterparty.*—Where the ship is chartered, this instrument serves to authenticate many of the facts on which the truth of her neutrality must rest, and should therefore be always found on board chartered ships.

5. *The Bills of Lading.*—By these the captain acknowledges the receipt of the goods specified therein, and promises to deliver them to the consignee or his order. Of these there are usually several duplicates; one of which is kept by the captain, one by the shipper of the goods, and one transmitted to the consignee. This instrument, being only the evidence of a private transaction between the owner of the goods and the captain, does not carry with it the same degree of authenticity as the charterparty.

6. *The Invoices.*—These contain the particulars and prices of each parcel of goods, with the amount of the freight, duties, and other charges thereon, which are usually transmitted from the shippers to their factors or consignees. These invoices prove by whom the goods were shipped, and to whom consigned. They carry with them, however, but little authenticity; being easily fabricated where fraud is intended.

7. *The Log Book, or Ship's Journal.*—This contains a minute account of the ship's course, with a short history of every occurrence during the voyage. If this be faithfully kept, it will throw great light on the question of neutrality; if it be in any respect fabricated, the fraud may in general be easily detected.

8. *The Bill of Health.*—This is a certificate, properly authenticated, that the ship comes from a place where no contagious distemper prevails; and that none of the crew, at the time of her departure, were infected with any such disorder. It is generally found on board ships coming from the Levant, or from the coast of Barbary, where the plague so frequently prevails.

A ship using false or simulated papers is liable to confiscation. — (Marshall on Insurance, book i. c. 9. § 6.)

SHOES (Du. *Schoenen*; Fr. *Souliers*; Ger. *Schuhe*; It. *Scarpe*; Rus. *Baschmaki*; Sp. *Zapatos*), articles of clothing that are universally worn, and require no description. The shoe manufacture is of great value and importance. The finest sort of shoes is made in London; but the manufacture is carried on upon the largest scale in Northamptonshire and Staffordshire. The London warehouses derive considerable supplies from Nantwich, Congleton, and Sandbach, in Cheshire. During the late war, the contractor for shoes generally furnished about 600,000 pairs annually. — (For an estimate of the value of the shoes annually manufactured in Britain, see LEATHER.)

SHUMAC or SUMACH (Ger. *Schmack*, *Semach*; Fr. *Sunac*, *Rouge*, *Roux*; It. *Sommaco*; Sp. *Zunague*; Rus. *Sumah*). Common shumac (*Rhus Coriaria*) is a shrub that grows naturally in Syria, Palestine, Spain, and Portugal. That which is cultivated in Italy, and is improperly called *young fustic*, is the *Rhus Cotinus*. It is cultivated with great care: its shoots are cut down every year quite to the root; and, after being dried, they are chipped or reduced to powder by a mill, and thus prepared for the purposes of dyeing and tanning. The shumac cultivated in the neighbourhood of Montpellier is called *rédoul* or *roudou*. Shumac may be considered of good quality when its odour is strong, colour of a lively green, is well ground, and free from stalks. Italian shumac

is used in dyeing a full high yellow, approaching to the orange, upon wool or cloth; but the colour is fugitive. Common shumac is useful for drab and dove colours in calico printing, and is also capable of dyeing black. — (*Bancroft on Colours*, vol. ii. p. 100.)

The entries of shumac for home consumption amounted, at an average of 1832 and 1833, to 138,241 cwt. a year. The imports are almost entirely from Italy.

Shumac, the produce of Europe, may not be imported for home consumption except in British ships, or in ships of the country of which it is the produce, or from which it is imported, under penalty of confiscation, and forfeiture of 100*l.* by the master of the ship. — (3 & 4 *Will. 4. c. 54. § 2.* and 22.)

SIERRA LEONE, an English settlement, near the mouth of the river of the same name, on the south-west coast of Africa, in lat. 8° 30' N., lon. 13° 5' W.

Objects of the Colony. — This colony was founded partly as a commercial establishment, but more from motives of humanity. It was intended to consist principally of free blacks, who, being instructed in the Christian religion, and in the arts of Europe, should become, as it were, a focus whence civilisation might be diffused among the surrounding tribes. About 1,200 free negroes, who, having joined the royal standard in the American war, were obliged, at the termination of that contest, to take refuge in Nova Scotia, were conveyed thither in 1792: to these were afterwards added the Maroons from Jamaica; and, since the legal abolition of the slave trade, the negroes taken in the captured vessels, and liberated by the mixed commission courts, have been carried to the colony. The total population of the colony in 1831 amounted to 31,627, of which 18,073 were males, and 13,554 females. The whites make but a very small fraction of the population.

Success of the Efforts to civilise the Blacks. — Great efforts have been made to introduce order and industrious habits amongst these persons. We are sorry, however, to be obliged to add, that these efforts, though prosecuted at an enormous expense of blood and treasure, have been signally unsuccessful. There is, no doubt, much discrepancy in the accounts as to the progress made by the blacks. It is, however, sufficiently clear, that it has been very inconsiderable, and we do not think that any other result could be rationally anticipated. Their laziness has been loudly complained of, but without reason. Men are not industrious without a motive; and most of those motives that stimulate all classes in colder climates to engage in laborious employments, are unknown to the indolent inhabitants of this burning region, where clothing is of little importance, where sufficient supplies of food may be obtained with comparatively little exertion, and where more than half the necessities and conveniences of Europeans would be positive incumbrances. And had it been otherwise, what progress could a colony be expected to make, into which there are annually imported thousands of liberated negroes, most of whom are barbarians in the lowest stage of civilisation?

Influence of the Colony upon the illicit Slave Trade. — As a means of checking the prevalence of the illicit slave trade, the establishment of a colony at Sierra Leone has been worse than useless. That trade is principally carried on with the countries round the bight of Biafra and the bight of Benin, many hundred miles distant from Sierra Leone; and the mortality in the captured ships during their voyage to the latter is often very great. In fact, there is but one way of putting down this nefarious traffic; and that is, by the great powers declaring it to be *piracy*, and treating those engaged in it, wherever and by whomsoever they may be found, as sea robbers or pirates. Such a declaration would be quite conformable to the spirit of the declaration put forth by the Congress of Vienna in 1824. — (See *SLAVE TRADE*.) And were it subscribed by England, France, the United States, Russia, &c., the Spaniards and Portuguese would be compelled to relinquish the trade; but unless something of this sort be done, we are afraid there are but slender grounds for thinking that humanity will speedily be relieved from the guilt and suffering inseparable from the traffic.

Climate of Sierra Leone. — The soil in the vicinity of Sierra Leone seems to be but of indifferent fertility, and the climate is about the most destructive that can be imagined. The mortality among the Africans sent to it seems unusually great; and amongst the whites it is quite excessive. Much as we desire the improvement of the blacks, we protest against its being attempted by sending our countrymen to certain destruction in this most pestiferous of all pestiferous places. It would seem, too, that it is quite unnecessary, and that instructed blacks may be advantageously employed to fill the official situations in the colony. But if otherwise, it ought to be unconditionally abandoned.

Commerce of Sierra Leone, and the West Coast of Africa. — Commercially considered, Sierra Leone appears to quite as little advantage as in other points of view. We import from it teak wood, camwood, ivory, palm oil, hides, gums, and a few other articles; but their value is inconsiderable, amounting to not more than from 40,000*l.* to 60,000*l.* a year. The great article of import from the coast of Africa is palm oil, and of this more than *fifty times* as much is imported from the coast to the south of the Rio Volta, several hundred miles from Sierra Leone, as from the latter. We doubt, indeed,

whether the commerce with the western coast of Africa will ever be of much importance. The condition of the natives would require to be very much changed before they can become considerable consumers of European manufactures. It is singular, that speculative persons in this country should be so much bent on prosecuting, without regard to expense, a trade with barbarous uncivilised hordes, while they contribute to the neglect or oppression of the incomparably more extensive and beneficial intercourse we might carry on with the opulent and civilised nations in our immediate vicinity. The equalisation of the duties on Canadian and Baltic timber, and the abolition of the existing restraints on the trade with France, would do 10 times more to extend our commerce, than the discovery of 50 navigable rivers, and the possession of as many forts on the African coast. If, however, an establishment be really required for the advantageous prosecution of the trade to Western Africa, it is abundantly obvious that it should be placed much further to the south than Sierra Leone. The island of Fernando Po has been suggested for this purpose; but after the dear-bought experience we have already had, it is to be hoped that nothing will be done with respect to it without mature consideration.

Exclusive of the above, we exported, in 1829, to the western coast of Africa, 161,431*l.* worth of foreign and colonial merchandise; of this amount, 43,550*l.* worth went to the coast south of the Rio Volta.

Expenses incurred on account of Sierra Leone. — The pecuniary expense occasioned by this colony, and our unsuccessful efforts to suppress the foreign slave trade, have been altogether enormous. Mr. Keith Douglas is reported to have stated, in his place in the House of Commons, in July, 1831, that “down to the year 1824, the *civil* expenses of Sierra Leone amounted to 2,268,000*l.*; and that the same expenses had amounted, from 1824 to 1830, to 1,082,000*l.* The naval expenses, from 1807 to 1824, had been 1,630,000*l.* The payments to Spain and Portugal, to induce them to relinquish the slave trade, amounted to 1,230,000*l.* The expenses on account of captured slaves were 533,092*l.* The expenses incurred on account of the mixed commission courts were 198,000*l.* Altogether, this establishment had cost the country nearly 8,000,000*l.*!”

The prodigality of this expenditure is unmatched, except by its uselessness. It is doubtful whether it has prevented a single African from being dragged into slavery, or conferred the smallest real advantage on Africa. The kings of Spain and Portugal have certainly turned their spurious humanity to pretty good account. We hope there is now, at least, an end of all attempts to bribe such monarchs to respect the rights of humanity, or the treaties into which they have entered.

For further details with respect to Sierra Leone, and the trade of Western Africa, see the *Report of the Select Committee of the House of Commons*, No. 661. Sess. 1830.

SILK (Lat. *Sericum*, from *Seres*, the supposed ancient name of the Chinese), a fine glossy thread or filament spun by various species of caterpillars or larvæ of the *phalena* genus. Of these, the *Phalena atlas* produces the greatest quantity: but the *Phalena bombyx* is that commonly employed for this purpose in Europe. The silkworm, in its caterpillar state, which may be considered as the first stage of its existence, after acquiring its full growth (about 3 inches in length), proceeds to enclose itself in an oval-shaped ball, or cocoon, which is formed by an exceedingly slender and long filament of fine yellow silk, emitted from the stomach of the insect preparatory to its assuming the shape of the chrysalis or moth. In this latter stage, after emancipating itself from its silken prison, it seeks its mate, which has undergone a similar transformation; and in 2 or 3 days afterwards, the female having deposited her eggs (from 300 to 500 in number), both insects terminate their existence. According to Reaumur, the *phalena* is not the only insect that affords this material, — several species of the *arana*, or spider, enclose their eggs in very fine silk.

Raw Silk is produced by the operation of winding off, at the same time, several of the balls or cocoons (which are immersed in hot water, to soften the natural gum on the filament) on a common reel, thereby forming one smooth even thread. When the skein is dry, it is taken from the reel and made up into hanks; but before it is fit for weaving, and in order to enable it to undergo the process of dyeing, without furring up or separating the fibres, it is converted into one of three forms; viz. *singles*, *tram*, or *organzine*.

Singles (a collective noun) is formed of *one* of the reeled threads, being twisted, in order to give it strength and firmness.

Tram is formed of 2 or more threads twisted together. In this state it is commonly used in weaving, as the *shoot* or *weft*.

Thrown Silk is formed of 2, 3, or more singles, according to the substance required, being twisted together in a *contrary* direction to that in which the singles of which it is composed are twisted. This process is termed *organzining*; and the silk so twisted, *organzine*. The art of throwing was originally confined to Italy, where it was kept a secret for a long period. Stow says it was known in this country since the 5th of Queen Elizabeth, “when it was gained from the strangers;” and in that year (1562), the silk throwers of the metropolis were united into a fellowship. They were incorporated in the year 1629; but the art continued to be very imperfect in England until 1719. — (See *post*.)

1. *Historical Sketch of the Manufacture.* — The art of rearing silkworms, of unravelling the threads spun by them, and manufacturing the latter into articles of dress and ornament, seems to have been first practised by the Chinese. Virgil is the earliest of the Roman writers who has been supposed to allude to the production of silk in China, and the terms he employs show how little was then known at Rome as to the real nature of the article: —

Velleraque ut foliis depectant tenuia Seres. — (*Georg.* book ii. lin. 121.)

But it may be doubted whether Virgil do not, in this line, refer to cotton rather than silk. Pliny, however, has distinctly described the formation of silk by the *bombyx*. — (*Hist. Nat.* lib. xi. c. 17.) It is uncertain when it first began to be introduced at Rome: but it was most probably in the age of Pompey and Julius Cæsar; the latter of whom displayed a profusion of silks in some of the magnificent theatrical spectacles with which he sought at once to conciliate and amuse the people. Owing principally, no doubt, to the great dis-

tance of China from Rome, and to the difficulties in the way of the intercourse with that country, which was carried on by land in caravans whose route lay through the Persian empire, and partly, perhaps, to the high price of silk in China, its cost, when it arrived at Rome, was very great; so much so, that a given weight of silk was sometimes sold for an equal weight of gold! At first it was only used by a few ladies eminent for their rank and opulence. In the beginning of the reign of Tiberius, a law was passed, *ne vestis serica viros fœdaret* — that no man should disgrace himself by wearing a silken garment. — (*Tacit. Annal. lib. ii. c. 33.*) But the profligate Heliogabalus despised this law, and was the first of the Roman emperors who wore a dress composed wholly of silk (*holosericum*). The example once set, the custom of wearing silk soon became general among the wealthy citizens of Rome, and throughout the provinces. According as the demand for the article increased, efforts were made to import larger quantities; and the price seems to have progressively declined from the reign of Aurelian. That this must have been the case, is obvious from the statement of Ammianus Marcellinus, that silk was, in his time (anno 370), very generally worn, even by the lowest classes. *Sericum ad usum antehac nobilium, nunc etiam infimorum sine ulla discretione proficiens.* — (*Lib. xviii. c. 6.*)

China continued to draw considerable sums from the Roman empire in return for silk, now become indispensable to the Western World, till the 6th century. About the year 550, two Persian monks, who had long resided in China, and made themselves acquainted with the mode of rearing the silkworm, encouraged by the gifts and promises of Justinian, succeeded in carrying the eggs of the insect to Constantinople. Under their direction they were hatched and fed; they lived and laboured in a foreign climate; a sufficient number of butterflies was saved to propagate the race, and mulberry trees were planted to afford nourishment to the rising generations. A new and important branch of industry was thus established in Europe. Experience and reflection gradually corrected the errors of a new attempt; and the Sogdoite ambassadors acknowledged, in the succeeding reign, that the Romans were not inferior to the natives of China in the education of the insects, and the manufacture of silk. — (*Gibbon, Decline and Fall, vol. vii. p. 99.*)

Greece, particularly the Peloponnesus, was early distinguished by the rearing of silkworms, and by the skill and success with which the inhabitants of Thebes, Corinth, and Argos carried on the manufacture. Until the 12th century, Greece continued to be the only European country in which these arts were practised; but the forces of Roger, king of Sicily, having, in 1147, sacked Corinth, Athens, and Thebes, carried off large numbers of the inhabitants to Palermo; who introduced the culture of the worm, and the manufacture of silk, into Sicily. From this island the arts spread into Italy; and Venice, Milan, Florence, Lucca, &c. were soon after distinguished for their success in raising silkworms, and for the extent and beauty of their manufactures of silk. — (*Gibbon, vol. x. p. 110.; Biographie Universelle, art. Roger II.*)

The silk manufacture was introduced into France in 1480; Louis XI. having invited workmen from Italy, who established themselves at Tours. The manufacture was not begun at Lyons till about 1520; when Francis I., having got possession of Milan, prevailed on some artisans of the latter city to establish themselves, under his protection, in the former. Nearly at the same period the rearing of silkworms began to be successfully prosecuted in Provence, and other provinces of the south of France. Henry IV. rewarded such of the early manufacturers as had supported and pursued the trade for 12 years, with patents of nobility.

Silk Manufacture of England. — The manufacture seems to have been introduced into England in the 15th century. Silk had, however, been used by persons of distinction two centuries previously. The manufacture does not appear to have made much progress till the age of Elizabeth; the tranquillity of whose long reign, and the influx of Flemings occasioned by the disturbances in the Low Countries, gave a powerful stimulus to the manufactures of England. The silk throwsters of the metropolis were united, as already observed, in a fellowship, in 1562; and were incorporated in 1629. Though retarded by the civil wars, the manufacture continued gradually to advance; and so flourishing had it become, that it is stated in a preamble to a statute passed in 1666 (13 & 14 Cha. 2. c. 15.), that there were at that time no fewer than 40,000 individuals engaged in the trade! And it is of importance to observe, that though the importation of French and other foreign silks was occasionally prohibited during the reigns of James I. and Charles I., the Protectorate, and the reign of Charles II., the prohibition was not strictly enforced; and, generally speaking, their importation was quite free.

A considerable stimulus, though not nearly so great as has been commonly supposed, was given to the English silk manufacture by the revocation of the edict of Nantes, in 1685. Louis XIV. drove, by that disgraceful measure, several hundreds of thousands of his most industrious subjects to seek an asylum in foreign countries; of whom it is supposed about 50,000 came to England. Such of these refugees as had been engaged

in the silk manufacture established themselves in Spitalfields, where they introduced several new branches of the art. When the refugees fled to England, foreign silks were freely admitted; and it appears from the Custom-house returns, that from 600,000*l.* to 700,000*l.* were annually imported in the period from 1685 to 1692, being the very period during which the British silk manufacture made the most rapid advances. But the manufacture was not long permitted to continue on this footing. In 1692, the refugees, who seem to have been quite as conversant with the arts of monopoly as with those either of spinning or weaving, obtained a patent, giving them an exclusive right to manufacture lustrings and *à-la-modes*,—the silks then in greatest demand. This, however, was not enough to satisfy them; for, in 1697, Parliament passed an act, in compliance with their solicitations, prohibiting the importation of all French and other European silk goods; and, in 1701, the prohibition was extended to the silk goods of India and China.

These facts show the utter fallacy of the opinion so generally entertained, that we owe the introduction and establishment of the silk manufacture to the prohibitive system. So far from this being the case, it is proved, by statements in numerous acts of parliament, and other authentic documents, that the silk manufacture had overcome all the difficulties incident to its first establishment, had been firmly rooted, and had become of great value and importance, long before it was subjected to the trammels of monopoly; that is, before the manufacturers were taught to trust more to fiscal regulations, and the exertions of Custom-house officers, than to their skill and ingenuity, for the sale of their goods.

The year 1719 is an important epoch in the history of the British silk manufacture; a patent being then granted to Mr. (afterwards Sir Thomas) Lombe and his brother, for the exclusive property of the famous silk mill erected by them at Derby, for throwing silk, from models they had clandestinely obtained in Italy. At the expiration of the patent, Parliament refused the prayer of a petition of Sir Thomas Lombe for its renewal; but granted him 14,000*l.* in consideration of the services he had rendered the country, in erecting a machine which, it was supposed, would very soon enable us to dispense wholly with the supplies of thrown silk we had previously been in the habit of importing from Italy: but instead of being of any advantage, it is most certainly true that the establishment of throwing mills in England has proved one of the most formidable obstacles to the extension of the manufacture amongst us. These mills could not have been constructed unless oppressive duties had been laid on thrown or orgazine silk; and the circumstance of their having been erected, and a large amount of capital vested in them, was successfully urged, for more than a century, as a conclusive reason for continuing the high duties!

From this period down to 1824, the history of the silk manufacture presents little more than complaints, on the part of the manufacturers, of the importation of foreign silks; impotent efforts on the part of parliament to exclude them; and combinations and outrages on the part of the workmen. Of the multitude of acts that have been passed in reference to this manufacture, from 1697 to the era of Mr. Huskisson, we believe it would be exceedingly difficult to point out one that is bottomed on any thing like a sound principle, or that was productive of any but mischievous consequences. The French writers estimate the average exportation of silks from France to England, during the period from 1688 to 1741, at about 12,500,000 francs, or 500,000*l.* a year! In 1763, attempts were made to check the prevalence of smuggling; and the silk merchants of the metropolis, to show their anxiety to forward the scheme, are said to have recalled their orders for foreign goods! It would seem, however, either that their patriotic ardour had very soon cooled, or that they had been supplanted by others not quite so scrupulous; for it appears from a report of a committee of the privy council, appointed, in 1766, to inquire into the subject, that smuggling was then carried on to a greater extent than ever, and that 7,072 looms were out of employment. The same committee reported, that though the French were decidedly superior to us in some branches of the trade, we were quite equal, and even superior to them in others; but instead of proposing, consistently with their report, to admit French silks on a reasonable duty,—a measure which would have proved very advantageous to those branches of the manufacture in which we were superior, or nearly equal, to the French, without doing any material injury to the others, which were already in the most depressed condition,—they recommended the continuance of the old system; substituting absolute prohibitions in the place of the prohibitory duties that formerly existed! Whatever immediate advantages the manufacturers might have reaped from this measure, the ultimate tendency of which could not fail of being most injurious, were effectually counterbalanced by the turbulent proceedings of the workmen, who succeeded, in 1773, in obtaining from the legislature an act which, by itself, was quite sufficient to have destroyed even a prosperous trade. This, which has been commonly called the Spitalfields Act, entitled the weavers of Middlesex to demand a fixed price for their labour, which should be settled by the magistrates; and while both masters and men

were restricted from giving or receiving more or less than the fixed price, the manufacturers were liable in heavy penalties if they employed weavers out of the district! The monopoly which the manufacturers had hitherto enjoyed, though incomplete, had had sufficient influence to render inventions and discoveries of comparatively rare occurrence in the silk trade; but the Spitalfields Act extinguished every germ of improvement. Parliament, in its wisdom, having seen fit to enact that a manufacturer should be obliged to pay as much for work done by the best machinery as if it were done by hand, it would have been folly to have thought of attempting any thing new! It is not, however, to be denied that Macclesfield, Manchester, Norwich, Paisley, &c. are under obligations to this act. Had it extended to the whole kingdom, it would have totally extirpated the manufacture; but being confined to Middlesex, it gradually drove the most valuable branches from Spitalfields to places where the rate of wages was determined by the competition of the parties, on the principle of mutual interest and compromised advantage. After having done incalculable mischief, the act was repealed in 1824. Had it continued down to the present day, it would not have left employment in the metropolis for a single silk weaver.

But, as the effects of this act did not immediately manifest themselves, it was at first exceedingly popular. About 1785, however, the substitution of cottons in the place of silk gave a severe check to the manufacture, and the weavers then began to discover the real nature of the Spitalfields Act. Being interdicted from working at reduced wages, they were totally thrown out of employment; so that, in 1793, upwards of 4,000 Spitalfields looms were quite idle. In 1798, the trade began to revive; and continued to extend slowly till 1815 and 1816, when the Spitalfields weavers were again involved in sufferings far more extensive and severe than at any former period.

It appears from this brief sketch of the progress of the English silk trade, that from the year 1695, down to our own times, it has been exposed to the most appalling vicissitudes. The reason is obvious. The monopoly enjoyed by the manufacturers, and the Spitalfields Act, effectually put a stop to all improvement; so that the manufacture continued stationary in England, while on the Continent it was rapidly advancing. Whenever, therefore, the markets were, either from the miscalculation of the manufacturers, or a change of fashion, overloaded with silks, there were no means of disposing of the surplus profitably abroad, and the distress became extreme. Notwithstanding the unparalleled advances we had made in other departments of manufacturing industry, it was affirmed, in 1826, by the member for Coventry (Mr. Ellice), in his place in the House of Commons, "that there were in that city 9,700 looms; 7,500 of which were in the hands of operative weavers, who applied their manual labour, as well as their machinery, to the manufacture of ribands. These looms were, for the most part, of the *worst possible construction*; and it would scarcely be believed that the improved loom in France would, in a given time, produce 5 times as much riband as the common loom in England with the same manual labour! He could also state that there existed an improved manufacture in Germany, by which one man could make *forty-eight times as much velveteen as could be made in an equal time by an English machine*. What chance was there that the English manufacturer could maintain such a competition?"

Perhaps these statements may be somewhat exaggerated; but there can be no doubt that they are substantially well founded. Surely, however, no one believes that the inferiority of the machinery used by the English manufacturers is to be ascribed to any thing except that the protection they enjoyed had made them indifferent to improvements. No one believes that the French or Germans are superior to the English in the construction of machines; on the contrary, their inferiority is admitted by themselves, and by every body else. That that spirit of invention, which has effected such astonishing results in the cotton manufacture, should have been wholly unknown in that of silk, is entirely to be ascribed to the fact of the former never having been the object of legislative protection. The cotton manufacturers were not bribed into the adoption of a routine system; they could not rest satisfied with mediocrity; but being compelled to put forth all their powers—to avail themselves of every resource of science and of art—they have, in a few years, raised the British cotton manufacture from a subordinate and trifling, to the very first place amongst the manufactures, not of this country only, but of the world!

Change, in 1826, of the Monopoly System.—At length, however, the impolicy of the system by which the silk manufacture had been so long depressed, became obvious to every intelligent individual. The principal manufacturers in and about London subscribed, in 1824, a petition to the House of Commons, in which they stated that "this important manufacture, though recently considerably extended, is still depressed below its natural level, by laws which prevent it from attaining that degree of prosperity which, under more favourable circumstances, it would acquire." Fortified by this authority, by the experience of 130 years, during which the prohibitive system had been allowed to paralyse the energies of the manufacturers, and by the sanction of parliamentary

committees, Mr. Huskisson moved, on the 8th of March, 1824, that the prohibition of foreign silks should cease on the 5th of July, 1826, and that they should then be admitted for importation on payment of a duty of 30 per cent. *ad valorem*. On this occasion Mr. H. observed — “The monopoly had produced, what monopoly was always sure to produce, an indifference with regard to improvement. That useful zeal which gives life to industry, which fosters ingenuity, and which in manufactures occasions unceasing efforts to produce the article in the most economical form, had been comparatively extinguished. *To the prohibitive system it was to be ascribed, that in silk only, in the whole range of manufactures, we were left behind our neighbours!* We have here a proof of that chilling and benumbing effect which is sure to be produced when no genius is called into action, and when we are rendered indifferent to exertion by the indolent security derived from restrictive regulations. I have not the slightest doubt, that if the same system had been continued with respect to the cotton manufacture, it would have been at this moment as subordinate in amount to the woollen as it is junior in its introduction into the country.” — (*Speeches*, vol. ii. p. 249.)

We have already alluded to the enormous duties imposed, in 1719, when Sir Thomas Lombe erected his throwing mill at Derby, on foreign organzine silk. These, though subsequently reduced, amounted, in 1824, to no less than 14s. 7½d. per lb. ! There was also, at the same time, a duty of 4s. per lb. on raw silk imported from Bengal, and of 5s. 7½d. per lb. on that imported from other places. Even had the manufacture been otherwise in a flourishing condition, such exorbitant duties on the raw material were enough to have destroyed it. Mr. Huskisson, therefore, proposed, by way of preparing the manufacturers for the approaching change of system, that the duty on foreign thrown silk should be immediately reduced to 7s. 6d. (it was further reduced to 5s. in 1826), and the duty on raw silk to 3d. per lb. These proposals were all agreed to; and considerable reductions were at the same time effected in the duties charged on most of the dye stuffs used in the manufacture.

It is to be regretted that Mr. Huskisson did not propose that the reduction of the duties on raw and thrown silk, and the legalised importation of foreign silks, should be simultaneous and immediate. During the interval that was allowed our manufacturers to make preparations for the change, the French had been accumulating a large stock of goods to pour into our markets. To quiet the alarm occasioned by this circumstance, a singular device was fallen upon. — The French had long been accustomed to manufacture their goods of a certain length: and, in the view of rendering their accumulated stock unfit for our markets, a law was passed in 1826, prohibiting the importation of any silks except such as were of entirely different lengths from those commonly manufactured by the French! No one can regret that this wretched trick, for it deserves no better name, entirely failed of its object. The French manufacturers immediately commenced, with redoubled zeal, the preparation of goods of the legitimate length: and the others, having become unsaleable at any thing like fair prices, were purchased up by the smugglers, and imported, almost entirely, into this country.

But no permanent injury arose from this circumstance; and, on the whole, the effect of the opening of the trade has been such as to justify all the anticipations which the advocates of the measure had formed of its success.

Effects of the Change of 1826. — We do not exaggerate, we only state the plain matter of fact, when we affirm that the silk manufacture has made a more rapid progress during the last 8 years, or since the abolition of the prohibitive system in 1826, than it did during the preceding century. So unprecedented has been its advance, that “the once existing disparity in quality between goods of French and English make has, with some very unimportant exceptions, not merely disappeared, but actually ranged itself on the side of the British artisan.” Some of our readers will, probably, be not a little surprised to learn, that the real or declared value of the silk goods of British manufacture exported to France, in 1832, amounted to 75,187*l*.

Most of the machines and processes known on the Continent have been introduced amongst us, and many of them have been materially improved. Nor, after what has taken place, can the least doubt remain in the mind of any one, that had the same freedom been given to the silk manufacture 50 years ago, that was given to it in 1826, it would now have ranked among the most important and valuable businesses in the kingdom, and would have had nothing whatever to fear from the admission of foreign silks, free of duty. It is the opinion of the most intelligent persons in the trade, that the existing duty of 30 per cent. on foreign silks ought to be reduced to 20 per cent.; and that it should be further reduced 1 per cent. per annum till it be brought to 12 or 15 per cent., at which it might be allowed to continue stationary, not as a protecting duty, but as a duty imposed for the sake of revenue. A measure of this sort, by increasing *fair* competition, would continue the impulse already given to the manufacture, and excite to new efforts of invention. Under such a system, we are well assured that, in a very few years, perhaps not more than 5 or 6, our superiority over France in

some important departments of the silk manufacture would be little less decided than in that of cotton.

"I maintain," said Mr. Poulett Thomson, in his excellent speech on the state of the silk trade (14th of April, 1829), — a speech equally distinguished for soundness of principle and beauty of illustration, — "I maintain, without fear of contradiction, that the very essence of commercial and manufacturing industry is freedom from legislative interference and legislative protection. Attempt to assist its course by legislative enactments, by fostering care, you arrest its progress, you destroy its vigour. Unbind the shackles in which your unwise tenderness has confined it — permit it to take unrestrained its own course — expose it to the wholesome breezes of competition, — you give it new life, you restore its former vigour. Industry has been well likened to the hardy Alpine plant; self-sown on the mountain side, exposed to the inclemency of the season, it gathers strength in its struggles for existence — it shoots forth in vigour and in beauty. Transplanted to the rich soil of the parterre, tended by the fostering hand of the gardener, nursed in the artificial atmosphere of the forcing-glass, it grows sickly and enervated, its shoots are vigourless, its flowers inodorous. In one single word lies the soul of industry — competition. The answer of the statesman and the economist to his sovereign inquiring what he could do to assist the industry of his kingdom was, 'Let it take its own way.' Such is my prayer. Relieve us from the chains in which your indiscreet tenderness has shackled us; remove your oppressive protection; give us the fair field we ask; and we demand no more. The talent, the genius, the enterprise, the capital, the industry of this great people will do the rest; and England will not only retain her present position, but she will take a yet more forward place in the race of competition for wealth and improvement which, by the nature of things, she is destined to run amongst the nations of the world. Place us in that condition, not by any violent change, but by slow and easy transition. Here we shall find security for our enterprise, and reward for our labours.

" 'Hic patet ingeniis campus; certusque merenti
Stat favor; ornatur propriis industria donis.' "

It was not, however, to be supposed, that all departments of the silk manufacture would be equally benefited by the change of system that has taken place. — *Non omnia possumus*. The probability is, that the trade will in future be divided between the English and French. In point of substantial excellence, the plain silk goods manufactured in England are superior to those of France; and the difference in favour of the latter in point of *finish* is every day becoming less perceptible; while in all mixed manufactures, of silk and wool, silk and cotton, silk and linen, &c., our ascendancy is admitted by the French themselves. On the other hand, the ribands, figured gauzes, and light fancy goods, manufactured in France, are superior to those of this country. Even in this department we have made a very great progress; and fancy goods are now produced at Spitalfields, Coventry, and other places, contrasting most advantageously, in point of taste and beauty, with those produced previously to the introduction of the new system. Still, however, we are not sanguine in our expectations of our countrymen being able to maintain a successful competition with our neighbours in the manufacture of this class of articles. The greater attention paid to the art of designing in Lyons, the consequent better taste of the artists, and the superior brightness and lustre of their colours, give them advantages with which it will be very difficult to contend.

But, supposing that the trade is partitioned between the two countries in the way now stated, it is easy to see that the best share will belong to us, and that that share will be incomparably more valuable than the whole manufacture formerly was. The proofs of the accuracy of this statement are at hand. Notwithstanding the decline of the trade at Coventry and a few other places, the manufacture, taken as a whole, is rapidly increasing. During 1822 and 1823, when the restrictive system was in its vigour, the entries for consumption of all sorts of raw and thrown silk amounted at an average to 2,454,842 lbs. a year. But, in despite of all the sinister predictions indulged in with respect to the ruin of the manufacture, the entries amounted, at an average of 1832 and 1833, to 4,565,850 lbs.; being an increase of nearly 100 per cent. upon the quantity entered during the monopoly!

The increase in the exports of wrought silks affords, if possible, a still more decisive proof of the extraordinary improvement and extension of the manufacture. Instead of having any thing to fear from the competition of the French at home, we are actually underselling them in the heavier and more important species of goods, in every foreign market equally accessible to both parties. The exports of silks from France have been declining, while those from England have been increasing beyond all precedent. The declared value of our exports of silk goods, in 1823, amounted to 351,409*l.*, whereas in 1833 it amounted to 740,294*l.*, being an *advance of more than cent. per cent.*! Not only, therefore, are the statements as to the ruin of the silk manufacture proved to be wholly without even the shadow of a foundation, but the expectations of those who contended

that the repeal of the restrictive system would be the commencement of a new era of invention and improvement, have been realised to the fullest extent.

What has now been stated renders it obvious, that though the manufacturers of fancy goods may be obliged to change their employment, a new, and at the same time a more extensive and fruitful, field is opened for their exertions. We lament the hardships incident to the transition even from one department of the same business to another, but the suffering thence arising will speedily disappear; and when the change has been effected, the manufacturers will enter with fresh vigour on a new career of prosperity.

It is to be regretted, that it is not possible either to abandon a routine system, or to introduce new and improved methods of production, without injury to individuals. But because such is the fact — because the bridge cannot be built without displacing watermen, nor the plough introduced without superseding the spade, nor wine brought from abroad without diminishing the demand for ale and beer — is that any reason for proscribing inventions, and denying ourselves gratifications within our reach? To maintain the affirmative, would be evidently absurd, — it would be equivalent to maintaining that the interests of society are best promoted by perpetuating poverty, ignorance, and barbarism! The injury occasioned by the adoption of an improved method of production, or the opening of new markets whence cheaper supplies of any article may be obtained, is temporary only, and affects but a very small portion of the community; while the advantage is permanent, and benefits every individual, even those whom it may, in the first instance, have forced to resort to other businesses.

Those unacquainted with the history of the silk trade, who may have looked into the pamphlets and speeches of those opposed to the late alterations, will probably be disposed to think that, though more limited in point of numbers, the condition of the workmen engaged in the trade was better previously to 1825 than it has been since. But those who have looked, however cursorily, into the history of the trade, must know that such is not the fact; and that, speaking generally, the situation of those engaged in it has been materially improved since 1825. We have already adverted to the state of the trade in 1793 and 1816. At the last mentioned period, 7 years before any relaxation of the monopoly had been so much as thought of, the distress in the silk trade was infinitely more severe than it has ever been since the introduction of the new system. In proof of this, we may mention that, at a public meeting held for the relief of the Spitalfields weavers, at the Mansion-house, on the 26th of November, 1816, the secretary stated, that *two thirds* of them were without employment, and without the means of support; “that some had deserted their houses in despair, unable to endure the sight of their starving families; and many pined under languishing diseases brought on by the want of food and clothing.” And Mr. Fowell Buxton, M.P., stated, at the same meeting, that the distress among the silk manufacturers was so intense, that “*it partook of the nature of a pestilence, which spreads its contagion around, and devastates an entire district.*” Such was the state of the workmen under that monopoly system that has been the worthless theme of so much recent eulogy. But such, we are glad to say, is not their state at present. The trade, being now mostly diverted into those branches in which we have a superiority, is comparatively secure against revulsions; and it would be an absurdity to imagine, that measures that have about doubled the manufacture, should have reduced the rate of wages, or been otherwise than advantageous to the workmen.

We have already noticed the smuggling of foreign silks carried on in the early part and towards the middle of last century. The evil was not afterwards abated. The vigilance of the Custom-house officer was no match for the ingenuity of the smuggler; and at the very moment when the most strenuous efforts were made to exclude them, the silks of France and Hindostan were openly displayed in the drawing-rooms of St. James's, and in the House of Commons, in mockery of the impotent legislation which sought to exclude them. We doubt, indeed, whether the substitution of the *ad valorem* duty of 30 per cent., in place of the old system of prohibition, has been productive of any materially increased importation of foreign silks. “I have lately,” said Mr. Huskisson, in his famous speech in vindication of his policy as to the silk trade, “taken some pains to ascertain the quantity of smuggled silks that has been seized inland throughout the kingdom during the last 10 years; and I find that the whole does not exceed 5,000*l.* a year. I have endeavoured, on the other hand, to get an account of the quantity of silk goods actually smuggled into this country. Any estimate of this quantity must be very vague; but I have been given to understand that the value of such goods as are regularly entered at the Custom-houses of France, for exportation to this country, is from 100,000*l.* to 150,000*l.* a year; and this, of course, is exclusive of the *far greater supply* which is poured in throughout all the channels of smuggling, without being subjected to any entry. In fact, to such an extent is this illicit trade carried, that there is scarcely a haberdasher's shop in the smallest village of the United Kingdom, in which prohibited silks are not sold; and that in the face of day, and to a very considerable extent.

"The honourable member for Coventry (Mr. Elliee) has mentioned the silk goods from India as those against which any thing but prohibition would prove an unavailing protection. Now, in my opinion, it is scarcely possible to conceive a stronger case than those very silks furnish against the honourable member's own argument. I believe it is universally known that a large quantity of Bandana handkerchiefs are sold every year, for exportation, by the East India Company. But does any gentleman suppose that these Bandanas are sent to the Continent for the purpose of remaining there? No such thing! They are sold at the Company's sales, to the number of about 800,000 or 1,000,000 a year, at about 4s. each; they are immediately shipped off for Hamburgh, Antwerp, Rotterdam, Ostend, or Guernsey, and from thence they nearly all illicitly find their way back to this country.

"Mark, then, the effect of this beautiful system. — These Bandanas, which had previously been sold for exportation at 4s., are finally distributed in retail to the people of England at about 8s. each; and the result of this prohibition is to levy upon the consumer a tax, and to give those who live by evading your law a bounty of 4s., upon each handkerchief sold in this country!" — (*Speeches*, vol. ii. p. 510.)

Indeed, one of the principal objections to the present duty of 30 per cent. on foreign silks is, that it is high enough to enable a considerable smuggling trade to be still carried on; the facility for smuggling being increased by means of the legalised importation. A duty of 12 or 15 per cent. would not, however, be so high as to balance the risks run in smuggling; and would, therefore, really afford the manufacturer a more efficient protection than he derives from the existing duty, at the same time that it would place all classes of dealers on the same footing; whereas the advantage is at present on the side of those who engage in fraudulent schemes.

Regulations as to the Importation of Silks. — Silk manufactures are not to be imported in any vessel under 70 tons burden, except by licence from the commissioners of the customs to vessels belonging to Dover, to import such manufactures direct from Calais, though such vessels may not exceed 60 tons burden. Silk goods, the manufacture of Europe, not to be imported except into the port of London or the port of Dublin direct from Bordeaux, or the port of Dover direct from Calais. — (3 & 4 Will. 4. c. 52. § 58; *ante*, p. 663.)

When the shoot or the warp only is of silk, the article is to be considered as composed of *not more* than one half part of silk, and subject to the *ad valorem* duty of 30 per cent.; but if the shoot or the warp be entirely of silk, and a portion of the other be of silk also, the article is to be considered to be composed of more than one half part of silk, and subject to the rated duties at per lb., or to the *ad valorem* duties, at the option of the officers. — (*Min. Com. Cus.* 14th of August, 1829.) But in all cases where the duties charged by weight upon mixed articles would manifestly exceed 30 per cent., by reason of the weight of the wool, or other ingredient thereof besides silk, the article is to be admitted to entry at value. — (*Min. Com. Cus.* 19th of December, 1831.)

For the regulations as to the smuggling of silks, see SMUGGLING.

I. Account, illustrative of the Progress of the Silk Manufacture, showing the Quantities of Raw, Waste, and Thrown Silk imported at different Periods. — (*Report of 1832 on Silk Trade*, p. 10., and *Parl. Paper*, No. 9. Sess. 1834.)

	Average Imports.		Raw.	Waste.	Thrown.	Total.
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.
1765, 1766, 1767, being the commencement of the absolute prohibition -	-	-	352,000	-	365,000	717,000
1785, 1786, 1787 -	-	-	551,000	-	357,000	891,000
1801 to 1812 -	-	-	760,000	-	350,000	1,110,000
1815, 1816, 1817, being 50 years after prohibition, and the first 3 years of peace -	-	-	1,095,000	27,000	293,000	1,415,000
1821, 1822, 1823, being the years immediately previous to the abolition of the prohibition -	-	-	1,970,000	74,000	355,000	2,399,000

1833	-	-	-	-	-	710,291	-

The United States is our best customer for silk goods. Of the total quantity exported in 1831, they took nearly $\frac{1}{2}$, or to the amount of 237,955*l.* of real value. During the same year, the exports to the British North American colonies were 93,913*l.*; to the British West Indies, 27,508*l.*; to France, 43,462*l.*; to Spain, 24,857*l.*, &c.

Sources of the Supply of Silk. — The following Table shows the sources whence we directly derive our supplies of raw and of foreign thrown silk, and the quantities brought from each in 1831 and 1832.

Imports of Silk.

Countries.	1831.	1832.	Countries.	1831.	1832.
	Lbs.	Lbs.		Lbs.	Lbs.
Raw silk from India	1,725,650	1,511,797	Waste and knuhs from Italy	410,750	347,451
Cape of Good Hope	26,930	8,194	France	329,345	257,016
China	8,374	28,165	Other countries	16,743	50,727
Turkey	451,121	458,278	Total of waste and knuhs	756,728	656,010
Italy	115,766	216,702	Thrown silk from Italy	638	2,516
France	821,519	719,117	France	612,590	145,284
Other countries	86,375	116,318	Other countries	15,995	29,336
Total of raw silk	3,255,865	3,391,741	Total of thrown silk	628,981	177,166
Waste and knuhs from India	-	112			
Turkey	-	701			

It is necessary, however, to observe that this account does not exhibit the countries which really furnish us with silk, and the quantities we import from them. It merely exhibits the sources whence we immediately derive our supplies, without tracing them to their source. Hence it makes the imports of silk from China and Italy appear very much less than they really are, and those from India and France much larger. With respect to China, it would appear from this account that only 8,374 lbs. were imported from it in 1831; whereas it appears from another parliamentary paper, that the imports of Chinese silk in that year really amounted to 466,692 lbs.; and even this last is, we believe, under-rated — see *ante* — p. 240. The reason is, that by far the largest portion of the Chinese silk imported into England is carried, in the first instance, to Singapore, or to some port in India, and is thence imported under the name of Indian silk. During the year 1831-32, there were exported from Canton, in British ships, 8,451 piculs, or 1,126,860 lbs., of silk, costing at the port of shipment (Canton) 2,651,088 dollars; and of this, by far the largest portion

came to England. — (See *anté*, p. 237.) The silk exported from Canton consists of two leading varieties, known in commerce by the names of Canton and Nanking. The first, which is raised principally in the province of Canton, is divided into 5 sorts. At an average, the picul of Canton silk brought at Canton, in 1831–32, 153 dollars. The Nanking silk, produced in the province of Kiangnan, is divided into 2 sorts, known in commerce by the names of Tsatlee and Taysaam. It is very superior to the other, and usually fetches more than double its price. It cost at Canton, in 1831–32, 368 dollars a picul. We have no doubt, now that the trade to China is thrown open, that the exports of Chinese silk will be materially increased; and that it will become an article of great commercial importance.

East India native silk comes wholly from Bengal. About the year 1760, the East India Company introduced the Italian mode of reeling silk, which was productive of a very great improvement in the quality of the article; but we are not aware that any subsequent improvement has been effected. According to the *Parliamentary Paper*, No. 425, Sess. 1833, the imports of raw silk from all places to the eastward of the Cape of Good Hope, except China, were, in 1830, 1,736,231 lbs.; in 1831, 1,725,650 lbs.; and in 1832, 1,814,819 lbs. But, notwithstanding this exception, we believe that a very considerable quantity of the silk so imported was the produce of China; being brought to us partly from Singapore, and partly from the Indian ports. Some of it was also the produce of Persia, shipped, in the first instance, from Bushire for Bombay. The silk goods brought from India are not only inferior, in point of quality, to those of Europe, but also to those of China. The quantity imported of late years is specified in the Table, No. III.

A good deal of the silk brought from Turkey is supplied by Persia. Some considerable part of the, Persian silk that used to be exported from Bushire and other ports on the Persian Gulf, is now exported by way of Trebisond; which promises to become an important emporium for Persian and Turkish silk. — (See TREBISOND.)

By far the greatest part of the raw and thrown silk that comes to us from France, is not the growth of that country, but of Italy; being principally conveyed by the canal of Languedoc and the Garonne to Bordeaux, whence it is shipped for England. So much is this the case, that it appears from the official accounts published by the French government, that while the aggregate value of the French and foreign raw and thrown silk exported from France in 1831 amounted to 45,102,054 fr., the value of the portion which was of French origin was only 2,092,776 fr. — (*Administration des Douanes*, for 1831, p. 39.)

The reader will find, under the article VENICE, an account of the exports of silk from the Venetian provinces in 1829, 1830, and 1831. Since the article NAPLES was printed, we have obtained the following authentic statement of the exports of silk from that city during the 6 years ending with 1833, and of the stocks on hand: —

Years.	Exports.					Stocks on the 31st of December.		
	Raw.	Spun.	Sewing.	Total.	Waste.	Raw.	Spun.	Total.
	<i>Lbs.*</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>
1828	189,002	46,604	95,196	330,847	38,718	107,100	3,600	110,700
1829	176,133	31,858	96,601	304,642	6,776	157,500	7,200	144,700

SILVER (Ger. *Silber*; Du. *Zilver*; Da. *Sølv*; Sw. *Silfver*; Fr. *Argent*; It. *Argento*; Sp. *Plata*; Port. *Prata*; Rus. *Serebro*; Pol. *Srebro*; Lat. *Argentum*; Gr. *ἄργυρος*; Arab. *Fazzech*), a metal of a fine white colour, without either taste or smell; being in point of brilliancy inferior to none of the metallic bodies, if we except polished steel. It is softer than copper, but harder than gold. When melted, its specific gravity is 10.474; when hammered, 10.51. In malleability, it is inferior to none of the metals, if we except gold. It may be beaten out into leaves only $\frac{1}{100000}$ of an inch thick. Its ductility is equally remarkable: it may be drawn out into wire much finer than a human hair; so fine, indeed, that a single grain of silver may be extended about 400 feet in length. Its tenacity is such, that a wire of silver 0.078 inch in diameter is capable of supporting a weight of 187.13 lbs. avoirdupois without breaking. Silver is easily alloyed with copper by fusion. The compound is harder and more sonorous than silver, and retains its white colour even when the proportion of copper exceeds $\frac{1}{2}$. The hardness is at a maximum when the copper amounts to one fifth of the silver. The standard or sterling silver of Britain, of which coin is made, is a compound of $12\frac{1}{2}$ parts silver and 1 copper. Its specific gravity is 10.2. The specific gravity of Paris standard silver, composed of 137 parts silver and 7 copper, is 10.175. The French silver coin during the old government was not nearly so fine, being composed of 261 parts silver and 27 copper, or $9\frac{2}{3}$ parts silver to 1 part copper. The Austrian silver coin contains $\frac{13}{268}$ of copper. The silver coin of the ancients was nearly pure, and appears not to have been mixed with alloy. — (*Thomson's Chemistry*.)

The most productive silver mines are in America, particularly in Mexico and Peru. There are also silver mines in Hungary, Saxony, and other parts of Europe, and in Asiatic Russia. — (See PRECIOUS METALS.)

Besides being used as coin, or money, silver is extensively employed in the arts. The value of the silver plate annually manufactured is very considerable. Large quantities are also used in plating. — (See PLATE.) For an account of the quantity of silver coined at the British mint, since 1790, see *anté*, p. 320.

SINGAPORE, an island and recent British settlement at the eastern extremity of the Straits of Malacca. The town is in lat. $1^{\circ} 17' 22''$ N., lon. $103^{\circ} 51' 45''$ E.

The island is of an elliptical form, about 27 miles in its greatest length, and 15 in its greatest breadth, containing an estimated area of 270 square miles. The whole British settlement, however, embraces a circumference of about 100 miles; in which is included

* Two lbs. avoirdupois are equal to about $\frac{2}{3}$ libri Napolitani.

about 50 desert islets, and the seas and straits within 10 miles of the coast of the principal island. Singapore is separated from the main land by a strait of the same name, of small breadth throughout, and scarcely, indeed, $\frac{1}{4}$ of a mile wide in its narrowest part. In the early period of European navigation, this channel was the thoroughfare between India and China. Fronting the island, on its southern side, and at the distance of about 9 miles, is an extensive chain of islands, all desert, or at least inhabited only by a few wild races, of which nothing is known but their mere existence. The intervening channel is now the grand route of the commerce between the eastern and western portions of maritime Asia; the safest and most convenient track being so near to Singapore, that ships in passing and repassing approach close to the roads. The town is on the south side of the island, and is situated on a river, or rather salt creek, navigable by lighters for about $\frac{3}{4}$ of a mile from the sea. Ships lie in the roads, or open harbour, at the distance of from 1 mile to 2 miles from town, according to their draught of water. The assistance of a number of convenient lighters, which are always in readiness, enables ships to load or unload, with scarcely any interruption, throughout the year. The river or creek is accessible to the lighters, and the goods are taken in and discharged at convenient quays, at the doors of the principal warehouses. — (See *Chart of the Island of Singapore* in the *Mercator's Chart* in this work.)

The climate of Singapore is hot, but healthy. Fahrenheit's thermometer ranges from 71° to 89°. In a place only about 80 miles from the equator there is, of course, very little variety in the seasons. There is neither summer nor winter; and even the periodical rains are short, and not very well marked — moderate showers of rain falling for about 150 days each year. The settlement of Singapore was formed in February, 1819, and its sovereignty and property, in their present extent, confirmed to the British government in 1825, by a convention with the king of the Netherlands, and a treaty with the Malay princes of Johore, to whom it belonged. When taken possession of by the English, it had been inhabited for about 8 years by a colony of Malays, half fishermen and half pirates. When the first census of the population was taken, in January, 1824, it was found to amount to 10,683. In 1828, it had increased to 15,834; in both cases, exclusive of troops, camp followers, Indian convicts, and a floating population of about 3,000. The following statement of the censuses taken on the 1st of January, 1832, and the 1st of January, 1833, shows the different classes of inhabitants, and their proportions to each other: —

	1832.		1833.			1832.		1833.	
	Males.	Females.	Males.	Females.		Males.	Females.	Males.	Females.

Chinese	7,149	615	7,650	867	Total inhabitants	19,715	-	20,978	-
Natives of the coast of Coromandel	1,574	40	1,762	57					

The principal merchants and agents are Englishmen, of whom also there are a few shopkeepers, auctioneers, &c. There are also some respectable Chinese merchants; and the bulk of the shopkeepers, with the most valuable part of the labouring population, consist of Chinese. About 5,000 adult males arrive annually from China by the junks; about 1,000 of whom remain at Singapore, the rest dispersing themselves among the neighbouring Dutch, English, and Malay settlements. The boatmen are chiefly natives of the Coromandel coast; and the Malays employ themselves as fishermen, in cutting timber, and in supplying the settlement with the rude produce of the neighbourhood. There are 2 good daily markets, open at all hours, and well supplied with vegetables, fruits, grain, fish, pork, and green turtle; the latter the cheapest animal food that can be procured. At Singapore there are no export or import duties levied, nor anchorage, harbour, light-house dues, or any fees; but a register is kept of all exports and imports. Reports must be made to the master attendant by the masters of vessels, and invoices delivered to the superintendent of imports and exports.

Currency, Weights, Language, &c. — The currency and weights are simple and convenient. Merchants' accounts are kept in Spanish dollars, divided into 100 parts, represented either by Dutch doits, or by English copper coins of the same value. The weights in use (and almost every thing is sold by weight, as in China) are the Chinese picul of 100 catties, or 133½ lbs. avoirdupois. Rice (the produce of Siam and the Archipelago) and salt are sold by the coyan of 40 piculs. Gold dust is sold by a Malay weight called the bungkal, which weighs 2 Spanish dollars, or 832 grains Troy. Bengal rice, wheat, and pulses of the same country, are sold by the bag, containing 2 Bengal maunds, or 164½ lbs. avoirdupois. Piece goods, &c. are sold by the corgie or score. English weights and measures are frequently used in reference to European commodities. The mode of transacting business among the European merchants is simple and efficient. Instead of trusting their affairs to native agents, as in other parts of India, they transact them in person, with the occasional assistance of a Chinese creole as an interpreter and broker. The European merchants transact business on their own account; but a great deal of their employment consists in acting as agents for houses in London, Liverpool, Glasgow, Amsterdam, Antwerp, Calcutta, Bombay, Madras, Canton, and Batavia. They are also agents for various insurance offices at Calcutta and elsewhere, and policies of insurance to any extent may be effected without difficulty. The language of commercial intercourse, where any of the natives of the East are concerned, is universally Malay, — a simple and easy dialect, of which all the resident merchants have a sufficient acquaintance for the transacting of ordinary business. A newspaper, the *Singapore Chronicle*, is published once a week, and contains a price current, an account of arrivals and departures of shipping, and an official detail of all the exports and imports of the preceding week. The administration of justice is entirely English, there being a recorder's court for the settlement, in common with the two neighbouring ones of Penang and Malacca.

Commodities and Prices. — Singapore is chiefly an *entrepôt*, having, with the exception of pearl sago manufactured on the spot from the raw material imported from the north coast of Sumatra, implements

of agriculture, and some others fabricated by the Chinese from European iron, and gambier or catechu grown and manufactured on the island, few commodities of its own exportation. The following price current of the 22d of August, 1833, will convey the best idea of the miscellaneous articles of which the commerce of the port consists:—

Articles.		Prices.		Articles.		Prices.

The following are the rates of commission and warehouse rent charged at Singapore, except in cases of special agreement:—

1. On all sales or purchases, except the following, 5 per cent.
2. On purchases of goods or produce for returns, 2½ per cent.
3. On sales or purchases of opium, 3 per cent.
4. On sale or purchase of ships, vessels, houses, or lands, 2½ per cent.
5. On sale, purchase, or shipment of bullion, 1 per cent.
6. On sale or purchase of diamonds, jewels, &c., 2 per cent.
7. On returns in treasure, bullion, or bills, 1 per cent.
8. On all goods consigned and withdrawn, ½ commission.
9. On sale, purchase, or negotiating of bills not serving for purchase of goods or produce, 1 per cent.
10. On all goods sold by auction by the agents themselves, in addition to the above, 2½ per cent.
11. On del credere, or guaranteeing sales when specially required, 2½ per cent.
12. Shroffage, 1 per cent, per mille.
13. On all advances of money for the purpose of trade, whether the goods are consigned to the agent or not, and where a commission of 5 per cent. is not charged, 2½ per cent.
14. On ordering goods, or superintending the fulfilment of contracts whence no other commission is derived, 2½ per cent.
15. On guaranteeing bills, bonds, or other engagements, and on becoming security for administrations of estates, or to government or individuals for contracts, agreements, &c., 2½ per cent.
16. On acting for the estates of persons deceased as executors or administrators, 5 per cent.
17. On the management of estates for others, on the amount received, 2½ per cent.
18. On procuring freight, or advertising as the agent of owner or commanders, on the amount of freight, whether the same passes through the hands of the agent or not, 5 per cent.
19. On chartering ships for other parties, 2½ per cent.
20. On making insurance, or writing orders for do., ½ per cent.
21. On settling insurance losses, total or partial, and on procuring return of premium, 1 per cent.
22. On debts, when a process at law or arbitration is necessary, 2½ per cent.—And if received by such means, 5 per cent.

23. On bills of exchange noted *or protested*, 2 per cent.
24. On collecting house rent, $\frac{5}{8}$ per cent.
25. On ships' disbursements, $\frac{2}{3}$ per cent.
26. On negotiating loans on *respondentia*, 2 per cent.
27. On letters of credit granted for mercantile purposes, $\frac{2}{3}$ per cent.
28. On purchasing or selling government securities, or on exchanging or transferring the same, $\frac{1}{2}$ per cent.
29. On delivering up *do.*, $\frac{1}{2}$ per cent.
30. On all advances not punctually liquidated, the agent to have the option of charging a second commission, as upon a fresh advance, provided the charge be only made once in the same year.
31. On transhipping all goods or produce, except the following, 1 per cent.
32. On transhipping whole chests of cassia, cassia buds, aniseed, camphor, nankeens, and gunny bags, per package, 1 mollar.
33. At the option of the agent, on the amount debited or cre-

Warehouse Rent per Month.

Chests of opium or silk, bales of woollens, pipes of wine or brandy, leathers of aratak, &c., 50 dollars.
Bales of Indian piece goods, cotton, and gunny bags, 50 cents.
Cases of European piece goods, trusses of woollens, &c., 25 cents.
Hog-heads of liquor, $\frac{1}{2}$ chests of wine, &c., 40 cents.
Pepper, rice, coffee, sugar, saltpetre, &c., 10 per cent.
Iron, tin, tutenague, spelter, copper, lead, &c., 5 per cent.
All other goods not mentioned, to pay accordingly, or by measurement, at the rate of, per ton of 50 cubic feet, 1 dollar.

Trade of Singapore.—The following Tables are taken from the official statements published in the *Singapore Chronicle*, 27th of September, 1832. The sums are expressed in sicca rupees, at the fixed exchange of 210½ sicca rupees per 100 Spanish dollars.

I. Total Account of Imports and Exports at Singapore for the Years 1823 to 1831-32.

Years.	Imports.	Exports.*	Years.	Imports.	Exports.

Trade of Java. — Since the article BATAVIA was printed, we have received a number of the *Singapore Chronicle*, containing the following account of the quantities of the principal articles exported from Java in 1830, 1831, and 1832. It shows a very rapid progress. There wants nothing but good management to render Java by far the most valuable of all the Eastern possessions belonging to any European power.

(See *Journal of an Embassy to Siam and Cochin China*, by John Crawford, Esq., chap. xix; *Return of the Population of British India*, in Report of the Select Committee of the Commons, 1831; *Report of the Select Committee of the Commons*, for 1830; and *Singapore Chronicle*, passim.)

SINOPE, a town of Asia Minor, on the S. coast of the Black Sea, lat. 42° 2' 30' N., lon. 35° 9' 45' E. Population uncertain, probably from 8,000 to 10,000. Sinope is situated on a low narrow isthmus, connecting the high rocky promontory of Ada with the main land. Its port, which is the best on this coast, on the south side of the town, is protected from the N. and N.E. gales by the isthmus and promontory already mentioned. Ships anchor within $\frac{1}{3}$ mile of the town, in from 13 to 17 fathoms; or nearer to it, in from 5 to 7 fathoms. There is a roadstead on the north side of the isthmus, but it is open and exposed. Sinope is one of the principal stations of the Turkish fleet; and there are docks and arsenals for its accommodation and outfit. Its exports are inconsiderable, the principal being timber, salt, cordage, fish oil, &c.

In ancient times, Sinope was a city of great wealth, magnitude, and importance. It was the birthplace of Diogenes the Cynic; and Mithridates made it the capital of his dominions. After its conquest by the Romans under Lucullus, it became the seat of a colony; and continued for a lengthened period to enjoy a good deal of consideration.

Should civilisation and the arts once more revive in the ancient Pontus, and the other countries to the south of the Black Sea, the excellence of its port could not fail to restore to Sinope some portion of its former grandeur. Even now a considerable intercourse is beginning to take place with the countries E. and S. of Sinope. Diarbek, on the Tigris, in lat. 37° 54' N., lon. 38° 53' 45' E., is one of the principal seats of Eastern commerce; and caravans set out regularly from it for Aleppo, Smyrna, and Constantinople; but any one who consults a map of Asia Minor, and of the contiguous countries, will see at once that Trebisond and the neighbouring ports on the S. E. coast of the Black Sea are the natural channels through which Armenia, Koordistan, and the north-western parts of Persia may best maintain an intercourse with Europe. We shall afterwards show that the danger to vessels in the roads of Trebisond has been very much exaggerated. — (See TREBISOND.) In the event, however, of the commerce with the countries referred to becoming of any considerable importance, Sinope would be an advantageous *entrepôt* to which goods might be brought, and whence they might be conveyed in proper vessels, and at proper times, to the other ports. At all events, it is of material importance that a direct intercourse with the southern coast of the Black Sea should be established, and that the trade with it should not be carried on, as hitherto, through Odessa. — (For further particulars as to Sinope, see *Tournefort, Voyage du Levant*, tom. ii. pp. 502-512; and *Nurce's Sailing Directions for the Black Sea*. See also the article TREBISOND, in this work.)

SKINS. The term is applied in commercial language to the skins of those animals, as calves, deer, goats, lambs, &c., which, when prepared, are used in the lighter works of bookbinding, the manufacture of gloves, parchment, &c.: while the term hides is applied to the skins of the ox, horse, &c., which, when tanned, are used in the manufacture of

shoes, harness, and other heavy and strong articles. Lamb and kid skins are principally used in the glove manufacture; 120 skins being supposed to produce, at an average, 18 dozen pairs of gloves.

Account of the Skins imported in 1831, specifying the Countries whence they came, and the Numbers brought from each.—*Parl. Paper*, No. 550. Sess. 1833.)

SLATE (ROOF), *Ger. Schiefer*; *Fr. Ardoise*; *It. Lavagna, Lastra*; *Sp. Pizarra*), a fossil or compact stone (*argillaceous schistus*), that may be readily split into even, smooth, thin laminae. There are several varieties of this valuable mineral, the prevailing colours being grey, blue, and brown. But the tints are very various; and slates are often marked with streaks of a different colour from the ground. Slate is principally used in the covering of houses, for which purpose it is infinitely superior to thatch or tiles, and is far less expensive than lead. Good roofing slate should not absorb water; and it should be so compact as not to be decomposed by the action of the atmosphere. When properly selected, roof slates are of almost perpetual duration; but those which are spongy and imbibe moisture speedily get covered with moss, and require, at no very distant period, to be renewed.

The use of slates in the covering of houses is entirely European. From the Hellespont to China inclusive there is not a single slated house; and this does not arise from any want of slate, which is as abundant in Asia as in Europe.

Slates carried by land have never been subjected to any duty; but those carried coastwise were, until 1831, charged with duties varying according to their size and species. The injustice of this distinction, and the impolicy of laying any duty on an article of this sort, are obvious. The revenue it produced was quite inconsiderable, not exceeding 35,000*l.* a year. It was repealed at the same time as the duty on coal carried coastwise.

Since the repeal of the duty, the consumption of slate has been materially increased; and it is now extensively employed for various purposes to which it was not formerly made applicable, such as the flooring of warehouses and vaults, the paving of streets, the formation of cisterns, the covering of worn or decayed floors, and of the walls of houses in exposed situations, &c. The slate used for these purposes is cut by the circular saw into pieces of from $\frac{1}{2}$ an inch to 2 inches thick. Many hundred tons have been used in the course of the last 2 years in paving, flooring, &c. at the London Docks; and, we believe, with much advantage to the company. Large *dépôts* of slates are now formed in London and other great towns.

The principal slate quarries in Great Britain are in Caernarvonshire. Those belonging to Mr. Pennant (formerly Lord Penrhyn's), near Bangor, employ about 1,500 men and boys, and are the most extensive and valuable in the empire. The other quarries in the same county employ about 1,620 men and boys:

and there are some in other parts of Wales. There are also extensive quarries at Ulverstone, in Lancashire; and others, of inferior magnitude, in various parts of Westmoreland and Cumberland.

The principal slate quarries in Scotland are at Easdale and Balachulish, in Argyleshire. Speaking generally, the Scotch quarries do not afford slates of the size and smoothness of those obtained from the Welsh quarries; and the wood-work of the roofs covered with them requires to be stronger.

Roofing slates are of different sizes, and are denominated Imperials, Queens, Princesses, &c. Their price, supposing their quality to be in other respects equal, depends partly on their size and partly on their weight. The subjoined account explains the mode in which it is determined.

Account of the Prices of the different Sorts of Slate on Shipboard at Bangor, in January, 1834.

Imperials, 20, 24, 27, and 30 inches long, and various breadths	55 per ton.	Slabs, sawn, per ton of 158 ft. superficial, in. thick, 65 per ton	
Queens, 27, 30, 35, and 36 inches long, and proportionate breadths, assorted	46 —	Do., if under 2 feet long, or 1 ft. 6 in. wide	75 —
Queens, 30 and 35 inches	48 —	Grave stones, not less than 6 ft. by 3 ft. 2½ in. thick, 00 —	
Princesses, 24 by 14 inches	41 —	Ended blocks or slabs, sawn at the ends only	60 —
Ton slates or rags	35 —	Unawn do.	50 —
Duchesses, 24 in. by 12, weighing 60 cwt. per m., 140 per m.		Shipping expenses, 6d. per ton; bills of lading, 5s. 6d.	
Countesses, 20 — 10, — 49 —	30 —	No. 1. plain jambs, mantel and turned blocking, with plain edge shelf	9 each.
Ladies, 16 — 8, — 25 —	45 —	2. moulded jambs, mantel with turned blocking, with plain edge shelf	16 —
Doubles, 13 — 6½, — 18 —	18 —	3. moulded jambs, &c. with bead mould	20 —
Singles, 11 — 5½, — 12 —	10 —	4. Grecian fret jambs and mantel	90 —
Moos slates, 11 to 15 by, 6 to 15 in.	15 —	5. moulded truss jambs and mantel	28 —
		6. panelled jambs and mantel	28 —
Duchesses, 24 in. by 12, weighing 82 cwt. per m., 100		Cisterns, with sides and ends, inch thick, 1 s. 10 d. per foot cubic contents	
Countesses, 20 — 10, — 55 —	63 —	Do. do. 1½ in. thick, 2 s. 2 d.	
Ladies, 16 — 8, — 35 —	50 —		
Doubles, 13 — 6½, — 20 —	13 6d.		

The subjoined account shows a very material increase in the quantity of slates exported.

An Account of the Quantities of Slate exported from England to Foreign Parts in each of the Five Years ending with 1832.

SLAVES AND SLAVE TRADE. A slave, in the ordinary sense of the term, is an individual at the absolute disposal of another, who has a right to employ and treat him as he pleases. But the state of slavery is susceptible of innumerable modifications; and it has been usual, in most countries where it has been long established, to limit in various ways the power of the master over the slave. The *slave trade* is, of course, the business of those who deal in slaves.

Origin of Slavery.—A great deal of learning has been employed in tracing the history of slavery, though the subject is still far from being exhausted. It seems most probable that it originally grew out of a state of war. In rude uncivilised communities, where the passion of revenge acquires a strength unknown in more advanced states of society, captives taken in war are adjudged to belong to the victors, who may either put them to the sword, or reduce them to a state of servitude. In antiquity the ideas of war and slavery were inseparable. Probably, in very remote ages, prisoners were most commonly put to death; but the selfish gradually predominated over the more passionate feelings, and for many ages it was usual to reduce them to the condition of slaves; being either sold by their captors to others, or employed by them as they might think fit. “*Jure gentium*,” says Justinian, “*servi nostri sunt, qui ab hostibus capiuntur*.”—(*Instit. lib. i. 5.*)

The practice of reducing men to a state of slavery, having once begun, was extended in various ways. The progeny of slaves, or of women in a state of slavery, were slaves; men born free might sell themselves as slaves; and parents had authority, in Judæa and Rome, to dispose of their children for the same purpose. — (*Michaelis on the Laws of Moses*, vol. ii. p. 163. Eng. ed.) It was the law of Rome, and of most other ancient states, that the persons of debtors who had contracted obligations which they could not discharge, should become the property of their creditors.

Treatment of Slaves.—The treatment of slaves in antiquity, as in more modern times, differed very widely in different countries and periods, and among different classes of slaves in the same country and at the same time. A great deal also depended on the character of particular masters. Slaves bred up in the house or family of the masters were uniformly treated with greater indulgence than others, and became entitled, by custom, to several important privileges. At Athens, slaves appear to have been better treated than in any other ancient state; and Demosthenes mentions, in his second Philippic, that “a slave was better off at Athens than a free citizen in many other countries.” In republican Rome, the masters had the power of life and death over their slaves, who were often treated with the most detestable barbarity. It was not an uncommon practice to expose old, useless, or sick slaves to starve in an island in the Tiber! We may, as Mr. Hume has justly remarked, “imagine what others would practise, when it was the professed maxim of the elder Cato, to sell his superannuated slaves at any price, rather than maintain what he esteemed a useless burden.”—(*Plutarch, in Vita Catonis.*)

Ergastula, or dungeons, where slaves were confined and chained at night, and where they were sometimes made to work in the day, were common all over Italy. *Columella* advises that they be always built under ground — (lib. i. c. 6.) ; and remains of them are still seen in the lower stories of ancient buildings in Italy and Sicily. Hundreds of slaves were sometimes put to death for the crime of one only ; and they were exposed, when they committed any petty fault, to all the violence of the most capricious and unrestrained despotism.

It was not uncommon in the barbarous ages to immolate captives on the tomb of such chiefs as had fallen in battle ; and magnificent games were celebrated on these occasions.* The gladiatorial exhibitions, so common at Rome after the Punic wars, seem to have grown out of this practice. These were contests between slaves, denominated gladiators, trained to fight in public for the amusement of a ferocious populace, who took the greatest delight in their sanguinary combats. Thousands of unfortunate wretches were annually sacrificed in this inhuman sport. After his triumph over the Dacians, Trajan exhibited spectacles, in which no fewer than 11,000 wild beasts of different kinds were killed, and 10,000 gladiators fought! — (*Adam's Roman Antiquities*, p. 317.)

The cruelties inflicted on the slaves occasioned frequent revolts, attended by the most dreadful excesses. Spartacus, a Thracian captive, destined for the profession of a gladiator, headed a rebellion of gladiators and slaves, which continued for 3 years, and required all the force of the republic to suppress. When finally defeated by Crassus, about 6,000 of his followers were nailed to the cross, in double rows, that extended almost from Capua to Rome. — (*Ferguson, Rom. Republic*, c. 16.) No one acquainted with the manners of the Romans can be surprised at the atrocities of so many of the emperors. The worst of them treated the citizens better than the latter treated the slaves. Humanity could not be looked for in the rulers of a state in which human life was held in contempt, and human suffering made the subject of popular sport.

In consequence partly of their ill usage, and partly of its being accounted cheaper to buy than to breed slaves, vast numbers were annually imported into Italy. Thrace and the countries round the Black Sea furnished large supplies of the best slaves ; and numbers were obtained from Egypt, Syria, Cappadocia, and other places. Delus in Cilicia was the greatest slave market of antiquity ; as many as 10,000 slaves have been sold there in a single day. — (*Strabo*, lib. xiv.)

Besides its brutalising influence on the manners of the people, the institution of slavery was in other respects productive of the worst effects. The best Roman writers bear testimony to the negligence, waste, and bad conduct of slaves. — (*Columella*, lib. i. § 8. ; *Plin. Hist. Nat.* lib. xvii. § 3.) The inferiority of the ancients in most of the useful arts is principally to be ascribed to the prevalence of slavery, which not only extinguished all emulation and invention on the part of most of those engaged in industrious employments, but made the employments be considered in some measure disgraceful. In the ancient world agriculture and arms were the only occupations that were reckoned worthy of a freeman. The mechanical arts were carried on either wholly by slaves, or by the very dregs of the people ; and remained for ages in the same stationary state.

The establishment of Christianity contributed more, perhaps, than any thing else, first to mitigate, and finally to suppress the abomination of slavery. But within no very long period after its abolition had been completely effected in every part of Europe, its horrors began to be inflicted on America.

African Slave Trade. — This infamous traffic was commenced by the Portuguese, in 1482. The trade, however, was but of trifling extent till the commencement of the sixteenth century. In consequence, however, of the rapid destruction of the Indians employed in the mines of St. Domingo or Hayti, Charles V. authorised, in 1517, the introduction into the island, of African slaves from the establishments of the Portuguese on the coast of Guinea. The concurrence of the emperor was obtained by the intercession of the celebrated Las Casas, bishop of Chiapa, who, contradictorily enough, laboured to protect the Indians by enslaving the Africans. The latter were certainly more vigorous and capable of bearing fatigue than the former. But this circumstance affords no real justification of the measure, which, at best, was nothing more than the substitution of one species of crime and misery in the place of another. — (*Robertson's Hist. America*, book iii.)

The importation of negroes into the West Indies and America, having once begun, gradually increased, until the extent and importance of the traffic rivalled its cruelty and guilt. Sir John Hawkins was the first Englishman who engaged in it : and such was the ardour with which our countrymen followed his example, that they exported from Africa more than 300,000 slaves between the years 1680 and 1700 ; and between 1700 and 1786, 610,000 Africans were imported into Jamaica only ; to which adding the imports into the other islands and the continental colonies, and those who died on their passage, the

* Achilles sacrificed 12 Trojan captives on the tomb of Patroclus. — (*Iliad*, lib. 23.)

number carried from Africa will appear immense. — (*Bryan Edwards, Hist. West Indies*, vol. ii. p. 64.) The importations by other nations, particularly the French and Portuguese, were also very great.

It is not easy to say whether this traffic has been more injurious to Africa or America. In the former it has perpetuated and multiplied every sort of enormity and abuse. The petty princes have been tempted to make war on each other, that they might obtain captives to sell to the European traders; and when these could not be found, have seized and sold their own subjects. Many, too, have been kidnapped by the crews of the slave ships; nor is there any sort of crime known among pirates and banditti, which, for more than 3 centuries, the civilised inhabitants of Europe have not perpetrated upon the unoffending natives of Central Africa. In the West Indies, and those parts of America into which slaves have been largely imported, its effect has been equally disastrous. It has led to the most violent antipathy between the whites and the blacks; and been the fruitful source of crimes, convulsions, and disorders, of which it is difficult to see the termination. — (There are some good remarks on slavery as it exists in America, and on the multiplied evils of which it is productive, in a volume entitled "Excursion of an English Gentleman through the United States and Canada," published in 1824.)

It would be to no purpose to enter into any examination of the sophisms by which it was formerly attempted to justify the slave trade. We shall not undertake to pronounce any opinion upon the question as to the inferiority of the blacks; though it does not appear to us that the statements of Mr. Jefferson on this subject, in his "Notes on Virginia," and similar statements made by others, have received any sufficient answer. But supposing the inferiority of the negroes were established beyond all question, that would be no justification of the infamous cruelties inflicted upon them. Did any one ever think of vindicating a robber, because he happened to be stronger or cleverer than his victim?

Abolition of the Slave Trade. — Notwithstanding the sanction it received from parliament, and the supineness of the public, the slave trade was frequently denounced by distinguished individuals, in this and other countries, as essentially cruel and unjust. Of these, Montesquieu is, perhaps, the most conspicuous. He successfully exposed the futility of the different pleas put forth by the advocates of slavery — (*Esprit des Loix*, liv. xv.); and the extensive circulation of his great work, and the deference paid to the doctrines advanced in it, contributed powerfully to awaken the public to a just sense of the iniquity of the traffic. The Quakers early distinguished themselves by their hostility to the trade; of which they were always the consistent and uncompromising enemies.

The first motion on the subject in parliament was made in 1776; but without success. The subject was not taken up systematically till 1787, when a committee was formed, of which Mr. Granville Sharp and Mr. Clarkson, whose names are imperishably associated with the history of the abolition of the slave trade, were members. This committee collected evidence in proof of the enormities produced by the trade, procured its circulation throughout the country, and succeeded in making a very great impression on the public mind. After a number of witnesses on both sides had been examined before the privy council, Mr. Wilberforce, on the 12th of May, 1789, moved a series of resolutions condemnatory of the traffic. They were supported by Mr. Burke in one of his best speeches; and by Mr. Pitt and Mr. Fox. But, notwithstanding the resolutions were carried, nothing was done to give them effect. The friends of the trade having obtained leave to produce evidence at the bar of the house, contrived to interpose so many delays that the session passed off without any thing being done. In the following sessions the great struggle was continued with various success, but without any definite result. At length the triumph of humanity and justice was finally consummated in 1807; a bill for the total and immediate abolition of the slave trade, having been carried in both houses by immense majorities, received the royal assent on the 25th of March, being the last act of the administration of Mr. Fox and Lord Grenville. "Thus ended," says Mr. Clarkson, "one of the most glorious contests, after a continuance of 20 years, of any ever carried on in any age or country: a contest, not of brutal violence, but of reason; a contest between those who felt deeply for the happiness and the honour of their fellow creatures, and those who, through vicious custom, and the impulse of avarice, had trampled under foot the sacred rights of their nature, and had even attempted to efface all title of the divine image from their minds."

America abolished the slave trade at the same time as England.

But notwithstanding what had been done, further measures were soon discovered to be necessary. The Spaniards and the Portuguese continued to carry on the trade to a greater extent than ever; and British subjects did not hesitate, under cover of their flags, to become partners in their adventures. An effectual stop was put to this practice in 1811, by the enactment of a law introduced by Mr. (now Lord) Brougham, that made trading in slaves punishable by transportation for 14 years, or by confinement to hard labour for a term of not more than 5 years nor less than 3 years.

The British laws relative to the slave trade were consolidated by the act 5 Geo. 4. c. 113. But, as the greater part of this act has been superseded by the late statute for the extinction of slavery (3 & 4 Will. 4. c. 73.), we shall merely lay before our readers the clauses still in force relating to the dealing in slaves.

Dealing in Slaves in the High Seas, &c. to be deemed Piracy.—And if any subject or subjects of his Majesty, or any person or persons residing or being within any of the dominions, forts, settlements, factories, or territories, now or hereafter belonging to his Majesty, or being in his Majesty's occupation or possession, or under the government of the United Company of Merchants of England trading to the East Indies, shall, except in such cases as are by this act permitted, after the 1st day of January, 1825, upon the high seas, or in any haven, river, creek, or place, where the admiral has jurisdiction, knowingly and wilfully carry away, convey, or remove, or aid or assist in carrying away, conveying, or removing, any person or persons as a slave or slaves, or for the purpose of his, her, or their being imported or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; or shall, after the said 1st day of January, 1825, except in such cases as are by this act permitted, upon the high seas, or within the jurisdiction aforesaid, knowingly and wilfully ship, embark, receive, detain, or confine, or assist in shipping, embarking, receiving, detaining, or confining, on board any ship, vessel, or boat, any person or persons for the purpose of his, her, or their being carried away, conveyed, or removed as a slave or slaves, or for the purpose of his, her, or their being imported, or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; then and in every such case the persons so offending shall be deemed and adjudged guilty of piracy, felony and robbery, and being convicted thereof shall suffer death without benefit of clergy, — and loss of lands, goods, and chattels, as pirates, felons, and robbers upon the seas ought to suffer. — § 9.

Persons dealing in Slaves, or exporting or importing Slaves, &c. guilty of Felony.—And (except in such special cases as are by this act permitted) if any persons shall deal or trade in, purchase, sell, barter, or transfer, or contract for the dealing or trading in, purchase, sale, barter, or transfer of slaves, or persons intended to be dealt with as slaves; or shall, otherwise than as aforesaid, carry away or remove, or contract for the carrying away or removing of slaves or other persons, as or in order to their being dealt with as slaves; or shall import or bring, or contract for the importing or bringing into any place whatsoever, slaves, or other persons, as or in order to their being dealt with as slaves; or shall, otherwise than as aforesaid, ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transhipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being carried away or removed, as or in order to their being dealt with as slaves; or shall ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transhipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being imported or brought into any place whatsoever, as or in order to their being dealt with as slaves; or shall fit out, man, navigate, equip, despatch, use, employ, let or take to freight or on hire, or contract for the fitting out, manning, navigating, equipping, despatching, using, employing, letting, or taking to freight or on hire, any ship, vessel, or boat, in order to accomplish any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully lend or advance, or become security for the loan or advance of money, goods, or effects, employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully become guarantee or security, or contract for the becoming guarantee or security, for agents employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful, or in any other manner to engage, or contract to engage, directly or indirectly therein, as a partner, agent, or otherwise; or shall knowingly and wilfully ship, tranship, lade, or receive or put on board, or contract for the shipping, transhipping, lading, receiving, or putting on board of any ship, vessel, or boat, money, goods, or effects, to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall take the charge or command, or navigate, or enter and embark on board, or contract for the taking the charge or command, or for the navigating or entering and embarking on board of any ship, vessel, or boat, as captain, master, mate, surgeon, or supercargo, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so take the charge or command, or navigate or enter and embark, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully insure, or contract for the insuring of any slaves, or any property or other subject matter engaged or employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall wilfully and fraudulently forge or counterfeit any certificate, certificate of valuation, sentence, or decree of condemnation or restitution, copy of sentence or decree of condemnation or restitution, or any receipt (such receipts being required by this act), or any part of such certificate, certificate of valuation, sentence or decree of condemnation or restitution, copy of sentence or decree of condemnation or restitution, or receipt as aforesaid; or shall knowingly and wilfully utter or publish the same, knowing, it to be forged or counterfeited, with intent to defraud his Majesty, or any other person or persons whatsoever, or any body politic or corporate; then, and in every such case the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be felons, and shall be transported for a term not exceeding 14 years, or shall be confined and kept to hard labour for a term not exceeding 5 nor less than 3 years, at the discretion of the court before whom such offenders shall be tried. — § 10.

Seamen, &c. serving on Board such Ships guilty of Misdemeanour.—And (except in such special cases, or for such special purposes as are by this act permitted) if any persons shall enter and embark on board, or contract for the entering and embarking on board of any ship, vessel, or boat, as petty officer, seaman, marine, or servant, or in any other capacity not herein-before specifically mentioned, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so enter and embark on board, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; then, and in every such case, the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be guilty of a misdemeanour only, and shall be punished by imprisonment for a term not exceeding 2 years. — § 11.

Abolition of Slavery.—We have already alluded (*anté*, p. 356.) to the ever memorable act of 1833, for the ABOLITION OF SLAVERY throughout the British colonies. In enacting this celebrated statute, parliament endeavoured, and, we think successfully, to reconcile the apparently conflicting claims of humanity and justice, by providing for the emancipation of the slaves, without prejudice to the just rights and claims of their pro-

prietors. This was effected by assigning to the latter the sum of *twenty millions* sterling, which is to be distributed amongst them on their complying with the provisions of the act. This is the greatest sacrifice ever voluntarily made by any nation in vindication of the right of property. But it was not too great for the object in view; for had that right been violated in this instance, a precedent would have been set for its violation in others, and the consequences would have been most disastrous. The measure, in fact, reflects quite as much credit on the wisdom and honesty, as on the generosity, of the British nation.

We subjoin a full abstract of such parts of this important statute as seem to be of general interest.

ACT 3 & 4 WILL 4. C. 73., FOR THE ABOLITION OF SLAVERY THROUGHOUT THE BRITISH COLONIES; for promoting the Industry of the manumitted Slaves; and for compensating the Persons hitherto entitled to the Services of such Slaves.

Slaves to become apprenticed Labourers from 1st of August, 1834. — After reciting, that it is expedient that the slaves in the British colonies should be manumitted and set free on compensation being made to those entitled to their services, the act goes on to declare, that from and after the 1st day of August, 1834, all persons who, in conformity with the laws now in force in the said colonies, shall, on or before the 1st day of August, 1834, have been duly registered as slaves in any such colony, and who, on the said 1st day of August, 1834, shall be actually within any such colony, and who shall by such registries appear to be, on the said 1st day of August, 1834, of the full age of 6 years or upwards, shall by force and virtue of this act, and without the previous execution of any indenture of apprenticeship, or other deed or instrument for that purpose, become and be apprenticed labourers; provided that, for the purposes aforesaid, every slave engaged in his ordinary occupation on the seas shall be deemed and taken to be within the colony to which such slave shall belong. — § 1.

Who entitled to Services of the Slave. — During the continuance of the apprenticeship of any such labourer, such person or persons shall be entitled to the services of such labourer as would for the time being have been entitled to his or her services as a slave if this act had not been made. — § 2.

All Slaves brought into U. K. with Consent of Possessors, free. — All slaves who may at any time previous to the passing of this act have been brought with the consent of their possessors, and all apprenticed labourers who may hereafter with the like consent be brought, into any part of the United Kingdom, shall from and after the passing of this act be absolutely and entirely free to all intents and purposes whatsoever. — § 3.

Apprenticed Labourers to be divided into prædial attached, prædial unattached, and non-prædial. — And whereas it is expedient that such apprenticed labourers should, for the purposes herein-after mentioned, be divided into 3 distinct classes; the first consisting of prædial apprenticed labourers attached to the soil, and comprising all persons who in their state of slavery were usually employed in agriculture, or in the manufacture of colonial produce or otherwise, upon lands belonging to their owners; the second consisting of prædial apprenticed labourers not attached to the soil, and comprising all persons who in their state of slavery were usually employed in agriculture, or in the manufacture of colonial produce or otherwise, upon lands not belonging to their owners; and the third consisting of non-prædial apprenticed labourers, and comprising all apprenticed labourers not included within either of the 2 preceding classes: be it therefore enacted, that such division shall be carried into effect in such manner and form, and subject to such rules and regulations, as shall for that purpose be established by such acts of assembly, ordinances, or orders in council as are herein-after mentioned; provided always, that no person of the age of 12 years and upwards shall be included in either of the said 2 classes of prædial apprenticed labourers, unless such person shall for 12 calendar months at the least next before the passing of this act have been habitually employed in agriculture or in the manufacture of colonial produce. — § 4.

Apprenticeship of the prædial Labourers limited. — No person who, by virtue of this act, or of any act of assembly, ordinance, or order in council, shall become a prædial apprenticed labourer, whether attached or not to the soil, shall continue in such apprenticeship beyond the 1st day of August, 1840; and during such apprenticeship, no such prædial apprenticed labourer shall be bound to perform any labour in the service of his or her employer or employers for more than 45 hours in one week. — § 5.

Apprenticeship of the non-prædial Labourers. — No person who, by virtue of this act, or of any act of assembly, ordinance, or order in council, shall become a non-prædial apprenticed labourer, shall continue in such apprenticeship beyond the 1st day of August, 1838. — § 6.

Labourer may be discharged by his Employer. — If before such apprenticeship shall have expired, the person or persons entitled during the remainder of any such term to the services of such apprenticed labourer shall be desirous to discharge him or her from such apprenticeship, it shall be lawful for such person or persons so to do by deed or instrument; which deed or instrument shall be in such form, and shall be executed and recorded in such manner and with such solemnities, as shall be prescribed under authority: provided that, if any person so discharged from apprenticeship by voluntary act as aforesaid shall at that time be of the age of 50 years or upwards, or shall be then labouring under any such disease or mental or bodily infirmity as may render him or her incapable of earning his or her subsistence, the person or persons so discharging such apprenticed labourer shall continue and be liable to provide for his or her support and maintenance during the remaining term of the apprenticeship, as fully as if such labourer had not been discharged. — § 7.

Apprenticed Labourer may purchase his Discharge. — It shall be lawful for any apprenticed labourer to purchase his or her discharge from such apprenticeship, even without the consent, or in opposition, if necessary, to the will of the person or persons entitled to his or her services, upon payment to such person or persons of the appraised value of such services; the appraisement being effected, the purchase money being paid and applied, and the discharge being given and executed, in such manner and form, and subject to such conditions, as shall be prescribed by competent authority. — § 8.

Apprenticed Labourers not removable from the Colony. — No apprenticed labourer shall be subject or liable to be removed from the colony to which he may belong; and no prædial apprenticed labourer who may become attached to the soil shall be subject or liable to perform any labour in the service of his or her employer or employers except upon the works and business of the plantations or estates to which he or she had been attached, or on which he or she had been usually employed previously to the said 1st day of August, 1834: provided that, with the consent in writing of any 2 or more justices of peace holding such special commission as herein-after mentioned, it shall be lawful for those entitled to the services of any prædial apprenticed labourer or labourers to transfer his or their services to any other estate or plantation within the same colony belonging to them; which written consent shall in no case be given, or be of any validity, unless such justices of the peace shall first have ascertained that such transfer would not separate any such apprenticed labourer from his or her wife or husband, parent or child, or from any one reputed to bear such relation to him or her, and that such transfer would not probably be injurious to the health or welfare of such labourer; and such written consent to such removal shall be expressed in such terms, and be in each case given, attested, and recorded in the manner prescribed for that purpose. — § 9.

Right to the Services of apprenticed Labourers to be transferable.—The right or interest of any employer or employers to the services of any apprenticed labourers shall be transferable by bargain and sale, contract, deed, &c., according to such rules and in such manner as shall for that purpose be provided as herein-after mentioned; provided that no apprenticed labourer shall, by virtue of any such bargain, sale, &c., be subject to separation from his or her wife or husband, parent or child, or from any one reputed to bear such relation to him or her. — § 10.

Employer to supply the Labourer with Food, &c.—During the continuance of such apprenticeship, the person or persons entitled to the services of every apprenticed labourer shall be and is required to supply him or her with such food, clothing, lodging, medicine, medical attendance, and such other maintenance and allowances as, by any law now in force in the colony to which such apprenticed labourer may belong, an owner is required to supply to any slave of the age and sex as such apprenticed labourer; and in cases in which the food of such apprenticed labourer shall be supplied, not by the delivery to him or her of provisions, but by the cultivation by such labourer of ground set apart for the growth of provisions, those entitled to his or her services shall and are required to provide such apprenticed labourer with ground adequate, both in quantity and quality, for his or her support, and within a reasonable distance of his or her usual place of abode, and to allow such labourer, from and out of the time during which he or she may be required to labour, after the rate of 45 hours per week, in the service of his or her employers, such a portion of time as shall be adequate for the proper cultivation of such ground, and for the raising and securing the crops thereon grown; the actual extent of which ground, and the distance thereof from the place of residence of the apprenticed labourer for whose use it is allotted, and the length of time to be deducted for the cultivation of the said ground from the said annual time, shall, in each of the colonies aforesaid, be regulated as herein-after mentioned. — § 11.

All Slaves in the British Colonies emancipated from the 1st of August, 1834.—Subject to the obligations imposed by this act, or to be imposed by any act of general assembly, ordinance, or order in council as herein-after mentioned, upon such apprenticed labourers, *all and every the persons who, on the 1st day of August, 1834, shall be holden in slavery within any British colony, shall, from and after the said 1st day of August, 1834, become and be to all intents and purposes free and discharged of and from all manner of slavery, and shall be absolutely and for ever manumitted; and the children thereafter to be born to any such persons, and the offspring of such children, shall in like manner be free from their birth; and from and after the said 1st day of August, 1834, slavery shall be and is hereby utterly and for ever abolished and declared unlawful throughout the British colonies, plantations, and possessions abroad.* — § 12.

Children may be apprenticed.—Whereas it may happen that children who have not attained the age of 6 years on the 1st of August, 1834, or that children who after that day may be born to female apprenticed labourers, may not be properly supported by their parents, and that no other person may be disposed voluntarily to undertake their support, and it is necessary that provision should be made for the maintenance of such children; be it enacted, that if any child who, on the 1st of August, 1834, had not completed his or her 6th year, or if any child to which any female apprenticed labourer may give birth on or after the said 1st of August, 1834, shall be brought before any justice of the peace holding such special commission as herein-after mentioned, and if it be made to appear to the satisfaction of such justice that such child is unprovided with adequate maintenance, and that such child hath not completed his or her age of 12 years, it shall be lawful for such justice, and he is hereby required, to execute an indenture of apprenticeship, binding such child as an apprenticed labourer to the person or persons entitled to the services of its mother, or who had been last entitled to her services; but in case it be made to appear to such justice that such person or persons is or are unable or unfit to enter into such indenture, and properly to perform the conditions thereof, then such justice is required to bind such child to any other person or persons approved by him, who may be willing and able properly to perform such conditions; and every indenture of apprenticeship shall declare whether such child shall thenceforward belong to the class of attached *prædial* apprenticed labourers, or to the class of unattached *prædial* apprenticed labourers, or to the class of non-*prædial* apprenticed labourers; and the term of apprenticeship of such child shall be made to continue in force until such child shall have completed his or her 21st year, and no longer; and every child so apprenticed shall, during his or her apprenticeship, be subject to all rules and regulations respecting work or labour, and respecting food and other supplies, as any other apprenticed labourers: provided always, that the indenture of apprenticeship shall contain sufficient words of obligation upon the employer to allow reasonable time and opportunity for the education and religious instruction of such child. — § 13.

His Majesty, or any Governor, may appoint Justices of the Peace.—This clause authorises his Majesty, or any governor of any colony, to appoint special justices of the peace for carrying this act into effect. — § 14.

His Majesty may grant Salaries to special Justices.—This clause authorises his Majesty to grant salaries, not exceeding 500*l.* a year, to such special justices; providing that no person in the receipt of half-pay from his Majesty's land or naval forces shall forfeit or lose the same on being appointed a justice under this act. It also directs lists of such justices to be laid before parliament. — § 15.

Recital of various Regulations necessary for giving Effect to this Act.—Whereas it is necessary that various rules and regulations should be established for ascertaining, with reference to each apprenticed labourer, to what class he or she belongs, and for determining the manner in and the solemnities with which the voluntary discharge of any apprenticed labourer may be effected, and for prescribing the manner in and the solemnities with which the purchase by any apprenticed labourer of his or her discharge from such apprenticeship, without, or in opposition, if necessary, to, the consent of those entitled to his or her services, shall be effected, and how the necessary appraisal of the future value of such services shall be made, and how and to whom the amount of such appraisal shall be paid and applied, and in what manner and by whom the discharge shall be given, executed, and recorded; and it is also necessary, for the preservation of peace throughout the said colonies, that proper regulations should be established for the maintenance of order and good discipline amongst the said apprenticed labourers, and for insuring the punctual discharge of the services due by them to their employers, and for the prevention and punishment of indolence, or the neglect or improper performance of work by any apprenticed labourer, and for enforcing the due performance by such labourer of any contract into which he or she may voluntarily enter for any hired service during the time in which he or she may not be bound to labour for his or her employer, and for the prevention and punishment of insolence and insubordination on the part of such apprenticed labourers towards their employers, and for the prevention or punishment of vagrancy, or of any conduct on the part of any such apprenticed labourers injuring or tending to the injury of the property of any employer, and for the suppression and punishment of any riot or combined resistance of the laws on the part of such apprenticed labourers, and for preventing the escape of such apprenticed labourers, during their term of apprenticeship, from the colonies to which they may belong; and whereas it will also be necessary for the protection of such apprenticed labourers, that various regulations should be framed and established in the said colonies for securing punctuality and method in supplying them with food, clothing, lodging, medicines, medical attendance, and such other maintenance and allowances as they are entitled to receive, and for regulating the amount and quality of all such articles in cases where the laws at present existing may not have made any regulation or any adequate regulation for that purpose; and it is also necessary that proper rules should be established for the prevention and punishment of any frauds which might be practised, or of any omissions or neglects which might occur, respecting the quantity or the quality of the supplies so to be furnished, or respecting the periods for the delivery of the same: and whereas it is necessary, in those cases in which the food of any such *prædial* apprenticed

labourers as aforesaid may either wholly or in part be raised by themselves by the cultivation of ground set apart and allotted for that purpose, that proper regulations should be made and established as to the extent of such grounds, and as to the distance at which such grounds may be so allotted from the ordinary place of abode of such prædial apprenticed labourers, and respecting the deductions to be made from the cultivation of such grounds from the annual time during which such prædial apprenticed labourers are declared liable to labour: and whereas it may also be necessary, by such regulations, to secure to apprenticed labourers the enjoyment for their own benefit of that portion of their time during which they are not required to labour in the service of their respective employers, and for securing exactness in the computation of the time during which such labourers are required to labour in the service of their employers; and it is also necessary that provision should be made for preventing the imposition of task-work on any apprenticed labourer without his or her free consent to undertake the same; but it may be necessary by such regulations in certain cases to require and provide for the acquiescence of the minority of the prædial apprenticed labourers attached to any plantation or estate in the distribution and apportionment amongst their whole body of any task-work which the majority of them shall be willing and desirous collectively to undertake; and it is also necessary that regulations should be made respecting any voluntary contracts into which any apprenticed labourers may enter with their respective employers or with any other person for hired service for any future period, and for limiting the greatest period of time to which such voluntary contract may extend, and for enforcing the punctual performance of such contracts on the part both of such labourers and of those engaging for their employment and hire; and it is also necessary that regulations should be made for the prevention or punishment of any cruelty, injustice, or other wrong or injury done to or inflicted upon any such apprenticed labourers by those entitled to their services; and it is also necessary that proper regulations should be made respecting the manner and form in which indentures of apprenticeship shall be made on behalf of children, and respecting the registering and preservation of such indentures: and whereas it is also necessary that provision should be made for insuring promptitude and despatch, and for preventing unnecessary expense, in the discharge by the justices of the peace of the jurisdiction and authorities committed to them, and for enabling such justices to decide in a summary way such questions as may be brought before them in that capacity, and for the division of the colonies into districts for the purposes of such jurisdiction, and for the frequent and punctual visitation by such justices of the apprenticed labourers within their respective districts; and it is also necessary that regulations should be made for indemnifying and protecting such justices of the peace in the upright execution and discharge of their duties: and whereas such regulations could not without great inconvenience be made except by the respective governors, councils, and assemblies, or other local legislatures of the said respective colonies, or by his Majesty, with the advice of his privy council, in reference to those colonies to which the legislative authority of his Majesty in council extends; be it therefore enacted and declared, that nothing in this act contained extends or shall be construed to extend to prevent the enactment by the respective governors, councils, and assemblies, or by such other local legislatures as aforesaid, or by his Majesty, with the advice of his privy council, of any such acts of general assembly, or ordinances, or orders in council as may be requisite for making and establishing such rules and regulations, or for carrying the same into full and complete effect: provided nevertheless, that it shall not be lawful for any such governor, council, and assembly, or for any local legislature, or for his Majesty in council, to make or establish any enactment, regulation, provision, rule, or order in anywise repugnant or contradictory to this present act, but that every such enactment, regulation, &c. shall be and is declared to be absolutely null and void. — § 16.

Such Colonial Acts may not authorise the whipping or Punishment of the Labourer. — It shall not be lawful for any such governor, &c., or other colonial legislature, or for his Majesty in council, by any such act, ordinance, &c., to authorise any one entitled to the services of any apprenticed labourer, or any person or persons other than justices of the peace holding special commissions as aforesaid, to punish any apprenticed labourer for any offence committed or alleged to have been committed, by the whipping, beating, or imprisonment of his or her person, or by any other personal correction or punishment whatsoever, or by any addition to the hours of labour herein-before limited; nor to authorise any court, judge, or justice to punish any apprenticed labourer, being a female, for any offence by her committed, by whipping or beating her person; and that every enactment, regulation, &c. for any such purpose is hereby declared to be absolutely null and of no effect: provided always, that nothing in this act contained doth or shall extend to exempt any apprenticed labourer from the operation of any law or police regulation in force for the prevention or punishment of any offence, such law or police regulation being in force against and applicable to all persons of free condition. — § 17.

The next 2 sections provide that none but special justices, holding commissions as aforesaid, shall act in execution of this act, or interfere between apprenticed labourers and their employers; but reserving to the supreme courts such powers in relation hereto as may now be vested in them.

Apprenticed Labourers not to be subject to Prolongation or Renewal of Apprenticeship. — No apprenticed labourer shall, by act of assembly, ordinance, or order in council, be rendered liable, in respect of any offence, or upon any pretext whatsoever, except as hereafter is mentioned, to any prolongation of his or her term of apprenticeship, or to any new or additional apprenticeship, or to any such additional labour as shall impose upon such apprenticed labourer the obligation of working in the service or for the benefit of those entitled to his or her services for more than 15 extra hours in the whole in any 1 week, but every such enactment, regulation, provision, &c. shall be and is null and void of no effect: provided nevertheless, that any act of assembly, ordinance, or order in council, may contain provisions for compelling any apprenticed labourer, who shall, during his or her apprenticeship, wilfully be absent from the service of his or her employer, either to serve such employer after the expiration of his or her apprenticeship for so long a time as he or she shall have so been absent from such service, or to make satisfaction to his or her employer for the loss sustained by such absence (except so far as he or she shall have made satisfaction for such absence, either out of such extra hours as aforesaid, or otherwise), but nevertheless so that such extra service or compensation shall not be compellable after the expiration of 7 years next after the termination of the apprenticeship of such apprentice. — § 20.

Apprenticed Labourers not to be compelled to work on Sundays. — Neither under the provisions or obligations imposed by this act, or any act of general assembly, ordinance, or order in council, shall any apprenticed labourer be compelled to labour on Sundays, except in works of necessity, or in domestic services, or in the protection of property, or in tending of cattle, nor shall any apprenticed labourer be hindered from attending anywhere on Sundays for religious worship, at his or her free will or pleasure, but shall be at full liberty so to do without let, denial, or interruption whatsoever. — § 21.

Nothing herein to interfere with certain Colonial Laws. — Nothing in this act extends or shall be construed to extend to interfere with or prevent the enactment by the governors, councils, and assemblies, or by such other local legislature of any colonies, or by his Majesty in council in reference to such colonies as are subject to the legislative authority of his Majesty in council, of any acts, ordinances, &c. for exempting any apprenticed labourers, during the continuance of their apprenticeship, from any civil or military service, or for disqualifying them during the continuance of any such apprenticeships from the enjoyment or discharge of any political franchise, or for exempting them during the continuance of such apprenticeships from being arrested or imprisoned for debt. — § 22.

Acts passed by local Legislatures with similar but improved Enactments to this Act to supersede this Act. — In case the governor, council, and assembly of one or more colonies shall, by any act or acts of general assembly for that purpose, substitute for the several enactments herein contained, or any of them, any enactments accomplishing the several objects in such enactments respectively contemplated as fully and to the like effect, but in a manner and form better adapted to the local circumstances of such colonies

or colony, and in case his Majesty shall, by any order in council, confirm and allow such act or acts of assembly, and shall in such order recite and set forth the provisions and enactments of this present act for which such other enactments shall have been substituted, then and in such case so much and such parts of this present act as shall be so recited and set forth in any such order in council shall be suspended and cease to be of any force in such colony from and after the arrival and proclamation therein of any such order or orders in council, and shall continue to be so suspended so long as any such substituted enactments shall continue in force, and no longer. — § 23.

*The Treasury may raise Loans, not exceeding 20,000,000*l.** — This section recites, that towards compensating the persons at present entitled to the services of the slaves to be manumitted and set free by virtue of this act for the loss of such services, the Commons of Great Britain and Ireland in parliament assembled have resolved to give and grant to his Majesty the sum of 20,000,000*l.* sterling. Authority is then given to raise such 20,000,000*l.*, and to grant annuities for the same. Directions are also given how the same is to be paid; and the interest and charges are made chargeable upon the consolidated fund. — § 24—2.

Commissioners to be appointed for distributing Compensation. — It shall be lawful for his Majesty from time to time, by a commission under the great seal, to constitute and appoint such persons, not being less than 5, as to his Majesty shall seem meet, to be commissioners of arbitration for inquiring into and deciding upon the claims to compensation which may be preferred to them under this act. — § 25.

Sections 34. to 43. inclusive, regulate the appointment of, meetings, and manner of proceeding before, the commissioners.

No Part of Compensation to be applicable to any Colony unless his Majesty declare that adequate Provision has been made by the Legislature thereof. — No part of the said sum of 20,000,000*l.* sterling shall be applied for the benefit of any person now entitled to the services of any slave in any of the colonies, unless an order shall have been first made by his Majesty in council, declaring that adequate and satisfactory provision hath been made by law in such colony for giving effect to this present act by such further and supplementary enactments as aforesaid, nor unless a certified copy of such order in council shall have been transmitted to the commissioners of his Majesty's treasury for their guidance or information; and every such order shall be published 3 several times in the *London Gazette*, and shall be laid before both houses of parliament within 6 weeks next after the date thereof, if parliament shall be then in session, and if not, within 6 weeks from the next ensuing session. — § 44.

The Commissioners to apportion the Compensation Fund. — The said commissioners shall proceed to apportion the said sum into 19 different shares, which shall be respectively assigned to the several British colonies or possessions, viz. the Bermuda Islands, the Bahama Islands, Jamaica, Honduras, the Virgin Islands, Antigua, Montserrat, Nevis, St. Christopher's, Dominica, Barbadoes, Grenada, St. Vincent's, Tobago, St. Lucia, Trinidad, British Guiana, the Cape of Good Hope, and Mauritius; and in making such apportionment of the said funds among the several colonies, the commissioners shall and are required to have regard to the number of slaves belonging to or settled in each of such colonies, as the same may appear and are stated according to the latest returns made in the office of the registrar of slaves in England, appointed under the authority of the act 59 Geo. 3. c. 120., intitled "An Act for establishing a Registry of Colonial Slaves in Great Britain, and for making further Provision with respect to the Removal of Slaves from British Colonies;" and the said commissioners are further required, in making such apportionment, to have regard to the prices for which, on an average of 8 years ending the 31st day of December, 1830, slaves have been sold in each colony, excluding from consideration any sales in which they shall have sufficient reason to suppose that slaves were sold or purchased under any reservation, or subject to any express or tacit condition affecting their price; and the said commissioners shall then proceed to ascertain, in reference to each colony, what amount of sterling money will represent the average value of a slave therein for the said period of 8 years; and the total number of the slaves in each colony being multiplied into the amount of sterling money so representing such average value of a slave therein, the product of such multiplication shall be ascertained for each colony separately; and the said 20,000,000*l.* sterling shall then be assigned to and apportioned amongst the said several colonies rateably and in proportion to the product so ascertained for each respectively. — § 45.

No Compensation to be allowed for Persons illegally held in Slavery. — In case it shall appear that any persons in respect of whom claims for compensation shall have been made have been registered and held in slavery in any colony mentioned in this act contrary to law, in every such case the commissioners shall deduct from the sum to be appropriated as compensation to the proprietors in such colony, such sums as shall correspond with the estimated value and number of the persons so illegally registered and held in slavery; and all such sum or sums which may be deducted as herein-before provided shall be applied towards defraying the general expenses of the commission: provided always, that for the purpose of ascertaining in what cases such deductions shall be made, every question arising in any colony respecting the servile condition of any persons registered as slaves shall be inquired of and determined by the commissioners to be appointed under this act, according to such rules of legal presumption and evidence as are or shall be established by any law in force or which shall be in force in any such colony. — § 46.

Commissioners to institute Inquiries, &c. — It shall be the duty of said commissioners, and they are hereby required, to institute a full and exact inquiry into all the circumstances connected with each of the said several colonies which in their judgment ought, in justice and equity, to regulate or affect the apportionment within the same of that part of the general compensation fund which shall be assigned to each of the said colonies; and especially such commissioners shall have regard to the relative value of prædial slaves and of unattached slaves in every such colony; and they shall distinguish such slaves, whether prædial or unattached, into as many distinct classes as, regard being had to the circumstances of each colony, shall appear just; and such commissioners shall, with all practicable precision, ascertain and fix the average value of a slave in each of the classes into which the slaves in any such colony shall be divided; and the commissioners shall also inquire and consider of the principles according to which the compensation to be allotted in respect to any slave or body of slaves ought, according to the rules of law and equity, to be distributed amongst persons who, as owners or creditors, legatees or annuitants, may have any joint or common interest in any such slave or slaves, or may be entitled to or interested in such slave or slaves, either in possession, remainder, reversion, or expectancy; and the commissioners shall also inquire and consider of the principles and manner in which provision might be most effectually made for the protection of any interest in any such compensation money which may belong to or be vested in any married women, infants, lunatics, or persons of insane or unsound mind, or persons beyond the seas, or labouring under any other legal or natural disability or incapacity, and according to what rules, and in what manner, and under what authority, trustees should, when necessary, be appointed for the safe custody, for the benefit of any person or persons, of such compensation fund, or of any part thereof, and for regulating the duties of such trustees, and providing them with a fair and reasonable indemnity; and the commissioners shall also inquire and consider upon what principles, according to the established rules of law and equity in similar cases, the succession to such funds should be regulated upon the death of any person entitled thereto who may die intestate; and the commissioners are also required to consider of any other question which it may be necessary to investigate in order to establish just and equitable rules for the apportionment of such compensation money amongst the persons seized of, or entitled to, or having any mortgage, charge, incumbrance, judgment, or lien upon, or any claim to, or right or interest in, any slave or slaves to be manumitted as aforesaid, at the time of such their manumission; and having made all such inquiries, and having taken all such matters and things as aforesaid into their consideration, the said commissioners shall draw up and frame such general rules, regard being had to the laws and usages in force in each colony respectively, as to them may seem best adapted in each colony for securing the just and equitable distribution of the said

funds amongst or for the benefit of the several persons aforesaid, and for the protection of such funds, and for the appointment and in remission of such trustees as aforesaid; and such general rules, when framed, and agreed upon by the commissioners, shall be subscribed with their respective hands and seals, and transmitted to the president of council, to be laid before his Majesty; and so from time to time as often as any further general rules should be so framed and agreed to for the purposes aforesaid, or any of them. — § 47.

Rules to be published in the London Gazette. — The general rules to be transmitted as aforesaid to the said Lord President shall be forthwith published in the *London Gazette* on 3 several occasions at least, together with a notice that all persons interested in or affected by them may, by a time to be in such notice limited, appeal against any such rules to his Majesty in council; and it shall be lawful for the Lords of his Majesty's privy council, or for any 3 or more of them, by any further notice or notices published in the *London Gazette*, to enlarge the time for receiving any such appeals. — § 48.

Section 49. enacts that his Majesty in council may hear such appeals, and thereupon confirm or disallow any general rule so appealed against.

Section 50. enacts that, in absence of appeal, his Majesty in council may confirm, rescind, or amend such rules.

The remaining sections respect the enrolment of rules, and the proceedings under appeal to his Majesty in council; the mode in which sums awarded by the commissioners are to be paid, &c.

Foreign Slave Trade. — At the congress of Vienna, in 1814, the plenipotentiaries of the great powers agreed to a declaration that the slave trade was "repugnant to the principles of humanity and of universal morality; and that it was the earnest desire of their sovereigns to put an end to a scourge which had so long desolated Africa, degraded Europe, and afflicted humanity."

But notwithstanding this memorable declaration, the immediate abolition of the trade was not agreed to. France was allowed to continue it for *five* years. It is, besides, abundantly certain that, though the trade nominally ceased in 1819, it has since been clandestinely carried on to a great extent in French ships, if not with the connivance, at least without much opposition, on the part of the late government of France. There is now, however, reason to hope that it will be effectually suppressed; for according to a recent arrangement (Nov. 30. 1831) made with his Majesty Louis-Philippe, the right of search is reciprocally conceded, within certain limits, by the French and English; so that French ships suspected of being engaged in the trade may be stopped by British cruisers.

Considering the efforts Great Britain made in behalf of Spain and Portugal, and the influence she might have been supposed to have acquired with the restored monarchs of those countries, it may well excite astonishment that our negotiators (whether from the intractability of those with whom they had to deal, or from want of address and firmness on their parts, we leave it to others to decide), were unable to prevail on these powers to renounce the trade till after the lapse of a considerable period. They succeeded, indeed, in inducing them to exempt that portion of the African coast north of the Equator from their piratical attacks; and for this concession, and damages alleged to have been sustained by their slave ships from our cruisers, Great Britain has paid them no less than 1,230,000*l.*! — (See *SIERRA LEONE*.)

The Spanish slave trade was to have finally ceased, according to the stipulations in the treaty between Spain and this country of the 5th of July and 28th of August, 1814, in 1820. But within these 2 years, and, perhaps, at this very moment, slave ships have been publicly fitted out from Cuba, and immense numbers of slaves have been imported into that island, with the open connivance of the authorities. A mixed commission court, consisting of British and Spanish commissioners, has been established at Havannah, for the condemnation of vessels proved to have been engaged in the slave trade. But we are officially informed by Mr. Macleay, one of the commissioners, that since the establishment of the court no seizure of a slave vessel has ever taken place, but on the interference and denunciation of the British commissioners; and even then *such seizure has only been made, to be instantly followed by a perfect acquittal in the Spanish tribunals!*" — (*Parl. Paper*, No. 120. Sess. 1831, p. 53.)

Slaves were freely imported in immense numbers into Brazil, till February, 1850, when the trade was to cease, conformably to the convention entered into with this country on the 23d of June, 1826. — (See *RIO DE JANEIRO*.) But whether the clandestine and illegal, as well as the open and legitimate importation of slaves, be at an end is more than we can undertake to say.

On the whole, we are afraid that nothing short of a declaration by the great powers, making the slave trade piracy, will be sufficient entirely to rid humanity of its guilt and horrors.

SMALTZ, or **SMALT** (Ger. *Schmalz*, Du. *Smalt*; Fr. *Smalt*; It. *Smalto azzurro*, *Smaltino*; Sp. *Esmalte*, *Azul azur*; Rus. *Лазор*), an oxide of cobalt, melted with siliceous earth and potash. It is a sort of glass, of a beautiful deep blue colour; and being ground very fine, is known by the name of powder blue. The colour of smaltz is not affected by fire; and it is consequently in great demand in the painting of earthenware. It is also employed in the colouring of paper, and for other purposes in the arts. Beckmann has proved that the process used in the preparation of smaltz was invented about the end of the 15th or the beginning of the 16th century; and that the blue

glass of the ancients owes its colour, not to the presence of cobalt or of smaltz, but to that of iron. — (*Hist. of Inventions*, vol. ii. art. *Cobalt*.)

Smaltz is principally manufactured in Germany and Norway. Of 391,523 lbs. imported into Great Britain in 1831, 296,840 lbs. came from Norway, 161,705 from Germany, and 23,958 from the Netherlands. At an average of 1831 and 1832, the entries of smaltz for home consumption amounted to 319,403 lbs. a year. The duty on smaltz has recently been reduced from 6*d.* to 4*d.* per lb.

SMUGGLING, the offence of defrauding the revenue by the introduction of articles into consumption, without paying the duties chargeable upon them. It may be committed indifferently either upon the excise or customs revenue.

Origin and Prevention of Smuggling. — This crime, which occupies so prominent a place in the criminal legislation of all modern states, is wholly the result of vicious commercial and financial legislation. It is the fruit either of prohibitions of importation, or of oppressively high duties. It does not originate in any depravity inherent in man; but in the folly and ignorance of legislators. A prohibition against importing a commodity does not take away the taste for it; and the imposition of a high duty on any article occasions a universal desire to escape or evade its payment. Hence, the rise and occupation of the smuggler. The risk of being detected in the clandestine introduction of commodities under any system of fiscal regulations may always be valued at a certain average rate; and wherever the duties exceed this rate, smuggling immediately takes place. Now, there are plainly but two ways of checking this practice, — either the temptation to smuggle must be diminished by lowering the duties, or the difficulties in the way of smuggling must be increased. The first is obviously the more natural and efficient method of effecting the object in view; but the second has been most generally resorted to, even in cases where the duties were quite excessive. Governments have uniformly almost consulted the persons employed in the collection of the revenue with respect to the best mode of rendering taxes effectual; though it is clear that the interests, prejudices, and peculiar habits of such persons utterly disqualify them from forming a sound opinion on such a subject. They cannot recommend a reduction of duties as a means of repressing smuggling and increasing revenue, without acknowledging their own incapacity to detect and defeat illicit practices; and the result has been, that, instead of ascribing the prevalence of smuggling to its true causes, the officers of customs and excise have almost universally ascribed it to some defect in the laws, or in the mode of administering them, and have proposed repressing it by new regulations, and by increasing the number and severity of the penalties affecting the smuggler. As might have been expected, these attempts have, in the great majority of cases, proved signally unsuccessful. And it has been invariably found, that no vigilance on the part of the revenue officers, and no severity of punishment, can prevent the smuggling of such commodities as are either prohibited or loaded with oppressive duties. The smuggler is generally a popular character; and whatever the law may declare on the subject, it is quite ludicrous to expect that the bulk of society will ever be brought to think that those who furnish them with cheap brandy, geneva, tobacco, &c. are guilty of any very heinous offence.

“To pretend,” says Dr. Smith, “to have any scruple about buying smuggled goods, though a manifest encouragement to the violation of the revenue laws, and to the perjury which almost always attends it, would, in most countries, be regarded as one of those pedantic pieces of hypocrisy, which, instead of gaining credit with any body, seems only to expose the person who affects to practise them to the suspicion of being a greater knave than most of his neighbours. By this indulgence of the public, the smuggler is often encouraged to continue a trade, which he is thus taught to consider as, in some measure, innocent; and when the severity of the revenue laws is ready to fall upon him, he is frequently disposed to defend with violence what he has been accustomed to regard as his just property; and from being at first rather imprudent than criminal, he, at last, too often becomes one of the most determined violators of the laws of society.” — (*Wealth of Nations*, vol. iii. p. 491.)

To create by means of high duties an overwhelming temptation to indulge in crime, and then to punish men for indulging in it, is a proceeding completely subversive of every principle of justice. It revolts the natural feelings of the people; and teaches them to feel an interest in the worst characters — for such smugglers generally are — to espouse their cause, and avenge their wrongs. A punishment which is not proportioned to the offence, and which does not carry the sanction of public opinion along with it, can never be productive of any good effect. The true way to put down smuggling is to render it unprofitable; to diminish the temptation to engage in it: and this is not to be done by surrounding the coasts with cordons of troops, by the multiplication of oaths and penalties, and making the country the theatre of ferocious and bloody contests in the field, and of perjury and chicanery in the courts of law; but by repealing prohibitions, and reducing duties, so that their collection may be enforced with a moderate degree of vigilance; and that the forfeiture of the article may be a sufficient penalty

upon the smuggler. It is in this, and in this only, that we must seek for an effectual check to illicit trafficking. Whenever the profits of the fair trader become nearly equal to those of the smuggler, the latter is forced to abandon his hazardous profession. But so long as prohibitions or oppressively high duties are kept up, or, which is, in fact, the same thing, so long as *high bounties* are held out to encourage the adventurous, the needy, and the profligate, to enter on this career, we may be assured that armies of excise and custom-house officers, backed by the utmost severity of the revenue laws, will be insufficient to hinder them.

Smuggling in France and England. — The recently printed *Report* of Messrs. Villiers and Bowring, on the commercial relations between France and Great Britain, contains some very curious and instructive details as to the smuggling carried on between them. They afford the most satisfactory and convincing proofs of the incapacity of restrictions and prohibitions to secure a real monopoly of any extensive market; and show that their principal effect is to promote illicit traffic; and to make that ingenuity and invention be exerted in devising means to defeat and elude the law, which, under a more liberal system, would be exerted to improve the methods of production. The introduction of prohibited goods is more easily effected by land than by sea; and smuggling into France is, in consequence, carried on principally through her north and east frontiers. Considerable quantities of prohibited or overtaxed goods are, however, introduced by sea. A regular tariff of risks is established; and persons of undoubted solidity contract, for certain premiums, which for the most part are abundantly moderate, to deliver any prohibited article in any part of France. Owing to the system of *octrois*, or of the collection of duties at the gates of large towns, where an inspection of the goods may also be made, the cost of smuggling into Paris and other populous places is considerably greater than that of smuggling into villages. At an average, however, most foreign goods may be delivered in Paris at a charge of from 25 to 30 per cent. *ad valorem* on their real value.

Notwithstanding the advantage of a sea frontier, a coast guard, and a most efficient custom-house establishment, the facts embodied by Messrs. Villiers and Bowring in their *Report* show that smuggling is in quite as flourishing a condition on the shores of England as on the land frontier of France. The premium on the illicit introduction amongst us of prohibited or overtaxed goods varies from 15 to 40 per cent. *ad valorem*, according to the description of the article. The parties employing the smugglers run no risk. The latter, or their agents, attend regularly upon 'Change; and "it is their constant practice to deposit the value of the goods confided to their care in a banker's acceptance, as a security to the owner!" — (*Report*, p. 54.) It could hardly, indeed, have been otherwise. Brandy, which is the favourite article for smuggling speculations, may be bought for shipment in France at from 3s. 6d. to 5s. a gallon. It is highly popular amongst us; but instead of admitting it to consumption under a moderate duty, or even under the high duty of 8s. or 10s., we load it with the oppressive and exorbitant duty of 22s. 6d.; that is, with a duty varying from 450 to 650 per cent. *ad valorem*! Had those who originally imposed this duty, and those by whom it has been kept up, been deeply interested in smuggling adventures, their conduct would have been intelligible; but, as no such excuse can be made for them, it has been in the last degree irrational and absurd. The temptation to the illicit introduction of brandy, occasioned by the exorbitancy of the duty, has roused all the energies of the smuggler, who has defeated the utmost vigilance of the revenue officers, and eluded or defied the multiplied pains and penalties of the customs laws! Messrs. Villiers and Bowring estimate, from a comparison of the shipments of different articles from France for England with the imports into the latter, and other authentic data, that the total amount of duties evaded by the fraudulent importation of overtaxed French articles (exclusive of tobacco, whole cargoes of which are sometimes introduced into Ireland) into this country amounts to about 800,000*l.* a year. — (p. 54.) Of this sum, the loss on brandy makes by far the largest item; and is said to be "*considerably more than 500,000*l.*!*" — (p. 57.) It is plain, therefore, that, as a means of raising revenue, this system is signally unsuccessful; but it is so in a far greater degree than appears even from the above statements: for, in addition to the vast quantity of overtaxed articles clandestinely introduced, and on which a reasonable duty would be paid, it occasions the overloading of the market with spurious, counterfeit articles, by which the public health as well as the revenue is materially injured. Nor is this all. In order to render oppressive duties productive of any revenue, it is necessary to organise and keep constantly on foot a very numerous and costly customs establishment. It is abundantly certain that we lose, by the clandestine importation of brandy, geneva, and tobacco, from France, Belgium, and Holland, above 1,500,000*l.* a year of revenue; and it is admitted, on all hands, that, but for the oppressive duties on these articles, a saving of 500,000*l.* a year might be effected in the customs department. Nothing, therefore, can be more futile than to attempt vindicating exorbitant duties on the pretence of their being required to keep up

the revenue. In point of fact, such duties are about the most efficient engines that can be devised for its reduction. The revenue derived from coffee has been trebled by reducing the duty from 1s. 7d. to 6d. per lb. — (see *COFFEE*); the revenue derived from British spirits was materially increased by reducing the duty from 5s. 6d. to 2s. 6d. the wine gallon — (see *SPIRITS*); and Mr. Pitt increased the duty derived from brandy, geneva, &c., in 1786, not by adding to, but by taking 50 per cent. from, the duties with which they had previously been loaded! There cannot, indeed, be the shadow of a doubt that the revenue derived from brandy and geneva would be very largely increased by reducing the duties to 8s. or 10s. a gallon. A measure of this sort, coupled as it ought to be with a reduction of the duties on tobacco — (see *TOBACCO*), — would do what neither coast guards, preventive services, revenue cruisers, or customs acts will ever do, — it would go far to annihilate smuggling; and would enable the services of a large number of revenue officers to be dispensed with.

But the demoralising influence of an extensive smuggling system is the worst consequence of oppressive duties and prohibitions. They make the smuggler be regarded as a public benefactor, and procure for him the sympathy of all classes, and the strenuous support of those in the lower walks of life. No one acquainted with the state of the peasantry in extensive districts of Kent and Sussex, will believe that it is easy to exaggerate the evils that spring from this source. The whole body of labourers may be said to be in combination with the smugglers; and numbers of them are every now and then withdrawn from their usual employments to assist in their desperate adventures. Lawless, predatory, and ferocious habits are thus widely diffused; and thousands, who, but for this moral contamination, would have been sober and industrious, are trained to despise and trample on the law, and to regard its functionaries as enemies whom it is meritorious to waylay and assault.

Such being the operation and result of those oppressive duties and absolute prohibitions to which smuggling owes its origin, it is not surely too much to hope that the former may be modified, and the latter repealed. When this has been done, smuggling will cease; but not one moment sooner. Till then it will continue, in despite of all the important efforts that may be made for its suppression, to scatter its seeds, and spread its roots on all sides; impoverishing the fair and enriching the illicit dealer — emptying the public treasury of the state, and filling its gaols with criminals!

Smuggling by Dogs. — The following extract from the *Report of Messrs. Villicers and Bowring* develops one of those ingenious devices by which mischievous customs laws are sure to be defeated.

"The director of the Custom-house made, on the 30th of July, 1831, some very curious statements to the minister of finance on the subject of the fraudulent introduction of articles by means of dogs. He says, that since the suppression of smuggling by horses, in 1825, dogs have been employed; that the first attempts were made in the neighbourhood of Valenciennes, and that it afterwards spread to Dunkirk and Charleville; that it has since extended to Thionville and Strasbourg; and, last of all, in 1828, to Besançon.

"In 1823, it was estimated that 100,000 kilogrammes of goods were thus introduced into France; in 1825, 187,315; and in 1826, 2,100,000 kilogrammes; all these estimates being reported as rather under the mark: the calculation has been made at 23 kilogrammes '*pro rata*' per dog. The dogs sometimes carry 10 kilogrammes, and sometimes even 12. The above estimate supposes that 1 dog in 10 in certain districts, and in others 1 in 20, is killed; but these calculations must necessarily be very vague. In the opinion of many of the Custom-house officers, not more than 1 dog in 75 is destroyed, even when notice has been given, and the dogs are expected.

"Tobacco and colonial produce are generally the objects of this illicit trade; sometimes cotton twist and manufactures. In the neighbourhood of Dunkirk, dogs have been taken with burdens of the value of 600, 800, and even 1,200 francs. Publications hostile to the government have not unfrequently been so introduced.

"The dogs which are trained to these 'dishonest habits' are conducted in packs to the foreign frontier; they are kept without food for many hours; they are then beaten and laden, and at the beginning of the night started on their travels. They reach the abodes of their masters, which are generally selected at 2 or 3 leagues from the frontiers, as speedily as they can, where they are sure to be well treated and provided with a quantity of food. It is said they do much mischief by the destruction of agricultural property, inasmuch as they usually take the most direct course across the country. They are dogs of a large size for the most part.

"The *Report* states, that these carrier dogs, being so tormented by fatigue, hunger, and ill usage, and hunted by the Custom-house officers in all directions, are exceedingly subject to madness, and frequently bite the officers, one of whom died in consequence in 1829. They have also been trained to attack the Custom-house officers in case of interference." — (p. 47.)

Various efforts have been made to suppress this species of smuggling, but hitherto without success. It is ludicrous, indeed, to suppose, seeing the vast extent of the land frontier of France, that any means should ever be adopted capable of excluding cheap foreign products in extensive demand. Nothing short of surrounding the country by Bishop Berkeley's wall of brass could accomplish such an object. The director-general of the French customs says that smuggling is carried on to an extent that is *vraiment effrayante*; and he may truly say so, when it is estimated that English bobbinet, though prohibited, is introduced into France to the extent of 10,000,000 fr., or 400,000*l.*, a year; cotton twist, and various other prohibited articles of British produce and manufacture, are also every where met with.

Thus it is that the two greatest and most civilised nations of Europe, by upholding vicious and destructive systems of commercial and financial legislation, mutually injure

each other. France and England, by their proximity, and the difference and variety of their products, are fitted to carry on a far more extensive and beneficial commerce than is carried on by any other two nations. But owing to their jealousy of each other's advancement, and the prevalence of unfounded theories as to the causes of national wealth, their intercourse has been subjected to the most oppressive fetters, and confined within the narrowest limits; most part, too, of what is actually carried on, has been diverted into illegitimate channels; so that what would, if left to itself, have been the most prolific source of wealth, and the most powerful incentive to genius and invention, has been made principally productive of crime and demoralisation. This conduct is as much opposed to their duty as to their interest. *Homines hominum causâ sunt generati, ut ipsi inter se aliis prodesse possint. . . . Sed ut magnas utilitates adipiscimur conspiratione hominum ac consensu, sic nulla tam detestabilis pestis est, quæ non homini ab homine nascatur.* — (Cic. De Officiis, lib. ii. c. 5.)

Law as to Smuggling in England. — The penalties imposed on illicit dealing in commodities subject to duties of excise have been specified in the articles on such commodities. The following formidable statute, with its multiplied provisions and penalties, refers entirely to customs duties. The importance of the subject has induced us to give it nearly entire.

ACT 3 & 4 WILL. 4. c. 53., FOR THE PREVENTION OF SMUGGLING.

VESSELS AND BOATS.

Commencement of the Act. — First of September, 1833. — § 1.

Certain Vessels found within certain Distances of the U. K. to be forfeited. — If any vessel not being square-rigged, or any boat, belonging in the whole or in part to his Majesty's subjects, or having $\frac{1}{2}$ the persons on board subjects of his Majesty, shall be found or discovered to have been within 100 leagues of the coast of the United Kingdom; or if any vessel belonging in the whole or in part to his Majesty's subjects, or having $\frac{1}{2}$ the persons on board subjects of his Majesty, or any foreign vessel not being square-rigged, or any foreign boat, in which there shall be 1 or more subjects of his Majesty, shall be found or discovered to have been within 4 leagues of that part of the United Kingdom which is between the North Foreland on the coast of Kent, and Beachy Head on the coast of Sussex, or within 8 leagues of any other part of the coast of the United Kingdom; or if any foreign vessel or boat shall be found or discovered to have been within 1 league of the coast of the United Kingdom; or if any vessel or boat shall be found or discovered to have been within 1 league of the islands of Guernsey, Jersey, Alderney, Sark, or Man respectively, or within any bay, harbour, river, or creek of or belonging to any one of the said islands; or any such vessel or boat so found or discovered, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits not being in a cask or package containing 40 gallons at the least, or any tea exceeding 6 lbs. weight in the whole, or any tobacco or snuff not being in a cask or package containing 450 lbs. weight at least, or being packed separately in any manner within any cask or package, or any cordage or other articles adapted and prepared for slinging or sinking small casks, or any casks or other vessels whatsoever of less size or content than 40 gallons, of the description used for the smuggling of spirits, then and in every such case the said spirits, tea, tobacco, or snuff, together with the casks or packages containing the same, and the cordage or other articles, casks, and other vessels of the description aforesaid, and also the vessel or boat, shall be forfeited. — § 2.

Any Vessel or Boat arriving within any Port of the U. K. having prohibited Goods on board, forfeited, unless there was no Want of Care in the Master or Owner. — If any vessel or boat whatever shall arrive or shall be found or discovered to have been within any port, harbour, river, or creek of the United Kingdom, not being driven thereto by stress of weather or other unavoidable accident, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, within any such port, harbour, river, or creek, any spirits not being in a cask or package containing 40 gallons at the least, or any tobacco or snuff not being in a cask or package containing 450 lbs. weight at least, or being packed separately in any manner within any cask or package, every such vessel or boat, together with such spirits or tobacco or snuff, shall be forfeited: provided always, that if it shall be made appear to the satisfaction of the commissioners of his Majesty's customs that the said spirits, tobacco, or snuff were on board without the knowledge or privity of the owner or master of such vessel or boat, and without any wilful neglect or want of reasonable care on their or either of their behalves, that then and in such case the said commissioners shall and they are hereby authorised and required to deliver up the said vessel or boat to the owner or master of the same. — § 3.

Certain Cases in which Vessels shall not be forfeited. — Nothing herein contained shall extend to render any vessel liable to forfeiture on account of any tobacco or snuff from the East Indies being in packages of 100 lbs. weight each at least, or on account of any segars being in packages of 100 lbs. weight each at least, or on account of any tobacco made up in rolls, being the produce of and imported from the State of Colombia, and in packages containing 320 lbs. weight each at least, or on account of any tobacco of the dominions of the Turkish empire which may be separated or divided in any manner within the outward package, provided such package be a hoghead, cask, chest, or case containing 450 lbs. weight nett at least, or on account of any rum of and from the British plantations in casks containing 20 gallons at the least, or on account of any spirits, tea, or tobacco really intended for the consumption of the seamen and passengers on board during their voyage, and not being more in quantity than is necessary for that purpose, or to render any square-rigged vessel liable to forfeiture on account of any tea, or of any spirits in glass bottles, being really part of the cargo of such ship, and included in the manifest of such ship, or to render any vessel liable to forfeiture if really bound from one foreign port to another foreign port, and pursuing such voyage, wind and weather permitting. — § 4.

Vessels belonging to his Majesty's Subjects, &c. throwing overboard any Goods during Chase, forfeited. — When any vessel or boat belonging in the whole or in part to his Majesty's subjects, or having $\frac{1}{2}$ of the persons on board subjects of his Majesty, shall be found within 100 leagues of the coast of this kingdom, and shall not bring to upon signal made by any vessel or boat in his Majesty's service, or in the service of the revenue, hoisting the proper pendant and ensign, in order to bring such vessel or boat to, and thereupon chase shall be given, if any person or persons on board such vessel or boat so chased shall, during the chase or before such vessel or boat shall bring to, throw overboard any part of the lading of such vessel or boat, or shall stave or destroy any part of such lading, to prevent seizure thereof, then and in such case the said vessel or boat shall be forfeited; and all persons escaping from such vessels or boats, or from any foreign vessel or boat, during any chase made thereof by any vessel or boat in his Majesty's service or in the service of the revenue, shall be deemed and taken to be subjects of his Majesty, unless it shall be proved to the contrary. — § 5.

Vessels in Port with a Cargo, and afterwards found in Ballast, and Cargo unaccounted for, forfeited.—If any vessel or boat whatever shall be found within the limits of any port of the United Kingdom with a cargo on board, and such vessel or boat shall afterwards be found light or in ballast, and the master is unable to give a due account of the port or place within the United Kingdom where such vessel or boat shall have legally discharged her cargo, such vessel or boat shall be forfeited. — § 6.

Regulations as to Vessels sailing from Guernsey, Jersey, &c.—No vessel or boat belonging wholly or in part to his Majesty's subjects shall sail from Guernsey, Jersey, Alderney, Sark, or Man, without a clearance, whether in ballast or having a cargo; and if with a cargo, the master shall give bond to his Majesty, in double the value of the vessel or boat and of the cargo, for duly landing the same at the port for which the vessel clears; and every such vessel or boat not having such clearance, or which, having a clearance for a cargo, shall be found light or with any part of the cargo discharged before delivery thereof at the port specified in the clearance (unless through necessity or for preservation of the vessel or boat, to be proved to the satisfaction of the commissioners of his Majesty's customs), shall be forfeited. — § 7.

Vessels to bring to on being chased by Vessels or Boats of the Navy or in Preventive Service.—In case any vessel or boat liable to seizure or examination under any act or law for the prevention of smuggling shall not bring to on being required so to do, on being chased by any vessel or boat in H. M. navy having the proper pendant and ensign of H. M. ships hoisted, or by any vessel or boat duly employed for the prevention of smuggling, having a proper pendant and ensign hoisted, it shall be lawful for the captain, master, or other person having charge or command of such vessel or boat in H. M. navy, or employed as aforesaid, (first causing a gun to be fired as a signal,) to fire at or into such vessel or boat; and such captain, master, or other person acting in his aid or assistance, or by his direction, shall be indemnified and discharged from any indictment, penalty, action, or other proceeding for so doing. — § 8.

Vessels belonging to his Majesty's Subjects not to hoist any Pendant, Ensign, or Colours usually worn by his Majesty's Ships.—If any person or persons shall, from and after the passing of this act, wear, carry, or hoist in or on board any vessel or boat whatever belonging to any of his Majesty's subjects, whether the same be merchant or otherwise, without particular warrant for so doing from his Majesty, or the High Admiral of Great Britain, or the commissioners for executing the office of High Admiral of Great Britain, H. M. jack, commonly called the Union jack, or any pendant, ensign, or colours usually worn by H. M. ships, or any flag, jack, pendant, ensign, or colours resembling those of his Majesty, or those used on board H. M. ships, or any other ensign or colours than the ensign or colours by any proclamation of his Majesty now in force or hereafter to be issued prescribed to be worn, then and in every such case the master or other person having the charge or command thereof, or the owner or owners on board the same, and every other person so offending, shall forfeit and pay the sum of 50*l.*; and it shall be lawful for any officer or officers of H. M. navy on full pay, or for any officer or officers of customs or excise, to enter on board any such vessel or boat, and to seize any such flag, jack, pendant, ensign, or colours, and the same shall thereupon be forfeited. — § 9.

Vessels and Boats used in Removal of run Goods to be forfeited.—All vessels and boats made use of in the removal, carriage, or conveyance of any goods liable to forfeiture under this or any other act relating to the revenue of customs, shall be forfeited. — § 10.

Boats of Vessels to have thereon the Name of Vessel, Port, and Master.—The owner of every vessel belonging in the whole or in part to any of his Majesty's subjects shall paint or cause to be painted upon the outside of the stern of every boat belonging to such vessel, the name of such vessel, and the port or place to which she belongs, and the master's name withinside the transom, in white or yellow Roman letters, not less than 2 inches in length, on a black ground, on pain of the forfeiture of such boat not so marked, wherever the same shall be found. — § 11.

Boats not belonging to Ships to have Name of Owner, &c. thereon.—The owner of every boat not belonging to any vessel shall paint or cause to be painted upon the stern of such boat, in white or yellow Roman letters of 2 inches in length, on a black ground, the name of the owner or owners of the boat, and the port or place to which she belongs, on pain of the forfeiture of such boat not so marked, wherever the same shall be found. — § 12.

Vessels and Boats used in piloting or fishing to be painted Black.—The owner or owners of every vessel or boat employed on the coasts of the United Kingdom in piloting or fishing shall paint or tar every such vessel or boat, or cause the same to be painted or tarred, entirely black, except the name or other description now required by law to be painted on such vessel or boat; and every such vessel or boat not so painted or tarred, and every boat so painted as to resemble any boat usually employed for the prevention of smuggling or in any other employment in H. M. service, shall be forfeited: provided always, that nothing herein contained shall extend to prevent any distinguishing mark being placed on any vessel or boat, or to be otherwise painted, if the commissioners of customs think proper to allow the same, expressing it so in the licence of said vessel or boat. — § 13.

British Vessels having secret Places, &c. forfeited.—All vessels and boats belonging in the whole or in part to H. M. subjects, having false bulkheads, false bows, double sides or bottoms, or any secret or disguised place whatsoever in the construction of the said vessel or boat adapted for the purpose of concealing goods, or having any hole, pipe, or other device in or about the vessel or boat adapted for the purpose of running goods, shall be forfeited, with all the guns, furniture, ammunition, tackle, and apparel belonging to such vessel or boat; and all foreign vessels or boats, not being square-rigged, coming to any port of the United Kingdom, having on board any goods liable to the payment of duties, or prohibited to be imported, concealed in false bulkheads, false bows, double sides or bottoms, or any secret or disguised place in said vessel or boat, shall be forfeited. — § 14.

Goods concealed on board forfeited, and all Goods packed therewith.—If any goods which are subject to any duty or restriction in respect of importation, or which are prohibited to be imported into the United Kingdom, shall be found concealed in any manner on board any vessel, or shall be found, either before or after landing, to have been concealed in any manner, in such case all such goods, and all other goods packed with them, shall be forfeited. — § 15.

LICENCES.—N. B. The clauses of this act, with respect to the licensing of ships, from § 16. to § 27., both inclusive, are given under the word LICENCES.

VESSELS AND GOODS.

Goods unshipped without Payment of Duty, and prohibited Goods, liable to Forfeiture.—If any goods liable to the payment of duties be unshipped from any vessel or boat in the United Kingdom or the Isle of Man (customs or other duties not being first paid or secured), or if any prohibited goods whatsoever be imported into any part of the United Kingdom or of the Isle of Man, or if any goods warehoused or otherwise secured in the United Kingdom, for home consumption or exportation be clandestinely or illegally removed from any warehouse or place of security, then and in every such case all such goods shall be forfeited, together with all horses and other animals, and all carriages and other things, made use of in the removal of such goods. — § 28.

Spirits and Tobacco found without a Permit to be deemed run.—All spirits or tobacco which shall be found removing without a legal permit for the same shall be deemed to be spirits or tobacco liable to and unshipped without payment of duty, unless the party in whose possession the same be found or seized prove to the contrary. — § 29.

Restricted Goods to be deemed run.—All goods the importation of which is in any way restricted, which are of a description admissible to duty, and which shall be found and seized in the United Kingdom under any law relating to the customs or excise, shall, for the purpose of proceeding for the forfeiture

of them, or for any penalty incurred in respect of them, be described in any information exhibited on account of such forfeiture or penalty as goods liable to and unshipped without payment of duties. — § 30.

Prohibited Goods shipped or waterborne, with intent to be exported, &c. forfeited, &c. — If any goods prohibited to be exported be put on board any vessel or boat with intent to be laden or shipped for exportation, or be brought to any quay, wharf, or other place in the United Kingdom to be put on board any vessel or boat for the purpose of being exported, or if any goods prohibited to be exported be found in any package produced to the officer or officers of the customs as containing goods not so prohibited, then and in every such case, not only all such prohibited goods, but also all other goods packed therewith, shall be forfeited. — § 31.

Vessels, Boats, and Goods may be seized by Officers and Persons herein mentioned, &c. — All vessels and boats, and all goods whatsoever, liable to forfeiture under this or any other act relating to the revenue of customs, may be seized in any place, either upon land or water, by any officer or officers of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer or officers of customs or excise, or by any person having authority to seize from the commissioners of customs or excise; and all vessels, boats, and goods so seized shall, as soon as conveniently may be, be delivered into the care of the proper officer appointed to receive the same. — § 32.

Penalty on Officers, &c. making collusive Seizures or taking Bribes, and on Persons offering them. — If any officer or officers of the customs or excise, or of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any other person or persons whatsoever duly employed for the prevention of smuggling, make any collusive seizure, or deliver up, or make any agreement to deliver up or not to seize, any vessel or boat or any goods liable to forfeiture, or take any bribe, gratuity, recompence, or reward for the neglect or non-performance of his duty, every such officer or other person shall forfeit for every such offence 500*l.* and be rendered incapable of serving his Majesty in any office whatever, either civil or military; and every person who shall give or offer, or promise to give or procure to be given, any bribe, recompence, or reward to, or shall make any collusive agreement with, any such officer or person as aforesaid, to induce him in any way to neglect his duty, or to do, conceal, or connive at any act whereby any of the provisions of any act of parliament relating to the revenue of customs may be evaded, shall forfeit the sum of 200*l.* — § 33.

Vessels and Persons may be searched within the Limits of the Ports. — It shall and may be lawful for any officer or officers of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or for any officer or officers of customs, producing his or their warrant or deputation (if required), to go on board any vessel within the limits of any of the ports of this kingdom, and to rummage and search the cabin and all other parts of such vessel for prohibited and uncustomed goods, and to remain on board such vessel during the whole time that the same shall continue within the limits of such port, and also to search any person or persons either on board or who shall have landed from any vessel, provided such officer or officers have good reason to suppose that such person or persons hath or have any uncustomed or prohibited goods secreted about his, her, or their person or persons; and if any person obstruct any officer or officers in going or remaining on board, or in entering or searching such vessel or person, every such person shall forfeit and lose the sum of 100*l.* — § 34.

Before Persons are searched, they may require to be taken before a Justice, &c. — Before any person shall be searched by any such officer or officers, it shall be lawful for such person to require the officer or officers to take him or her before a justice of the peace, or before the collector, comptroller, or other superior officer of the customs, who shall determine whether there is reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person; and if it appear to such justice, collector, &c. that there is reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person, such justice, collector, comptroller, or other superior officer of customs shall direct such person to be searched in such manner as he shall think fit; but if it shall appear to such justice, collector, comptroller, &c. that there is not reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person, then such justice, collector, &c. shall forthwith discharge such person, who shall not in such case be liable to be searched; and every such officer or officers is and are authorised and required to take such person, upon demand, before any justice, collector, &c., detaining him or her in the meantime: provided always, that no person being a female shall be searched except by a female duly authorised by the commissioners of customs. — § 35.

Penalty on Officers for Misconduct with respect to Search. — If any such officer or officers shall not take such person with reasonable despatch before such justice, collector, comptroller, or other superior officer of customs, when so required, or shall require any person to be searched by him, not having reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person, such officer shall forfeit and pay the sum of 10*l.* — § 36.

Penalty on Persons denying having Foreign Goods about them. — If any passenger or other person on board any vessel or boat shall, upon being questioned by any officer of customs, whether he or she has any foreign goods upon his or her person, or in his or her possession, deny the same, and any such goods shall, after such denial, be discovered upon his or her person, or in his or her possession, such goods shall be forfeited, and such person shall forfeit treble the value of such goods. — § 37.

Officers, authorised by Writ of Assistance, may search Houses for prohibited Goods, &c. — It shall and may be lawful for any officer or officers of customs, or person acting under the direction of the commissioners of customs, having a writ of assistance under the seal of the Court of Exchequer, to take a constable, headborough, or other public officer inhabiting near the place, and in the daytime to enter into and search any house, shop, cellar, warehouse, room, or other place, and in case of resistance to break open doors, chests, trunks, and other packages, there to seize and from thence to bring any uncustomed or prohibited goods, and to put and secure the same in the Custom-house warehouse in the port next to the place whence such goods shall be taken: provided always, that for the purposes of this act any such constable, headborough, or other public officer, duly sworn as such, may act as well without the limits of any parish, ville, or other place for which he shall be so sworn as within such limits. — § 38.

Duration of Writs. — All writs of assistance so issued from the Court of Exchequer shall continue and be in force during the whole of the reign in which such writs have been granted, and for 6 months from its conclusion. — § 39.

Officers may, on probable Cause, stop Carts, &c., and search for Goods. — It shall be lawful for any officer of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, upon reasonable suspicion, to stop and examine any cart, wagon, or other means of conveyance, for the purpose of ascertaining whether any smuggled goods are contained therein; and if no such goods be found, the officer or other person stopping and examining such cart, wagon, &c. having had probable cause to suspect that smuggled goods were contained therein, shall not, on account of such stoppage and search, be liable to any action at law on account thereof; and all persons driving or conducting such cart, wagon, &c. refusing to stop when required so to do in the King's name, shall forfeit 100*l.* — § 40.

Police Officers seizing Goods to carry them to Warehouse. — If any goods subject or liable to forfeiture under this or any other act relating to the customs be stopped or taken by any police officer or other person acting by virtue of any act of parliament, or otherwise duly authorised, such goods shall be carried to the Custom-house warehouse next to the place where the goods were stopped or taken, and there delivered to the proper officer appointed to receive the same, within 48 hours after the said goods were stopped and taken. — § 41.

Goods stopped by Police Officers may be retained until Trial of Persons charged with stealing them. —

If any goods be stopped or taken by a police officer on suspicion that the same have been feloniously stolen, it shall be lawful for the said officer to carry the same to the police office to which the offender is taken, there to remain to be produced at the trial of said offender; and in such case the officer is required to give notice in writing to the commissioners of customs of his having so detained the goods, with the particulars of the same; and immediately after the trial all such goods are to be deposited in the Custom-house warehouse, to be proceeded against according to law; and in case any police officer making detention of any such goods neglect to convey the same to such warehouse, or to give notice of having stopped the same as before described, he shall forfeit 20*l*. — § 42.

Commissioners of Treasury, &c. may restore Seizures. — It shall and may be lawful for the commissioners of the treasury, or any 3 or more of them, or for the commissioners of customs or excise, by an order for that purpose, to direct any vessel, boat, goods, or commodities seized under this or any act relating to the customs or excise, or to the trade or navigation of the United Kingdom, or to any of his Majesty's possessions abroad, to be delivered to the proprietor or proprietors, whether condemnation have taken place or not, upon such terms and conditions as they may deem expedient, and which shall be mentioned in the said order; and it shall be also lawful for the said commissioners of the treasury, and of the customs and excise, to mitigate or remit any penalty or fine which shall have been incurred, or any part of such penalty or fine incurred under any such act: provided always, that no person shall be entitled to the benefit of any order for delivery or mitigation unless the terms and conditions expressed in the said order are fully and effectually complied with. — § 43.

PENALTIES.

*Persons unshipping, &c. any prohibited or uncustomed Goods, to forfeit Treble the Value, or 100*l*.* — Every person who shall, either in the U. K. or the Isle of Man, assist or be concerned in the unshipping of any goods prohibited to be imported into the U. K. or into the Isle of Man, or the duties for which have not been paid or secured, or who shall knowingly harbour, keep, or conceal, or knowingly permit or suffer to be harboured, kept, or concealed, any goods which have been illegally unshipped without payment of duties, or which have been illegally removed, without payment of the same, from any warehouse or place of security in which they may have been deposited, or any goods prohibited to be imported, or to be used or consumed in the U. K. or in the Isle of Man, and every person, either in the U. K. or the Isle of Man, to whose possession any such uncustomed or prohibited goods shall knowingly come, or who shall assist or be in anywise concerned in the illegal removal of any goods from any warehouse or place of security in which they have been deposited, shall forfeit either the treble value thereof, or the penalty of 100*l*., at the election of the commissioners of customs. — § 44.

How Value is to be ascertained. — In all cases where any penalty, the amount of which is to be determined by the value of any goods, is directed to be sued for under any law now in force or to be made for the prevention of smuggling, or relating to the revenue of customs or excise, such value shall be taken to be according to the rate and price which goods of the like sort or denomination and of the best quality bear at such time, and upon which the duties due upon importation have been paid. — § 45.

*Persons insuring the Delivery of prohibited or uncustomed Goods to forfeit 500*l*.* — Every person who by way of insurance or otherwise shall undertake or agree to deliver any goods to be imported from beyond the seas into any port or place in the U. K. without paying the duties due on such importation, or any prohibited goods, or who in pursuance of such insurance shall deliver or cause to be delivered any uncustomed or prohibited goods, and every aider or abettor of such person, shall for every such offence forfeit 500*l*. over and above any other penalty to which he may be liable; and every person who shall agree to pay any money for the insurance or conveyance of such goods, or shall receive or take them into his custody or possession, or suffer them to be so received or taken, shall also forfeit 500*l*. over and above any penalty to which he may be liable on account of such goods. — § 46.

Penalty on Persons offering Goods for Sale under Pretence of being run or prohibited. — If any person or persons offer for sale any goods under pretence that the same are prohibited, or have been unshipped and run on shore without payment of duties, in such case all such goods (although not liable to any duties or prohibited) shall be forfeited, and the person or persons, and every of them, offering the same for sale shall forfeit the treble value of such goods, or the penalty of 100*l*., at the election of the commissioners of customs. — § 47.

*Persons found to have been on board Vessels liable to Forfeiture subject to a Penalty of 100*l*.* — Every person, being a subject of his Majesty, who shall be found or discovered to have been on board any vessel or boat liable to forfeiture under this or any other act relating to the customs for being found or discovered to have been within any of the distances, ports, or places in this act mentioned, from or in the United Kingdom, or from or in the Isle of Man, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, such goods or things as subject such vessel or boat to forfeiture, or who shall be found or discovered to have been, within any such distance as aforesaid, on board any vessel or boat from which any part of the cargo or lading of such vessel or boat shall have been thrown overboard, or staved or destroyed, to prevent seizure, shall forfeit 100*l*.; and every person, not being a subject of his Majesty, who shall have been on board any vessel or boat liable to forfeiture for any of the causes aforesaid, within 1 league of the coast of the United Kingdom or of the Isle of Man, or within any bay, harbour, river, or creek of the said island, shall forfeit for such offence 100*l*.; and it shall be lawful for any officer or officers of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any officer or officers of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, and he and they is and are hereby authorised, empowered, and required, to detain and to carry and convey every such person before any justice of the peace, to be dealt with as herein-after directed: provided always, that any such person proving, to the satisfaction of any justice or justices before whom he may be brought, that he was only a passenger in such vessel or boat, and had no interest whatever either in the vessel or boat, or in the cargo or goods on board the same, shall be forthwith discharged by such justices. — § 48.

*Persons unshipping, &c. Spirits or Tobacco, to forfeit 100*l*.*, &c. — Every person whatsoever who shall unship, or be aiding or concerned in the unshipping, of any spirits or tobacco liable to forfeiture under this or any other act relating to the customs or excise, in the U. K. or the Isle of Man, or who shall carry, convey, or conceal, or be aiding, assisting, or concerned in the carrying, conveying, or concealing of any such spirits or tobacco, shall forfeit for such offence 100*l*.; and every such person may be detained by any officer of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer or officers of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, and taken before any justice of the peace, to be dealt with as herein-after directed. — § 49.

Persons carrying, &c. Tea or manufactured Silk to forfeit Treble the Value, &c. — Every person whatsoever who shall unship, or be aiding, assisting, or otherwise concerned in the unshipping, of any tea or foreign manufactured silk of the value of 20*l*., liable to forfeiture under any act relating to the customs or excise, or who shall carry, convey, or conceal, or be aiding, assisting, or concerned in the carrying, conveying, or concealing of such tea or silk, shall forfeit for every such offence treble the value thereof; and every such person shall and may be detained by any officer of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer of customs or excise, or by any other person acting in his aid or assistance, or duly employed for the prevention of smuggling, and taken before any justice of the peace, to be dealt with as herein directed: provided always, that it shall be lawful for such detained person to give security in treble the amount of the goods seized, to the satis-

faction of such justice, to appear at a time and place appointed; and that no such person shall be liable to serve his Majesty in his naval service. — § 50.

A Justice may order Persons taken before him for Offences relating to the Customs to be detained a reasonable Time. — Where any person or persons shall have been detained by any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or by any officer of customs or excise, or any person or persons acting in his or their aid or assistance, or duly employed for the prevention of smuggling, for any offence under this or any other act relating to the customs, and shall have been taken and carried before any justice of the peace, if it shall appear to such justice that there is reasonable cause to detain such person or persons, he may and he is authorised and required to order such person or persons to be detained a reasonable time, and at the expiration of such time to be brought before any 2 justices, who are authorised and required finally to hear and determine the matter. — § 51.

Any Person liable to Arrest making his Escape, may be detained by any Officer of Customs. — If any person or persons liable to be detained under the provisions of this or any other act relating to the customs shall not be detained at the time of so committing the offence, or after detention shall make his or their escape, it shall be lawful for any officer or officers of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or for any officer of customs or excise, or any other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, to detain such person at any time afterwards, and to carry him before any justice of the peace, to be dealt with as if detained at the time of committing the said offence. — § 52.

Persons making Signals to Smuggling Vessels at Sea, on Conviction to forfeit 100l., &c. — No person shall, after sunset and before sunrise between the 21st day of September and the 1st day of April, or after the hour of 8 in the evening and before the hour of 6 in the morning at any other time in the year, make, aid or assist in making, any signal in or on board or from any vessel or boat, or on or from any part of the coast or shore of the United Kingdom, or within 6 miles of any part of such coasts or shores, for the purpose of giving any notice to any person on board any smuggling vessel or boat, whether any person so on board such vessel or boat be or be not within distance to notice such signal; and if any person, contrary to the intent and meaning of this act, make or cause to be made, or aid or assist in making, any such signal, such person shall be guilty of a misdemeanour; and it shall be lawful for any person to stop, arrest, and detain the person or persons who shall so offend, and to carry and convey such person or persons before any 1 or more justices of the peace residing near the place where such offence shall be committed, who, if he sees cause, shall commit the offender to the next county gaol, there to remain until the next court of oyer or terminer, great session, or gaol delivery, or until such person or persons shall be delivered by due course of law; and it shall not be necessary to prove on any indictment or information that any vessel or boat was actually on the coast; and the offender or offenders being duly convicted thereof shall, by order of the court before whom they are convicted, either forfeit and pay the penalty of 100l., or, at the discretion of such court, be committed to the common gaol or house of correction, there to be kept to hard labour for any term not exceeding 1 year. — § 53.

Proof of a Signal not being intended, to lie on the Defendant. — In case any person be charged with or indicted for having made or caused to be made, or been aiding or assisting in making, any such signal, the burden of proof that such signal so charged as having been made with intent and for the purpose of giving such notice as aforesaid was not made with such intent and for such purpose shall be upon the defendant. — § 54.

Any Person may prevent Signals. — It shall be lawful for any person whatsoever to prevent any signal as aforesaid being made, and to enter upon any lands for that purpose, without being liable to any indictment, suit, or action for the same. — § 55.

Persons resisting Officers, or rescuing or destroying Goods to prevent Seizure, forfeit 100l. — If any person whatsoever shall obstruct any officer or officers of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer or officers of customs or excise, or any person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, in the execution of his or their duty, or in the due seizing of any goods liable to forfeiture, or shall rescue or cause to be rescued any goods which have been seized, or shall attempt or endeavour to do so, or shall before or at or after any seizure, stave, break, or otherwise destroy any goods, to prevent the seizure thereof or the securing the same, then and in such case the party or parties offending shall forfeit for every such offence 100l. — § 56.

Penalty on Persons procuring others to assist in unshipping prohibited Goods. — Any person or persons who shall by any means procure or hire any person or persons, or who shall depute, authorise, or direct any person or persons to procure or hire any person or persons, to assemble for the purpose of being concerned in the landing or unshipping or carrying or conveying any goods prohibited to be imported, or the duties for which have not been paid or secured, shall for every person so procured or hired forfeit 100l. — § 57.

FELONIES.

Three or more armed Persons assembled to assist in the illegal Landing of Goods, &c. deemed guilty of Felony. — If any persons to the number of 3 or more, armed with fire-arms or other offensive weapons, shall, within the U. K., or within any port, harbour, or creek thereof, be assembled in order to aid and assist in the illegal landing, running, or carrying away of any prohibited goods, or any goods liable to any duties which have not been paid or secured, or in rescuing or taking away any goods, after seizure, from the officer of the customs or other officer authorised to seize the same, or from any person or persons employed by or assisting them, or from the place where the same have been lodged by them, or in rescuing any person who shall have been apprehended for any of the offences made felony by this or any act relating to the customs, or in the preventing the apprehension of any person guilty of such offence, or in case any persons to the number of 3 or more, so armed, shall, within the U. K., or within any port, harbour, or creek thereof, be so aiding or assisting, every person so offending, and every person aiding, abetting, or assisting therein, shall, being thereof convicted, be adjudged guilty of felony, and suffer death as a felon. — § 58.

Persons shooting at any Boat belonging to the Navy, &c. deemed guilty of Felony. — If any person shall maliciously shoot at any vessel or boat belonging to H. M. navy, or in the service of the revenue, within 100 leagues of any part of the coast of the U. K., or shall maliciously shoot at, maim, or dangerously wound any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or any person acting in his aid or assistance, or employed for the prevention of smuggling, in the due execution of his office or duty, every person so offending, and every person aiding, abetting, or assisting therein, shall, being lawfully convicted, be adjudged guilty of felony, and suffer death as a felon. — § 59.

Any Person in company with 4 others having prohibited Goods, or with 1 other armed or disguised, guilty of Felony. — If any person being in company with more than 4 other persons be found with any goods liable to forfeiture, or in company with 1 other person, within 5 miles of the sea coast or of any navigable river leading therefrom, with such goods, and carrying offensive arms or weapons, or disguised in any way, every such person shall be adjudged guilty of felony, and shall, on conviction of such offence, be transported as a felon for the space of 7 years. — § 60.

OFFICERS.

Persons assaulting Officers by Force or Violence may be transported. — If any person shall by force or violence assault, resist, oppose, molest, hinder, or obstruct any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or other

person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, in the due execution of his or their office or duty, such person, being thereof convicted, shall be transported for 7 years, or sentenced to be imprisoned in any house of correction or common gaol, and kept to hard labour, for any term not exceeding 5 years, at the discretion of the court before whom the offender shall be tried and convicted as aforesaid. — § 61.

Commanding Officers of Vessels in the Service may haul their Vessels on Shore without being liable to any Action for so doing. — It shall be lawful for the commanding officer of any vessel or boat employed for the prevention of smuggling to haul any such vessel or boat upon any part of the coasts of the United Kingdom, or the shores, banks, or beaches of any river, creek, or inlet of the same (not being a garden or pleasure ground, or place ordinarily used for any bathing machine or machines), which shall be deemed most convenient for that purpose, and to moor any such vessel or boat on such part of the aforesaid coasts, shores, &c. below high water mark, and over which the tide flows on ordinary occasions, and to continue such vessel or boat so moored for such time as said commanding officer shall deem proper; and such officer, or person or persons acting under his direction, shall not be liable to any indictment, action, or suit for so doing, any law, statute, custom, or usage to the contrary notwithstanding. — § 62.

Officer, if wounded in the Service of the Customs, to be provided for, &c. — In all cases where any officer or seaman employed in the service of the customs or excise shall be killed, maimed, wounded, or in any way injured in the due execution of his office, or if any person acting in his aid, or duly employed for the prevention of smuggling, shall be so killed, maimed, wounded, or in any way injured while so aiding such officer or seaman, or so employed, it shall be lawful for the commissioners of customs and excise to make such provision for the officer or person so maimed, wounded, or injured as aforesaid, or for the widows and families of such as shall be killed, as they shall be authorised and empowered to do by warrant from the Lord High Treasurer or commissioners of the treasury. — § 63.

Vessels and Goods seized to be disposed of as the Commissioners direct. — All vessels and boats, and all goods whatsoever, seized and condemned for breach of any law relating to the customs, shall be disposed of as soon as conveniently may be after the condemnation thereof, in such manner as the commissioners of customs shall direct. — § 64.

REWARDS.

Rewards to Officers for detaining Smugglers. — It shall be lawful for the commissioners of customs, and they are hereby authorised and empowered, to award, to any officer or other person detaining any person liable to detention under this or any other act relating to the revenue of customs, to be paid upon the conviction of such person, any reward they may think fit to direct, not exceeding the sum of 20*l.* for each person. — § 65.

Rewards to Officers where pecuniary Penalties are recovered. — It shall be lawful for the commissioners of customs, and they are hereby authorised, to order the following reward to be paid to any officer or officers or persons by whose means any pecuniary penalty or composition is recovered; (that is to say,) $\frac{1}{2}$ part of the penalty or sum recovered, except in seizures of silk goods, in which case the officers may receive $\frac{1}{2}$ the penalty or sum recovered. — § 66.

Rewards to Officers making Seizures. — It shall be lawful for the commissioners of customs, and they are hereby authorised, to order to be paid, in respect of any seizure made under this or any act relating to the customs or to trade and navigation, to the person or persons making the same, the following rewards; (that is to say,)

In the case of seizures of spirits or tobacco. —

If all the parties concerned in the act which occasions the seizure, being above the age of 16 years, are detained and convicted, the whole value thereof, such value to be fixed and settled by the Lords of the Treasury, or by the commissioners of his Majesty's customs, as herein-after directed:

If 2 or more of such parties, not being the whole, are so detained and convicted, 7-8ths of such value:

If 1 such party, not being the whole of them, but being a seafaring man, is so detained and convicted, 3-4ths of such value:

If 1 such party, not being the whole of them, is detained and convicted, and the vessel or means of conveyance is or are seized and condemned, 5-6ths of such value:

If 1 such party, not being the whole of them, nor being a seafaring man, is so detained and convicted, 5-8ths of such value:

If the vessel or means of conveyance is seized and condemned without any person being detained, 1-5d of such value:

If all the goods are seized, and all the parties concerned as aforesaid are subsequently convicted in consequence of such seizure, and by the exertion of the seizers, $\frac{1}{2}$ of such value:

If the goods only are seized, 1-8th, or such other part as the commissioners of the customs shall think proper, not exceeding 1-4th of such value:

In the case of seizures of other goods, not silks: —

If the vessel or other means of conveyance is or are seized and condemned, or if any person is prosecuted to conviction on account of the same, $\frac{1}{2}$ of the produce, exclusive of the duties:

If the goods only, 1-4th of such produce:

In the case of damaged tobacco, snuff, or other goods destroyed, such reward as the Lords of the Treasury or the commissioners of his Majesty's customs may think proper to direct, not exceeding a moiety of the duty payable on such goods in case the same had been sold for home consumption:

In the case of seizures of silk goods, the whole value of such goods, exclusive of the duty thereon:

In the case of seizures of vessels and boats: —

If sold, a moiety of the produce:

If taken into the public service or broken up, a moiety of the value:

In the case of seizures of cattle and carriages, in all cases 5-10ths of the produce of the sale. — Sect. 67.

The Treasury, &c. to fix the Value of Spirits & Tobacco. — The value of spirits and tobacco seized as aforesaid shall in all cases be deemed and taken to be such as the Lords of the Treasury or the commissioners of customs may think fit to fix the same at per gallon or per pound weight, for the purpose of rewarding the officer; and all the before-mentioned rewards shall be paid subject to a deduction of 10*l.* per cent. on account of law charges and other expenses. — § 68.

All Rewards, &c. payable to Officers of Army, &c. to be regulated by H. M. Orders in Council. — Every such reward, or part or share of any such seizure or of the value thereof, as shall be payable to any officer or officers, non-commissioned officers, petty officers, seamen, or privates of the army, navy, or marines, or acting under the orders of the Lord High Admiral or commissioners of the admiralty, shall be divided and distributed in such proportions, and according to such rules, regulations, and orders, as his Majesty shall be pleased to direct and appoint. — § 69.

Commissioners may distribute Shares of Seizures so as to reward Persons not actually present. — It shall be lawful for the commissioners of customs or excise respectively, in case of any seizure of vessels, boats, or goods, or of the apprehension of any parties, under this or any other act relating to the customs, to direct the distribution of the seizer's share of such vessels, boats, or goods, or of any penalties or rewards that may be recovered on account of any seizure, in such manner as to enable any officer or officers, or other person or persons through whose information or means such seizure shall have been made, or penalty recovered, or party apprehended, and who may by them be deemed to be so entitled, to participate in such proportion as the said commissioners shall respectively deem expedient. — § 70.

In case Officers act negligently or collusively. — Upon proof being made to the satisfaction of the commissioners of customs or excise that any officer or officers or person or persons as aforesaid have acted collusively or negligently in the making of any seizure, the said commissioners may direct that the whole or any part of the proportion of such seizure be applied to the use of his Majesty. — § 71.

None except Officers to take up Spirits in small Casks sunk or floating upon the Sea. — No person or persons whatsoever, being a subject or subjects of his Majesty, other than an officer or officers of the navy, customs, or excise, or some person or persons authorised in that behalf, shall intermeddle with or take up any spirits, being in casks of less content than 40 gallons, found floating upon or sunk in the sea within 100 leagues of the United Kingdom; and if any spirits shall be so intermeddled with or taken up, the same shall be forfeited, together with any vessel or boat in which they are found. — § 72.

Rewards to Persons giving Information of Goods floating or sunk in the Sea.—If any person or persons shall discover any spirits, being in casks of less content than 40 gallons, floating upon or sunk in the sea, and give information to any officer of the customs, or other person or persons authorised to make seizure of such spirits, so that seizure be made of the same, the person or persons giving such information shall be entitled to and shall receive such reward as the commissioners of customs may deem expedient to direct. — § 73.

Allowance to poor Persons confined for Offences against Laws of Customs and Excise.—For the necessary subsistence of any poor person confined in the United Kingdom or in the Isle of Man, under or by virtue of any exchequer or other process for the recovery of any duties or penalties, upon bond or otherwise, sued for, under or by virtue of any order of the commissioners of customs or excise, it shall be lawful for said commissioners respectively to cause an allowance, not exceeding the sum of 7½d. and not less than 4½d. per day, to be made to any such poor person, out of any money in their hands arising from the duties of customs or excise, as the case may require. — § 74.

JURISDICTION.

Penalties and Forfeitures how to be sued for.—All penalties and forfeitures incurred or imposed by this or any other act relating to the customs, or to trade or navigation, shall and may be sued for, prosecuted, and recovered by action of debt, bill, plaint, or information in any court of record at Westminster, or at Dublin, or at Edinburgh, or in the royal courts of the islands of Guernsey, Jersey, Alderney, Sark, or Man, in the name of the attorney-general or of the lord advocate of Scotland, or in the name of some officer or officers of the customs, or by information before any 2 or more justices of the peace in the U. K., or before any governor, deputy governor, or deemster in the Isle of Man. — Sect. 75.

Vessels, Boats, and Goods seized how to be deemed to be condemned, unless the Owner gives Notice that he intends to claim.—All vessels, boats, and goods which have been or shall be hereafter seized as forfeited under any law relating to the customs, and which have been or shall hereafter be ordered to be prosecuted by the commissioners of customs, shall be deemed and taken to be condemned, and may be sold in the manner directed by law in respect to vessels, boats, and goods seized and condemned for breach of any law relating to the customs, unless the person from whom such vessels, boats, and goods have been seized, or the owner of them, or some person authorised by him, shall, within 1 calendar month from the day of seizing the same, give notice in writing, if in London, to the person seizing the same or to the secretary or solicitor for the customs, and if elsewhere, to the person seizing the same or to the collector and comptroller or other chief officer of the customs at the nearest port, that he claims the vessel, boat, or goods, or intends to claim them. — Sect. 76.

Offences on the High Seas deemed to have been committed at the Place into which the Offender is brought, or in which he is found.—In case any offence be committed upon the high seas against any law or any other act relating to the customs, any penalty or forfeiture be incurred upon the high seas for any breach of such acts, such offence shall, for the purpose of prosecution, be deemed and taken to have been committed, and such penalties and forfeitures to have been incurred, at the place on land in the U. K. or the Isle of Man into which the person committing such offence or incurring such penalty or forfeiture shall be taken, brought, or carried, or in which such person shall be found; and in case such place on land is situated within any city, borough, liberty, division, franchise, or town corporate, as well as any justice of the peace for such city, borough, liberty, division, franchise, or town corporate, as any justice of the peace of the county within which such city, borough, liberty, division, franchise, or town corporate is situated, shall have jurisdiction in heard and tried all such offences, as against such act so committed upon the high seas, any charter or act of parliament to the contrary notwithstanding: provided always, that where any offence shall be committed in any place upon the water not being within any county of the U. K., or where any doubt exists as to the same being within any county, such offence shall, for the purpose of this act, be deemed and taken to be committed upon the high seas. — Sect. 77.

Justices may summon Offender, and the Summons may be left at his last Place of Residence, or on board any Ship to which he belongs.—Upon the exhibiting any information before any justice of the peace for any offence against this or any act relating to the customs or to trade or navigation, for which the party charged is not liable to be detained in manner hereinbefore mentioned, such justice is hereby required to issue a summons for the appearance of the party against whom such information is exhibited before 2 justices of the peace; and such summons, directed to such party, being left either at his or her last known place of residence, or on board any ship or vessel to which such party may belong, shall be deemed to have been sufficiently served. — Sect. 78.

Two Justices may, upon Appearance or Default of the Party, proceed to the Hearing.—Upon the appearance or default of any party so summoned, it shall be lawful for any 2 justices of the peace to proceed to the examination of the matter contained in such information, and to take proof thereof, either upon the confession of such party or upon the oath of 1 or more credible witness or witnesses, to convict such party in the penalty or penalties sued for by such information; and in case of nonpayment thereof, such justices, or 1 of them, or some other justices or justice of the peace, are hereby authorised and required by warrant under hand and seal, to commit such party to any of His Majesty's gaols within their or his jurisdiction, there to remain until the penalty or penalties shall be paid. — Sect. 79.

Warrants shall and may be executed in any part of the United Kingdom.—Sect. 80.

Justice empowered to mitigate Penalty.—Where any party shall or may be convicted before any 2 or more of His Majesty's justices of the peace in any penalty or penalties incurred as aforesaid, except as is herein-after provided, it shall and may be lawful for the said justices, in cases where upon consideration of the circumstances they shall deem it expedient so to do, to mitigate the said penalty or penalties, so that the sum to be paid by such party be not less than 1-10th of the amount of the penalty in which such party shall have been convicted. — Sect. 81.

As to Persons committed for Penalties under 100*l.*—Where any person shall have been so committed by any justices or justice of the peace to any prison for nonpayment of any penalty less than 100*l.*, the gaoler or keeper of such prison is hereby

authorised and required to discharge such person at the end of 6 calendar months from the commencement of such imprisonment. — Sect. 82.

Married Women may be committed to Prison.—Where any party so convicted before 2 justices of the peace shall be a married woman, such party shall be liable to be committed to prison in manner hereinbefore mentioned, notwithstanding her coverture. — Sect. 83.

Mode of Proceeding before Justices.—When any information shall have been exhibited before any justice of the peace for the forfeiture of any goods seized under this or any act relating to the customs, it shall be lawful for the said justice, and he is hereby authorised and required, to summon the party to whom such goods belonged, or from whom they were seized, to appear before any 2 justices of the peace; and such summons, directed to such party, being left either at his or her last known place of residence or on board any ship to which such party may belong, shall be deemed to have been sufficiently served; and upon his, her, or their appearance or default, any 2 justices may proceed to the examination of the matter, and, upon due proof that the said goods are liable to forfeiture under this or any act relating to the customs, may condemn the said goods. — Sect. 84.

Persons on Conviction to forfeit 100*l.*, or if securing Men to be sent into the Navy for 5 Years.—It shall be lawful for any 2 or more justices of the peace before whom any person liable to be detained, and who shall have been detained, for any offence against any act relating to the customs, shall be brought, or either on the confession of such person or such offence, or on proof thereof upon the oaths of 1 or more credible witness or witnesses, to convict such person of any such offence; and every such person so convicted shall, immediately upon such conviction, pay into the hands of such justices, for the use of His Majesty, the penalty of 100*l.*, without any mitigation whatever, for any such offence of which he shall be so convicted as aforesaid; or in default thereof the said justices shall be authorised and required, by warrant under their hands and seals, to commit such person so convicted, and making such default, to any gaol or prison, there to remain until such penalty be paid; provided, that if the person convicted of such offence or offences be a seafaring man, and fit and able to serve in His Majesty's naval service, and shall not prove that he is a subject of His Majesty, it shall be lawful for any such justices, and they are hereby required, in lieu of such penalty, to order any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer of customs, or excise, or constable, or carrier, or cause to be carried or conveyed, such person or persons, to any of His Majesty's ships, in order to his serving in the naval service for the term of 5 years; and if such person shall at any time within that period escape or desert from such custody or service, he shall be liable at any time afterwards to be again arrested and detained, and delivered over to complete his service of 5 years: provided also, that it shall be made to appear to any 2 justices that the convenient arrangement cannot be made at the time of the conviction of the said party for immediately carrying or conveying such seafaring man so convicted on board any of His Majesty's ships, it shall be lawful for such justices to commit such convicted seafaring man to any prison or gaol, there to remain in safe custody for any period not exceeding 1 month, until it may be given to make arrangements for conveying him to one of His Majesty's ships: provided also, that the commissioners of the treasury, or any 5 or more of them, shall have full power to remit or mitigate any such penalty, punishment, or service, whether the parties be seafaring men or otherwise. — Sect. 85.

Justices may amend Informations.—If any person shall be proceeded against under this or any other act relating to the customs or excise, and the information exhibited against such person shall charge him as being a seafaring man, and fit and able to serve His Majesty in his naval service, and it shall appear to the justices before whom such person is brought that he is guilty of the offence with which he is charged, but that he is not fit for the naval service, then any of his Majesty's justices be lawful for such justices, and they are hereby required to amend such information accordingly, and to convict such person in the penalty of 100*l.*, as if he had been convicted of not being a seafaring man or fit for the naval service. — Sect. 86.

If Persons convicted, and sent on board His Majesty's Ships, be found unfit, they may be again conveyed before Magistrates, and convicted in the Penalty of 100*l.*—If any person so convicted as a seafaring man, and carried on board any ship of war, shall on examination by any surgeon or surgeons of His Majesty's navy, within 1 month after being so carried on board, be deemed to be unfit, and shall be refused on that account to be received into His Majesty's naval service, such person shall, as soon as convenient, be conveyed before any justice of the peace, and upon proof that he has been refused to be received on board any of His Majesty's ships as unfit for His Majesty's service, such justice shall and he is hereby authorised and required to call upon the said person to pay the penalty of 100*l.*, without hearing any evidence other than such proof as last aforesaid; and in default of immediate payment of the said penalty, he shall be committed to any of His Majesty's gaols, to remain in custody until such penalty be paid: provided always, that no person so convicted, and ordered to serve on board any of His Majesty's ships, shall be sent away from the U. K. on board such ship in less than 1 month from the date of such conviction. — Sect. 87.

As to Jurisdiction.—Where there any offence against this or any other customs act shall be committed in any city

borough, liberty, division, franchise, or town corporate, any Justices of said city, borough, &c., and any justices of any county in which such city, borough, &c., is situated, shall have jurisdiction to hear and determine upon the same. — Sect. 88.

Magistrate of an adjoining County may act with One of the County where Offence committed. — Where the attendance of 2 magistrates having jurisdiction in the county where the offence is committed cannot be conveniently obtained, a magistrate of any adjoining county, with 1 magistrate of the county in which the offence was committed, may hear and determine any information exhibited before them, and have the same powers and authorities in all respects as to any proceeding had under any act relating to the customs, as if they were both magistrates for the county in which the offence was committed. — Sect. 89.

Writs of Certiorari and Habeas Corpus not to be issued except on Affidavit. — No writ of certiorari shall issue from the Court of King's Bench to remove any proceedings before any justice or justices of the peace under any act for the prevention of smuggling or relating to the customs, nor shall any writ of habeas corpus issue to bring up the body of any person convicted before any justice or justices of the peace under any such act, unless the party against whom such proceeding shall have been directed, or who shall have been so convicted, or his attorney or agent, shall state in an affidavit in writing, to be duly sworn, the grounds of objection to such proceedings or conviction, and that upon the return to such writ of certiorari or habeas corpus no objection shall be taken or considered other than such as shall have been stated in such affidavit; and it shall be lawful for any justice or justices of the peace to amend any information, conviction, or warrant of commitment for any offence under any such act at any time, whether before or after conviction. — Sect. 90.

Informations, &c. to be in the Form given in the Schedule. — All informations before justices of the peace for any offences committed against this or any other act relating to the customs, and all convictions for such offences, and warrants of justices of the peace founded upon such convictions, shall be in the form or to the effect in the schedule to this act annexed. — Sect. 91.

Informations, &c. deemed valid if Offence is set forth in the Words of the Act. — Every information for any penalty or forfeiture, and every conviction or warrant of commitment for any penalty, shall be deemed valid and sufficient, in which the offence for which such penalty shall have been inflicted, or the cause of such forfeiture, is set forth in the words of this act. — Sect. 92.

Powers of Justices to be exercised by Governors or Deputies of the Isle of Man. — All the powers vested in any justices or justice of the peace by virtue of this act are hereby vested in and may be exercised, in the Isle of Man, by any governor, deputy governor, or deputy of the Isle of Man, so far as regards offences committed against the penalties or forfeitures incurred by this or any other act relating to the customs. — Sect. 93.

Penalties, &c. to be paid to Commissioners of Customs, &c. — All penalties and forfeitures which may be recovered before any justices of the peace under this or any other act relating to the customs or excise, on any prosecution by order of the commissioners of customs, shall be paid to the said commissioners, and on any prosecution by order of the commissioners of excise shall be paid to said commissioners of excise, or to the person appointed by them respectively to receive the same; and such penalties and forfeitures shall be applied by the said commissioners respectively in such manner as the law directs, any "An Act for the more effectual Administration of the Office of a Justice of the Peace in and near the Metropolis, and for the more effectual Prevention of Depredations on the River Thames and its Vicinity, for Seven Years," or any other act now in force or hereafter to be made, to the contrary in anywise notwithstanding. — Sect. 94.

Capias may issue out of Persons sued under this Act, who are to give Bail. — Whenever any penalty shall be sued for as aforesaid by information against any person in any court of record at Westminster, Dublin, or Edinburgh, a *capias* may thereupon issue as the first process, specifying the amount of the penalty sued for; and such person against whom such *capias* shall issue shall be obliged to give sufficient bail for security, by natural born subjects or denizens, to the person or persons to whom such *capias* shall be directed, to appear in the court out of which such *capias* shall issue, at the day of the return of such writ, to answer such suit and prosecution, and shall likewise at the time of such appearing give sufficient bail or security, by such persons as aforesaid, in the said court, to answer and pay all the forfeitures and penalties incurred for such offence or offences in case he, she, or they shall be convicted thereof, or to yield his, her, or their body or bodies to prison. — Sect. 95.

Persons in Gaol not appearing or pleading to the Information, Judgment may be entered by Default. — If any person against whom a *capias* shall be directed, or any court of record shall be arrested upon such *capias*, and taken to prison for want of sufficient bail, a copy of the information exhibited against such person shall be served upon him or her in gaol, or delivered to the gaoler, keeper, or turnkey of the prison in which such person shall be confined; and if such person shall neglect or refuse to appear or plead to the said information, or at the expiration of 20 days, judgment shall be entered by default; and in case judgment shall be obtained against any such person or persons by default, verdict, or otherwise, and he or they shall not pay the sum recovered for his or their offence, execution shall be issued, not only against the body or bodies of the person or persons, but against all their real and personal estates for the sum or sums recovered against him, her, or them. — Sect. 96.

*Persons not worth 5*l.* may defend Suits in forma pauperis.* — In case any person arrested and imprisoned by virtue of any writ of *capias* shall make affidavit before the court where the information is brought, or before any other person commissioned to take affidavits in such court, that he or she is not worth, over and above his or her wearing apparel, the sum of 5*l.* (which affidavit the judge or judges of such court, and such person so commissioned, is authorised and required to take), and such person shall petition such court to defend himself or herself in *forma pauperis*, then the judge or judges of such court shall, according to their discretion, admit such person to defend himself or herself against such information in the same manner and with the same privileges as they are by law directed and authorised to admit poor subjects to commence

actions for the recovery of their rights; and for that end and purpose the judges of such court shall assign counsel learned in the law, and appoint an attorney and clerk, to advise and carry on any legal defence that such person can make against such action or information, and which said counsel, attorney, and clerk, is and are hereby required to give his and their advice and assistance to such person, and to do their duties without fee or reward. — Sect. 97.

Sheriff to grant special Warrant on Writ of Capias. — Where any writ of *capias* or other process shall issue out of any court, directed to any sheriff, mayor, bailiff, or other person having the execution of process in any county, city, or liberty, against any person guilty of any offence against this or any act relating to the customs, every such sheriff, mayor, or bailiff, and other person having execution of process aforesaid, and their under-sheriffs, deputies, and other persons acting for them, shall and are hereby enjoined and required, upon the request or application of the solicitor for the customs, (such request to be in writing, and indorsed upon the back of the said process, and signed by such solicitor with his name, and addition of solicitor for the customs,) to grant a special warrant or warrants to the person or persons named to them by such solicitor, for apprehending such offender or offenders; or in default thereof every such sheriff, mayor, &c. acting in said office or offices shall be subject to such process of contempt, fines, &c. as they or any of them may incur by any law, custom, or usage applicable to the refusal or neglecting to execute the like process where the defendant might have been taken in the common and usual method of proceeding. — Sect. 98.

Sheriff indemnified from Escapes. — All and every such sheriff, mayor, bailiff, under-sheriff, and other persons so granting or making out such special warrant aforesaid, and every person so indemnified against his Majesty, his heirs and successors, and against all and every other person whomsoever, of and from all escapes of any person or persons taken by virtue of any such warrant as aforesaid, which shall happen from the time of taking such offender or offenders till he, she, or they be committed to the proper gaol or prison, or to any other place, or to the gaol-keeper, or other person having charge of such gaol or prison, (who is hereby enjoined and required to receive every such person or persons, and give a receipt for his, her, or their body or bodies,) and of and from all actions, prosecutions, process of contempt, and other proceedings for or by reason of such escape, any law, custom, or usage to the contrary notwithstanding. — Sect. 99.

No Claim or Appearance to be entered unless in the Name of the Owner. — No claim shall be permitted to be entered to, and no appearance shall be permitted to be entered to, any information filed for the forfeiture of any vessel, boat, or goods seized for any cause of forfeiture, and returned into any court of record, unless such claim or appearance be entered in the true and real name or names of the owner or owners, proprietor or proprietors of such vessel, boat, or goods, describing the place of residence and the business or profession of such person or persons; and if such person or persons shall reside at London, Edinburgh, or Dublin, or within the liberties thereof, oath shall be made by him, her, or them before the judge or judges of the court into which the said vessel, boat, or goods are returned, or in which such information is filed, that the said vessel, boat, or goods was or were really and truly the property of him, her, or them at the time of such seizure; but if such person or persons shall then, there, or then and in such court, be made in the like manner by the agent or attorney or solicitor by whom such claim or appearance shall be entered, that he has full power and legal authority and directions from such owners or proprietor to enter such claim or appearance, and that to the best of his knowledge and belief such vessel, boat, or goods were, at the time of the seizure thereof, *bona fide* and truly the real property of the person or persons whose name or names such claim or appearance is entered; and on failure thereof, the vessel, boat, or goods shall be absolutely condemned, and judgment shall be entered thereon by default, in the same manner as if no claim or appearance had been entered thereto; and every person who shall be convicted of making or taking a false oath to any of the facts or circumstances required to be sworn shall be deemed guilty of perjury, and shall be liable to the pains and penalties to which persons are liable for wilful and corrupt perjury. — Sect. 100.

Owners to give Security for Costs. — Upon the entry of any claim to any boat or vessel, or to any goods, seized for any cause of forfeiture, or of any appearance to any information filed for such forfeiture, the person or persons who enter the claim or appearance as the owner or proprietor thereof (in case such claimant shall reside in the U. K.) shall be bound, with 2 other sufficient sureties, in the penalty of 100*l.*, to answer and pay the costs occasioned by such claim or appearance; and if such owner or proprietor shall not reside in the U. K., then the attorney or solicitor by whom such claim or appearance shall be entered, shall be bound, with 2 other sufficient sureties, in the like penalty, to answer and pay the costs occasioned by such claim or appearance. — Sect. 101.

*If Suit brought on account of Seizure, and Judge certify there was probable Cause, Plaintiff to have 2*l.* Damages as a Reward.* — In case any information or suit shall be commenced or brought to trial on account of the seizure of any vessel, boat, or goods, merchandise, or commodities whatsoever, or any horses or other animals, or any carriage, seized as forfeited by this or any act relating to the customs, wherein a verdict shall be found for the claimant thereof, and it shall appear to the judge before whom the case was tried, that there was a probable cause of seizure, such judge or court shall certify in the record that there was such probable cause, and in such case the person who made such seizure shall not be liable to any action, indictment, or other suit or prosecution on account of such seizure; and in case any action, indictment, or other suit or prosecution shall be commenced and brought to trial against any person or persons whatsoever, on account of any such seizure as aforesaid, wherein a verdict shall be given against the defendant or defendants, if the court or judge before whom such information or suit be tried shall have certified that there was a probable cause for such seizure, then the plaintiff, besides the things seized, or the value thereof, shall be entitled to 2*l.* damages, not to any costs of suit, nor shall the defendant in such prosecution be fined above 1*s.* — Sect. 102.

No Process to be sued out against any Officer, until 1 Calendar Month after Notice. — No writ shall be sued out against, nor a

copy of any process served upon, any officer of the army, navy, marines, customs, or excise, or against any person acting under the direction of the commissioners of customs, for any thing done in the execution of or by reason of his office, until a calendar month next after notice in writing of such service is given to him, or left at his usual place of abode, by the attorney or agent for the party who intends to sue out such writ or process, in which notice shall be clearly and explicitly contained the cause of action, the name and place of abode of the person who is to bring such action, and the name and place of abode of the attorney or agent; and a sum of 20s. shall be paid for preparing or serving every such notice, and no more.—Sect. 107.

No Evidence to be adduced but what is contained in the Notice.—No plaintiff in any case where an action shall be grounded on any act done by the defendant shall be permitted to produce any evidence of the cause of such action, except such as shall be contained in the notice to be given as aforesaid, or shall receive any verdict against such officer or person, unless he prove on the trial of such action that such notice was given; and in default of such proof, the defendant shall receive a verdict and costs.—Sect. 104.

Officer may tender Amends.—It shall be lawful for any officer or other person to whom any action shall have been given, at any time within 1 calendar month after such notice, to tender amends to the party complaining, or to his, her, or their agent or attorney, and in case the same is not accepted, to plead such tender in bar to any action brought against him, grounded on such writ or process, together with the plea of Not Guilty, and other pleas, with leave of the court; and if, upon issue joined thereon, the jury shall find the amends so tendered to have been sufficient, then they shall give a verdict for the defendant; and in such case, or in case the plaintiff shall become nonsuited, or discontinue his, her, or their action, or in case judgment shall be given for such defendant upon demurrer, then such defendant shall be entitled to the like costs as he would have been entitled to in case he had pleaded the general issue only; but if, upon the trial, the jury shall find that no amends were tendered, or that the same were not sufficient, or shall find against the defendant in such other plea or pleas, then they shall give a verdict for the plaintiff, and such damages as they shall think proper, together with his, her, or their costs of suit.—Sect. 105.

Officer may tender Amends, may pay Money into Court.—In case such officer or other person shall neglect to tender any amends, or shall have tendered insufficient amends, before the action brought, it shall be lawful for him, by leave of the court, at any time before the trial of the said action, to pay into court such sum of money as he shall see fit, whereupon such proceedings, orders, and judgments shall be had made, and given thereon by such court, as if the defendant who the defendant is allowed to pay money into court.—Sect. 106.

Action to be commenced within 6 Months after Cause of Action has arisen.—If any action or suit be brought or commenced as aforesaid, such action or suit shall be brought or commenced within 6 months next after the cause of action shall have arisen, and not afterwards, and shall be laid and tried in the county or place where the facts were committed, and not in any other county or place; and the defendant or defendants shall and may plead the general issue, and give the special matter in evidence, at any trial had thereupon; and if the plaintiff or plaintiffs be nonsuited, or discontinue, his, her, or their action or suit, or if, upon a verdict or demurrer, judgment be given against them, the defendant or defendants shall or may recover treble costs, and have such remedy for the same as any defendant or defendants in other cases where costs are given by law.—Sect. 107.

Judges of the King's Bench may issue Warrants for apprehending Offenders.—Whenever any person shall be charged with any offence against or any act relating to the customs, or against which he or she may be liable to forfeiture, or information in the Court of the King's Bench, and the same shall be made appear to any judge of the same court, by affidavit or by certificate of an information or indictment being filed against such person in the said court for such offence, it shall and may be lawful for such judge to issue his warrant under his hand and seal, and thereby to cause such person to be apprehended, and to be brought before him or the judge of the same court, or before some 1 justice of the peace, in order to his, or her being bound, with 2 sufficient sureties, in such sum as in the said warrant shall be expressed, with condition to appear in the said court at the time mentioned in such warrant, and to answer to all and singular indictments or informations for any such offence; and in case any such person shall neglect or refuse to become bound as aforesaid, it shall be lawful for such judge or justice to commit such person to the common goal of the county, city, or place where the offence has been committed, or where he or she shall have been apprehended, to remain until he or she shall become bound, or be discharged by order of the court in term time, or of 1 of the judges of the court in vacation; and the remainder of the duties of such warrant, and filed in the said court, and shall continue in force until such person shall be acquitted of such offence, or in case of conviction shall have received judgment for the same, unless sooner ordered by the court to be discharged; and where any person, either by virtue of such warrant of commitment aforesaid, or by virtue of any writ of *captus ad respondendum*, or otherwise, shall be committed to the custody of the gaoler, or detained in any goal for want of bail, it shall be lawful for the prosecutor of such indictment or information to cause a copy thereof to be delivered to such person, or to the gaoler, keeper, or turnkey of the goal wherein such person is detained, with a notice thereon indorsed, that unless such person shall, within 8 days from the time of such delivery of such copy, cause an appearance and also a plea or demurrer to be entered in court to such indictment or information, an appearance and the plea of Not Guilty will be entered thereto in the name of such person; and in case he or she shall, for the space of 8 days after the delivery of a copy of such indictment or information, neglect to cause an appearance, and also a plea or demurrer to be entered in the said court to such indictment or information, it shall be lawful for the prosecutor, upon affidavit being made and filed in the court of the delivery of a copy of such indictment or information, with such notice indorsed thereon as aforesaid, to such person, or to such gaoler, keeper, or turnkey, as the case may be, which affidavit may be made and sworn to, by the prosecutor or the court authorized to take affidavits, to

cause an appearance and the plea of Not Guilty to be entered to such indictment or information for such person; and such proceedings shall be had thereupon as if the defendant appeared and pleaded Not Guilty, according to the usual course of the common law, and upon such delivery of such copy, and upon being acquitted of all the offences therein charged upon him or her, it shall be lawful for the judge before whom such trial shall be had, although he may not be one of the judges of the King's Bench, to order that such defendant be discharged out of custody, as to his or her commitment as aforesaid, and such defendant shall be thereupon discharged accordingly.—Sect. 108.

When Recognizance is given, and the Party shall not plead, a Copy of the Information or Indictment may be delivered to his Attorney or Agent.—Where any person, arrested by virtue of a warrant issued as aforesaid, enters into a recognizance, and appears in court at the return of the said recognizance, but does not afterwards plead to the information or indictment, it shall be lawful for the prosecutor to cause a copy thereof to be delivered to such person, or to his or her attorney or agent, or to be left at his or her last place of abode, with a notice thereon indorsed, that unless such person shall, within 8 days from the time of such delivery, cause a plea to be entered in court to such information or indictment, the prosecutor will enter a plea of Not Guilty on his or her behalf; and upon affidavit being made and filed in the court of the delivery of a copy of such information or indictment, with notice indorsed thereon as aforesaid, to such person, or to his or her attorney or agent, or at his or her last place of abode, as the case may be, it shall be lawful for the prosecutor to cause the plea of Not Guilty to be entered on his or her behalf, and such proceedings for such person, and such proceedings shall be had thereupon as if the defendant had pleaded according to the usual course of the said court.—Sect. 109.

Certain Articles not to be landed until the Dues of the City of London are paid.—If all or any of the goods of the description hereinafter mentioned, (that is to say,) tins of butter, tons of cheese, salt, tins of sugar, salt, fruit, and other commodities, brought conswive into the port of the said city, and which are liable to the said dues, shall be landed or unshipped at or in the said port before a proper certificate of the payment of the said duties shall have been obtained, such goods shall be forfeited, and may be seized by any officer of customs empowered to seize goods brought without due entry; and such duties may be sued for, prosecuted, and recovered by action of debt, bill, plaint, or information in any court of record at Westminster, in the name of the chamberlain of the said city, on behalf of the mayor, commonalty, and citizens.—Sect. 110.

When Offenders are arrested and give Bail, the Bail Bond to be assigned to his Majesty.—If any person shall be arrested by a writ of *habeas corpus*, or by a writ of *certiorari*, or by a writ of *replevin*, or record, or out of any of the superior courts of record of either of the counties palatine, at the suit of his Majesty, and the sheriff or other officer shall take bail from such person, he shall, at the request and costs of the prosecutor, assign to his Majesty, his heirs and successors, the bail bond taken from such person, by indorsing the same, and attesting it under his hand and seal, in the presence of 2 or more credible witnesses, which may be done without any stamp, provided the assignment so indorsed be duly stamped before any suit be commenced thereupon; and if such bail bond be forfeited, such process shall thereupon issue as on bonds originally made to his Majesty, his heirs and successors; and the court in which such bail bond was put in suit may give such order to the defendant or defendants as is agreeable to justice and reason.—Sect. 111.

Indictments to be preferred by Order of the Commissioners.—No indictment shall be preferred or suit commenced for the recovery of any penalty or forfeiture under this or any other act relating to the customs or excise (except in the case of persons charged and arraigned before 1 or more justices in pursuance of this act) unless such suit be commenced in the name of the attorney-general, or of the lord advocate of Scotland; or unless such indictment be preferred under the direction of the commissioners of customs or excise, or unless such suit be commenced in the name of some other of customs or excise, under the direction of the said commissioners respectively.—Sect. 112.

The Attorney-general or Lord Advocate may sign a Noli prosequi.—If any prosecution whatever be commenced for the recovery of any fine, penalty, or forfeiture incurred under this or any other act relating to the customs or excise, it shall be lawful for the attorney-general, or for the lord advocate of Scotland, if he is satisfied that such fine, penalty, or forfeiture was incurred without any intention of fraud, or that it is inexpedient to proceed in the said prosecution, to stop all further proceedings by entering a *noli prosequi*, or otherwise, on such information, as well with respect to the share of such fine, penalty, or forfeiture to which any officer or officers may be entitled, as to the king's share thereof.—Sect. 113.

Proof of Payment of Duties, or of the lawful Importation of Goods, to be an Excuse.—If any goods be seized for nonpayment of duties, or other cause of forfeiture, and any dispute arise whether the customs, excise, or inland duties have been paid for the same, or the same have been lawfully imported, or concerning the place whence such goods were brought, the proof thereof shall be on the owner or claimant of such goods, and not on the officer seizing and stopping the same.—Sect. 114.

No Justice connected with the Collection of the Revenue to interfere in summary Convictions.—No justice of the peace being a collector or comptroller, or otherwise connected with the collection of the revenue, shall take cognizance of any matter relating to summary convictions of persons offending against this or any other customs act.—Sect. 115.

Arrest of certain Matters to be sufficient.—In case of any information or proceedings had under any act relating to the customs, the arrestment that the commissioners of customs or excise have directed or elected such information or proceedings to be instituted, or that any vessel is foreign, or belonging wholly or in part to H. M. subjects, or that any person detained or found on board any vessel or boat liable to seizure is or is not a subject of his Majesty, or that any person detained is or is not a seafaring man, or fit or able to serve in the naval service, or that any person is an officer of customs, and where the offence is committed by any port in the said act, the arrestment upon any information or proceedings, shall be sufficient

without proof as to such fact or facts, unless defendant prove to the contrary. — Sect. 116.

Persons preventing Smuggling to be deemed duly employed. — All persons employed for the prevention of smuggling under the commissioners of customs, or of any officer or officers in the service of the customs, shall be deemed and taken to be duly employed for the prevention of smuggling; and the averment, in any information or suit, that such party was so duly employed, shall be sufficient proof thereof, unless the defendant prove to the contrary. — Sect. 117.

Find vice Evidence may be given. — If upon any trial a question shall arise whether any person is an officer of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or an officer of customs or excise, evidence of his having acted as such shall be deemed sufficient, and such person shall not be required to produce his commission or deputation, unless sufficient proof be given to the contrary; and every such officer, and any person acting in his aid or assistance, shall be a competent witness upon the trial of any suit or information on account of any seizure or penalty, notwithstanding such officer or person may be entitled to the whole or any part of such seizure or penalty, or to any reward upon conviction of the party charged in such suit or information. — Sect. 118.

What deemed sufficient Evidence of an Order of Commissioners of Customs or Excise. — Upon the trial of any issue, or upon any judicial hearing or investigation touching any penalty or forfeiture under any law or laws relating to the customs or excise, or to the law of navigation, where it may be necessary to give proof of any order issued by the commissioners of the treasury, or by the commissioners of customs or excise, the letter or instructions officially received by the officer of customs or excise at the place or district where such penalty or forfeiture

was incurred, or shall be alleged to have been incurred, for his government, and in which such order is mentioned or referred to, and under which instructions he shall have acted, shall be admitted and taken as sufficient evidence and proof of such order to all intents and purposes whatsoever. — Sect. 119.

Within what Time Suits, &c. are to be exhibited. — All suits, indictments, or informations exhibited for any offence against this or any other act relating to the customs in any court of record at Westminster, or in Dublin, or in Edinburgh, or in the royal courts of Guernsey, Jersey, Alderney, Sark, or Man, shall and may be had, brought, sued, or exhibited within 3 years next after the date of the offence committed, and shall and may be exhibited before 1 or more justices of the peace within 6 months next after the date of the offence committed. — Sect. 120.

Information may be exhibited any Time after 6 Months. — Where any person shall have been detained for any offence against this or any other customs act, and shall have made his escape from custody, an information may be exhibited before 1 or more justices of the peace against such person, for such offence, at any time afterwards, although more than 6 months have expired. — Sect. 121.

Indictments or Informations may be tried in any County. — Any indictment or information for any offence against this or any other customs act shall be inquired of, examined, tried, and determined in any county of England where the offence is committed in England, and in any county in Scotland where the offence is committed in Scotland, and in any county in Ireland where the offence is committed in Ireland, in such manner and form as if the offence had been committed in the said county where the said indictment or information shall be tried. — Sect. 122.

SMYRNA, a large city and sea-port of Asiatic Turkey, on the western side of Asia Minor, lat. $38^{\circ} 25' 36''$ N., lon. $27^{\circ} 6' 45''$ E. Population, probably, about 120,000; of whom 60,000 may be Turks, 40,000 Greeks, and the remainder Armenians, Franks, Jews, &c. Smyrna is situated at the bottom of a deep gulf; the entrance to which lies between the island of Mytilene on the north, and Cape Carabourun, in lat. $38^{\circ} 41' 30''$ N., lon. $26^{\circ} 21'$ E., on the south. The woodcut on the next page gives a better idea of the gulf of Smyrna than could be derived from any description. The dotted line shows the course inwards. The passage between James' Castle (D) on the south and the opposite sand-bank is narrow; but there is from 9 to 10 fathoms water, with a blue clay bottom. Merchant ships anchor abreast of the city in from 7 to 8 fathoms; but the water is so deep that they may come close to the quays. The *inbat*, or sea breeze, blows from morning till evening, and is always waited for by ships going up to the city. There is excellent anchorage in most parts of the gulf, merely avoiding the shoals on the north side. Smyrna is a place of great antiquity. The excellence of its port, and its admirable situation, have made it be several times rebuilt, after being destroyed by earthquakes. On approaching it from the sea, it has the appearance of an amphitheatre: the castle is at the back of the town, which it commands, on the top of the hill; but it is in a state of decay, and could oppose no resistance to an invading force. The interior of the city does not correspond to its external appearance; the streets being, for the most part, narrow, dirty, and ill paved. Owing to the want of cleanliness, and of all sorts of precautions, on the part of the Turks, Smyrna is frequently visited by the plague. So late as 1814, from 50,000 to 60,000 of the inhabitants are said to have been cut off by this dreadful scourge. The trade of this city is more extensive than that of any other in the Turkish empire. The caravans from Persia are chiefly composed of Armenians. They arrive and depart at fixed periods, which are nearly identical with those of the arrival and departure of most of the foreign ships frequenting the port. Bargains are principally effected by Jew brokers, many of whom have amassed considerable fortunes. The principal articles of import consist of grain, furs, iron, butter, &c. from Odessa and Taganrog; and of cotton stuffs and twist, silk and woollen goods, coffee, sugar, cochineal, and dye woods, iron, tin and tin plates, rum, brandy, paper, cheese, glass, wine, &c. from Great Britain, France, Italy, the United States, &c. The exports consist principally of raw silk and cotton, fruits — particularly raisins; opium, rhubarb, and a variety of drugs and gums; olive oil, madder roots, Turkey carpets, valonia, sponge, galls, wax, copper, hare skins, goats' wool, safflower, &c. — (For further details, see *Tournefort, Voyage du Levant*, tome ii. pp. 495—507. 4to edit.; and *Macgill's Travels in Turkey*, vol. i. Letters 5, 6, 7, 8, and 9.)

References to Plan. — A, Partridge Island, on the south side of which there is excellent anchorage in from 15 to 17 fathoms, muddy bottom. B, a mud point. C, Pelican Point. D, James' Castle. E, Low narrow islands. Soundings, except where otherwise marked, in fathoms.

Monies, Weights, and Measures, same as at Constantinople; which see. Accounts are kept in piastres of 40 paras, or medini. The value of the piastre fluctuates according to the exchange. It has been very much degraded; and is at present worth about $\frac{1}{4}$ d. The oke is the principal weight used. It is equivalent to 2 lbs. 13 oz. 5 dr. avoirdupois; 45 okes = 1 kinta = 100 rottolos = 127.48 lbs. avoirdupois. The kintal of Constantinople is only 44 okes. A teflee of silk = 42 lbs. avoirdupois. A chequee of opium = $\frac{1}{3}$ lb.; a chequee of goats' wool = 5½ lbs. Corn is measured by the killow = 1.456 Winch. bushel. The pic, or long measure, = 27 Eng. inches. — (*Kelly's Cambist*, &c.)

COMMERCE OF SMYRNA.—The following details with respect to the commerce of Smyrna with Western Europe are copied from a letter addressed by an intelligent English merchant, established in Smyrna, to his correspondent in London, to whom we are indebted for it. Nothing so complete or satisfactory has ever been published as to the trade of this emporium. It is right, however, to mention, that since 1828, when this paper was drawn up, the commerce of Smyrna has lost some of its importance. Syria, the islands of the Archipelago, the eastern parts of Greece, &c. used formerly to derive a considerable part of their supplies of foreign produce at second hand from Smyrna; but they now, for the most part, are either supplied direct from England, Marseilles, &c., or indirectly from Syria, which is become a considerable *depôt*.

Charges on Selling and Buying.—As we conceive that a correct list of selling and buying charges is an essential piece of information for those interested in the commerce of the Levant, we annex the same, including every item of expense, namely:—

On Selling.		On Buying.	
	Per cent.		Per cent.
Freight (according to the rate agreed upon in England)	-	Custom duty (according to the quality of the article)	1 to 3
say	2	Porterage (included in the cost of packages, which vary according to the quality of the goods packed).	-
Custom duty (on general goods)	3	House and street brokerage	1½
Porterage from 1 to 2 piastres per package (according to the size).	-	Commission (except on hgs, which is 6 per cent.)	3
Shroffage	0½	Warehouse rent	0½
House and street brokerage	2½		
Commission for effecting sale	3		
Ditto, if proceeds are remitted by bill or specie	1½		
Del credere ditto (when required to be charged)	2		
Warehouse rent	0½		

With regard to the cost of packages, those for silk are about 24 piastres each; for galls, 18 do.; gums mastic, tragacanth, &c., 20 do.; scammony, 18 do.; opium, 30 to 36 do.; raisins, 12 to 14 do.; figs, 25 to 30 paras; cotton wool, from 12 to 20 piastres, &c.

We learn from —, that your firm deals largely in skins and furs, but he does not state the quality of either; the latter article is, however, of a very limited and ordinary nature with us, and chiefly consists of hare skins, which are abundant and shipped in considerable quantities for the German and French markets. They are most plentiful during the winter season, when they are also cheaper and keep better than in the hot months of the year. Sheep, goat, lamb, and kid skins are plentiful, and are often in request for America; particularly the 2 latter when in season, which is, for lamb skins from the middle of March to the beginning of June, and for goat skins from November until April. We have no want of ox and cow hides, both dried and salted, the leather of which is said to be more pliable than those of Europe. They are now and then sent to Marseilles in small parcels; but as it would be difficult to convey, by a written description, the exact quality of those skins, we intend making up a little bale of such kinds as may for the moment be met with, and to forward it by an early vessel to London, when it shall be submitted to your inspection, with an invoice, and remain, if you think proper, at your disposal.

We now proceed to make you acquainted with the manner in which our sales, purchases, and barter are effected, together with the nature of sales made on credit or for cash, &c.

Sales are effected in this country between our house's brokers, and what is termed a street or out-door broker; the former receiving their instructions from us, and the latter acting on behalf of the buyer. When the terms are mutually agreed upon, the real buyer and seller personally meet; and a bond or obligatory note stating the terms and amount of the transaction is drawn out and signed by the buyer, and when not much approved of, one or more signatures are required to the bond, who individually and collectively become responsible for the fulfilment of it.

Purchases are similarly made, except that the purchaser or agent himself, in the first instance, and his brokers, inspect the goods he is about to treat for: cash down is generally expected; and it is but seldom that a short credit of 1 or 2 couriers is obtained: it not unfrequently happens, also, that $\frac{1}{2}$ or even $\frac{1}{3}$ of the purchase amount is advanced to the seller, when an insufficient quantity of the article wanted by the buyer is in the place, and which must then be procured from the interior or place of growth. The money advanced (which is to be returned if the quality does not suit) is sent by a confidential person on the part of the purchaser, accompanied either by the seller in person, or by some one representing him.

Barter are generally attended with delay, impediments, and sacrifices to the European agent who exchanges his constituents' goods for native produce, and are never completed without his paying a large portion in cash, which is mostly $\frac{1}{2}$, sometimes even $\frac{3}{4}$, but never less than $\frac{1}{3}$ of the full amount; besides always paying a higher price for the produce than if it were bought for ready money. On the other hand, so far as the agent's transaction goes in goods, the price of which he also advances, it is equal to an advantageous cash sale, deducting a discount; but still he loses, as we have just stated, on that part of the operation which subjects him to the necessity of giving ready money for such part of the produce as remains above the counter-value given in goods, at a higher rate than it is worth in the open market. Thus the advantage is all in favour of this country, and against the agent. Indeed, barter are seldom undertaken unless when a profitable result is anticipated, when European goods are difficult to be placed upon saving conditions, either from the want of demand or a glutted market, or when (which is mostly the case) the holder of such goods has orders from the owners of them to remit them in produce, and thus realise their property, if not upon profitable terms, at least without the risk arising from bad debts; sometimes, also, outstanding bonds are taken in part payment, to the extent occasionally of $\frac{1}{3}$; another $\frac{1}{3}$ is taken in goods at an advance of from 5 to 10 or 12 per cent. above current prices; and the remaining $\frac{1}{3}$ in cash against produce, at from 5 to 10 per cent. more than it fetches in the bazaars. However, it is by barter alone that any extensive transaction ever takes place, or that it can be either readily or safely effected.

Sales on Credit.—The terms of credit vary considerably, and depend entirely upon the quality of the goods which the agent sells: for current or demanded merchandise, 2 couriers (or 2 periods of 15 days), and two and three 31 days, are the present terms; which are extended to four, five, and six 31 days for articles not much in request. Couriers mean post days; of which we have 2 in each month: at each courier, and 31 days, a proportionate payment becomes payable; for instance, on a credit of six 31 days, $\frac{1}{3}$ falls due at the expiration of the first month; and if paid, is noted accordingly on the bond, and so on until the remaining 5 periods are expired: it must, however, be observed, that payments are by no means punctually made, except by a few of our more wealthy bazaar buyers, although for the first 3 or 4 periods of a long credit some regularity is observed; but as the time begins to shorten, payments are proportionably retarded, so that two 31 days on a bond of credit for 6 months may be considered as a fair average of time in addition to the limited term.

Sales for Cash.—These very seldom occur, indeed, and then only when money is abundant, or the article sold scarce and in great demand; in fact, not 1 sale in 100 is made on these terms; and in about the same ratio is a discount taken off from a bazaar bond at even an exorbitant rate, however

short the period may be that it has to run : occasionally a sale is, however, effected for $\frac{1}{2}$ cash, and the other $\frac{1}{2}$ short credit, for some very current goods.

Character of Dealers.—Before entering upon the articles of commerce, we are desirous of making you acquainted with the character and customs of our bazaar dealers. The Greek dealers are in general petty shopkeepers, very cunning, and very bad payers. The Jews have similar defects, but are well supported by their brethren, who generally become guarantee for each other. The Armenians are by far the largest traffickers both for buying and selling; and though hard bargainers, are mostly all solvent, and honourable as well as honest. The Turks are, however, as far superior to the foregoing races in all moral qualities, as they are inferior to them in means and commercial abilities; yet they sometimes deal largely, and their bond is as punctually discharged, in general, as the day comes when it falls due. The laws in this country mostly favour the debtor at the expense of the creditor; and so far they encourage dishonesty. The number of insolvent native dealers was at one time excessive; but of late the means of each individual buyer have been so carefully investigated, that at present we are not aware that there is one bazaar dealer who is not able to meet the demands of those from whom he has purchased. The European consuls, who enjoy much consideration by the Turks, protect the interests of their countrymen in disputed points; and, in general, questions of a commercial nature are submitted to the decision of a Turkish tribunal, where very little pleading, but a good deal of plain straight-forward justice, goes forward; except that, *perhaps*, the European is, if any thing, rather less favoured than the native.

We now proceed to offer some observations on the leading articles of our imports and exports for your government, the correctness of which may be relied upon.

IMPORTS.

Coffee.—This is by far the most current article received here, and is sent from England, France, Holland, Trieste, Marseilles, Leghorn, Genoa, and America; but first, and principally of late years, from the latter country; the vessels of which are frequently laden with coffee, and always partly so: the next in point of quantity comes from England; but is shipped mostly in small parcels at a time, of from 500 to 600 sacks, although occasionally that amount is doubled. France follows, but on a less extensive scale; and Austria, Holland, and the small ports in the south of Europe, do not together export more than what is received from England alone. We have 4 different qualities of coffee in our markets; namely, Mocha, St. Domingo, Havannah, and Brazil: the first is sent from Alexandria, and by American vessels, and but seldom from Europe; the consumption is, however, limited, and does not exceed 60,000 oke annually. At Constantinople, about 3 times that quantity is sold yearly. We never remember to have known such heavy importations of West India coffee as within these last 6 months (written in November, 1827); the consequence of which has been such an excess beyond the wants of the place, that not only buyers are fully supplied for some time to come, but also the heavy stock in first hands can only be diminished either by forced or ruinous sales, or must wait for 2 or 3 months, until the demand again comes round; which is, however, certain to take place, as coffee forms one of the necessities of life in this country: in short, an Asiatic cannot do without his coffee; and it is well known that in Smyrna alone not less than perhaps 400,000 cups of it are daily drunk, which, computed at the cost price of 2 paras each, amount to 20,000 piastres! The St. Domingo and Havannah coffee are preferred to the Brazil, although, when the latter is of a fair round quality, there is not more than 5 per cent. difference in price; the small green West India berry certainly commands a ready sale; but, for the finest sort, not more than 6 or 8 per cent. can be obtained above the middling and sound quality. Coffee is amongst the very few articles which occasionally meet with a partial and entire cash sale and short credit; and is, moreover, from the means and character of the dealers in it, the least liable to risk from insolvency. It is also the easiest through which an advantageous barter can be effected, as a much larger quantity of coffee will be taken in exchange for produce than almost any other item of European merchandise. Annual consumption, about 3,000,000 oke.

Sugar is the next in consequence. This article is supplied from the same sources as coffee, and is attended in its disposal with similar results. We receive the following qualities:—White crushed, white Havannah, brown do., white East India, refined in small loaves of 4 lbs. and in large of 8 lbs. each: the 2 latter are mostly shipped from America and England. The brown and ordinary sorts are not so current. Annual consumption, 10,000 kintals.

Indigo follows the 2 preceding articles, not so much in extent as meeting a ready sale always, and not unfrequently a profitable one: it is attended likewise with all the advantages and facilities attached to coffee and sugar, and is furnished by Europe and America, but principally by England. The qualities we receive consist of East India purple and copper, ditto common, and Guatemala. The first of the 3 is the kind best adapted for our markets, and is placed sooner and better than the other 2; but, as is the case with coffee, the *very fine* will not pay cost price, and ought therefore never to be sent. The pieces suited for our buyers ought to be good sized, with about an equal proportion of purple and copper in each piece. The few chests on sale are all ordinary, and consequently dull; and the first arrival of 15 or 20 chests (and not more ought ever to be shipped at one time) of fair East India will meet with a ready and favourable sale at 20 piastres per oke. Annual consumption, 80 chests.

Manufactures.—This is, in point of amount, the most extensive branch of trade carried on in Turkey. We have, as you will perceive from our price current, a numerous assortment of British and East India cotton goods and English shalloons. The white or unprinted cotton goods are most in demand during the warm weather, and the coloured or printed stuffs during winter, although a considerable quantity of all sorts is regularly and largely sold throughout the whole year. The East Indian manufactures are supplied by America and England exclusively; the latter country also sends fair imitations of the East India loom, in long cloths, seersuckers, &c. The native consumers are exceedingly fastidious in their choice of designs and colours, which ought very frequently to be altered, in order to meet their capricious taste. Manufactured goods are always sold at long credits, but large barterers are often effected through them. A person desirous of entering into this item of our commerce is almost certain ultimately to reap an advantage; but he must have patience, a large capital, and must not be disheartened at the first or second result of his enterprise, should it disappoint his hopes of profit. He must also enter into the thing with spirit, and keep his agent always supplied with the goods he may recommend; and he is to remember that many months must elapse before he can expect a return by bills of exchange, but sooner if he order a barter. The capital employed must also at least be to the amount of 20,000*l.* to do any good; and further, this sum ought to be disbursed by him without any pecuniary embarrassment or inconvenience. For a person willing to undertake such a step, he would require to be regularly furnished with patterns, and advices of the manner in which they ought to be printed and varied; and we again repeat, that with *competent means*, a real desire to follow the branch up firmly, and full information hence of what is required, a most extensive and finally lucrative business would be done; and we recommend the matter strongly to your best consideration. Annual consumption of all kinds (British), about 367,300 pieces.

Cotton Twist forms no inconsiderable article in our trade, and is supplied exclusively from England. Mule twist has, however, superseded, in some degree, the demand which formerly existed for water twist, and is consequently more in request. Water twist is nevertheless saleable, and both qualities ought to be of rather high numbers. This article is often given in barter, but mostly sold at rather long credits, and hardly ever for cash. Annual consumption of water twist, 10,000 oke; ditto of mule ditto, 28,000 oke.

Iron in Bars, English, was formerly largely consumed; but from the buyers being plentifully supplied,

it is at present but little demanded, even at the losing price of the day. Barterers are very frequently effected through irons of all descriptions, and command a short credit, and sometimes a cash sale. Annual consumption, 16,000 to 18,000 kintals.

Iron Plates are generally employed for building purposes, and store doors.

Iron Rods are always saleable.

Iron Hoops are most saleable in August, September, and October, for fruit and other export barrels.

Iron, Russia, and Swedish Bars.—These kinds are sent in rather large parcels, particularly the former, and fetch a higher price than the English, owing to their malleable qualities, which render labour easier, and by that advantage command a preference: though the high price, beyond the English make, puts the two qualities upon a level, and commands a larger consumption of the latter. Annual consumption, 3,500 kintals.

Tin in Bars is a good, steady, saleable article; is often given on fair terms in barter, always disposed of on short credit, and now and then placed for cash. It comes from England exclusively. Annual consumption, 830 to 1,000 barrels of 4 cwt. each.

Tin in Plates is attended with the foregoing advantages, and is also supplied by England alone. Annual consumption, 1,200 double boxes.

Lead in Sheets, Pigs, and Shot.—These 3 items have lately, particularly shot, been sent from Germany, and prove dangerous competitors with the English; in consequence of which the thing is overdone, and we have more in market than meets the demand at losing prices.

Lead, Red and White.—These 2 articles have lately been much in request for the formation of paint. Some large parcels of red have lately arrived, and sell well and currently, but we are altogether without white. The consumption of all sorts of lead has, however, considerably decreased of late years, and no longer forms an item of any great consequence in our trade.

Rum and Brandy.—Leeward Island and Jamaica are furnished by America and England; the former particularly in the lower qualities, of which we have a full market at low prices. The better kind and brandy are supplied from England, but do not obtain a proportionate advance compared with the common sorts. Brandy is but of limited demand, and 2 or 3 puncheons are sufficient at a time. It ought, as well as rum, to be deeply coloured. Annual consumption of rum, 300 puncheons.

Spices are all saleable in small parcels at a time, particularly pepper and pimento; the latter of which, in small sound berries, is demanded at good prices. Nutmegs are very abundant, and offering very low without finding purchasers. France, America, and England supply us with spices, but France more so in cloves than in other kinds; and it may be remarked that the qualities received from England are preferred. Credit on selling is generally short.

Cochineal is a fair article now and then in small qualities; and, when in demand, at times fetches good prices, occasionally a cash sale, and always one of the shortest credits. Annual consumption, 4,500 oke.

In concluding our observations on imports, we could wish to impress the conviction, that a poor man's purpose cannot be answered in speculating to this country; for, should his circumstances require a speedy remittance in bills, he must submit to a heavy sacrifice, in order to meet his wants, by selling his property for whatever it may fetch in cash; and such a measure cannot but be attended with very heavy loss. On the contrary, when an opulent person finds that his property cannot be realised at saving prices, he can afford to wait until a more favourable moment presents itself; and such a moment, in less than 12 months, is almost certain to arrive, when he retires his money with an advantage more than equal to any interest he could obtain for it in Europe.

That the rate of exchange has regularly advanced, and will continue to advance, is the natural result of the continual deterioration of the Turkish specie. We remember when the piece of money denominated 'Mahmoudia,' passed at about its value, or nearly so, of 10 piastres: it rose to 25 soon afterwards; and the few which remain are at present worth 38 each. At the period we allude to (1812), the exchange on London was at 25 piastres the pound sterling; and until lately (owing to the great stagnation of trade, and to political events, which have lowered it), the rate has been up to 60! It cannot, however, increase beyond that rate more than 5 per cent., as it then will nearly be on a par with the value of the gold and silver current coin of the realm, when it will be better to remit in specie than by a bill at 63 piastres for 61 days' sight.* The rates of exchange fluctuate considerably, and a difference of $\frac{1}{2}$ to 1 per cent. often occurs between one post day and another, and are attributable to the quantity or scarcity of paper in market: it is for this reason that the rate always decreases during the fruit season, which takes place at the latter end of August, and continues until the middle of October; when it rises again to meet the limited wants of drawers, and the larger demands of those remitters who did not ship fruit, and invest the funds of their employers in that article. These observations lead us to submit the question of the advantage which a person in Europe has in receiving from this country, instead of sending to it. Late extensive barterers have proved to us, and which we have endeavoured to show you, the unprofitable terms upon which they are conducted, were it only in paying, and that in cash too, for at least $\frac{1}{3}$ of the amount, at a higher rate than was current; now this higher rate is, in itself, supposing the produce taken in barter to meet with a saving sale in Europe, of no small consideration;—then you have the advantage of drawing at a high exchange in making a purchase; and again you have the choice of selecting the good part of the produce, and of rejecting the inferior,—a choice which is not allowed in taking it in barter; lastly, the principal advantage in buying over bartering is, that you can avail yourself of a depression in the produce market, and effect your purchase upon easy terms; whereas, when a barter is proposed, it has the immediate effect of producing a general rise in the whole market, and also of engendering the most absurd pretensions on the part of produce holders, who are too conversant with commerce not to see that either the European house, wishing to barter, is in want of procuring returns for his principal, or else that the articles of produce wanted are in great demand in Europe—without which, the European agent would never submit to take produce at so much higher a price than he could procure it for with cash! The only time in which the person sending to this country can calculate upon a profitable return, is during the fruit season; and for that reason he ought to forward his shipments from Europe so as to meet the demand, and to be cashed by the beginning of August. A vessel from England hence is in general from 40 to 50 days in performing her voyage; sometimes much less, and but seldom longer: goods ought, if possible, always to be shipped in a fast and first class ship.

We now continue our remarks on the articles of our trade, and the following are some of them sent hence, and deserving of serious attention.

EXPORTS.

Silk.—This is the richest raw article in our export trade with Europe in general, but almost exclusively with England, which consumes nearly our entire produce. There are 3 different qualities, viz. fine, middling, and coarse. Bales, adapted for the English market, are composed of the 3 qualities, but the lesser quantity is of the coarse kind; at one time, all coarse was in request in London, but at present an assortment of the 3 qualities is preferred. When an order is given, it ought to be accompanied by a

* The exchange, partly from the further degradation of the coin, and partly from the balance of payments being against Smyrna, is now (February, 1834) 98 piastres to the pound sterling! This variation of the exchange renders the holding of property upon a speculation for an advance very hazardous.

description of the quality required; and it is necessary to state that, for *all* of the finest, without being mixed, a higher price is demanded. A bale contains 40 teffes; and, before being packed, is carefully examined and approved of by competent native judges. Silk is produced at Brussa, a large city about 260 miles distant from Smyrna, whence it is forwarded by caravans to the different places of consumption, which are Constantinople and this town. Until very lately, almost the entire crop of silk came for sale to Smyrna, but at present the most considerable part is sent to Constantinople, where the price is higher; we have therefore here an advantage, not only in price, but also in our manner of packing, which fetches 5 or 6 per cent. more in England than if packed in the capital. Silk is mostly a ready money article, though it sometimes may be had in small quantities at a short credit; or half cash and half 1 or 2 couriers: it is also now and then given in barter. Annual average produce, 2,500 bales, or about 480,000 lbs.*

Opium, in point of value, and as an article of speculation, hardly gives way to silk; but as it is largely shipped by Americans, and sent in smaller quantities to Holland, and the south of Europe, it is subject to much competition and variation of price, although we have invariably observed that the opening price of the new crop is always the lowest, which, however, is in some measure counterbalanced by the decrease in weight which occurs by keeping. This is also a cash article, and indeed subject to the same conditions as purchasing or bartering for silk; it nevertheless has one inferiority, which the silk is not liable to—namely, a difference in the quality of the crops: last year, for instance, opium was of a very bad kind, and hardly saleable in England; this year, though small, it is fine. On the Continent and in America, the small sort is preferred to the larger sized. We observe that, in England, the prices of opium fluctuate considerably; but we are not aware that, by holding it, any loss has ever happened,—another reason why a wealthy man only should embark in the Turkey trade. It would be impossible, or at least difficult, and attended with much expense, to obtain a monopoly of the opium crop, as it is produced through some thousands of individuals, each one (and they are all poor) adding his produce; and when collected in sufficient quantities, it is brought to market by the natives, having each of them 1 or 2 baskets for sale. What might be done is this:—Send a person to the place of growth with ready money to purchase a certain but limited quantity, and which he can do easily, if not hurried, to the extent of 50, or even 100 baskets, and upon terms of advantage, from the simple fact that the collectors of it prefer to receive a remunerating price on the spot of growth, rather than perform a long and expensive journey, with the chance of not finding purchasers immediately. Opium is produced at sundry places in the interior, of from 10 to 30 days' distance hence; but that grown at Caissar, about 600 miles from Smyrna, is the most esteemed, from its cleanness and good quality; it comes to market in June, and finishes about December or January. Annual average produce, 3,000 baskets, or about 400,000 lbs.*

Drugs and Gums form one of our principal branches of commerce, and is almost entirely in the hands of the Jews. At present, gum Arabic and mastic are exceedingly scarce; and it is only when that is the case, or the demand for exportation is very brisk, that much variation exists in the price of drugs. Trieste, and occasionally America, consume a considerable portion of gums, but the largest quantity goes to the English markets. Barterers are often effected through this medium; but it is not attended with much advantage, as they are conducted by a race who never lose in any transaction they undertake. It is impossible to ascertain the quantities of drugs received in Smyrna, and equally so to know the quantity remaining, as they are dispersed all over the city, and consumed so irregularly in Europe, as bids defiance to all regular calculation.

Sponges have been, and still are, an article of considerable moment, particularly for the English markets, and are found about the islands in the Grecian Archipelago, brought here, and cleaned for exportation. They vary in price from 6 to 90 piastres per oke, according to fineness and quality: the better sort alone answers for speculation, and which, it would appear, from the considerable quantity sent to London, turns to good account. The produce depends so entirely on chance, that no correct estimate of the yearly quantity can be formed; however, we are seldom in want of a moderate supply.

Galls are shipped in considerable quantities for the English, German, and French markets; the two former, however, being the largest consumers: for England, the blue galls are those principally sent; though the market there for their sale being dull and low, prices with us, moderate as they are compared to last year, will still further decline, should a demand not spring up, of which there is no appearance. Annual produce of all sorts, 5,500 kintals.

Cotton Wool, of which we have several qualities, is chiefly exported to Trieste and Marseilles. The demand at present for all kinds of this produce is extremely limited, and we expect that prices will go lower with us before long, when perhaps something good might be done in Souhougas to England, which generally receives only that quality. Barterers are made to a large extent in cottons. Annual average produce of all sorts, 60,000 kintals.

Falonia employs more British shipping for full cargoes of only one article, than any other species of produce, if we except, perhaps, fruit: it is also sent to Dublin and to the German markets in considerable quantities. Almost any supply can be obtained, and it is shipped generally near the places of growth, which are numerous, although there is never any want of it in the Smyrna market. It is much resorted to as a means of making barter, which perhaps are as easily effected, upon pretty fair terms, as with any other article of produce. The annual produce is sufficient to meet the wants of all Europe. It can be had to any extent, and at all periods.

Fruit.—This is an article which occupies the attention of all Smyrna, more or less, and produces, during the season, great interest and activity. Figs come to market early in September, and raisins are ready for shipping early in October: the former are procurable only at Smyrna, where the latter in all their qualities may be procured; but the shipments are generally made at Csmé, Vouria, Carabourna, Usbeck, &c., from which ports the name of the raisin takes its origin. Large sums are frequently gained in fruit speculations; and when the demand in England is brisk, and the prices and quality fair with us, it very seldom happens, indeed, that any loss is sustained: it is, however, attended with risk; must be shipped dry; and ought only to go in a very fast, sound vessel, as much depends upon a first, or at least an early arrival, which obtains in general a higher price than the later arrivals. The quantity produced is always uncertain.

For the remaining articles of exports hence, we refer you to our price current. Carpets are produced to the extent of about 80,000 to 100,000 pikes a year. Oil (olive), to the amount of 10 to 15 middling sized cargoes, from the islands of Mytilene, Candia, &c., is generally shipped for America and France; seldom

* Since the period when this paper was drawn up, a considerable change has taken place in the silk and opium trade of Smyrna. A few years ago, the Turkish government so far receded from the free principles which pervaded its commercial policy—(see *CONSTANTINOPLE*),—as to attempt the establishment of monopolies of silk and opium; by compelling the producers of these articles to sell them at a fixed and low price to the government agents; by whom they were afterwards disposed of at an advanced rate. But a plan of this sort could not be carried into effect in such a country as Turkey; and had, consequently, to be abandoned. A duty of nearly 10 per cent. has, however, been imposed on the silk and opium exported to foreign parts. And in order to facilitate the collection of this duty, the whole of these articles intended for exportation are required to be brought to Constantinople! This regulation has done considerable injury to Smyrna; but it seems so very absurd, and its enforcement is so obviously impossible, that it is not likely it will be maintained for any considerable period.—(*Erquhart on Turkey and its Resources*, p. 189.)

for England : the season commences in September, but the crops of olives fluctuate exceedingly in point of quantity ; hence arise dear and cheap years : last year was a high one, and it is expected to be lower this. Copper, old and new, may be computed at 30,000 oke, which are generally bought up as soon as offered, for Europe. Hare skins are computed at 350,000 to 400,000 annually. Madder roots at 12,000 kintals. Pelicans, at 12,000 to 15,000 cheques. Goats' wool of all kinds may be calculated per year at 45,000 to 50,000 cheques ; sheep's wool at 23,000 kintals. Wax (yellow), 1,600 kintals.

We have now finished our general remarks on the exports and imports of the place ; and in concluding them, we beg to state that, upon an average of all of them, (with the exception of fruit from, and of iron to, Turkey,) the selling charges may (excluding *del credere* commission) be calculated at about 12 per cent., and on purchasing at about 8 per cent.

SNUFF (Ger. *Schnupftaback* ; Fr. *Tabac en poudre* ; It. *Tabacco da naso* ; Sp. *Tabaco de polvo* ; Rus. *Nosovoi tabak*), a powder in very general use as an errhine. Tobacco is the usual basis of snuff ; but small quantities of other articles are frequently added to it, to vary its pungency, flavour, scent, &c. Though substantially the same, the kinds and names of snuff are infinite, and are perpetually changing. There are, however, 3 principal sorts : the first, granulated ; the second, an impalpable powder ; and the third, the bran, or coarse part remaining after sifting the second sort. Unless taken in excess, no bad consequences result from its use.

Dealers in tobacco and snuff are obliged to take out a licence, renewable annually, which costs 5s. They are also obliged to enter their premises, and have their names written in large legible characters over their door, or on some conspicuous part of their house, under a penalty of 50*l*. The dyeing of snuff with ochre, amber, or any other colouring matter except water tinged with colour, is prohibited under a penalty of 100*l*. ; and its intermixture with fustic, yellow ebony, touchwood, sand, dirt, leaves, &c. is prohibited under a penalty of 100*l*. and the forfeiture of the article. — (1 & 2 *Geo.* 4. c. 109.) If snuff be found to contain 4 per cent. of any substance, not being tobacco, and other than water only, or water tinged with colour, or flavoured only, such snuff shall be deemed adulterated, and shall be forfeited, and the parties subjected to a penalty of 100*l*. over and above all other penalties and forfeitures. — (*Ib.*) No quantity of snuff weighing above 2 lbs. shall be removed by land or water without a permit. — (29 *Geo.* 3. c. 68.) — (See **TOBACCO**.)

SNUFF-BOXES are made of every variety of pattern, and of an endless variety of materials. We only mention them here for the purpose of giving the following details, not to be met with in any other publication, with respect to the manufacture of Laureekirk or Cumnock boxes. These are made of wood, admirably jointed, painted, and varnished.

These beautiful boxes were first manufactured at the village of Laureekirk, in Kincardineshire, about 40 years since. The original inventor was a cripple hardly possessed of the power of locomotion. In place of curtains, his bed (rather a curious workshop) was surrounded with benches and receptacles for tools, in the contrivance and use of which he discovered the utmost ingenuity. The inventor, instead of taking out a patent, confided his secret to a joiner in the same village, who in a few years amassed a considerable property ; while the other died, as he had lived, in the greatest poverty. The great difficulty of the manufacture lies in the formation of the hinge, which, in a genuine box, is so delicately made as hardly to be visible. Peculiar, or, as they are called, secret tools, are required in its formation ; and though they must have been improved by time and experience, the mystery attached to their preparation is still so studiously kept up, that the workmen employed in one shop are rigorously debarred from having any communication with those employed in another.

About the beginning of this century, an ingenious individual belonging to the village of Cumnock, in Ayrshire, of the name of Crawford, having seen one of the Laureekirk snuff-boxes, succeeded, after various attempts, by the assistance of a watchmaker of the same village, who made the tools, in producing a similar box ; and by his success, not only laid the foundation of his own fortune, but greatly enriched his native parish and province. For a while, the Laureekirk boxes were most in demand ; but Mr. Crawford and his neighbours in Cumnock not only copied the art, but so improved and perfected it, that, in a very few years, for every box made in the north there were, probably, 20 made in the south. In 1826, the Cumnock trade was divided amongst 8 master manufacturers, who employed considerably more than 100 persons. The demand at that time equalled the supply, and it was calculated that the trade yielded from 7,000*l*. to 8,000*l*. annually, — a large product for a manufacture seemingly so insignificant, and consisting almost exclusively of the wages of labour. Plane is the wood in common use, and the cost of the wood in an ordinary sized box does not exceed 1*d*. ; the paints and varnish are rated at 2*d*. ; and though something is lost by selecting timber of the finest colour, the whole expense of the raw material falls considerably short of $\frac{1}{3}$ per cent. on the return it yields !

Snuff-box, like pin making, admits of subdivision of labour ; and in all workshops of any size 3 classes of persons are employed, — painters, polishers, and joiners. At the period alluded to, an industrious joiner earned from 30*s*. to 40*s*. weekly, a painter from 45*s*. to 5*l*., and a polisher considerably less than either. When Mr. Crawford first commenced business, he obtained almost any price he chose to ask ; and many instances occurred, in which ordinary sized snuff-boxes sold at 2*l*. 12*s*. 6*d*., and ladies' work-boxes at 25*l*. But as the trade increased, it became necessary to employ apprentices, who first became journeymen and then masters ; and such have been the effects of improvement and competition, that articles such as are specified above may now be obtained at the respective prices of *six* and *twenty-five shillings*. While the joiner's part of the art has remained pretty stationary, that of the painter has been gradually improving. By means of the *Pentagraph*, which is much employed, the largest engravings are reduced to the size most convenient for the workman, without injuring the prints in the slightest degree ; and hence a snuff-box manufacturer, like a Dunfermline weaver, can work to order by exhibiting on wood his employer's coat of arms, or, in short, any object he may fancy within the range of the pictorial art. Some of the painters display considerable talent, and as often as they choose to put forth their strength, produce box-lids, which are really worthy of being preserved as pictures. At first, nearly the whole subjects chosen as ornaments, were taken from Burns's poems ; and there can be no doubt, that the "Cotter's Saturday Night," "Tam O'Shanter," "Willie brewed a peck o' maut," &c. &c., have penetrated in this form into every quarter of the habitable globe. Now, however, the artists of Cumnock take a wider range ; the studios of Wilkie, and other artists, have been laid under contribution ; landscapes are as often met with as figures ; and there is scarcely a celebrated scene in the country that is not pictured forth more or less perfectly on the lid of a Cumnock snuff-box. A few years ago, the art in question was much affected by the long-continued depression of the weaving business ; so much so, that many left it for some other employment ; and some of those who emigrated, having made a good deal of money, instead of being cooped up in a workshop, are now thriving proprietors in Upper Canada. But after a brief interval the trade rallied ; and though prices are low, it is now more flourishing than ever. In Cumnock, the number of hands has increased considerably, and in Mauchline there is one workshop so extensive that it may almost be compared to a cotton mill or factory. In other quarters the trade is extending, such

as Helensburgh near Greenock, Catrine, Maxwelltown, Dumfries, &c. The principal markets for the snuff-boxes are London, Liverpool, Glasgow, and Edinburgh. At one time, large lots of boxes were exported to South America, and probably are so at present. Cumnock, in a word, in regard to its staple manufacture, is in that palmy state so well described by a modern writer:—"The condition most favourable to population is that of a laborious frugal people ministering to the demands of opulent neighbours; because this situation, while it leaves them every advantage of luxury, exempts them from the evils which accompany its admission into a country. Of the different kinds of luxury, those are the most innocent which afford employment to the greatest number of artists and manufacturers; or those in which the price of the work bears the greatest proportion to that of the raw material." Some very wretched imitations of Cumnock boxes have been produced in different parts of England; but they can deceive no one who ever saw a genuine box. The hinge, as well as the finishing, is clumsy in the extreme.

* * * We are indebted for this curious and instructive article to our esteemed friend, John McDiarmid, Esq., Editor of the *Dumfries Courier*, one of the best provincial papers in the empire.

SOAP (Ger. *Seife*; Fr. *Savon*; It. *Sapone*; Sp. *Jabon*; Rus. *Mýlo*; Lat. *Sapo*). The soap met with in commerce is generally divided into 2 sorts, *hard* and *soft*: the former is made of soda and tallow or oil, and the latter of potash and similar oily matters. Soap made of tallow and soda has a whitish colour, and is, therefore, sometimes denominated *white* soap; but it is usual for soap makers, in order to lower the price of the article, to mix a considerable portion of rosin with the tallow; this mixture forms the common *yellow* soap of this country. Soap made of tallow, &c. and potash does not assume a solid form; its consistence is never greater than that of hog's lard. The properties of soft soap as a detergent do not differ materially from those of hard soap, but it is not nearly so convenient for use. The alkali employed by the ancient Gauls and Germans in the formation of soap was potash; hence we see why it was described by the Romans as an unguent. The oil employed for making soft soap in this country is whale oil. A little tallow is also added, which, by a peculiar management, is dispersed through the soap in fine white spots. The soap made in countries which produce olive oil, as the south of France, Italy, and Spain, is preferable to the soap of this country, which is usually manufactured from grease, tallow, &c. — (*Thomson's Chemistry*.)

London, Liverpool, Newcastle, Bristol, Brentford, Frodsham, and Glasgow, are the great seats of the British soap manufacture. Thus, of 119,379,057 lbs. of hard soap made in Great Britain in 1832, London furnished 29,627,735 lbs.; Liverpool, 28,878,466 lbs.; Newcastle, 6,982,049 lbs.; Bristol, 6,861,167 lbs.; Brentford, 5,573,074 lbs.; Frodsham, 4,933,335 lbs.; and Glasgow, 4,607,354 lbs. Of 10,556,763 lbs. of soft soap, made during the same year, Liverpool furnished above $\frac{1}{2}$; the rest being supplied by Glasgow, London, Bristol, Hull, &c.

The use of soap as a detergent is well known: it may, in fact, be considered as a necessary of life. Its consumption in most civilised countries is immense. Pliny informs us, that soap was first invented by the Gauls; that it was composed of tallow and ashes; and that the German soap was reckoned the best. — (Lib. xviii. c. 51.)

Regulations as to the Manufacture.—Soap is charged with a duty of excise, and its manufacture is consequently regulated by several provisions intended for the protection of the revenue. No person is permitted to make soap within the limits of the head office of excise in London, unless he occupy a tenement of 104, and is assessed to and pays the parish rates; nor elsewhere, unless he is assessed and pays to church and poor; and every soap-maker is required to take out a licence to be renewed annually, for which he is to pay 4l.; but persons in partnership require only 1 licence for 1 house. They are also required to provide sufficient wooden covers for all coppers and other utensils wherein they boil hard soap: which covers are to be sealed and sealed down by the officer whenever any soap is left in the same; and the furnace door, cover, and the ash-hole door is also to be locked and sealed at all times except when the same is at work. Regulations are also made for preventing the use of any private conveyances or pipes; empowering officers to break up the ground to search for the same, and cut them up if found; if not, the officers must make compensation for the injury done. On cleansing or taking soap out of the coppers, the makers are required to give notice; and certain spaces of time are limited for completing the cleansing and taking out of the soap, according to the kind of soap, and the number of frames into which the same is put. Coppers and other utensils must be cleansed once in every month. The frames used in making hard soap, for cleansing and putting the same into when taken out of the vessel when boiled and prepared, must be either square or oblong, and the bottom, sides, and end of such frames are to be 2 inches thick and not more than 15 inches long, and 15 inches broad, the same being marked and numbered at the expense of the soap-maker. The making of

yellow or mottled soap is regulated by 59 Geo. 3. c. 90., by which every maker is required, as soon as the same is cleaned or taken out of the vessel in which it has been made, to add and put into the copper or vessel all the foil and skimmings taken out of the same, and also grease, in the proportion of at least 10 cwt. of grease for every ton of yellow or mottled soap which the copper or vessel shall be by the officer computed to hold or make, and immediately renet such grease in the presence of the officer of excise. No lees fit for the making of soap may be manufactured for sale; nor may any barilla be ground or pounded for sale; nor when ground or pounded be sold exceeding the weight of 28 lbs. of such barilla at one time. In the removal of soap exceeding the quantity of 28 lbs., the word "soap" must be painted or marked in large letters of at least 2 inches long on every chest, basket, box, cask, or package containing the same; and the same word must be painted or marked in letters of at least 3 inches in length on every wagon, cart, or other carriage carrying more than 28 lbs., in some conspicuous and open part of the same, unless it is carried by a person being a known and public or common carrier of goods and merchandise from one part to another; officers may inspect the soap and the accompanying certificate. Soap-makers are also to keep books, and enter therein all quantities of soap sold exceeding 28 lbs. Every barrel of soap must contain 256 lbs. avoirdupois; every $\frac{1}{2}$ barrel 128 lbs.; every irkin 64 lbs.; and every $\frac{1}{4}$ irkin 32 lbs.; besides the weight and tare of the cask. Soap-makers must keep scales and weights, and assist the excise officers in the use of them, and must weigh their materials for making soap before the officer, on penalty of 50l. — (*Chitty's Com. Law*, vol. ii. pp. 418–120.)

Exports of Soap and Candles.—We annually export from 10,000,000 to 12,000,000 lbs. of soap and candles, worth from 250,000l. to 300,000l. Nearly $\frac{2}{3}$ are exported to the British West Indian and American colonies. A very large quantity is also exported to Brazil.

Oppressiveness of the Duty.—The direct duty charged on hard soap, which is by far the most extensively used, amounted, till June, 1833, to 3d. per lb. or 28s. per cwt., while the price of soap rarely exceeded 6d. per lb. or 56s. per cwt., so that the direct duty was fully 160 per cent. But besides this enormous duty, the substances of which soap is made, viz. tallow, barilla, and turpentine, or rosin, were respectively charged with duties of 3s. 4d., 2s., and 4s. 4d. a cwt.; and taking these indirect taxes into account, it may be truly stated that soap was taxed from 120 to 130 per cent. *ad valorem*! The imposition of so exorbitant a duty on an article that is indispensable to the prosecution of many branches of manufacture, and to the comfort and cleanliness of all orders of persons, was in the last degree inexpedient. There were good reasons, too, for thinking that in consequence of the encouragement which this excessive duty gave to smuggling and fraud, the revenue derived from it was not much greater than it will be now that it is reduced to $\frac{1}{2}$ its former amount. During the 5 years ending with 1832, the consumption of duty-paid soap was nearly stationary; though there can be no doubt, from the increase of manufactures and population during that period, that it would have been very considerably extended, but for the increase of smuggling. This baneful practice is facilitated by the total exemption which Ireland enjoys from this duty; for it not unfrequently happens that the soap made in this country, and sent to Ireland under a drawback, is again clandestinely introduced into Great Britain. It is, perhaps, needless to say that nothing but the effectual

reduction of the duty could put a stop to the smuggling and fraud that has been so generally practised. So long as the profit to be made by breaking the law was so high as 120 or 130 per cent., so long was it sure to be broken, in despite of the multiplication of penalties and the utmost activity and vigilance of the officers. But now that the duty has been reduced $\frac{1}{2}$, the temptation to smuggle will be most materially diminished. And it may be fairly concluded that the increased consumption that will, no doubt, follow this reduction of duty, will go far to render the low duty as productive as the higher one; so that the advantages resulting from the diminished temptation to smuggling and fraud, and the influence of the reduced price of the article in facilitating manufacturing industry, and in promoting habits of cleanliness, will, most probably, be obtained without any considerable loss of revenue.

The entire repeal of the soap duty would be a popular measure; but, seeing that a large amount of revenue must be raised, and that those taxes only are productive which affect all classes of the community, we should not be disposed to recommend such a measure. It is not the tax itself, but the oppressive extent to which it was carried that made it objectionable. Instead of proposing its repeal, we think it ought to be extended to Ireland. The exemption of one part of the empire from a duty of this sort imposed on another part, is contrary to all principle, and is fraught with the most pernicious results. It will be impossible to get rid of smuggling so long as this unjust distinction is suffered to exist. Were the duty extended to Ireland, the necessity for granting drawbacks on the soap exported to it, and of laying countervailing duties on that imported from it, would, of course, fall to the ground. And we feel confident that, though a still further deduction were made from the rate of duty, its productiveness would not, under such circumstances, be impaired even in England.

I. Account of the Quantity of *Hard and Soft Soap* charged with Excise Duty in Great Britain, in each of the Eleven Years ending 5th of January, 1833; the Rates of Duty; and the *Gross and Nett Produce of the Duties*. — (Compiled from different *Parliamentary Papers*.)

SODA. See ALKALI.

SOUTH SEA DUTIES. The act of the 9 Ann. c. 21., establishing the South Sea Company, conveyed to them the exclusive privilege of trading to the Pacific Ocean, and along the east coast of America, from the Orinoco to Cape Horn.

This privilege was taken away by the 47 Geo. 3. c. 23.; and in order to raise a guarantee fund for the indemnification of the Company, a duty of 2 per cent. *ad valorem* was imposed by the 55 Geo. 3. c. 57. on all goods (with the exception of those from Brazil and Dutch Surinam*; and with the exception of blubber, oil, &c. of whales, or fish caught by the crews of British or Irish ships) imported from within the aforesaid limits. A duty of 1s. 6d. per ton was also imposed on all vessels (except in ballast or importing the produce of the fishery of British subjects) entering inwards or clearing outwards from or to places within the said limits. The duties are to cease when the guarantee fund is completed.

SOY, a species of sauce prepared in China and Japan from a small bean, the produce of the *Dolichos soja*. It is eaten with fish and other articles. It should be chosen of a good flavour, not too salt nor too sweet, of a good thick consistence, a brown colour, and clear; when shaken in a glass, it should leave a coat on the surface, of a bright yellowish brown colour; if it do not, it is of an inferior kind, and should be rejected. Japan soy is deemed superior to the Chinese. It is worth, in bond, from 6s. to 7s. a gallon. It is believed to be extensively counterfeited. — (*Milburn's Orient. Com.*)

SPELTER, a name frequently given to ZINC; which see.

SPERMACETI (Ger. *Wallrath*; Fr. *Blanc de Baleine*, *Sperme de Baleine*; It. *Spermaceti*; Sp. *Esperma de Ballena*; Rus. *Spermazet*), a product obtained from the

* The provinces of the Rio de la Plata have since been added. — (*Treas. Order*, 12th of March, 1823.)

brain of the *physeter macrocephalus*, a species of whale inhabiting the Southern Ocean. The brain being dug out from the cavity of the head, the oil is separated from it by dripping. The residue is crude spermaceti, of which an ordinary sized whale will yield 12 barrels. After being brought to England, it is purified. It then concretes into a white, crystallised, brittle, semitransparent, unctuous substance, nearly inodorous and insipid. On being cut into small pieces it assumes a flaky aspect. It is very heavy; its specific gravity being 9.433. It is used in the manufacture of candles, in medicine, &c.

SPICES (Ger. *Spezereyen*; Du. *Speeryen*; Fr. *Epiceries*, *Epices*; It. *Spezie*, *Spezierie*; Sp. *Especias*, *Especerías*; Port. *Especiaria*; Rus. *Pränie korenja*). Under this denomination are included all those vegetable productions which are fragrant to the smell and pungent to the palate; such as cloves, ginger, nutmegs, allspice, &c. These will be found under their proper heads.

SPIRIT OF WINE. See **ALCOHOL**.

SPIRITS. All inflammable liquors obtained by distillation, as brandy, rum, geneva, whisky, gin, &c., are comprised under this designation. The term *British spirits* is applied indiscriminately to the various sorts of spirits manufactured in Great Britain and Ireland. Of these, gin and whisky are by far the most important.

The manufacture of spirits is placed under the *surveillance* of the excise, and a very large revenue is obtained from it. The act 6 Geo. 4. c. 80. lays down the regulations to be followed by the distillers in the manufacture, and by the officers in charging the duties. This act is of great length, having no fewer than 151 clauses; it is, besides, exceedingly complicated, and the penalties in it amount to many thousand pounds. It would, therefore, be to no purpose to attempt giving any abstract of it in this place. Every one carrying on the business of distillation must have the act in his possession, and must be practically acquainted with its operation.

1. *Spirit Duties.* *Consumption of British Spirits in Great Britain and Ireland.* — There are, perhaps, no better subjects for taxation than spirituous and fermented liquors. They are essentially luxuries; and while moderate duties on them are, in consequence of their being very generally used, exceedingly productive, the increase of price which they occasion has a tendency to lessen their consumption by the poor, to whom, when taken in excess, they are exceedingly pernicious. Few governments, however, have been satisfied with imposing moderate duties on spirits; but partly in the view of increasing the revenue, and partly in the view of placing them beyond the reach of the lower classes, have almost invariably loaded them with such oppressively high duties as have entirely defeated both objects. The imposition of such duties does not take away the appetite for spirits; and as no vigilance of the officers or severity of the laws has been found sufficient to secure a monopoly of the market to the legal distillers, the real effect of the high duties has been to throw the supply of a large proportion of the demand into the hands of the illicit distiller, and to superadd the atrocities of the smuggler to the idleness and dissipation of the drunkard.

During the latter part of the reign of George I., and the earlier part of that of George II., gin drinking was exceedingly prevalent; and the cheapness of ardent spirits, and the multiplication of public houses, were denounced from the pulpit, and in the presentments of grand juries, as pregnant with the most destructive consequences to the health and morals of the community. At length, ministers determined to make a vigorous effort to put a stop to the further use of spirituous liquors, except as a cordial or medicine. For this purpose, an act was passed in 1736, the history and effects of which deserve to be studied by all who are clamorous for an increase of the duties on spirits. Its preamble is to this effect: — “Whereas the drinking of spirituous liquors, or strong water, is become very common, especially among people of lower and inferior rank, the constant and excessive use of which tends greatly to the destruction of their health, rendering them unfit for useful labour and business, debauching their morals, and inciting them to perpetrate all vices; and the ill consequences of the excessive use of such liquors are not confined to the present generation, but extend to future ages, and tend to the destruction and ruin of this kingdom.” The enactments were such as might be expected to follow a preamble of this sort. They were not intended to repress the vice of gin-drinking, but to root it out altogether. To accomplish this, a duty of *twenty shillings* a gallon was laid on spirits, exclusive of a heavy licence duty on retailers. Extraordinary encouragements were at the same time held out to informers, and a fine of 100*l.* was ordered to be rigorously exacted from those who, were it even through inadvertency, should vend the smallest quantity of spirits which had not paid the full duty. Here was an act which might, one should think, have satisfied the bitterest enemy of gin. But instead of the anticipated effects, it produced those directly opposite. The respectable dealers withdrew from a trade proscribed by the legislature; so that the spirit business fell almost entirely into the hands of the lowest and most profligate characters, who, as they had nothing to lose, were not deterred by penalties from breaking through all its provisions. The populace having in this, as in all similar

cases, espoused the cause of the smugglers and unlicensed dealers, the officers of the revenue were openly assaulted in the streets of London and other great towns; informers were hunted down like wild beasts; and drunkenness, disorders, and crimes, increased with a frightful rapidity. "Within 2 years of the passing of the act," says Tindal, "it had become *odious and contemptible*, and policy as well as humanity forced the commissioners of excise to mitigate its penalties." — (*Continuation of Rapin*, vol. viii. p. 358. ed. 1759.) The same historian mentions (vol. viii. p. 390.), that during the 2 years in question, no fewer than 12,000 persons were convicted of offences connected with the sale of spirits. But no exertion on the part of the revenue officers and magistrates could stem the torrent of smuggling. According to a statement made by the Earl of Cholmondeley, in the House of Lords — (*Timberland's Debates in the House of Lords*, vol. viii. p. 388.), it appears, that at the very moment when the sale of spirits was declared to be illegal, and every possible exertion made to suppress it, upwards of SEVEN MILLIONS of gallons were annually consumed in London, and other parts immediately adjacent! Under such circumstances, government had but one course to follow — to give up the unequal struggle. In 1742, the high prohibitory duties were accordingly repealed, and such moderate duties imposed, as were calculated to increase the revenue, by increasing the consumption of legally distilled spirits. The bill for this purpose was vehemently opposed in the House of Lords by most of the bishops, and many other peers, who exhausted all their rhetoric in depicting the mischievous consequences that would result from a toleration of the practice of gin-drinking. To these declamations it was unanswerably replied, that whatever the evils of the practice might be, it was impossible to repress them by prohibitory enactments; and that the attempts to do so had been productive of far more mischief than had ever resulted, or could be expected to result, from the greatest abuse of spirits. The consequences of the change were highly beneficial. An instant stop was put to smuggling; and if the vice of drunkenness was not materially diminished, it has never been stated that it was increased.

But it is unnecessary to go back to the reign of George II. for proofs of the impotency of high duties to take away the taste for such an article, or to lessen its consumption. The occurrences that took place in the late reign, though they would seem to be already forgotten, are equally decisive as to this question.

Duties in Ireland. — Perhaps no country has suffered more from the excessive height to which duties on spirits have been carried than Ireland. If heavy taxes, enforced by severe fiscal regulations, could make a people sober and industrious, the Irish would be the most so of any on the face of the earth. In order to make the possessors of property join heartily in suppressing illicit distillation, the novel expedient was here resorted to, of imposing a heavy fine on every parish, town land, manor land, or lordship, in which an unlicensed still was found; while the unfortunate wretches found working it were subjected to *transportation for seven years*. But instead of putting down illicit distillation, these unheard-of severities rendered it universal, and filled the country with bloodshed, and even rebellion. Is it stated by the Rev. Mr. Chichester, in his valuable pamphlet on the *Irish Distillery Laues*, published in 1818, that "the Irish system seemed to have been formed in order to perpetuate smuggling and anarchy. It has culled the evils of both savage and civilised life, and rejected all the advantages which they contain. The calamities of civilised warfare are, in general, inferior to those produced by the Irish distillery laws; and I doubt whether any nation of modern Europe, which is not in a state of actual revolution, can furnish instances of legal cruelty commensurate to those which I have represented." — (Pp. 92—107.)

These statements are borne out to the fullest extent by the official details in the *Reports of the Revenue Commissioners*. In 1811, say the commissioners (*Fifth Report*, p. 19.), when the duty on spirits was 2s. 6d. a gallon, duty was paid in Ireland on 6,500,361 gallons (Irish measure); whereas, in 1822, when the duty was 5s. 6d., only 2,950,647 gallons were brought to the charge. The commissioners estimate, that the annual consumption of spirits in Ireland was at this very period not less than TEN MILLIONS of gallons; and, as scarcely three millions paid duty, it followed, that seven millions were illegally supplied; and "taking one million of gallons as the quantity fraudulently furnished for consumption by the licensed distillers, the produce of the unlicensed stills may be estimated at *six millions of gallons*." — (*Ib.* p. 8.) Now, it is material to keep in mind, that this vast amount of smuggling was carried on in the teeth of the above barbarous statutes, and in despite of the utmost exertions of the police and military to prevent it; the only result being the exasperation of the populace, and the perpetration of revolting atrocities both by them and the military. "In Ireland," say the commissioners, "it will appear, from the evidence annexed to this Report, that parts of the country have been absolutely disorganised, and placed in opposition not only to the civil authority, but to the military force of the government. The profits to be obtained from the evasion of the law have been such as to encourage nu-

merous individuals to persevere in these desperate pursuits, notwithstanding the risk of property and life with which they have been attended."

To put an end to such evils, the commissioners recommended that the duty on spirits should be reduced from 5s. 6d. to 2s. the wine gallon (2s. 4d. the Imperial gallon), and government wisely consented to act upon this recommendation. In 1823, the duties were accordingly reduced; and the following official account will show what has been the result of this measure:—

An Account of the Quantities of Spirits made in Ireland, which have paid the Duties of Excise for Home Consumption; stating the Rate of Duty paid, and also the Nett Amount of Revenue received in each Year, since the Year 1820.—(*Part. Paper*, No. 340. Sess. 1829, No. 61. Sess. 1831, &c.)

Years.	Number of Gallons.	Rate per Gallon.	Nett Amount of Revenue.

1833	8,168,596	Ditto.	1,360,769	6	8

It may appear, on a superficial view of this Table, as if the consumption of spirits in Ireland had been nearly trebled since 1823; but, in point of fact, it has not been in any degree increased. The reduction of the duties substituted legal for illicit distillation, and freed the country from the perjuries and other atrocities that grew out of the previous system; but it would be wholly erroneous to say that it increased drunkenness. We have already seen that the commissioners, who had the best means of obtaining accurate information, estimated the consumption of spirits in Ireland, in 1823, at TEN millions of gallons; and it was not more in 1828 and 1829. The measure was, therefore, in every point of view most successful; and it is much to be regretted that it was interfered with in 1830, by raising the duties from 2s. 10d. to 3s. 4d. The above Table shows that this increase has materially diminished the quantity of spirits brought to the charge. We do not, however, believe that it has occasioned any diminution of consumption. The truth is, that 2s. 10d. was as high a duty as the article would bear; and the additional 6d. has again thrown the balance in favour of the smuggler, and led to a partial revival of illicit distillation. The evidence taken before the commissioners of excise inquiry has completely established this fact; and sound policy would, therefore, suggest that the duty should be once more reduced to 2s. 10d. At all events, we trust that no senseless, though well-meant clamour about the prevalence of drunkenness, and no pecuniary necessity, will ever tempt ministers to add further to the duties on spirits. Such a measure would not bring a shilling into the public treasury, nor cause any diminution of the vice of drinking; it would merely add smuggling and its attendant evils to the other disorders with which Ireland is afflicted.

Duties in Scotland.—The experience of Scotland is hardly less decisive as to this question. The exorbitancy of the duties produced nearly the same effects there as in Ireland. Mr. John Hay Forbes, formerly sheriff-depute of Perthshire, now one of the Lords of Session, stated in evidence before the commissioners, that, according to the best information he could obtain, the quantity of illegally distilled spirits annually produced in the Highlands could not amount to less than two millions of gallons. In corroboration of this he stated, that, in 1821, only 298,138 gallons were brought to the charge in the Highlands; and of these, 254,000 gallons were permitted to the Lowlands, leaving only 44,000 gallons for the consumption of the whole country;—a supply which, we are well assured, would hardly be sufficient for the demand of 2 moderately populous parishes. In a letter of Captain Munro of Teaninich to the commissioners, it is stated that, "at Tain, where there are upwards of 20 licensed public houses, not one gallon had been permitted from the legal distilleries for upwards of twelve months," though a small quantity of smuggled whisky had been purchased at the excise sales, to give a colour of legality to the trade. The same gentleman thus expresses himself in another part of his letter:—"The moral effects of this baneful trade of smuggling on the lower classes is most conspicuous, and increasing in an alarming degree, as evidenced by the multiplicity of crimes, and by a degree of insubordination formerly little known in this part of the country. In several districts, such as Strathconon, Strathcarron, &c., the excise officers are now often deforced, and dare not attempt to do their duty; and smuggled whisky is often carried to market by smugglers escorted by armed men, in defiance of the laws. In short, the Irish system is making progress in the Highlands of Scotland."

To arrest the progress of demoralisation, government, pursuant to the judicious advice of the commissioners, reduced the duties on Scotch to the same level as those on Irish whisky; and the consequences were equally salutary. The subjoined official statement shows the effect of the reduction of the duty in 1823, and of its subsequent increase in 1830:—

An Account of the Quantities of Spirits made in Scotland, which have paid the Duties of Excise for Home Consumption; stating the Rate of Duty paid, and also the Nett Amount of Revenue received in each Year, since the Year 1820. — (*Parl. Paper*, No. 340. Sess. 1829, No. 61. Sess. 1831, &c.)

Years.	Number of Gallons.	Rate per Gallon.	Nett Amount of Revenue.		
	<i>Imperial Measure.</i>		£	s.	d.
1821	2,229,435	5s. 6d. per English wine gallon.	727,650	19	7
1822	2,079,556	Ditto.	691,136	6	6
1823	2,252,728	{ from 10th of Oct. 1823, 2s. per English wine gallon, Ditto; } 2s. 10d. per Imperial gallon.	536,654	17	8
1824	4,350,301	Ditto.	520,624	18	4
1825	5,981,550	Ditto.	682,848	11	1

1829	5,777,280	Ditto.	818,448	0	0
1830	6,007,631	2s. 10d., 3s., and 3s. 4d. per ditto.	939,258	6	0
1831	5,700,689	3s. 4d.	950,041	4	3
1832	5,407,097	Ditto.	901,182	16	8
1833	5,988,556	Ditto.	998,051	3	3

This Table sets the impolicy of the increase of duty in 1830 in nearly as striking a point of view as it does the policy of its reduction in 1823. There is no denying the fact, that this uncalculated measure has diminished the consumption, and given a powerful stimulus to illicit distillation. We understand that the commissioners of excise inquiry mean to recommend that the duty be again reduced to 2s. 10d.; and every one, not anxious for the prevalence of smuggling, will be desirous that this recommendation should be carried into effect.

Duties in England.—Previously to the reduction of the duty on Irish and Scotch spirits, the duty on English spirits had been as high as 10s. 6d. a gallon. This high duty, and the restrictions under which the trade was placed, were productive of the worst effects. They went far to enable the distillers to fix the price of spirits, “and consequently,” (we quote the words of the commissioners) “to raise it much beyond that which was sufficient to repay, with a profit, the cost of the manufacture and the duty advanced to the Crown.” And, in proof of this, the commissioners mention, that in November, 1823, “when corn spirits might be purchased in Scotland for about 2s. 3d. a gallon, raw spirits could not be purchased in England for less than 4s. 6d. ready money, and 4s. 9d. credit, omitting, in both cases, the duty.” In consequence of this state of things, the adulteration of spirits was carried on to a great extent in England; and the large profits made by the smuggler occasioned clandestine importation in considerable quantities from Scotland and Ireland. To obviate these inconveniences, and at the same time to neutralise the powerful additional stimulus that the reduction of the duties in Scotland and Ireland would have given to smuggling, had the duties in England been continued at their former amount, the latter were reduced, in 1825, to 7s. a gallon, facilities being at the same time given to the importation of spirits from the other parts of the empire. It is of the effects of this measure that so many complaints have been made, though nothing can well be imagined more completely destitute of foundation. The commissioners estimated the consumption of British spirits in England and Wales in 1823, at 5,000,000 gallons — (*Sup. to Fifth Report*, p. 8); and it appears from the subjoined account, that it amounted, for the year ending the 5th of January, 1834, to 7,717,303 gallons; producing 2,593,989 12s. 6d. of revenue: so that, making allowance for the increase of population, and the check given to adulteration and smuggling, the increase must appear very trifling indeed; and we are warranted in affirming that the reduction of the duties has been as eminently successful in England as in either Scotland or Ireland.

Account of the Quantities of British, Colonial, and Foreign Spirits, which paid the Home Consumption Duty for England, Scotland, and Ireland, from the Year 1821 to 1832 inclusive. — (*Parl. Paper*, No. 186. Sess. 1831.)

The extraordinary increase in the consumption of brandy in 1832 is wholly ascribable to the alarm occasioned by the breaking out of the cholera, and the prevalent, but now exploded, notion that brandy and potatoes were an antidote to the disease. As soon declined to its old level; the entries for home use in 1833 not having exceeded 1,556,620 gallons.

Trade in Spirits. — No spirits made in England, Scotland, or Ireland, shall be conveyed from England to Scotland or Ireland, or from Scotland or Ireland to England, otherwise than in casks containing eighty gallons at the least, and in vessels of not less than fifty tons burden.

All persons whatsoever, not being licensed distillers, rectifiers, or compounders, having more than eighty gallons of spirits in their possession, shall be deemed dealers in spirits, and subject to the survey of the officers of excise, and to all the regulations, penalties, &c. to which such persons are liable. — (6 Geo. 4. c. 80. sect. 122.)

Dealers in British spirits are prohibited selling or having in their possession any plain British spirits, except spirits of wine, of any strength exceeding the strength of 25 per cent. above hydrometer, or of any strength below 17 per cent. under hydrometer proof; or any compounded spirits, except shrub, of any greater strength than 17 per cent. under hydrometer, under pain of forfeiting all such spirits, with the casks, &c. — Sect. 124.

Dealers in foreign and British spirits are to keep them separate, in cellars, vaults, or other places specially entered for that purpose, under a heavy penalty; and any person mixing, selling, or sending out any British spirits mixed with foreign or colonial spirits, shall forfeit 100*l.* for every such offence. — Sect. 126.

No retailer of spirits, or any other person licensed or unlicensed, shall sell or send out from his stock or custody any

quantity of spirits exceeding 1 gallon, unless the same be accompanied by a true and lawful permit, under pain of forfeiting 200*l.*; and any rectifier, compounder, or dealer in spirits, receiving the same into their stock, or allowing any one else to receive it, and any carrier, boatman, or other person, knowingly carrying the same, shall forfeit the sum of 200*l.*, with the boat, horse, cart, &c. used in the carriage. — Sect. 116.

No licence to be granted for retailing spirits within gaols, houses of correction, or workhouses for parish poor; nor are spirits to be used there, except medicinally prescribed by a regular physician, surgeon, or apothecary, or other person, knowing the same to be so committed by gaolers, &c., 100*l.* a second offence to be deemed a forfeiture of their office. — Sect. 134.

Persons *hauling spirits* to forfeit them and 100*l.*; and if the penalty be not immediately paid, they are to be committed to the house of correction for 3 months, or until paid. — (Sect. 135.) Any person is authorised to detain a hawker of spirits, and give notice to a peace officer, who is to carry the offender before a justice. — Sect. 140.

Any officer of excise, or other person employed in the excise, taking any sum of money or other reward from, or entering into any collusive agreement with, any person, to act contrary to his duty, to forfeit 500*l.*, and be incapacitated; and any person offering such reward or proposing such agreement, to forfeit 500*l.* — Sect. 115.

For the regulations as to the importation, &c. of foreign spirits, see BRANDY, GENEVA, and RUM.

SPONGE (Ger. *Schwamm*; Fr. *Eponge*; It. *Spugna*; Sp. *Esponja*), a soft, light, very porous, and compressible substance, readily imbibing water, and as readily giving it out again. It is found adhering to rocks, particularly in the Mediterranean Sea, about the islands of the Archipelago. It was formerly supposed to be a vegetable production, but is now classed among the zoöphytes; and analysed, it yields the same principles as animal substances in general. The inhabitants in several of the Greek islands have been trained from their infancy to dive for sponges. They adhere firmly to the bottom; and are not detached without a good deal of trouble. The extraordinary clearness of the water facilitates the operations of the divers. Smyrna is the great market for sponge. The price varies from 6 to 16 piastres per oke for ordinary and dirty, and from 80 to 100 piastres per oke, for fine and picked specimens. Sponge is also fished in the Red Sea. — (*Ure's Dictionary*; *Savary's Letters on Greece*, Eng. ed. p. 109.; and *private communications*.)

Sponge is used in surgery, and for a variety of purposes in the arts. The duty on it, in 1832, produced 2,097*l.* 4*s.* 1*d.*; but it has since been judiciously reduced from 2*s.* to 6*d.* per lb. when brought from a foreign country, and from 6*d.* to 1*d.* per lb. when brought from a British possession. The far greater portion comes from the former. No deduction is made from the duty on account of sand or dirt, unless it exceed 7 per cent., and then only for the excess above 7 per cent.

SQUILL (Ger. *Meerzwiebel*; Fr. *Scille*, *Oignon marin*; It. *Scilla*, *Cipolla marina*; Sp. *Cebolla albarrana*), or, as it is sometimes denominated, the *Sea onion*, is a plant with a large bulbous root, which is the only part that is used. It grows spontaneously on sandy shores in Spain, and the Levant; whence we are annually supplied with the roots. They should be chosen large, plump, fresh, and full of a clammy juice: some are of a reddish colour, and others white; but no difference is observed in the qualities of the 2 sorts. The root is very nauseous, intensely bitter, and acrimonious; much handled, it ulcerates the skin. The bulbs are brought to England, preserved fresh in sand. The acrimony of the roots, on which their virtue depends, is partially destroyed

by drying and long keeping, and is completely destroyed by exposure to heat above 212°. Squill is one of the most powerful and useful remedies in the materia medica. — (*Lewis's Mat. Med.*; *Thomson's Dispensatory*.)

STADE, a small city of Hanover, on the Schwinge, 22 miles W. by N. of Ham-
burgh, lat. 53° 36' 32" N., lon. 9° 28' 34" E. It has very little trade; and would be
quite unworthy of notice in a work of this sort, except for the circumstance that a toll
or duty, charged by the Hanoverian government on all goods imported into Ham-
burgh, whether for consumption or transit, is paid at the castle of Brunshausen, contiguous
to this town. The duty is generally about $\frac{1}{2}$ per cent. *ad valorem*. It is rated according
to a tariff; and is computed from the ship's manifest, bills of lading, cockets, &c., which
must be left at Brunshausen for that purpose. The duties are paid in Ham-
burgh; and no vessel is allowed to unload, till a receipt, subscribed by the Hanoverian authorities in
that city, be produced for the duties. We have already — (see HAMBURGH) — expressed
our surprise that an obstruction of this sort should have been tolerated for so long a
period. The duties fall heavily on certain descriptions of goods; particularly on some
manufactured articles; and are, at an average, decidedly higher than the duties charged
in Ham-
burgh. They are most objectionable, however, from their requiring many
troublesome regulations to be complied with; the unintentional deviation from any one
of which exposes the cargo to confiscation, and never fails to occasion a great deal of
delay, trouble, and expense. As the principal part of the foreign trade of the Elbe is in
our hands, we are, of course, principally affected by the Stade toll; and, considering the
source of the nuisance, it is really not a little astonishing it should not have been
abated long ago. The sum which the Hanoverian government derives from the duties is
but trifling compared with the injury they inflict on our trade; it would, consequently,
be good policy for the former to sell, and for the British government to buy, an exemp-
tion from so vexatious a duty; and we are well assured that few things would do more
to extend our trade with Ham-
burgh than the completion of an arrangement of this sort.

Previously to 1736, English ships passing up the Elbe had to come to an anchor
opposite Brunshausen: but they were then allowed, under certain conditions, to pass on
to Ham-
burgh. The proclamation to this effect, and which contains an epitome of the
regulations that have still to be observed, is subjoined.

1. That all English vessels be exempted from coming to an anchor before the river Schwinge, and allowed to sail directly up to Ham-
burgh.

2. Such English vessels shall be obliged, at their approach, within about $\frac{1}{4}$ of a league thereof, to hoist their colours, to lower their sails, and only to drive, till the legitimization is made at the king's frigate lying there.

3. The master of the ship, or a proper person fully provided with the necessary documents, is to go on board the frigate, and afterwards to the Custom-house at Brunshausen and Stade; and there to produce an exact manifest, and the original bills of lading, cockets, &c.

4. The documents being produced, the accounts shall be stated, and all duties must be paid at Brunshausen, Stade, or Ham-
burgh.

5. The clearance shall be given at Brunshausen to the person sent thither by the master of the vessel; by whom it must be delivered to the king's commissary in Ham-
burgh, together with the documents of the cargo, and a specification of the parcels, bales, casks, &c. which were received on board at the port of lading, whether designed for Ham-
burgh or other places.

6. Bulk must not be broken till all this has been performed, except the king's commissary in Ham-
burgh permits, in urgent cases, the unloading.

7. The vessels being thus allowed to pass the frigate without being detained, in case of suspecting any fraud, the masters shall be obliged to sign a proper oath; and the merchants in

Ham-
burgh, who receive effects by those vessels, shall make an exact report thereof, and give a certificate in lieu of an oath — that they neither have received nor expected more goods than have been specified, — which must be delivered to his Majesty's commissary in Ham-
burgh, to enable him to examine the report made by the master.

8. No master is to depart from Ham-
burgh before he has taken a certificate from his Majesty's commissary, proving that all has been duly performed; which is to be sent to the king's frigate, near Brunshausen.

9. The signals mentioned in the second article are likewise to be made when the ship refuses Stade.

10. The taking cognizance of, and punishing misdemeanours, frauds, and mis-managements, as well as the neglecting of the preceding articles, remains in the Court of the King's Customs at Stade: so that both merchants and masters of ships, who may be called to an account, shall, when summoned, appear before the said court, and submit to its decisions; but they have the liberty of appeal to the superior courts for a revision and relief.

11. As to all other points not expressly mentioned in the foregoing articles, they shall be observed at the king's Custom-houses at Brunshausen, Stade, and Ham-
burgh, according to the regulations and customs heretofore practised.

12. This gracious concession is hereby granted *only durante bene placito*; the king reserving to himself and his successors, in his German dominions the right of revoking it, and making any alterations or new orders, whenever they shall see reason.

The following statement, taken from the books of a Ham-
burgh merchant, shows, in parallel columns, the amount of the Stade and Ham-
burgh duties paid on certain articles imported into Ham-
burgh. It is clear from it, that, even though there were no burdensome regulations to be complied with, the amount of the Stade duties must be a very serious drawback on the trade of the Elbe.

A List, showing the Amount of Stade Duties, and the Amount of Ham-
burgh Duties paid on the same Goods imported into Ham-
burgh.

STARCH (Ger. *Amidan*; Fr. *Amidon*; It. *Amidi*, *Amilo*; Sp. *Anidon*, *Almidon*; Rus. *Kruchmal*), a substance obtained from vegetables. It has a fine white colour, and

is usually conereted in longish masses; it has scarcely any smell, and very little taste. When kept dry, it continues for a long time uninjured, though exposed to the air. It is insoluble in cold water; but combines with boiling water — forming with it a kind of jelly. It exists chiefly in the white and brittle parts of vegetables, particularly in tuberosc roots, and the seeds of the gramineous plants. It may be extracted by pounding these parts, and agitating them in cold water; when the *parenchyma*, or fibrous parts, will first subside; and these being removed, a fine white powder, diffused through the water, will gradually subside, which is the starch. Or the pounded or grated substance, as the roots of potatoes, acorns, or horse chestnuts, for instance, may be put into a hair sieve, and the starch washed through with cold water, leaving the grosser matters behind. Farinaeous seeds may be ground and treated in a similar manner. Oily seeds require to have the oil expressed from them before the farina is extracted. Potato starch goes a good deal further than wheat starch — a less quantity of it sufficing to form a paste of equal thickness, with water. It has a very perceptible crystallised appearance, and is apparently heavier than common starch. — (*Thomson's Chemistry; Ure's Dictionary.*)

Starch is charged with a duty of $3\frac{1}{4}$ d. per lb.; and its manufacture is, consequently, placed under the control of the excise. Every maker of starch for sale must take out an annual licence, which costs 5*l*. Notice must be given to the excise of the erection, and of all changes in the construction, of workshops, implements, &c. used in the manufacture of starch, under a penalty of 500*l*. All starch, before it is put into any stove or place to dry, must be papered and sealed or stamped by the officer, under a penalty of 100*l*. Any person forging or counterfeiting such stamp or seal is guilty of felony, but with the benefit of clergy. Any person knowingly selling any starch with a forged or counterfeit stamp, &c. forfeits 500*l*. No quantity of starch exceeding 28 lbs. to be removed from one place to another, unless the word *starch* be marked on the package in legible letters 3 inches long, under forfeiture of the package, and of the cattle and carts conveying the same. Any dealer in starch receiving any quantity exceeding 28 lbs. not marked as above, shall forfeit 500*l*. Starch-makers are to make weekly entries of the starch made by them, under a penalty of 50*l*; and are to make payment of the duties within a week of such entry. Cockets granted for shipping starch to be carried coastwise are to express the quality, quantity, weight, the mark of the package, by whom made and sold, and to whom consigned; and if shipped without such cocket, it may be seized. No starch is to be imported, unless in packages containing at least 224 lbs. stowed openly in the hold, on pain of forfeiture and of incurring a penalty of 50*l*. No starch is to be exported, unless the package as originally sealed or stamped by the officer be entire, and unless the officer mark the word *exportation* upon it. The duties must have been paid on all starch exported; but the exporter is entitled to an excise drawback of $3\frac{1}{4}$ per lb. — (*Burn's Justice of the Peace*, Marriott's ed., tit. *Starch*.)

An Account of the Number of Pounds of Starch that paid the Home Consumption Duty in Great Britain, the Rate of Duty, and the Gross and Nett Produce of the Duty, in each of the Three Years ending with the 5th of January, 1833.

Years ended 5th Jan.	Rate per lb.	Lbs.	Gross Produce.			Nett Produce.

STEEL (Fr. *Acier*; Ger. *Stahl*; It. *Acciajo*; Lat. *Chalybs*; Rus. *Stal*; Sp. *Acero*; Sw. *Stål*), is iron combined with a small portion of carbon; and has been, for that reason, called carburretted iron. The proportion of carbon has not been ascertained with much precision. It is supposed to amount, at an average, to $\frac{1}{110}$ th part. Steel is so hard as to be unmalleanable while cold; or at least it acquires that property by being immersed, while ignited, in a cold liquid: for this immersion, though it has no effect upon iron, adds greatly to the hardness of steel. It is brittle, resists the file, cuts glass, affords sparks with flint, and retains the magnetic virtue for any length of time. It loses this hardness by being ignited, and cooled very slowly. It is malleable when red hot, but scarcely so when raised to a white heat. It may be hammered out into much thinner plates than iron. It is more sonorous; and its specific gravity, when hammered, is greater than that of iron — varying from 7.78 to 7.84. Steel is usually divided into 3 sorts, according to the method in which it is prepared; as *natural steel*, *steel of cementation*, and *cast steel*. The latter is the most valuable of all, as its texture is the most compact, and it admits of the finest polish. It is used for razors, surgeons' instruments, and similar purposes. Steel is chiefly employed in the manufacture of swords, knives, and cutting instruments of all sorts used in the arts; for which it is peculiarly adapted by its hardness, and the fineness of the edge which may be given to it. — (*Thomson's Chemistry*; and see *IRON*.)

STOCKHOLM, the capital of Sweden, situated at the junction of the lake Maelar with an inlet of the Baltic, in lat. 59° 20' 31" N., lon. 17° 54' E.; a well-built, handsome city. Population 80,000. The entrance to the harbour is intricate and dangerous, and should not be attempted without a pilot; but the harbour itself is capacious and excellent, the largest vessels lying in safety close to the quays. Stockholm possesses half the foreign trade of Sweden; but this is confined within comparatively narrow limits, in consequence of the impolitic efforts of the government to promote industry by excluding foreign products. Iron, timber, and deals form the great articles of export. Swedish iron is of very superior quality, and is extensively used in Great Britain; the

imports of it amounting, in ordinary years, to about 10,000 tons, exclusive of 500 tons of steel. In addition to the above leading articles, Stockholm exports pitch, tar, copper, &c. The timber is inferior to that from the southern ports of the Baltic. The imports principally consist of colonial products, cotton, dye stuffs, salt, British manufactured goods, hides, fish, wine, brandy, wool, fruit, &c. In seasons of scarcity corn is imported, but it is generally an article of export.

Pilotage.—Vessels bound for Stockholm take a pilot at the small island of Oja. Lands-hort light-house, 70 feet high, and painted white, is erected on the southern extremity of this island, in lat. $59^{\circ} 44'$ $30''$ N., lon. $17^{\circ} 52'$ $15''$ E. It is furnished with a fixed light, which may be seen, under favourable circumstances, 5 leagues off. The signal for a pilot is a flag at the fore-topmast head, or firing a gun.

Money.—Accounts are kept here, at Gottenburgh, and generally throughout Sweden, in rixdollars, or crowns, of 48 skilling, each of 12 rundstycks; or in rixdollars, skilling, and rundstycks, value. The latter currency is at present (1854) 50 per cent. more valuable than the former. A rixdollar banco is worth, at the current rates of exchange, from about 1*l.* 5*s.* to 1*l.* 8*s.* sterling. Except copper, there are no coins in circulation, nor have there been any for 30 years past.

Weights and Measures.—The victual or commercial weights are pounds, lispunds, and skipunds; 20 pounds being equal to 1 lispund, and 20 lispunds = 1 skipund; 100 lbs. Swedish commercial weight = 93½ lbs. avoirdupois = 42½ kilog. = 87½ lbs. of Hamburg.

The iron weights are 3-5ths of the victual or commercial weights; 20 marks = 1 mark pund; 20 mark pounds = 1 skipund; and 7½ skipunds = 1 ton English. Hence, 100 pounds Swedish iron weight = 75 lbs. avoirdupois, and 106 lbs. avoirdupois = 135 1/3 lbs. Swedish iron weight.

In corn measure:—

4 Quarts	=	1 Spann.
2 Spann	=	1 Tun or barrel.
1 Tun	=	4 1-6th Winch. bush.
A last of rye from Riga	=	18 Tans.
Ditto Liebau	=	19½ —
Ditto Stettin	=	22½ —
Ditto Stralsund	=	24 —

The tun of 52 kapor contains 4 1-6th Winchester bushels.

In liquid measure:—

2 Stup	=	1 Kanna.
15 Kanner	=	1 Anker.
2 Ankers	=	1 Eimer.

2 Eimers	=	1 Ahm.
1½ Ahm	=	1 Oshofi.
2 Oshofi	=	1 Pipe.

The pipe = 124½ English wine gallons; and, consequently, the ahm = 41 5-12ths ditto, and 100 kanner = 69 1-5th ditto.

The Swedish foot = 11-654 English inches; the ell or alna = 2 feet; the fathom = 5 ells; the rod = 8 ells.

In estimating by last:—

1 Last of pitch, ashes, &c.	=	12 barrels.
1 ditto tar, oil, &c.	=	15 ditto.
1 Last of hemp, flax, tallow, &c.	=	6 skipunds.
1 Ton of Liverpool common salt	=	7 tuns Swed.

Metals, &c. exported from Stockholm during the year 1833.

Total, 281,986½ skipunds = 37,598 tons; consisting of—

	Skippunds.

Regulations as to the working of Mines in Sweden.—The following paper, which we have received from Sweden, and on the authenticity of which our readers may rely, shows the nature of the obstructions laid on the principal branch of industry carried on in that kingdom. They appear to us to be in the last degree absurd and oppressive. It might be proper to enact regulations to prevent the waste of the forests; but having done this, every one ought to be at liberty to produce as much iron as he pleased, without being subject to any sort of regulation or control. We are surprised that so intelligent a government as that of Sweden should think of imposing such preposterous regulations.

Sweden has at present from 330 to 340 smelting furnaces, which produce annually from 90,000 to 95,000 tons of pig iron. In converting the pig into bar iron, about 23 per cent. is allowed for waste; and as near as can be ascertained, the annual manufacture of bar iron is from 63,000 to 65,000 tons. The number of iron works is between 420 and 430, having about 1,100 forges (hearths). The annual exportation of bar iron, at an average of the 10 years ending 1831, was 49,568 tons; of which were, for—

Great Britain - - - - - 10,000 tons.

United States - - - - - 20,000 —

Germany, Holland, France, and Portugal - - - 15,000 —

The remainder to Brazil, and a very little to the Mediterranean - - - 4,568 —

Total - 49,568

“The smelting furnaces and iron works are licensed for particular quantities, some being as low as 50 tons, and others as high as 400 or 500 tons; and some fine bar iron works have licences for 1,000 tons each. These licences are granted by the College of Mines, which has a control over all iron works and mining operations. The iron masters make annual returns of their manufacture, which must not exceed the privileged or licensed quantity, on pain of the overplus being confiscated. The College has subordinate courts, called Courts of Mines, in every district, with supervising officers of various ranks. All iron sent to a port of shipment must be landed at the public weigh-house, the superintendent of which is a delegate of the college; and his duty is to register all that arrives, and transmit a quarterly report thereof to the college, so that it is impossible for an iron master to send more iron to market than his licence authorises. Many, however, sell iron to inland consumers at the forges, of which no returns are ever made out, and in so far the licences are exceeded; but we do not suppose that the quantity so disposed of exceeds 2,000 or 3,000 tons a year. Every furnace and forge pays a certain annual duty to the Crown. Its amount is fixed by the College when the licence is granted; and care is taken not to grant a licence to any one, unless he has the command of forests equal to the required supply of charcoal, without encroaching on the supply of this material required for the existing forges in the neighbourhood. As the supply of pig iron is limited*, the quantity licensed to be made being never exceeded, the College, in granting new licences to bar iron works, always takes into consideration how far this may be done without creating a scarcity of pig iron. Hence, the erection of new forges depends—1st, on having a supply of charcoal, without encroaching on the forests which supply your neighbours; and, 2dly, on the quantity of pig iron which the College knows to be disposable. The courts of the mines decide all disputes that arise among the iron masters regarding the exceeding of their licences, encroachments, &c.; an appeal to the College lying from their decision, and ultimately to the king in council, or to the supreme court of the kingdom. In 1824 the mines produced 850 tons of copper, 50 tons of brass, 40 tons of lead, 1,700 tons of alum, 46,629 lbs. of cobalt, 3,000 lbs. of silver; and of late years several mines of manganese have been worked, the produce of which may be from 300 to 400 tons.”

STOCKINGS, as every one knows, are coverings for the legs. They are formed of only 1 thread entwined, so as to form a species of tissue, extremely elastic, and readily adapting itself to the figure of the part it is employed to cover. This tissue cannot be called cloth, for it has neither warp nor woof, but it approaches closely to it; and for the purposes to which it is applied, it is very superior.

1. *Historical Sketch of the Stocking Manufacture.*—It is well known that the Romans and other ancient nations had no particular clothing for the legs. During the middle ages, however, hose or *leggings*, made of cloth, began to be used; and at a later period, the art of knitting stockings was discovered. Unluckily, nothing certain is known as to the individual by whom, the place where, or the time when, this important invention was made. Howell, in his *History of the World* (vol. iii. p. 222.), says, that Henry VIII. wore none but cloth hose, except there came from Spain by great chance a pair of silk stockings; that Sir Thomas Gresham, the famous merchant, presented Edward VI. with a pair of long silk stockings from Spain, and that the present was much taken notice of; and he adds, that Queen Elizabeth was presented, in the third year of her reign, with a pair of black knit silk stockings, and that from that time she ceased to wear cloth hose. It would appear from this circumstantial account, that the art of knitting stockings, or at least that the first specimens of knit stockings, had been introduced into England from Spain about the middle of the 16th century; and such seems to have been the general opinion, till an allusion to the practice of knitting, in the pretended poems of Rowley, forged by Chatterton, caused the subject to be more strictly investigated. The result of this investigation showed clearly that the practice of knitting was well known in England, and had been referred to in acts of parliament, a good many years previously to the period mentioned by Howell. But it had then, most probably, been applied only to the manufacture of woollen stockings; and the general use of cloth hose

* We do not mean that the manufacture of pig iron is limited; for any one can get a licence to smelt, who can prove he has a sufficiency of charcoal at his disposal; but the quantity licensed is never exceeded, but is often less.

shows that even these had not been numerous. There is no evidence to show whether the art is native to England, or has been imported. — (See *Beckmann's Inventions*, vol. iv. art. *Knitting Nets and Stockings*.)

It is singular that the stocking frame, which, even in its rudest form, is a very complex and ingenious machine, that could not be discovered accidentally, but must have been the result of deep combination and profound sagacity, should have been discovered so early as 1589, before, in fact, the business of knitting was generally introduced. The inventor of this admirable machine was Mr. William Lee, of Woodborough, in Nottinghamshire. He attempted to set up an establishment at Calverton, near Nottingham, for the manufacture of stockings, but met with no success. In this situation he applied to the queen for assistance; but, instead of meeting with that remuneration to which his genius and inventions so well entitled him, he was discouraged and discountenanced! It need not, therefore, excite surprise that Lee accepted the invitation of Henry IV. of France, who, having heard of the invention, promised him a magnificent reward if he would carry it to France. Henry kept his word, and Lee introduced the stocking frame at Rouen with distinguished success; but after the assassination of the king, the concern got into difficulties, and Lee died in poverty at Paris. A knowledge of the machine was brought back from France to England by some of the workmen who had emigrated with Lee, and who established themselves in Nottinghamshire, which still continues the principal seat of the manufacture. — (See *Beckmann's Inventions*, vol. iv. pp. 313—324; and *Letters on the Utility and Policy of Machines*, Lond. 1780.)

During the first century after the invention of the stocking frame, few improvements were made upon it, and 2 men were usually employed to work 1 frame. But in the course of last century, the machine was very greatly improved. The late ingenious Mr. Jedediah Strutt, of Derby, was the first individual who succeeded in adapting it to the manufacture of *ribbed stockings*.

Statistical View of the Stocking Trade.—We subjoin, from a paper by Mr. Felkin, of Nottingham, who is very advantageously known by his statistical researches, the following view of the present state of the British hosiery trade.

Worsted hosiery is chiefly made in Leicestershire; silk hosiery in Derby and Nottingham; and cotton hosiery throughout the counties of Nottingham and Derby, at Hinckley, and at Tewkesbury. The analysis furnished by Blackner, in 1812, may be, perhaps, modified as follows, so as to show the kinds and quantities of goods which the frames are now employed upon, viz. —

Plain cotton, 11 to 22-gauge, 1,600; 21 to 28-gauge, 1,000; 30 to 34-gauge, 2,790; 36 to 60-gauge, 1,000 frames 7,590
 Gauze, 600; gloves and caps, 1,000; drawers, 500; sundries, 500 2,660
 Wide frames, making cut-ups and various other kinds 6,030
 Worsted, 12 to 20-gauge, 4,100; 22 to 26-gauge, 5,000; 28 to 34-gauge, 1,150 frames 9,450

Frames.		Dozen.	Lbs.
10,500	fashioned cotton hose	420,000	880,000
6,000	cut up, &c.	1,960,000	2,940,000
9,500	fashioned worsted	710,000	2,810,000
1,000	cut up, &c.	100,000	400,000
1,500	Angola	95,000	332,500
1,000	lambs' wool	135,000	639,500
5,000	silk	90,000	105,000
33,000		3,510,000	8,137,000

According to this calculation, the value of the cotton hosiery annually made is 880,000*l.*; that of worsted, &c. is 870,000*l.*; and that of silk is 241,000*l.*—To produce these goods, it is probable that 1,581,000 lbs. of raw cotton wool, value 153,000*l.*, are used; and 110,000 lbs. of raw silk (2-5ths China and 3-5ths Nevi), value 91,000*l.*; also, 6,318,000 lbs. of English wool, value 316,000*l.* The total original value of the materials used, is, therefore, 560,000*l.*, which, it appears, becomes of the ultimate cost value of 1,991,000*l.*, in this manufacture.

There are employed in the various processes, as follows, viz. —

In cotton spinning, doubling, &c., 5,000; worsted carding, spinning, &c., 2,500; silk winding, throwing, &c., 1,000 6,500
 In making stockings, 15,000 men, 10,000 women, and 10,000 youths; and women and children in seaming, winding, &c., 27,000 60,000
 In embroidering, mending, bleaching, dyeing, dressing, putting-up, &c., probably about 6,500

Total persons employed 75,000

The capital employed in the various branches of the trade may be thus estimated, taking the machinery and frames at neither their original cost, nor actual selling price, but at their working value, and the stocks of hosiery on an average of years: —

The capital in mills and machinery, for preparing cotton, is	L.
— worsted, &c.	70,000
— silk	52,000
—	18,000
Fixed capital in mills, &c.	110,000
— in frames	245,000
Total of fixed capital	L. 385,000

Angola, 1,550; lambs' wool, 1,900; shirts, 500 frames	3,750
Wide frames, on which worsted stockings are made	500
Silk, 2,500; gloves, 550; and knots, 350	3,000
Total of frames	33,000

The following statement, it is believed, presents a sufficiently accurate approximation to the annual amount in quantity and value of the goods manufactured in this trade, to answer all practical purposes: —

Each narrow cotton frame produces about 40 dozen of hose a year, if of women's size; wide cotton frames, 500; narrow worsted, 75; wide worsted, 150; and silk, 50. There are —

	L.	L.	L.	L.
valued at	73,000	220,000	32,000	325,000
for making	172,000	285,000	98,000	555,000
wages for making	281,000	215,000	41,000	540,000
finishing	40,000	50,000	10,000	80,000
finishing	45,000	40,000	19,000	104,000
finishing	80,000	50,000	16,000	146,000
finishing	120,000	108,000	15,000	241,000
	811,000	918,000	229,000	1,991,000

In wool and yarn in process and stock	L.
—	85,000
—	150,000
—	35,000

Floating capital in spinning, &c. L. 270,000

Capital in narrow cotton frames	L.
— wide	62,000
— narrow worsted frames	60,000
— wide	76,000
— silk frames	11,000
	36,000

Fixed capital in frames L. 245,000

In goods in process and stock	L.
—	350,000
—	345,000
—	85,000

Floating capital in making hose	L.
— in spinning, &c.	780,000
	270,000

Total of floating capital L. 1,050,000

N. B. — This estimate is independent, of course of the value of the hosiery wrought by wires; but this is not very considerable. We believe it underrates the total value of the manufacture; for a sum of 1,991,000*l.* is barely equivalent, without even deducting the exports, which are very considerable, to an expenditure upon stockings of about 2*l.* 5*d.* a year to each individual in Great Britain, — a sum which we are inclined to think is decidedly under the mark.

STORAX. See BALSAM.

STORES, MILITARY AND NAVAL, include arms, ammunition, &c. It is enacted, that no arms, ammunition, or utensils of war, be imported by way of merchandise, except by licence, for furnishing his Majesty's public stores only. — (6 Geo. 4. c. 107.)

STORES, in commercial navigation, the supplies of different articles provided for the subsistence and accommodation of the ship's crew and passengers.

It is laid down, in general, that the surplus stores of every ship arriving from parts beyond seas are to be subject to the same duties and regulations as those which affect similar commodities when imported as merchandise; but if it shall appear to the collector and comptroller that the quantity of such stores is not excessive, nor unsuitable, under all the circumstances of the voyage, they may be entered for the private use of the master, purser, or owner of such ship, on payment of the proper duties, or be warehoused for the future use of such ship, although the same could not be legally imported by way of merchandise. — (3 & 4 Will. 4. c. 52. § 35.)

A List, by which to calculate the Amount of Stores, of the estimated Average Number of Days' Duration of a Voyage from the United Kingdom to the different Ports enumerated, and back.

For such places as are not included in the List, the same allowance should be granted as is given to the place nearest therunto.

No stores shall be shipped for the use of any ship bound to parts beyond the seas, nor shall any goods be deemed to be such stores, except such as shall be borne upon the victualling bill. — (3 & 4 Will. 4. c. 52. sect. 61.)

Goods delivered into the charge of the searchers to be shipped as stores, may be so shipped without entry or payment of any duty, for any ship of the burden of 70 tons at least bound upon a voyage to foreign parts, the probable duration of which out and home will not be less than 40 days: provided such stores be duly borne upon the ship's victualling bill, and be shipped in such quantities, and subject to such directions and regulations, as the commissioners of customs shall direct and appoint. — (3 & 4 Will. 4. c. 52. sect. 16.)

Turn of the British plantations may be delivered to the searcher, to be shipped as stores for any ship, without entry or payment of any duty; and any surplus stores of any ship may be delivered to the searcher, to be re-shipped as stores for the same ship, or for the same master in another ship, without entry or payment of any duty, — such run and such surplus stores being duly borne upon the victualling bills of such ships respectively; and if the ship, for the future use of which any surplus stores have been warehoused, shall have been broken up or sold, such stores may be so delivered for the use of any other ship belonging to the same owners, or may be entered for payment of duty, and delivered for the private use of such owners, or any of them, or of the master or purser of the ship. — Sect. 17.

The searchers in London, on clearance of vessels coastwise to take in cargoes for foreign parts, are to apprise the collectors and comptrollers at the outports where the vessels may be bound, of the quantity and description of the goods which may have been shipped as stores on board such vessels, and that bond has been given by the masters of the vessels that no part of such stores shall be consumed by the crews, or any package opened or altered, until the vessels have actually been cleared on their foreign voyages; and the collectors and comptrollers at the out-ports are in like manner to cause a similar communication to be made to the ports where the outward cargoes are to be taken on board, and the officers at such ports are to take care to ascertain that the several goods so shipped are actually on board the vessels on their arrival, and have neither been consumed or run on shore during the coasting voyage; and if so, to report the same to the Board. — (*Min. by Com. of Customs*, 19th of Feb. 1833.)

List of Foreign Goods allowed to be shipped as Stores, from the bonded Warehouses free of Duty. — (*Custom's Minute*, 29th of Nov. 1852.)

Tea, $\frac{3}{4}$ of an oz.; coffee or cocoa, 1 oz. per day for each person on board, with the option to ship the entire quantity required for the voyage of either species of these articles, *half* an oz. of tea being considered equal to one oz. of coffee or cocoa; the tea to be shipped in the original packages in which it was imported.

Wine, 1 quart per day for the master, each mate, and cabin passenger.

Wine bottled in the bonded warehouses for exportation may be shipped as stores, in packages containing not less than 5 doz. reputed quart, or 6 doz. reputed pint bottles.

Spirits, viz. brandy, geneva, rum (British plantation), $\frac{1}{2}$ pint per day for each person on board.

British plantation rum to be in the proportion of $\frac{1}{2}$ of the whole quantity of spirits shipped. Each description of spirits intended as stores to be shipped in one cask capable of containing the entire quantity of brandy, or of geneva or rum, allowed for the voyage, or in casks containing not less than 40 gallons of brandy or geneva, or 20 gallons of British plantation rum, as the case may be: provided that if spirits shall have been imported in bottles, or bottled in the bonded warehouse for exportation, the same may be shipped as stores, in packages containing not less than 5 doz. reputed quart or 6 doz. reputed pint bottles.

Rare Sugar and Molasses (together or separate), 2 oz. per day for each person on board.

Dried Fruits, 2 lbs. per week for each person on board.

Rice, 2 lbs. per week for each person on board.

Foreign Segars, $\frac{1}{2}$ oz. per day for the master, each mate, and each cabin passenger.

The entire quantity of foreign segars, allowed as stores for each voyage to be shipped in one package.

A List of British manufactured Goods to be allowed to be shipped as Stores on the usual Bounty or Drawback.

British refined Sugar, 3 oz. per day for the master, each mate, and each cabin passenger.

British manufactured Tobacco, $\frac{1}{2}$ oz. per day per man.

British excisable Goods, viz. beer, ale, and porter (together or separate), 1 quart per day for the master, each mate, and each passenger.

Vinegar, $\frac{1}{2}$ pint per week for each person on board.

Soap, $\frac{1}{2}$ oz. per day for each person on board. The same indulgence, in respect of the shipment of stores, which has been granted to merchant vessels under the 2 & 3 Will. 4. c. 84., and by subsequent orders, is granted to transports under the following conditions, viz: — On a certificate being produced for each vessel, from the office of a comptroller for victualling and transport services, setting forth the destination of the vessel, and the number of the crew and passengers on board, who are not to be messed by the victualling shipped by the public; and as respects soldiers embarked as guards in ships chartered for the transportation of convicts, on a certificate being produced from the proper department, specifying the number of soldiers to be embarked in each case; but no indulgence can be granted in regard to the article of soap. — (*Trans. Order*, 6th of March, 1853; see also *Ellis's British Tariff* for 1833 and 1851, — an accurate and useful publication.)

STRANDING, in navigation, the running of a ship on shore, or on the beach.

It is the invariable practice to subjoin the following memorandum to policies of insurance executed by private individuals in this country: — “N. B. — Corn, fish, salt, fruit, flour, and seed, are warranted free from average, unless general, or the ship be stranded; sugar, tobacco, hemp, flax, hides, and skins, are warranted free from average under 5*l*. per cent.; and all other goods, also the ship and freight, are warranted free of average under 3*l*. per cent., unless general, or the ship be stranded.”

It is, therefore, of the greatest importance accurately to define what shall be deemed a stranding. But this is no easy matter; and much diversity of opinion has been entertained with respect to it. It would, however, appear that merely striking against a rock, bank, or shore, is not a stranding; and that, to constitute it, the ship must be upon the rock, &c. for some time (how long?). — Mr. Justice Park has the following observations on this subject: — “It is not every touching or striking upon a fixed body in the sea or river that will constitute a stranding. Thus Lord Ellenborough held, that in order to establish a stranding, the ship must be *stationary*; for that merely striking on a rock, and *remaining there a short time* (as in the case then at the bar, about a minute and a half), and then passing on, though the vessel may have received some injury, is not a stranding. Lord Ellenborough's language is important. — *Ex vi termini* stranding means lying on the shore, or something analogous to that. To use a vulgar phrase, which has been applied to this subject, if it be *touch and go* with the ship, there is no stranding. It cannot be enough that the ship lie for a few moments on her beam ends. Every striking must necessarily produce a retardation of the ship's motion. If by the force of the elements she is run aground, and becomes stationary, it is immaterial whether this be on piles, on the muddy bank of a river, or on rocks on the sea shore; but a mere *striking* will not do, *wherever* that may happen. I cannot look to the consequences, without considering the *causa causans*. There has been a curiosity in the cases about stranding not creditable to the law. A little common sense may dispose of them more satisfactorily.”

This is the clearest and most satisfactory statement we have met with on this subject; still, however, it is very vague. Lord Ellenborough and Mr. Justice Park hold, that to constitute a stranding, the ship must be *stationary*; but they also hold, that if she merely remain upon a rock, &c. for a *short time*, she is not to be considered as having been stationary. Hence every thing turns upon what shall be considered as a short time. And we cannot help thinking that it would be better, in order to put to rest all doubts upon the subject, to decide either that every striking against a rock, the shore, &c. by which damage is done to the ship, should be considered a stranding; or that no striking against a rock, &c. should be considered as such, provided the ship be

got off within a *specified time*. Perhaps a *tide* would be the most proper period that could be fixed.

The insurance companies exclude the words, "*or the ship be stranded*," from the memorandum. — (See INSURANCE, MARINE.)

STURGEON FISHERY. The sturgeon is a large, valuable, and well known fish, of which there are several species, viz. the sturgeon, properly so called, or *Accipenser sturio*; the beluga, or *Accipenser huso*; the sevruga, or *Accipenser stellatus*, &c. The sturgeon annually ascends our rivers, but in no great number, and is taken by accident in the salmon nets. It is plentiful in the North American rivers, and on the southern shores of the Baltic; and is met with in the Mediterranean, &c. But it is found in the greatest abundance on the northern shores of the Caspian, and in the rivers Wolga and Ural; and there its fishery employs a great number of hands, and is an important object of national industry. Owing to the length and strictness of the Lents in the Greek Church, the consumption of fish in Russia is immense; and from its central position, and the facilities afforded for their conveyance by the Wolga, the products of the Caspian fishery, and those of its tributary streams, are easily distributed over a vast extent of country. Besides the pickled carcases of the fish, caviar is prepared from the roes; and isinglass, of the best quality, from the sounds. The caviar made by the Ural Cossacks is reckoned superior to any other; and both it and isinglass are exported in considerable quantities. The belugas are sometimes of a very large size, weighing from 1,000 to 1,500 lbs., and yield a good deal of oil. The seal fishery is also pretty extensively prosecuted in the Caspian. The reader will find a detailed account of the mode in which the fishery is carried on in the Caspian, and in the rivers Wolga and Ural, in *Tooke's Russia*, vol. iii. pp. 49—72. We subjoin the following official statement of the produce of the Russian fisheries of the Caspian and its tributary streams in 1828 and 1829:—

Year.	Number of Persons employed.		Number of Fish taken.					Products of Sturgeon.		
	In Fishing.	In hunting Seals.	Sturgeon.	Sevruga.	Beluga.	Sasans (Carp).	Seals.	Caviar.	Fish Cartilage.	Isinglass.
1828	8,887	254	43,035	653,164	23,069	8,353	98,584	<i>Pounds. lbs.</i> 34,860 1	<i>Pounds. lbs.</i> 1,307 38	<i>Pounds. lbs.</i> 1,225 27
1829	8,760	257	68,325	697,716	20,391	5,940	69,872	<i>Pounds. lbs.</i> 38,420 7	<i>Pounds. lbs.</i> 1,173 26½	<i>Pounds. lbs.</i> 1,092 22

SUCCORY, or CHICORY, the wild endive, or *Cichorium Intybus* of Linnaeus. This plant is found growing wild on calcareous soils in England, and in most countries of Europe. In its natural state the stem rises from 1 to 3 feet high, but when cultivated it shoots to the height of 5 or 6 feet. The root runs deep into the ground, and is white, fleshy, and yields a milky juice. It is cultivated to some extent in this country as an herbage plant, its excellence in this respect having been strongly insisted upon by the late Arthur Young. But in Germany, and in some parts of the Netherlands and France, it is extensively cultivated for the sake of its root, which is used as a substitute for coffee; and it is this circumstance only that has induced us to mention it. When prepared on a large scale, the roots are partially dried, and sold to the manufacturers of the article, who wash them, cut them in pieces, kiln-dry them, and grind them between fluted rollers into a powder, which is packed up in papers containing from 2 oz. to 3 or 4 lbs. The powder has a striking resemblance to dark ground coffee, and a strong odour of liquorice. It has been extensively used in Prussia, Brunswick, and other parts of Germany, for several years; but as it wants the essential oil and the rich aromatic flavour of coffee, it has little in common with the latter except its colour, and has nothing to recommend it except its cheapness. It is only lately that succeory powder began to be used in England; but, within the last 3 years, considerable quantities have been imported from Hamburgh, Antwerp, &c. We believe, too, that a small quantity has been produced in the Isle of Thancet. — (*London's Encyc. of Agriculture; Rees's Cyclopaedia; and private information.*)

¹ Succeory, when first imported, being an unenumerated article, was charged with a duty of 20 per cent. *ad valorem*. But the average price of British plantation coffee may be taken at 80s. per cwt. in bond; and the duty, being 56s. per cwt., is equivalent to an *ad valorem* duty of about 70 per cent.; so that *coffee was taxed more than three times as much as succeory*. Had coffee been always sold unground, this distinction in the duties would have been less objectionable; but as the lower classes, who are now the great consumers of coffee, have no facilities for roasting and grinding it at home, they uniformly buy it in the shape of powder; hence it is plain that the discriminating duty in favour of succeory must have acted as a premium upon, and an incentive to the adulteration of coffee by its intermixture. We are, therefore, glad to have to state that it has been abolished, and that succeory is now subjected to a duty of 6d. per lb. The imposition of different duties upon *convertible articles* is quite subversive of every sound principle; and, whether it be so intended or not, is calculated only to promote adulteration and fraud.

SUGAR (Fr. *Sucre*; Ger. *Zucker*; It. *Zucchero*; Russ. *Sachar*; Sp. *Azucar*; Arab. *Sukhir*; Malay, *Soola*; Sans. *Sarkarā*), a sweet granulated substance, too well known to require any particular description. It is every where in extensive use; and in

this country ranks rather among the indispensable necessities of life, than among luxuries. In point of commercial importance, it is second to very few articles. It is chiefly prepared from the expressed juice of the *arundo saccharifera*, or sugar cane; but it is also procured from an immense variety of other plants, as maple, beet root, birch, parsnep, &c.

1. *Species of Sugar*. — The sugar met with in commerce is usually of 4 sorts; — brown, or muscovado sugar; clayed sugar; refined, or loaf sugar; and sugar candy. The difference between one sort of sugar and another depends altogether on the different modes in which they are prepared.

1. *Brown, or Muscovado Sugar*. — The plants or canes being crushed in a mill, the juice, having passed through a strainer, is collected in the clarifier, where it is first exposed to the action of a gentle fire, after being “tempered” (mixed with alkali), for the purpose of facilitating the separation of the liquor from its impurities. It is then conveyed into the large evaporating copper, and successively into two others, each of smaller size; the superintending boiler freeing it, during the process, from the scum and feculent matters which rise to the surface. The syrup then reaches the last copper vessel, called the “striking tache,” where it is boiled till sufficiently concentrated to be capable of granulating in the cooler, whence it is transferred with the least possible delay, to prevent charring. Here it soon ceases to be a liquid; and when fully crystallised, is put into hogsheads (called “potting”), placed on their ends in the curing-house, with several apertures in their bottoms, through which the molasses drain into a cistern below. In this state they remain till properly cured, when the casks are filled up, and prepared for shipment.

2. *Clayed Sugar* is prepared by taking the juice, as in the case of muscovado sugar, when boiled to a proper consistency, and pouring it into conical pots with the apex downwards. These pots have a hole at the lower extremity, through which the molasses or syrup is allowed to drain. After this drain has continued for some time, a stratum of moistened clay is spread over the surface of the pots; the moisture of which percolating through the mass, is found to contribute powerfully to its purification.

3. *Refined Sugar* may be prepared from muscovado or clayed sugar, by redissolving the sugar in water, and, after boiling it with some purifying substances, pouring it, as before, into conical pots, which are again covered with moistened clay. A repetition of this process produces *double refined* sugar. But a variety of improved processes are now resorted to.

4. *Sugar Candy*. — Solutions of brown or clayed sugar, boiled till they become thick, and then removed into a hot room, form, upon sticks or strings put into the vessels for that purpose, into crystals, or candy.

II. *Historical Notice of Sugar*. — The history of sugar is involved in a good deal of obscurity. It was very imperfectly known by the Greeks and Romans. Theophrastus, who lived about 320 years before the Christian era, the first writer whose works have come down to us by whom it is mentioned, calls it a sort of “honey extracted from canes or reeds.” Strabo states, on the authority of Nearchus, Alexander’s admiral, that “reeds in India yield honey without bees.” And Seneca, who was put to death in the 65th year of the Christian era, alludes (Epist. 84.) to the sugar cane, in a manner which shows that he knew next to nothing of sugar, and absolutely nothing of the manner in which it is prepared and obtained from the cane.

Of the ancients, Dioscorides and Pliny have given the most precise description of sugar. The former says, it is “a sort of conereted honey, found upon canes, in India and Arabia Felix; it is in consistence like salt, and is, like it, brittle between the teeth.” And Pliny describes it as “honey collected from canes, like a gum, white and brittle between the teeth; the largest is of the size of a hazel nut: it is used in medicine only.” — (*Saccharum et Arabia fert, sed laudatius India; est autem mel in arundinibus collectum, gummi modo candidum, dentibus fragile, applissimum nucis avellanæ magnitudine, ad medicinæ tantum usum*. — Lib. xii. c. 8.)

It is evident, from these statements, that the knowledge of the Greeks and Romans with respect to the mode of obtaining sugar was singularly imperfect. They appear to have thought that it was found adhering to the cane, or that it issued from it in the state of juice, and then conereted like gum. Indeed, Lucan expressly alludes to Indians near the Ganges, —

Quique bibunt tenerâ dulces ab arundine succos. — (Lib. iii. l. 237.)

But these statements are evidently without foundation. Sugar cannot be obtained from the cane without the aid of art. It is never found native. Instead of flowing from the plant, it must be forcibly expressed, and then subjected to a variety of processes.

Dr. Moseley conjectures, apparently with much probability, that the sugar described by Pliny and Dioscorides, as being made use of at Rome, was sugar candy obtained from China. This, indeed, is the only sort of sugar to which their description will at

all apply. And it would seem that the mode of preparing sugar candy has been understood and practised in China from a very remote antiquity; and that large quantities of it have been in all ages exported to India, whence, it is most probable, small quantities found their way to Rome. — (*Treatise on Sugar*, 2d edit. pp. 66—71. This, as well as Dr. Mosely's *Treatise on Coffee*, is a very learned and able work.)

Europe seems to be indebted to the Saracens not only for the first considerable supplies of sugar, but for the earliest example of its manufacture. Having, in the course of the 9th century, conquered Rhodes, Cyprus, Sicily, and Crete, the Saracens introduced into them the sugar cane, with the cultivation and preparation of which they were familiar. It is mentioned by the Venetian historians, that their countrymen imported, in the 12th century, sugar from Sicily at a cheaper rate than they could import it from Egypt. — (*Essai de l'Histoire du Commerce de Venise*, p. 100.) The crusades tended to spread a taste for sugar throughout the Western world; but there can be no doubt that it was cultivated, as now stated, in modern Europe, antecedently to the era of the crusades; and that it was also previously imported by the Venetians, Amalphitans, and others, who carried on a commercial intercourse, from a very remote epoch, with Alexandria and other cities in the Levant. It was certainly imported into Venice in 996. — (See the *Essai*, §c. p. 70.)

The art of refining sugar, and making what is called loaf-sugar, is a modern European invention, the discovery of a Venetian about the end of the 15th or the beginning of the 16th century. — (*Mosely*, p. 66.)

The Saracens introduced the cultivation of the sugar cane into Spain soon after they obtained a footing in that country. The first plantations were at Valencia; but they were afterwards extended to Granada and Murcia. Mr. Thomas Willoughby, who travelled over great part of Spain in 1664, has given an interesting account of the state of the Spanish sugar plantations, and of the mode of manufacturing the sugar.

Plants of the sugar cane were carried by the Spaniards and Portuguese to the Canary Islands and Madeira, in the early part of the 15th century; and it has been asserted by many, that these islands furnished the first plants of the sugar cane that ever grew in America.

But though it is sufficiently established, that the Spaniards early conveyed plants of the sugar cane to the New World, there can be no doubt, notwithstanding Humboldt seems to incline to the opposite opinion (*Essai Politique sur la Nouvelle Espagne*, liv. iv. c. 10.), that this was a work of supererogation, and that the cane was indigenous both to the American continent and islands. It was not for the plant itself, which flourished spontaneously in many parts when it was discovered by Columbus, but for the secret of making sugar from it, that the New World is indebted to the Spaniards and Portuguese; and these to the nations of the East. — (See *Lafitau*, *Mœurs des Sauvages*, tome ii. p. 150.; *Edwards's West Indies*, vol. ii. p. 238.)

Barbadoes is the oldest settlement of the English in the West Indies. They took possession of it in 1627; and so early as 1646 began to export sugar. In 1676, the trade of Barbadoes is said to have attained its maximum, being then capable of employing 400 sail of vessels, averaging 150 tons burden.

Jamaica was discovered by Columbus, in his second voyage, and was first occupied by the Spaniards. It was wrested from them by an expedition sent against it by Cromwell, in 1656; and has since continued in our possession, forming by far the most valuable of our West Indian colonies. At the time when it was conquered, there were only 3 small sugar plantations upon it. But, in consequence of the influx of English settlers from Barbadoes and the mother country, fresh plantations were speedily formed, and continued rapidly to increase.

The sugar cane is said to have been first cultivated in St. Domingo, or Hayti, in 1506. It succeeded better there than in any other of the West Indian islands. Peter Martyr, in a work published in 1530, states that, in 1518, there were 28 sugar-works in St. Domingo established by the Spaniards. "It is marvellous," says he, "to consider how all things increase and prosper in the island. There are now 28 sugar-presses, where-with great plenty of sugar is made. The canes or reeds wherein the sugar groweth are bigger and higher than in any other place; and are as big as a man's wrist, and higher than the stature of a man by the half. This is more wonderful, that whereas in Valencia, in Spain, where a great quantity of sugar is made yearly, whensoever they apply themselves to the great increase thereof, yet doth every root bring forth not past 5 or 6, or at most 7 of these reeds; whereas in St. Domingo 1 root beareth 20, and oftentimes 30." — (Eng. trans. p. 172.)

Sugar from St. Domingo formed, for a very long period, the principal part of the European supplies. Previously to its devastation, in 1790, no fewer than 65,000 tons of sugar were exported from the French portion of the island.

III. *Sources whence the Supply of Sugar is derived.* — The West Indies, Brazil, Surinam, Java, Mauritius, Bengal, Siam, the Isle de Bourbon, and the Philippines, are the principal sources whence the

supplies required for the European and American markets are derived. The average quantities exported from these countries during each of the 3 years ending with 1833 were nearly as follows : —

	Tons.
British West Indies, including Demerara and Berbice	190,000
Mauritius	30,000
Bengal, Isle de Bourbon, Java, Siam, Philippines, &c.	60,000
Cuba and Porto Rico	110,000
French, Dutch, and Danish West Indies	95,000
Brazil	75,000
	560,000 tons.

Loaf or lump sugar is unknown in the East, sugar candy being the only species of refined sugar that is made use of in India, China, &c. The manufacture of sugar candy is carried on in Hindostan, but the process is extremely rude and imperfect. In China, however, it is manufactured in a very superior manner and large quantities are exported. When of the best description, it is in large white crystals, and is a very beautiful article. Two sorts of sugar candy are met with at Canton, viz. Chinchew and Canton; the former being the produce of the province of Fokien, and the latter, as its name implies, of that of Canton. The chinchew is by far the best, and is about 50 per cent. dearer than the other. Chinese sugar candy is consumed, to the almost total exclusion of any other species of sugar, by the Europeans at the different settlements throughout the East. There were exported from Canton, in 1831-32, by British ships, 32,279 piculs (38,427 cwt.) of sugar candy, valued at 242,000 dollars; and 60,627 piculs (72,175 cwt.) of clayed sugar, valued at 318,256 dollars; and during the previous year the exports were about 50 per cent. greater. — (See *ante*, pp. 237, 238.) The exports by the Americans are also considerable. At an average, the exports of sugar from Canton may be taken at from 6,000 to 10,000 tons; but of this only a small quantity finds its way to Europe. The exports from Siam and Cochinchina are estimated at about 12,500 tons.

Consumption of Sugar in Europe, &c. — Mr. Cook gives the following Table of the imports of sugar into France and the principal Continental ports in 1831, 1832, and 1833, and of the stocks on hand on the 31st of December of each of these years : —

	Imports.			Stocks, 31st of December.		
	1831.	1832.	1833.	1831.	1832.	1833.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
France	97,450	82,000	79,500	25,870	9,350	10,450
Trieste	17,950	22,400	13,800	6,900	11,900	6,840
Genoa	9,500	10,500	6,800	1,500	2,200	2,180
Antwerp	5,240	8,780	12,800	2,000	2,000	5,100
Rotterdam	10,700	11,600	8,650	1,800	3,900	3,350
Amsterdam	18,370	22,380	20,100	2,200	3,400	5,300
Hamburg	38,800	37,930	30,000	9,000	13,400	9,820
Bremen	12,380	12,500	7,350	3,230	5,800	3,550
Copenhagen	5,350	5,850	5,560	800	2,370	1,830
Petersburgh	11,170	23,100	18,500	8,440	11,660	15,600
	226,910	237,040	203,060	61,740	65,980	64,020

This Table does not, however, give the imports into any of the ports of the Peninsula. But the consumption of Spain, only, has been estimated, apparently on good grounds, by M. Montveran (*Essai de Statistique sur les Colonies*, p. 92.), at 45,000,000 kilog. (41,050 tons). This may appear large for a country in the situation of Spain; but the quantity is deduced from comparing the imports with the exports; and it is explained partly by the moderation of the duties, and partly by the large consumption of cocoa, and other articles that require a corresponding consumption of sugar. Mr. Cook's Table also omits the imports into Leghorn, Naples, Palermo, and other Italian ports. Neither does it give those into Stettin, Königsberg, Riga, Stockholm, Gottenburg, &c. It is, besides, very difficult, owing to transshipments from one place to another, accurately to estimate the real amount of the imports. On the whole, however, we believe that we shall be within the mark, if we estimate those for the whole Continent at from 285,000 to 310,000 tons, including what is sent from England.

The following Table, compiled from the best authorities, exhibits the total consumption of colonial and foreign sugars in France at different periods since 1788, with the population, and the average consumption of each individual. — (See *Montveran, Essai de Statistique*, p. 96., and the authorities there referred to.)

Years.	Consumption.	Population.	Individual Consumption.
	Kilog.		Kilog.
1788	21,300,000	23,600,000	906
1801	25,200,000	31,000,000	813
1812	16,000,000	43,000,000	372*
1816 to 1819 average	36,000,000	30,000,000	1200
1819 — 1822	47,000,000	39,833,000	1566
1819 — 1822	47,250,000	31,103,000	1513
1822 — 1824	47,250,000	31,280,000	1782
1824 — 1825	55,750,000	31,625,000	1976
1826 — 1827	62,500,000	31,845,000	2126
1830	67,250,000		

This, however, is independent of the consumption of indigenous sugar — (see *post*), and of the sugar introduced by the contraband trade, — both of which are very considerable. The entire consumption of all sorts of sugar in France in 1832, including from 8,000,000 to 9,000,000 kilog. of beet-root sugar, and allowing for the quantity fraudulently intro-

* Continental system and empire.

duced, may be estimated at about 88,000,000 kilog., or 193,000,000 lbs.; which, taking the population at 32,000,000, gives an average consumption of 6 lbs. to each individual, being about $\frac{1}{4}$ th part of the consumption of each individual in Great Britain! This extraordinary discrepancy is no doubt ascribable to various causes;—partly to the greater poverty of the mass of the French people; partly to their smaller consumption of tea, coffee, punch, and other articles that occasion a large consumption of sugar; and partly and principally, perhaps, to the oppressive duties with which foreign sugars are loaded on their being taken into France for home consumption.

The United States consume from 70,000 to 80,000 tons; but of these, from 30,000 to 40,000 tons are produced in Louisiana.

About 170,000 tons of sugar are retained for home consumption in Great Britain, and 17,000 tons in Ireland; exclusive of about 12,000 tons of bastards, or inferior sugar obtained by the boiling of molasses, and exclusive also of the refuse sugar and treacle remaining after the process of refining.

On the whole, therefore, we believe we may estimate the aggregate consumption of the Continent and of the British islands at about 500,000 tons a year; to which if we add the consumption of the United States, Turkey, &c., the aggregate will be nearly equivalent to the supply. The demand is rapidly increasing in most countries; but as the power to produce sugar is almost illimitable, no permanent rise of prices need be looked for.

Taking the price of sugar at the low rate of 1*l.* 4*s.* a cwt., or 24*l.* a ton, the prime cost of the article to the people of Europe will be 12,000,000*l.* sterling; to which adding 75 per cent. for duty, its total cost will be 21,000,000*l.*! This is sufficient to prove the paramount importance of the trade in this article. Exclusive, however, of sugar, the other products of the cane, as rum, molasses, treacle, &c., are of very great value. The revenue derived by the British treasury from rum, only, amounts to nearly 1,600,000*l.* a year.

Progressive Consumption of Sugar in Great Britain.—We are not aware that there are any authentic accounts with respect to the precise period when sugar first began to be used in England. It was, however, imported in small quantities by the Venetians and Genoese in the 14th and 15th centuries*; but honey was then, and long after, the principal ingredient employed in sweetening liquors and dishes. Even in the early part of the 17th century, the quantity of sugar imported was very inconsiderable; and it was made use of only in the houses of the rich and great. It was not till the latter part of the century, when coffee and tea began to be introduced, that sugar came into general demand. In 1700, the quantity consumed was about 10,000 tons, or 22,000,000 lbs.; at this moment, the consumption has increased (bastards included) to above 180,000 tons, or more than 400,000,000 lbs.; so that sugar forms not only one of the principal articles of importation and sources of revenue, but an important necessary of life.

Great, however, as the increase in the use of sugar has certainly been, it may, we think, be easily shown, that the demand for it is still very far below its natural limit; and that, were the existing duties on this article reduced, and the trade placed on a proper footing, its consumption, and the revenue derived from it, would be greatly increased.

During the first half of last century, the consumption of sugar increased five-fold. It amounted, as already stated—

In 1700, to 10,000 tons	-	or 22,000,000 lbs.	In 1754, to 53,270 tons	or 119,320,000 lbs.
1710, - 14,000 —	-	- 31,360,000 —	1770—1775, 72,500 (average)	- 162,500,000 —
1734, - 42,000 —	-	- 94,080,000 —	1786—1790, 81,000 —	- 181,500,000 —

In the reign of Queen Anne, the duty on sugar amounted to 3*s.* 5*d.* per cwt. Small additions were made to it in the reign of George II.; but in 1780 it was only 6*s.* 8*d.* In 1781, a considerable addition was made to the previous duty; and in 1787 it was as high as 12*s.* 4*d.* In 1791 it was raised to 15*s.*; and while its extensive and increasing consumption pointed it out as an article well fitted to augment the public revenue, the pressure on the public finances, caused by the French war, occasioned its being loaded with duties, which, though they yielded a large return, would, there is good reason to think, have been more productive had they been lower. In 1797, the duty was raised to 17*s.* 6*d.*; 2 years after, it was raised to 20*s.*; and, by successive augmentations in 1803, 1804, and 1806, it was raised to 30*s.*; but in the last-mentioned year it was enacted, that, in the event of the market price of sugar in bond, or exclusive of the

* In Marin's *Storia del Commercio de' Veneziani* (vol. v. p. 306.), there is an account of a shipment made at Venice for England in 1319, of 100,000 lbs. of sugar, and 10,000 lbs. of sugar candy. The sugar is said to have been brought from the Levant.

II. Account of the Imports, Exports, and Home Consumption of Sugar in the UNITED KINGDOM, and of the Revenue derived therefrom, in each Year from 1814 to 1833 inclusive, specifying the different Species of Sugar and the Quantities of each consumed and exported, with the Gross and Nett Amount of the Duty. — (*Report of the West India Committee of 1832, p. 238.; and Parl. Papers.*)

N. B. — The rates of duty in this Table are the same as those in Table No. I.

* These quantities are exclusive of the coarse sugar and bastards remaining from the process of refining; and they are also exclusive of the coarse sugar obtained by boiling molasses. The quantities of the latter taken for home consumption, in 1831, were 8,020 tons; in 1832, 11,450 do.; and in 1833, 13,970 do. — (*Cook's Commerce of 1833, p. 6.*)

† The drawback in 1833 was 504,797*l.*; but not having learned the amount of the repayments on over entries for that year, we are unable to specify the nett produce of the duties; but it will be very near 4,400,000*l.*

The following Tables exhibit the sugar trade of 1832 more in detail :—

III. Account of the Quantity of Unrefined Sugar imported into the United Kingdom, from the several British Colonies and Plantations, from the British Possessions in the East Indies, and from Foreign Countries, in the Year ended 5th of January, 1833; distinguishing the several Sorts of Sugar, and the Colonies and Countries from which the same was imported.

Influence of the Duties. — The price of sugar, exclusive of the duty, may be taken, at an average of the last few years, at from 24s. to 35s. a cwt. But to lay a tax of 24s. on a necessary of life costing from 24s. to 35s., including 8s. per cwt. freight and charges, is obviously a most oppressive proceeding. Indeed, there does not seem to be much room for doubting that the consumption, and consequently also the revenue, would be very greatly increased by reducing the duty to 16s. or 18s. This may be pretty confidently inferred from the increase of consumption that has invariably followed every fall in the price of sugar. During the 3 years ending with 1808, when the price of brown or muscovado sugar, inclusive of the duty, was about 66s. a cwt., there were, at an average, 2,640,741 cwt. retained for home consumption. During the 3 years ending with 1816, the price was about 95s., and the average quantity retained for home consumption fell off to 2,038,373 cwt. But during the 3 years ending with 1820, the price having fallen to about 57s., the average quantity retained for home consumption rose to 3,267,581 cwt.; being an increase of more than fifty per cent. upon the quantity consumed during the previous period!

It will be observed that the duty was either the same, or very nearly the same, in those 3 periods; but had it been imposed on an *ad valorem* principle, or made to vary directly as the price, the reduction in the last-mentioned period would have been proportionately greater, and there would, consequently, have been a still greater increase of consumption.

The reduction of 5s. a cwt. from the duty, in 1850, was too trifling to have much effect; and it is difficult to say what portion of the increased consumption that has since taken place is to be ascribed to it, and what to other things. But if, instead of reducing the duty from 27s. to 24s., it had been reduced from 27s. to 16s. or 18s., the reduction would have had a powerful influence; and would certainly have occasioned a great increase in the consumption of the lower priced sugars, particularly in Ireland.

The quantity of sugar consumed in Great Britain is, at present, allowing for the quantity sent to Ireland, more than double what it was in 1790. But had the duty continued at 12s. 4d., its amount in 1790, there cannot, we think, be much doubt that the consumption would have been quadrupled. During the intervening period, the population has been little less than doubled; and the proportion which the middle classes now bear to the whole population has been decidedly augmented. The consumption of coffee — an article in the preparation of which a great deal of sugar is used in this country, by all who can afford it — is more than 22 times as great now as in 1790; that is, it has increased from under 1,000,000 lbs. to above 22,000,000 lbs.! The consumption of tea has about doubled; and there has been a vast increase in the use of home-made wines, preserved and baked fruits, &c. Instead, therefore, of having done little more than increase proportionally to the increase of the population, it may be fairly presumed that the consumption of sugar would, had there not been some powerful counteracting cause in operation, have increased in a far greater degree. Instead of amounting to little more than 3,000,000, it ought to have amounted to 6,000,000 cwt.

Taking the aggregate consumption of Great Britain at 400,000,000 lbs., and the population at 16,500,000, the average consumption of each individual will be about 24 lbs. This, though a far greater average than that of France, or any of the Continental states, is small compared with what it might be were sugar supplied under a more liberal system. In workhouses, the customary annual allowance for each individual

is, we believe, 24 lbs.; and in private families, the smallest separate allowance for domestics is 1 lb. a week, or 52 lbs. a year. These facts strongly corroborate what we have already stated as to the extent to which the consumption of sugar may be increased; and others may be referred to, that are, if possible, still more conclusive. Mr. Huskisson stated, in his place in the House of Commons, on Mr. Grant's motion for a reduction of the sugar duties, 25th of May, 1829, that "in consequence of the present enormous duty on sugar, the poor working man with a large family, to whom pence were a serious consideration, was denied the use of that commodity; and he believed he did not go too far when he stated, that two-thirds of the poorer consumers of coffee drank that beverage without sugar. If, then, the price of sugar were reduced, it would become an article of his consumption, like many other articles — woollens, for example, which are now used from their cheapness — which he was formerly unable to purchase." (*Speeches*, vol. iii. p. 455.) There are no grounds for thinking that this statement is in any degree exaggerated; and it strikingly shows the very great extent to which the consumption of sugar might be increased, were it brought fully under the command of the labouring classes.

It is in Ireland, however, that we should anticipate the greatest and most salutary effects from a reduction of the duties on sugar. The direct importations into Ireland do not exceed 15,000 tons; and if we add to these 6,000 tons for the second-hand importations from Great Britain, which, we believe, is quite as much or more than they amount to, the entire consumption of that country will be 21,000 tons, or 47,040,000 lbs., which, taking the population of Ireland at 8,000,000, gives about 5·8 lbs. to each individual; or about 1·4th part of the average consumption of each individual in Great Britain. So singular a result must, we believe, be ascribed, in a considerable degree, to the comparative poverty of the Irish; but there can be no doubt that it is partly, if not principally, owing to over-taxation. The direct imports of sugar into Ireland were twice as great 30 years ago as they are at this moment; and there is no reason for thinking that the increase in the second-hand imports has been equivalent to the increase in the population. Hence, in order to diffuse a taste for so necessary an article as sugar among the population of Ireland, it would be very desirable, if possible, to reduce the duties even as low as 12s. a cwt.; and we are well convinced that such reduction, though it might occasion an immediate loss, would, in the end, be productive of a great increase of revenue, besides being attended with other and still more beneficial consequences. The "one thing needful" in Ireland is to inspire the population with a taste for the conveniences and enjoyments of civilised life; but how is it possible to do this while these conveniences are burdened with oppressive duties, that form an insuperable obstacle to their being used by any but the richest classes? Hence, the first step towards supplying what is confessedly the grand desideratum in the case of Ireland, is to reduce the duties on articles of convenience and luxury, so that they may become attainable by the mass of the people. If this be done, we may rest assured that the desire inherent in all individuals of improving their condition, will impel them to exert themselves to obtain them. A taste for the articles in question will be gradually diffused amongst all ranks; and, ultimately, it will be thought discreditable to be without them. — (*Parl. Paper*, No. 97. Sess. 1831.)

We have already seen that the imports of sugar from the British West Indies and the Mauritius may be estimated at 216,500 tons, and the consumption of Great Britain and Ireland at above 184,000 tons, exclusive of bastards; but of this quantity, about 6,000 tons is Bengal sugar, — making the nett consumption of West India and Mauritius sugar 178,000 tons, leaving 28,000 tons of the latter for exportation, exclusive of the surplus of Bengal sugar.

The duty on East India sugar ought to be reduced to the same level as that on West India sugar. It is difficult to imagine that there can be any good reason why all the productions of the different dependencies of the empire should not be allowed to come into the home market on paying the same duty. The admission of Mauritius sugar at a duty of 24s. is, indeed, a full concession of the principle; for there is not a single argument that could be alleged in favour of admitting Mauritius sugar at the same duty as West India sugar, that will not equally apply to Bengal sugar. However, we do not think that this point is of so much practical importance as is generally supposed. East India sugar has not, as yet, made any way in the Continental markets, most of which are open to it on the same terms as to other sugars; and unless its quality be materially improved, or its price considerably reduced, there is but little prospect of its being able to come into competition with the sugars of Jamaica, Brazil, and Cuba.

Bounty on the Exportation of Refined Sugar. — The business of refining sugar for exportation has been carried on to a considerable extent in this country; but it may be doubted whether its prosecution has ever been productive of any material national advantage. It had long been suspected, — and the fact seems now sufficiently established, — that the drawback allowed on the exportation of refined sugar has been greater than the duty charged on the raw sugar used in its manufacture; the excess being, in fact, a bounty paid to those engaged in the trade. Previously to 1826, the drawback on double refined sugar was 46s. a cwt.: it was then reduced to 43s.; but there is reason to think that it is still considerably above the mark. The average price of sugar in bond in this country, for several years past, has been from 5s. to 6s. a cwt. above what sugar of the same quality has brought on the Continent; a difference which, as we export sugar, could not have been maintained, had it not been for the bounty. The same conclusion has been established by the trials made under the superintendence of Dr. Ure at a sugar house taken for the purpose by government. It is said to be the intention of ministers to reduce the drawback to what may be supposed to be the fair equivalent of the duties paid on the raw sugar; a measure, of the expediency of which no doubt can be entertained. It has been the practice, in making up returns to parliament, to reduce the refined sugar exported into raw sugar, by allowing 34 cwt. of the latter to 20 of the former. But the export of sugar is thus made to appear greater than it really is: for, though 34 cwt. of raw may be required to produce 20 cwt. of refined sugar, the whole of the molasses and bastards that remain (about 13 cwt.) are consumed at home. We subjoin those clauses of the act 3 & 4 Will. 4. c. 58. which refer to the allowing of a bounty on refined sugar.

Bounties upon the Exportation of Refined Sugar. — So long as the duties which are now payable upon the importation of sugar until the 5th of April, 1854, shall be continued, there shall be allowed upon the exportation of refined sugar made in the United Kingdom the several bounties set forth in the Table herein-after contained; (that is to say,)

Refined sugar, viz. —	L. s. d.	being of a uniform whiteness throughout, or such sugar pounded, crushed, or broken, and sugar candy,	L. s. d.
Bastard sugar, or refined loaf sugar broken in pieces, or being ground or powdered sugar, or such sugar pounded, crushed, or broken,		exported in a British ship, for every cwt. —	1 15 10
exported in a British ship, for every cwt. —	1 4 0	exported in a ship not British, for every cwt. —	1 15 8
exported in a ship not British, for every cwt. —	1 3 0	Double refined sugar, and sugar equal in quality to double refined sugar, additional bounty for every cwt. —	0 6 4
Other refined sugar in loaf, complete and whole, or lumps duly refined, having been perfectly clarified and thoroughly dried in the stove, and —	2		

Bond to be given for the due Exportation. — The exporter of goods in respect of which any bounty is claimed under this act, or the person in whose name the same are entered outwards, shall, at the time of entry and before cocket be granted, give security by bond in double the value of the goods, with 1 sufficient surety, that the same shall be duly exported to the place for which they are entered, or be otherwise accounted for to the satisfaction of the commissioners of customs, and shall not be re-landed in the United Kingdom, or landed in the Isle of Man, unless expressly entered to be exported thereto. — § 3.

Candy in Packages of $\frac{1}{2}$ Cwt. — No bounty shall be given upon the exportation of any refined sugar called candy, unless it be properly refined and manufactured, and free from dirt and scum, and packed in packages, each of which shall contain $\frac{1}{2}$ a cwt. of such candy at the least. — § 4.

Sugar crashed for Exportation. — If any sugar in lumps or loaves is to be pounded, crashed, or broken before the same be exported, for the bounty payable thereon, such lumps or loaves shall, after due entry thereof, be lodged in some warehouse provided by the exporter, and approved by the commissioners of the customs for such purpose, to be then first examined by the officers of customs while in such lumps or loaves, as if for immediate shipment, and afterwards to be there pounded, crashed, or broken, and packed for exportation, in the presence of such officers and at the expense of the exporter; and such sugar shall be kept in such warehouse, and be removed thence for shipment, and be shipped under the care and in the charge of the searchers, that the shipment and exportation thereof may be duly certified by them upon the debenture, according to the quality ascertained by them of the same while in such lumps or loaves. — § 5.

Different Sorts of crashed Sugar to be kept separate. — The different sorts of such sugar shall be kept apart from each other in such manner and in such distinct rooms or divisions of such warehouse as shall be directed and appointed by the commissioners of the customs; and if any sort of such sugar shall be found in any part of such warehouse appointed for the keeping of sugar of a sort superior in quality thereto, the same shall be forfeited; and if any sort of such sugar shall be brought to such warehouse to be pounded, crashed, or broken, which shall be of a quality inferior to the sort of sugar expressed in the entry for the same, such sugar shall be forfeited. — § 6.

Sugar Refiners to provide Sample Loaves of Double Refined Sugar. — There shall be provided by and at the expense of the committee of sugar refiners in London, and by and at the expense of the committee of merchants in Dublin, as many loaves of double refined sugar, prepared in manner herein-after directed, as the commissioners of customs shall think necessary; which loaves, when approved of by the said commissioners, shall be deemed and taken to be standard samples; 1 of which loaves shall be lodged with the said committees respectively, and 1 other with such person or persons as the said commissioners shall direct, for the purpose of comparing therewith double refined sugar, or sugar equal in quality to double refined sugar, entered for exportation for the bounty; and fresh standard samples shall be again furnished by such committees, whenever it may be deemed expedient by the commissioners: provided always, that no loaf of sugar shall be deemed to be a proper sample loaf of double refined sugar, if it be of greater weight than 14 lbs., nor unless it be a loaf complete and whole, nor unless the same shall have been made by a distinct second process of refinement from a quantity of single refined sugar, every part of which had first been perfectly clarified and duly refined, and had been made into loaves or lumps which were of a uniform whiteness throughout, and had been thoroughly dried in the stove. — § 7.

Sugar entered not equal to the Standard shall be forfeited. — In case any sugar which shall be entered in order to obtain the bounty on double refined sugar, or sugar equal in quality to double refined sugar, shall, on examination by the proper officer, be found to be of a quality not equal to such standard sample, all sugar so entered shall be forfeited and may be seized. — § 8.

Refining in Bond. — If any further proof, in addition to what has been stated above, were required to show that the trade of refining in this country has been at all times mainly dependent on the bounty, it would be found in the circumstances that have occurred under the late act authorising refining in bond. In 1828, 1829, 1830, and down to July, 1831, foreign sugars were allowed to be refined on the same terms as British sugars — that is, they paid the same duty and were entitled to the same drawback. The quantity of foreign sugar so refined amounted, in 1830, to 2,105 tons, and in the first half of 1831, when the privilege ceased, to about 4,500 tons. The renewal of this system was strongly advocated in 1831 and 1832; but it was successfully opposed by the West India merchants, who considered the scheme injurious to their interests. Last year (1833), however, the refiners having pressed upon parliament the expediency of allowing them to refine foreign sugars *in bond*, which excluded, of course, the possibility of the revenue losing any thing by the drawback exceeding the duty, their request was complied with. The result, however, has shown that the trade had formerly been mainly artificial, or that it had depended principally on the drawback being above the duty. “Out of 65 houses in London, 4 only have availed themselves of the permission to refine in bond; and of these 4, 2 are now about to give up working; and the total quantity that has been used is 100 tons Siam, 100 tons Havannah, and 470 tons Brazil; in all, but 670 tons. A statement has, also, been recently put forth, which shows that, notwithstanding the aid of a bounty, the export had declined from 611,000 cwt. in 1818, to 344,000 in 1828; and although it has since fluctuated between these quantities, it has amounted during the first 3 quarters of the present year (1833) to 195,271 cwt. only, against 382,479 cwt. in the same period of the last year, and 432,222 cwt. in the previous one, notwithstanding there has been abundance of foreign sugar to be had at low prices, and that all the powers of chemical science have been at work to improve the process of refining.” — (*Cook's Commerce of Great Britain* for 1833.)

This unfavourable state of things is owing, no doubt, to a concurrence of causes; but principally, we believe, to the exaggerated opinions entertained by most foreign nations as to the importance of the sugar refining business. We have no wish, certainly, to undervalue it; but every unprejudiced person must admit that, compared with most other businesses carried on in a great country, it is of very inferior consideration. Instead, however, of regarding it in this point of view, most foreign governments seem to look upon it as of the highest value; and have endeavoured to extend the business, not merely by excluding foreign refined sugars from their markets, but by granting the most lavish bounties on the exportation of sugar refined at home. In France, this sort of policy, if we may so call it, was carried so far, that out of a gross revenue of about 40,000,000 francs (1,570,000*l.*) paid into the treasury on account of the sugar duties in 1832, about 19,000,000 (760,000*l.*) were returned as drawback on the export of refined sugar! As the French government could not afford to lose the sugar duties, which would very speedily have been swallowed up by the drawback, necessity has compelled them to modify their system, by making the allowance to the exporter more nearly correspond with the duty. This will, no doubt, diminish the exportation of refined sugar from France; a change by which it is reasonable to suppose our refiners will in some degree be benefited.

Prussia, and most parts of Germany, to which we formerly exported large quantities of refined sugar, no longer admit it except at a high duty. And even in those Continental markets that are still open for its importation under moderate duties, we have formidable competitors in the Dutch and Belgian refiners, whose governments continue to allow pretty high bounties.

On the whole, therefore, we are afraid that the refining business in this country is in a rather precarious state. Improvements in the process seem to be the only source of relief to which the refiners need look with much hope of advantage. The idea of attempting to bolster up the business by the aid of bounties is not one that can be any longer entertained.

We subjoin the act 3 & 4 Will. 4. c. 61., allowing sugar to be refined in bond.

ACT 3 & 4 WILL. 4. C. 61., FOR ADMITTING SUGAR TO BE REFINED FOR EXPORTATION WITHOUT PAYMENT OF DUTY.

Commissioners of Customs may approve Premises for Bonded Sugar Houses. — Upon application to the commissioners of customs of any person actually carrying on the business of a sugar refiner in the ports of London, Liverpool, Bristol, Hull, Greenock, or Glasgow, or any other port approved by any 3 Lords of the Treasury, it shall be lawful for the commissioners of customs to approve of such premises as bonded sugar houses for the refining of sugar for exportation only, on it being made appear to the satisfaction of said commissioners that the said premises are fit in every respect for receiving such sugars, and wherein the same may be safely deposited. — § 1.

Officers of Customs empowered to deliver Sugars Duty-free, to be there refined for Exportation only. — On the approval of any premises as bonded sugar houses, it shall be lawful for the officers of the customs

at the ports where such premises are situated to deliver, without payment of duty, to the party or parties so applying as aforesaid, on entry with the proper officer of customs, any quantity of foreign sugar, or of sugar the produce of any British possession, for the purpose of being there refined, under the locks of the Crown, for exportation only; and all sugars so delivered shall be lodged and secured in such premises, under such conditions, regulations, and restrictions as the said commissioners shall from time to time direct: provided, that it shall be lawful for the commissioners to revoke or alter any order of approval of any such premises. — § 2.

Refiner to give Bond that Sugar received be refined and exported, or delivered into Bonded Warehouse. — Upon the entry of sugar to be refined in any premises approved of under the authority of this act, the refiner on whose premises the same is to be refined shall give bond, to the satisfaction of the officers of the customs, in the penalty of double the amount of the duty payable upon a like quantity of sugar of the British plantations, with a condition that the whole of such sugar shall be actually subjected to the process of refinement upon the said premises, and that within 4 months from the date of such bond the whole of the refined sugar and treacle produced by such process shall be either duly exported from the said premises, or delivered into an approved bonded warehouse, under the locks of the Crown, for the purpose of being eventually exported to foreign parts. — § 3.

Regulations as to Importation, &c. of Sugar. — No allowance is to be made for damage or increase of weight by water, on sugar, without special permission.

Tare on British plantation sugar: —

Under 5 cwt.	—	14 per cent.
8 — and under 12	—	1 cwt. each cask.
12 —	—	15 — 1 cwt. 1 qr. 12 lbs. each cask.
15 —	—	17 — 2 — 0 —
17 — and upwards	—	1 — 3 — 0 —

Certificates of Growth are required before any sugar can be entered as the produce of a British possession in America, or of the Mauritius; and before it can be entered as the produce of any British possession within the limits of the East India Company's charter. — (See the clauses in the act 3 & 4 Will. 4. c. 52. ante, p. 660.)

BEET ROOT SUGAR. — The manufacture of sugar from beet root is carried on a very considerable extent in several parts of the Continent, particularly in France, where the annual produce of the sugar from this source may at present be estimated at about 8,000 tons. This branch of industry began during the exclusion of colonial products from France in the reign of Napoleon. It received a severe check at the return of peace, by the admission of West India sugars at a reasonable duty; and would, it is most probable, have been entirely extinguished, but for the oppressive additions made to the duties on colonial sugars in 1820 and 1822. It is supposed by some, that at no distant period the manufacture of sugar from beet root will be so much improved, that it may be able to stand a competition with colonial sugar at the same duty; but we have no idea that this supposition will ever be realised. It is of importance, however, to bear in mind, that were the culture of beet root sugar to be extensively carried on at home, it would be quite impossible to collect a duty upon it; so that the large amount of revenue that may be advantageously derived from a moderate duty on imported sugar, would be almost entirely lost. — (For an account of the beet root cultivation in France, see the article on the *French Commercial System*, in the *Edinburgh Review*, No. 99.)

We understand that a few small parcels of beet root sugar have recently been produced in this country; and with the present enormous duty on colonial sugar, we are not sure that the manufacture may not succeed. But, as the preservation of the revenue from sugar is of infinitely more importance than the introduction of this spurious business, the foundations of which must entirely rest on the miserable machinery of Custom-house regulations, sound policy would seem to dictate that the precedent established in the case of tobacco should be followed in this instance, and that the beet root sugar manufacture should be abolished. Inasmuch, too, as it is better to check an evil at the outset, than to grapple with it afterwards, we trust that no time may be lost in taking vigorous measures, should there be any appearance of the business extending.

MAPLE SUGAR. — A species of maple (*Acer saccharinum* Lin.) yields a considerable quantity of sugar. It grows plentifully in the United States and in Canada; and in some districts furnishes the inhabitants with most of the sugar they make use of. Though inferior both in grain and strength to that which is produced from the cane, maple sugar granulates better than that of the beet root, or any other vegetable, the cane excepted. It is produced from the sap, which is obtained by perforating the tree in the spring, to the depth of about 2 inches, and setting a vessel for its reception. The quantity afforded varies with the tree and the season. From 2 to 3 gallons may be about the daily average yield of a single tree; but some trees have yielded more than 20 gallons in a day, and others not more than a pint. The process of boiling the juice does not differ materially from what is followed with the cane juice in the West Indies. It is necessary that it should be boiled as soon after it is drawn from the tree as possible. If it be allowed to stand above 24 hours, it is apt to undergo the vinous and acetous fermentation, by which its saccharine quality is destroyed. — (*Bouchette's British America*, vol. i. p. 371.; *Timber Trees and Fruits*, *Library of Entertaining Knowledge*.)

Prices of Sugar. — The following statement of the prices of sugar in the London market, on the 21st of February, 1834, is taken from the *Circular of Messrs. Corrie and Co.* of that date.

ACCOUNTS OF SALES OF SUGAR. — Subjoined are *pro forma* accounts of sales of sugar from Jamaica, Brazil, Bengal, Mauritius, &c. These accounts are interesting, inasmuch as they exhibit the various charges affecting this necessary article, from the time it is shipped in the colonies till it finds its way into the hands of the grocer; and our readers may rely on their authenticity. It will be observed, that the duties are very much greater than the sums received by the planters.

Pro Forma Sales of 100 Hogsheads Jamaica Sugar, per "Jean," Captain Yates, by Order and for Account of Thomason & Co.

SULPHUR, OR BRIMSTONE (Fr. *Soufre*; Ger. *Schwefel*; It. *Zolfo, Solfo*; Sp. *Azufre*; Arab. *Kibreet*), is a crystallised, hard, brittle substance, commonly of a greenish yellow colour, without any smell, and of a weak though perceptible taste; its specific gravity is from 1.9 to 2.1. It burns with a pale blue flame, and emits a great quantity of pungent suffocating vapours. In some parts of Italy and Sicily it is dug up in a state of comparative purity. That which is manufactured in this country is obtained by the roasting of pyrites. It is denominated *rough* or *roll sulphur*, from its being cast in cylindrical moulds, and contains 7 per cent. of orpiment. The Italian roll sulphur does not contain more than 3 per cent. of a simple earth; and is, therefore, in higher estimation than the English. When roll sulphur is purified, it receives the name of *sublimed sulphur*, and is in the form of a bright yellow powder. — (*Thomson's Chemistry, &c.*)

Sulphur is of great importance in the arts. It is used extensively in the manufacture of gunpowder, and in the formation of sulphuric acid, or oil of vitriol. It is also used extensively in medicine, and for other purposes. The entries for home consumption in 1831 and 1832 amounted, at an average, to 312,698 cwt. a year. The duty on refined brimstone varies from 6s. to 9s. 9d. a cwt.; so that the imports consist almost wholly of rough, or what is called roll brimstone. Of 289,421 cwt. imported in 1831, 264,944 cwt. came from Italy, or rather Sicily. Its price in bond in the London market, in March, 1834, varied from 13*l.* to 20*l.* a ton.

SYDNEY, the capital of New South Wales, and of the British settlements in New Holland, or Australia, in lat. 33° 55' S., lon. 150° 10' E. Population about 14,000. Sydney is situated on a cove on the south side of Port Jackson, about 7 miles from its mouth. The water is of sufficient depth to allow the largest ships to come close to the shore. The inlet or harbour, denominated Port Jackson, is one of the finest natural basins in the world. It stretches about 15 miles into the country, and has numerous creeks and bays; the anchorage is every where excellent, and ships are protected from every wind. The entrance to this noble bay is between 2 gigantic cliffs not quite 2 miles apart. On the most southerly, in lat. 33° 51' 30" S., lon. 151° 16' 30" E., there is a light-house, the lantern of which is elevated 67 feet above the ground, and about 345 above the sea. Owing to a want of attention at first, the streets of Sydney were laid out, and the houses built, according to the views of individuals, without any fixed or regular plan. But latterly this defect has been to a considerable degree remedied in the old streets; and the new ones are systematically laid out. The town covers a great extent of land; almost every house having a considerable piece of ground attached to it. There are different banks at Sydney; some of which are joint stock associations, and others private copartneries. There is also a Savings' Bank. Schools for the instruction of poor children have been established; and there are, besides two establishments, dignified with the pompous title of colleges, numerous seminaries, some of them said to be very well conducted, for the education of the middle and upper classes. There are several periodical publications.

Population, &c. — The British settlements in New South Wales were originally intended to serve as penal establishments to which convicts might be transported, and employed in public and private works; and are still used for this purpose. The first vessel with convicts arrived at Botany Bay in January, 1788; but it having been found to be quite unsuitable as a site for a colony, the establishment was removed to Port Jackson. The progress of the colony has been much more rapid than might have been anticipated, considering the character and habits of the convicts annually landed upon its shores, and the difficulties which the great distance from England interpose in the way of an emigration of voluntary settlers. Owing to the circumstance of the great majority of the convicts and other emigrants being males, a great disproportion has always existed between the sexes in the colony, which has materially retarded its progress, and been, in other respects, productive of very pernicious results. Government, however, recently agreed to pay a sum of 8*l.* each, on their arrival in the colony, to every well-behaved unmarried young woman, between the ages of 18 and 30, not exceeding 1,200 in all, who might emigrate, either to New South Wales or Van Diemen's Land; and some have been sent out by private associations. In 1828, the date of the last census, the entire population of the colony, exclusive of aborigines, was 36,598, distributed as follows: —

Free emigrants	-	-	{ males	-	2,846	4,673	13,400
			{ females	-	1,827		
Born in the colony	-	-	{ males	-	4,473	8,727	7,530
			{ females	-	4,254		
Convicts become free by servitude	-	-	{ males	-	5,302	6,644	886
			{ females	-	1,342		
Convicts pardoned	-	-	{ males	-	830		15,668
			{ females	-	51		
Convicts	-	-	{ males	-	14,155	-	36,598
			{ females	-	1,513		
Total	-	-	-	-	-	-	

But there is some uncertainty as to these returns. At present, the population of the colony may safely be taken at above 50,000.

Climate. — The climate of such parts of New South Wales as have been explored by the English is particularly mild and salubrious. The high summer heat indicated by the thermometer has not the relaxing and enfeebling effect that a similar high temperature has in India and many other countries. Fearless of damps, and unmolested by noxious insects, the traveller may throw himself under the shade of the first tree that invites him, and sleep in safety. On the other hand, however, the climate has the serious defect of being too dry. It seems to be subject to the periodical recurrence of severe droughts. These prevail sometimes for 2, 3, or even 4 years together. The last "great drought" began in 1826, and it did not terminate till 1829! Very little rain fell during the whole of this lengthened period, and for more than 6 months there was not a single shower! In consequence, the whole surface of the ground was so parched and withered, that all minor vegetation ceased; and even culinary vegetables were raised with much difficulty. It well nigh ruined many of the settlers; nor is the colony as yet quite recovered from its effects. — (*Bretton's Excursions in New South Wales*, p. 296.; *Sturt's Southern Australia*, vol. i. p. 2.) This is, in fact, the great drawback upon the colony; and were it more populous, there is reason to think it would expose it to still more serious difficulties.

Soil, Products, &c. — The fertility of the soil in most parts of New Holland that have been explored with any care, is very far, indeed, from corresponding with the glowing descriptions of some of its casual visitors, whose imaginations seem to have been dazzled by the magnificence of its botanical productions, and the clearness and beauty of the climate. The truth is, that the bad land seems to bear a much greater proportion to the good in New Holland, than in almost any other country with which we are acquainted. Different theories have been framed to account for the fact; but of the fact itself there seems no manner of doubt. Of course, it is not to be supposed but that in a country of such vast extent there are many fertile districts; but along the east coast, with which we are best acquainted, these seem to be much more confined than might have been expected; and the little experience we have had on the west side, at Swan River and other places, seems to lead to still more unfavourable conclusions. Only a comparatively small part of the interior has as yet been explored. On the whole, however, the fair inference seems to be, not only that New South Wales, but that New Holland generally, is much better fitted for becoming a pastoral than an agricultural country. Sheep succeed remarkably well; and notwithstanding the colony continues to derive part of her supplies of corn from Van Diemen's Land and other places, she has already a very large export of wool; and from the great and growing attention paid to the improvement of the breed of sheep, their rapid multiplication, and the extraordinary increase in the quantity of wool exported, there seems little doubt but that, at no distant period, New South Wales will be one of the principal wool-growing countries in the world. In 1822, the exports of wool amounted to only 152,880 lbs.; in 1825, they had increased to 411,600 lbs.; in 1828, they were 854,343 lbs.; and in 1832, 1,336,000 lbs.!

The following statements show the progress of cultivation in the colony, from 1819 to 1828: —

The Stock was			
In 1819.		In 1828.	
Horses	- - - 3,572	Horses	- - - 12,479
Horned cattle	- - - 42,789	Horned cattle	- - - 262,868
Sheep	- - - 75,369	Sheep	- - - 536,391

The Number of Acres held was			
In 1819		In 1828	
-	- - - 337,114	-	- - - 2,905,546
Of which were cultivated	47,973	Of which were cleared	- 231,573
		And cultivated	- 71,523

Imports and Exports. — The total value of the imports from all places into Sydney in 1832, excluding those from the Whale Fishery and New Zealand, which are almost entirely the produce of the industry of the colonists, was estimated at 510,733*l.*; of which the imports from Great Britain amounted to 424,489*l.* Of the latter, the principal articles were — cottons, 1,319,000 yards, value 48,966*l.*; apparel and slops, 32,955*l.*; casks and staves, 18,927*l.*; hardware and ironmongery, 28,375*l.*; haberdashery, 27,505*l.*; hats, caps, bonnets, &c., 14,022*l.*; spirits, about 340,000 gallons, value 38,547*l.*; stationery and books, 10,795*l.*; woollens, 19,629*l.*; wines, 10,293*l.*, &c. The principal foreign and colonial imports were sugar and wheat.

The estimated value of the exports during the same year was 371,174*l.* Of these, the principal articles of native produce were — wool, 1,336,414 lbs., value 73,944*l.*; hides, 10,309*l.*; spermaceti oil, 2,221 tuns 190 gals., value 112,027*l.*; black whale oil, 944 tuns, value 21,227*l.*; salt provisions, 18,001*l.*, &c. Exclusive of these, there were re-exported of British produce and manufactures, 53,762*l.*; and of the produce of British and foreign colonial settlements, 23,816*l.* We have thus —

Total amount of imports	- - - - -	£ 510,733
- of exports	- - - - -	371,174
Balance of imports	-	£ 139,559

But from this we have to deduct 115,629*l.*, being the amount of the bills drawn by the insular commissariat on the government at home for the maintenance of the military and convict establishments, leaving an apparent balance against the island of 23,940*l.* It should be observed, that in these statements no account is taken of the precious metals imported or exported. — (*New South Wales Calendar and Directory* for 1833, pp. 305–312.)

In 1832, 186 ships, of the burden of about 40,000 tons, entered Port Jackson. During the same year, 38 ships, of 12,231 tons burden, entered British ports inwards from New South Wales, Van Diemen's Land, and Swan River; and 89 ships, of 30,494 tons burden, cleared outwards for the same.

Whale Fishery. — The statements given above show the great importance of the whale fishery to New South Wales. The *Physeter macrocephalus*, or black-headed spermaceti whale, being particularly abundant in the Southern Ocean, the situation of Sydney gives its whale ships advantages for the prosecution of the fishery that are not enjoyed by those either of England or America. The latter have a long voyage to make before they reach the fishing stations; whereas those belonging to New South Wales reach them without loss of time, and return home with equal facility for fresh supplies, or to repair any damage they may happen to meet with. No wonder, therefore, that the colonists should have eagerly embarked in this field of enterprise. They have prosecuted it with much success, and have now many valuable ships engaged in it.

The trade carried on between New South Wales and New Zealand is daily becoming of more and more importance. The imports of flax from the latter into this country are now, as we have already seen, of considerable value and importance.

Income and Expenditure. — We subjoin an account of the revenue of New South Wales for the 6 years ending with 1831, and for part of 1832.

Revenue of New South Wales, from the 1st of January, 1826, to the 31st of October, 1832.

Head of Revenue.	1826.	1827.	1828.	1829.	1830.	1831.	From 1st Jan. to 31st Oct. 1832.

According to the *Papers published by the Board of Trade* (vol. i. p. 250.), the total expenditure of the colony in 1830 amounted to 242,891*l.*, of which 80,174*l.* were civil expenses; and the remainder, being 162,717*l.*, were the charges incurred by the colony for the convict and military establishments; and which has, of course, to be defrayed by the mother country. In fact, were it not for the heavy expenses necessarily incurred on account of the conveyance and superintendence of convicts, the revenue of the colony would be adequate to meet the outgoings.

Monies, Weights, and Measures. — Accounts are kept in sterling money; but Spanish dollars are most abundant. They pass current at 5*s.* each. The weights and measures are the same as those of England.

Rate of Agency, Commission, and Warehouse Rent, agreed to at a Meeting of the New South Wales Chamber of Commerce, 1828.

Commission.

- On all sales or purchases of ships and other vessels, houses, or lands, where no advance on them has been made, 2*½* per cent.
- On all other sales, purchases, or shipments, 5 per cent.
- On goods consigned and afterwards withdrawn, or sent to public auction, if no advance on them has been made, 2*½* per cent.
- On giving orders for the provision of goods, 2*½* per cent.
- On guaranteeing sales, bills, bonds, or other engagements, 2*½* per cent.
- On the management of estates for others, 5 per cent.
- On procuring freight or charter, and on freight collected, 5 per cent.
- On insurances effected, 2 per cent.
- On settling losses, partial or general, 1 per cent.
- On effecting remittances, or purchasing, selling, or negotiating bills of exchange, 1 per cent.
- On the recovery of money, 2*½* per cent. If by law or arbitration, 5 per cent.

- On collecting house rent, 5 per cent.
- On attending the delivery of contract goods, 2 per cent.
- On securing security for contracts, 5 per cent.
- On ships' disbursements, 5 per cent.
- On obtaining money on *repondentia*, 2 per cent.
- On letters of credit granted, 2*½* per cent.
- On purchasing, selling, receiving from any of the public offices, lodging in ditto, delivering up or exchanging government paper or other public securities, 2 per cent.
- On all items on the debit or credit side of an account, on which a commission of 5 per cent. has not been previously charged in the same account, including government paper, 1 per cent.
- On entering and clearing ships at the Custom-house, each, 1 guinea.
- On the dishonour of foreign bills, exclusive of protest and other law expenses a re-exchange of 25 per cent.

Warehouse Rent.

- On all measurement goods, 1*s.* per ton of 40 cubic feet, per week.
- On liquids, 1*s.* 3*d.* per tun of 252 gallons (old measure) per week.
- On sugar, rice, salt, and similar articles, 6*d.* per ton per week.
- On grain, 4*d.* per bushel for first month, and 4*d.* per bushel per month afterwards.
- On iron, lead, &c. 4*d.* per ton per week.

Duties levied at Sydney under Acts of Parliament.

Emigration to New South Wales, Rate of Wages, &c.—Were it not for the heavy expenses attending emigration to so distant a country as New South Wales, the advantages it holds out to the industrious emigrant are considerable. Labour is in great demand, the rate of wages high, provisions moderately cheap, and the climate mild and not unsuitable to European constitutions. The great drawbacks are the general inferiority of the soil, the want of water, and the immense distance from Europe. The commissioners for facilitating emigration (that is, for contracting with individuals or parishes willing to defray the expense of removing voluntary emigrants to the colonies), issued the following

INFORMATION WITH RESPECT TO THE AUSTRALIAN COLONIES.

Price of Passage.—The commissioners for emigration have reason to expect, from the result of the inquiries which they have made on this subject, that passages can be provided for people of the working classes, including their maintenance during the voyage, at a charge not exceeding 16l. for adults, and 8l. for children. More exact particulars, and the precise charge for which passages can be provided, will be stated at the time of entering into the agreements with such persons as may apply to the commissioners for that purpose.

Probability of Employment, and Rates of Wages. — The commissioners have examined a considerable number of letters upon these subjects from respectable inhabitants of New South Wales and Van Diemen's Land; and they find that all concur in representing the existence of a great demand for labour. These representations are further confirmed by official reports received from those colonies by the secretary of state.

The following general statements, collected from a variety of sources, will afford a view of the average rates of wages in the Australian colonies: —

Twenty-five or thirty pounds a year, besides board and lodging, seem to be the wages which are usually paid to common labourers: artisans of very ordinary qualifications are reported to find no difficulty in obtaining 50*l.* a year, besides board and lodging. The following advertisement, which appeared in the Sydney Gazette of the 12th of August, 1830, contains a list of several descriptions of workmen wanted at Sydney, as well as an account of the high wages which some of them might obtain: —

Wanted, in Sydney, New South Wales, the following Tradesmen and Mechanics: —

Bread and biscuit bakers.	Dairywomen.	Milliners.	Sail makers.
Butchers.	Distillers.	Maltsters.	*Slaters and shinglers.
*Boat builders.	*Engineers.	Mustard makers.	Shepherds.
*Brick makers.	Farriers.	Milkmen.	Sheepshearers.
* — layers.	Flax dressers.	Nurserymen.	Soap makers.
Bel lows makers.	Fencers.	Nailers.	Sign painters.
*Blacksmiths.	Feltmongers.	Painters.	Sailors.
Bell hangers.	Gardeners.	Parchment makers.	Sail cloth makers.
Brass foundries.	Glaziers.	Pump makers.	Sieve makers.
Brewers.	Glass blowers.	Plough makers.	Starch makers.
Boatmen.	Glue makers.	Potters.	Straw platters.
*Collar makers.	Gilders.	Paper makers.	Straw hat makers.
Confectioners.	Gunsmiths.	*Plasterers.	Turners.
Chair makers.	Hairdressers.	Ploughmen.	*Tanners.
*Curriers.	Hat makers.	Provision curers.	Tailors.
*Carpenters.	— finishers.	Plumbers.	Tin plate workers.
*Caulkers.	*Harness makers.	Printers and pressmen.	Tobacco pipe makers.
*Coopers.	Horse breakers.	Quarrymen.	Tobacco growers.
Cart makers.	Hoop benders.	Quill preparers.	Tallow melters.
Coach makers.	*Joiners.	Rope makers.	Vine dressers.
Compositors.	Japanners.	Reapers.	Upholsterers.
Candle makers.	Ironmongers.	Saddlers.	Wheelwrights.
Cabinet makers.	Iron foundries.	Shoemakers.	Wagon makers.
Cheese makers.	Leather dressers.	*Sawyers.	Wool sorters.
Coach spring makers.	Lime burners.	Shipwrights.	Whalers.
Cooks.	Locksmiths.	*Stone masons.	Weavers of blankets and
Colliers.	Millers.	*Stone cutters.	coarse woollen.
*Coppersmiths.	Mealmen.	Stone setters.	Wire drawers.
Cutlers.	*Millwrights.	Stone quarrymen.	Wood splitters.
Dyers.			

Those marked thus (*) are particularly wanted, and earn 10*s.* a day and upwards, *all the year round*; and engineers and millwrights earn 20*s.* a day.

All articles of provision are very cheap: beef and mutton, 2*d.* per lb. by the joint, and 1*d.* per lb. by the quarter or carcass. Tea (green), 1*s.* 6*d.*; sugar, 5*d.* Indian corn, 1*s.* 6*d.* per bushel, &c. &c.

The agent for New South Wales and Van Diemen's Land, in a letter addressed to the Chairman of the Emigration Committee in the year 1827, since which period the price of labour is understood to have risen, stated the rates of wages as follows: —

	Per Day.		Per Day.
Common labourers - - - -	3 <i>s.</i>	And to mechanics of peculiar qualifica-	
Common mechanics - - - -	7 <i>s.</i>	tions, or agricultural labourers capable	
2 <i>d.</i> rate ditto - - - -	8 <i>s.</i> to 12 <i>s.</i>	of managing a farm in the capacity of	
3 <i>d.</i> rate ditto - - - -	12 <i>s.</i> to 15 <i>s.</i>	baillifs - - - -	1 <i>l.</i>

Market Prices at Sydney. — The commissioners have collected from newspapers published in New South Wales, the following accounts of the market prices at Sydney on the 1st day of each month during the year 1830: —

It is not necessary that emigration to the Australian colonies should be confined to any particular season; and the commissioners for emigration will therefore be ready immediately to afford their assistance to persons desirous of going to New South Wales and Van Diemen's Land. In consequence, however, of the state of the population in the Australian colonies, the commissioners do not propose to take charge of the conveyance of any but married men and their families, or of females belonging to the labouring classes.

The price of the principal articles of provision in the market of Sydney, in January, 1833, were as follows:—

Articles.		Prices.				Articles.		Prices.									
		L.	s.	d.	L.	s.	d.			L.	s.	d.	L.	s.	d.		
Beef, per lb. per quarter	-	0	0	13	to	0	0	2	Goose	-	0	4	0	to	0	6	0

Rations for Convicts.—The weekly rations of the convicts are 12 lbs. of wheat, or 9 lbs. of flour, or 3½ lbs. of maize, and 9 lbs. of wheat, or 7 lbs. of 2d flour; 7 lbs. of beef or mutton, or 4½ lbs. of salt pork; 2 oz. of salt; 2 oz. of soap.

The clothing to which they are entitled consists of 2 frocks or jackets; 5 pair of shoes, of stout and durable leather; 5 shirts; 2 pair of trousers; 1 hat or cap.

We subjoin, in illustration of the sort of statements put forth to allure immigrants, the following extract from the *Sydney Gazette* of the 22d of May, 1830:—

“Here, then, is a country prepared to our very hands for all the purposes of civilised life. While England is groaning under a population for which she cannot provide bread, here is an unmeasured extent of rich soil, that has lain fallow for ages, and to which the starving thousands of the North are beckoned to repair. The great want of England is employment; the great want of New South Wales is labour. England has more mouths than food; New South Wales has more food than mouths. England would be the gainer by lopping off one of her superfluous millions; New South Wales would be the gainer by their being planted upon her ample plains. In England, the lower orders are perishing for lack of bread; in New South Wales, they are, like Jeshurun, “waxing fat and kicking” amid superabundance. In England, the master is distracted to find work for his men; in New South Wales, he is distracted to find men for his work. In England, the capitalist is glad to make his 3 per cent.; in New South Wales, he looks for 20. In England, capital is a mere drug,—the lender can scarcely find a borrower, the borrower can scarcely repay the lender; in New South Wales, capital is the one thing needful,—it would bring a goodly interest to the lender, and would make the fortune of the borrower.

“Then let the capitalist wend his way hither, and his 1 talent will soon gain 10; and his 10, 20. Let the labouring pauper come hither; and, if he can do nothing but dig, he shall soon be welcome to 23s. a week, and shall feast on fat beef and mutton at 1d. or 2d. a pound! Let the workhouses and jails disgorge their squalid inmates on our shores, and the heart-broken pauper and the abandoned profligate shall be converted into honest, industrious, and jolly-faced yeomen.”

This is a striking, but an exceedingly exaggerated, paragraph. Those who emigrate in the expectation of finding an El Dorado in New South Wales, or in any part of Australia with which we are acquainted, will meet with nothing but disappointment. Industry and good conduct are not more necessary to the success of individuals in England than they are to the success of those who emigrate to New Holland. There, as here, man must “eat his bread in the sweat of his brow.”

In order to provide a fund for defraying the expenses of emigration to Australia, government has resolved to impose a tax of 1l. each upon the convicts assigned to private individuals. Doubts, however, may be entertained as to the policy of any such tax. A duty upon labour is certainly a novel expedient for increasing the prosperity of a colony; though, perhaps, under the peculiar circumstances of the case, it may be justified.

Granting of Land in Australia.—We have previously given (*ante*, p. 359.) a copy of the terms on which lands are henceforth to be granted to emigrants to New South Wales and Van Diemen's Land. They are not very explicit. The colonial secretary's letters to the governor merely tell him that in future all land is to be sold by auction; that the *minimum* or upset price is to be 5s. an acre; and that he has a *discretionary power* of fixing a higher minimum price on superior lots, and of declining to sell them till that price be obtained. Even were there nothing to object to the *principle* of this plan, if any thing so very vague deserve that name, we have very little doubt that in its practical operation it will generate every species of abuse. The local government, having the power of limiting the quantity of land to be put up to auction, has it completely in its power to fix its price; for it may either increase the quantity of land so that it shall fetch no more than the upset price, or it may limit it so that it shall fetch any greater sum. Such auctions must in reality be a mere farce; it is not possible that they can be conducted on a fair principle. The price must, in every instance, really depend on the pleasure of the sellers, and not on the competition of the buyers. Supposing the local authorities to be uniformly actuated by the sincerest desire to deal fairly by every one, by what test are they to discover the probable number of offerers at different

periods, the amount of their funds, and the intensity of their desire to purchase? And yet, without knowing all these things, they cannot decide upon the quantity of land to be put up, so as to have any thing like a fair sale. And supposing them to be influenced by the partialities and weaknesses incident to humanity, how easy, when they wish to oblige, will it be for them to increase the number of lots put up, and conversely! To obviate, in some degree at least, the chance of such abuses, the better way would be to get a *large tract* of country divided into lots, and to fix prices on these according to the estimate formed of their various advantages, assigning them in absolute property to the *first applicant* ready to pay down the price, and to conform to the regulations as to occupancy, &c. It is to no purpose to contend that the plan of selling land by auction is adopted in America. What is there in common between the political condition of Australia and the United States? Jobbing, that would be instantly detected and put down in the latter, may attain to the rankest luxuriance in the former. The influence of a government and a public on the spot is altogether different from that of a government and a public many thousand miles distant. It is easy to set a *minimum* price upon land; the real desideratum is the establishment of some certain, fixed, and *fair* principles for fixing its *maximum* price.

We confess, however, that we entertain serious doubts as to the soundness of the principle involved in this plan, even supposing it could be fairly carried into effect; and these doubts have not been in any degree lessened by the extravagant eulogies lavished upon it. It would seem, indeed, to be supposed that all the evils incident to colonisation have resulted from the settlers getting land on too easy terms; and that all that was required for the establishment of a colony on the best possible foundation, was, to sell its land at a high price; in other words, to make it as like an old country as possible! It says little for the public discernment, that opinions of this sort should have obtained much currency. We concede, indeed, that nothing can be more injurious to a colony than the making of large grants of land to individuals who either do not intend to settle upon them, or are unable to clear and bring any considerable portion of them into cultivation. But because such inconveniences have resulted from the injudicious granting of land, it does not, therefore, follow that it should be sold at high prices, or even at any price at all. In making grants of land, regard ought to be always had to the means and the intentions of the grantee; that is, the grant should depend partly on the probable amount of his available capital, and partly on the purposes to which he means to apply it. And it might be properly enough stipulated, that if, at the end of some fixed period, certain improvements were not made, buildings erected, &c., it should revert to the Crown. But the more we reflect upon the subject, the greater are our doubts as to the policy of exacting any price for land, particularly in such a country as New South Wales. Considering the very inferior quality of most of the land in that colony, it seems to us that 5s. an acre is quite extravagant as a minimum price; and that, instead of being made the lowest point in the scale, it should rather have been made the highest. At all events, if an upset price of 5s. an acre be not a great deal above the mark in New Holland, it must be a great deal below it in Upper Canada. It would not really be more absurd to set about establishing a uniform rate by which to regulate the sale of land in Essex and the Hebrides, than it is to apply the same scale to all our colonial possessions. If this preposterous scheme do not discourage emigration, it will assuredly turn the tide from our own colonies to the United States. And though it had no such effect, it would still be highly objectionable; inasmuch as it cripples the resources of the colonist at the very moment when they are the most indispensable; and deprives him of funds which he would have laid out better than, it is easy to suppose, they can be laid out by government. The mode of letting land by fine, that is, by the receipt of a large sum of money on the tenant's entry to a farm,—the rent during the currency of the lease being proportionally small,—has been severely censured by all the best agricultural writers; and for the very sufficient reason, that it deprives the tenant of the greater part of his capital, and disables him from undertaking any considerable improvement. And yet we are loudly called upon to do the same thing by the settlers in a new colony,—who, for the most part, emigrate only because they have little or no capital,—that is so justly condemned at home. This precious project has actually been trumpeted forth as a signal discovery that was to be productive of the very greatest utility; and a society has been formed to promote colonisation, on the avowed principle of rendering it much more difficult than it has ever hitherto been for a colonist in the lower walks of life to acquire land and become independent! If slaves could be imported into a colony of this sort, there might be some chance of its succeeding. But while land of the *very best quality* may be had in Illinois for 2 dollars an acre, and even less, we think better of the common sense of our countrymen, than to suppose that they will resort to Australia under the auspices of any company of the sort now alluded to.

In compiling this article we have made use of the *Report of Mr. Bigge on the Agriculture and Trade of New South Wales*, being *Parl. Paper*, No. 136. Sess. 1823;

Report of Commissioners of Inquiry, Parl. Paper, No. 328. Sess. 1831; Papers laid before the Finance Committee; New South Wales Calendar and Directory for 1833; and the works of Messrs. Sturt, Breton, and others.

SYRA, the ancient Seyros, one of the islands of the Greek Archipelago, in the group called the Northern Cyclades. It is from 7 to 8 miles long, and 4 broad. Though rugged, it is tolerably well cultivated, and produces corn, wine, cotton, olives, figs, &c. The population in 1830 is set down by Mr. Urquhart at 4,500; but we have been assured that it is, at present, little if at all short of 7,000. Pherycides, one of the most celebrated of the ancient Greek philosophers, the disciple of Pittacus, and the master of Pythagoras, was a native of this island.

The port is on the east side of the island, in lat. $37^{\circ} 26' 30''$ N., lon. $24^{\circ} 55'$ E. It affords excellent anchorage for vessels of light draught, and is capable of accommodating a few even of the largest ships. In consequence, partly of the advantages it enjoys through the possession of its port, but more of its central situation, Syra has recently become a considerable commercial *entrepôt*; and has attracted a good deal of the carrying trade that formerly centered at Smyrna, Constantinople, &c.

A few miles to the east of Syra, lies Delos. This island, regarded in antiquity with peculiar veneration, from its being the birthplace of Apollo and Diana, is no less celebrated in the commercial than in the religious history of ancient Greece. Its sacred character, by insuring its immunity from hostile attacks, and its central situation, made it a favourite mart for the products of the states of Greece, Asia Minor, Phœnicia, Egypt, &c. Religion, pleasure, and trade had all their votaries at its festivals; which were famous throughout the ancient world for the splendour of the rites and processions, and the magnitude of the business transacted. It were too much to expect that Syra should ever attain to equal importance, even as an *entrepôt*. But as she enjoys most of those advantages of position that contributed to render Delos one of the principal emporiums of antiquity, it may be hoped, now that there is a reasonable prospect of good order and freedom being again established in Greece, that she may also acquire some commercial celebrity. It may be worth while mentioning, as strikingly evincing the mutability of human affairs, that, at present, both the great and the little Delos are uninhabited. And Tournefort states, that the inhabitants of Mycone were, in the early part of last century, in the habit of holding the greater Delos for the purposes of pasturage, paying to the Grand Seigneur a rent of 20 crowns a year for that famous island! — (*Tournefort, Voyage du Levant*, 4to ed. tome i. pp. 290—325. There is a good account of the religious rites celebrated at Delos, though but a very indifferent one of its commerce, in the *Travels of Anacharsis*.)

T.

TACAMAHAC, a resin obtained from the *Fagara octandra*; and likewise, it is supposed, from the *Populus balsamifera*. It is imported from America in large oblong masses wrapt in flag leaves. It is of a light brown colour, very brittle, and easily melted when heated. When pure, it has an aromatic smell, between that of lavender and musk; and dissolves completely in alcohol; water having no action upon it. — (*Thomson's Chemistry*.)

TAGANROG, a city of European Russia, on the north coast of the Sea of Azof, near the mouth of the river Don, lat. $47^{\circ} 12' 40''$ N., lon. $38^{\circ} 39'$ E. Population from 7,000 to 8,000. It has a naval hospital, a lazaretto, &c.; and there are annual fairs in May, August, and November. Taganrog is a place of considerable commercial importance. It owes this distinction to its situation, which makes it the emporium of the extensive countries traversed by the Don (the ancient *Tanais*), one of the principal European rivers; and which, there is reason to think, will at no very distant period be connected with the Wolga, and consequently with the Caspian Sea, by the completion of the canal projected by Peter the Great. Civilisation is in a very backward state in these regions; but it is making a constant, though not a very rapid progress; and as it proceeds, Taganrog will necessarily rise in importance. The principal exports are grain, particularly wheat, of which large quantities are sometimes shipped; iron and hardware from Tula; with cordage, linen and sail-cloth, copper, tallow, leather, furs, wax, ashes, caviar, isinglass, &c. The imports are comparatively trifling, and consist principally of wine, oil, fruit, dry-salteries, cotton and woollen goods, dye stuffs, tobacco, sugar, coffee, &c. By far the largest part of the trade is carried on with Constantinople, Smyrna, and other Turkish ports; but a good deal is also carried on with the different Italian ports. We subjoin an

Official Account of the principal Articles imported into and exported from Taganrog, in 1830 and 1832.

The Turkish vessels are generally of but small burden.

Money, Weights, and Measures, same as those of PETERSBURGH; which see.

Sea of Azof.—The navigation of this sea, the *Palus Mæotis* of antiquity, is impeded by numerous shoals, and can neither be entered nor safely navigated by vessels drawing more than 11 or 12 feet water. Its greatest depth in the middle is about 7 fathoms; but it shoals gradually to the sides, and at Taganrog there is only from 9 to 10 feet water. Its depth is, however, materially affected by the direction and strength of the winds. The only entrance to this sea is by the Straits of Yenikalé, the *Bosphorus Cimmerius* of the ancients, a narrow and difficult passage, having in some places not more than 13 feet water. Owing to the great quantity of fresh water poured into the Sea of Azof, and its limited magnitude, its water is brackish merely. It is unnavigable from November to April, during the greater part of which time it is generally frozen over.—(*Norie's Sailing Directions for the Mediterranean and Black Seas; Annuaire du Commerce Maritime* for 1833, p. 161. &c.) We avail ourselves of this opportunity to lay before our readers the following details with respect to the

TRADE, ETC. OF THE CASPIAN SEA.

N. B.—Of the vessels here described, only 1 Persian arrived, and 1 ditto departed, of burden unknown.

Magnitude of the Caspian Sea. Ports, &c.—The Caspian Sea, or rather lake (the *Mare Hyrcanum* of the ancients), extends lengthwise from N. to S. about 740 miles, varying in breadth from 112 to 275 miles. In some parts, particularly on the southern shores, it is so very deep that a line of 450 fathoms will not reach the bottom; whereas, in the northern parts, and opposite to the mouths of the Wolga, it is comparatively shallow; and owing to the frequent occurrence of shoals, it is not safely navigated by vessels drawing more than 10 or 12 feet water. Its level had been variously estimated by Olivier and Lowitz, at from 64 to 53 feet below that of the Black Sea; but according to the recent observations of M. Humboldt, the difference of level between them is no less than 300 feet! We confess, however, that we are not without our doubts as to the perfect accuracy of this statement; and would not have been inclined to attach much weight to it had it proceeded from any inferior authority. The water of the Caspian is not salt, but brackish merely; it has no tides, but gales of wind raise a very heavy sea. It is extremely prolific of fish and seals. The value of the sturgeon caught in the Russian fisheries amounts to a very large sum. (See STURGEON FISHERY.) They proceed in shoals up the rivers, where they are captured without the least apparent diminution of their numbers. The salmon is remarkably fine; and herrings are in such abundance, that, after a storm, the shores of the Persian provinces of Ghilan and Mazunderan are nearly covered with them.—(*Kinneir's Memoir of the Persian Empire*, p. 6.; *Memoir on the Caspian Sea*, in *Malte Brun's Geography*; *Humboldt, Fragmens de Géologie*, &c.)

Astrakhan is situated on an island of the Wolga, more than 50 miles from the mouth of that river; and owing to the extensive command of internal navigation it possesses, it is a place of very considerable commercial importance. Baku, acquired by the Russians in 1801, is, however, the best port on the western side of the Caspian. It is situated on the southern shore of a peninsula that projects far into the sea, in lat. 40° 22' N., lon. 51° 10' E. The harbour is spacious and convenient; and its central and advanced position gives it superior advantages as a trading station. Prodigious quantities of naphtha are procured in the vicinity of Baku. It is drawn from wells, some of which yield from 1,000 to 1,500 lbs. a day. It is used as a substitute for lamp oil; and when ignited emits a clear light, with much smoke and a disagreeable smell. Large quantities are exported in skins to the Persian and Tartar ports on the south and east shores of the sea.

Vessels.—The largest class of vessels by which the Caspian Sea is navigated are called by the Russians *schuyts*, and belong wholly to Astrakhan and Baku; their burden varies from 90 to 150, and, in some instances, 200 tons. They are not built on any scientific principle, and are constructed of the worst materials, that is, of the timber of the barks that bring grain down the Wolga to Astrakhan. There are supposed to be, in all, about 100 sail of these vessels. There is a second class of vessels employed in the trade of the Caspian, called *razchives*. They carry from 70 to 140 tons, and sail better than the *schuyts*. Their number is estimated at about 50. Exclusive of the above, there are great numbers of small craft employed in the coasting trade, in the rivers, in the fisheries, and in acting as lighters to the *schuyts*. Steam boats have been introduced upon the Wolga; and one has been launched on the Caspian itself. The masters and crews of the vessels employed on this sea are, for the most part, as ignorant as can well be imagined. They are generally quite incapable of making an observation, or of keeping a reckoning; so that accidents frequently occur, that might be avoided by the most ordinary acquaintance with the principles of navigation.—(These statements are made, partly upon official, and partly upon private authority; the latter may, however, be safely relied on.)

The trade of this great sea is entirely in the hands of the Russians; by whom it is carried on from the ports of Astrakhan and Baku, with the Persian ports of Astrabad, Balfroosh, &c. on the south; and with the Tartar ports of Mangishlak, Balkan, &c. on the east. It is very insignificant, compared with what it ought to be. On the whole, however, a gradual improvement is taking place; and whatever objections may, on other grounds, be made to the encroachments of Russia in this quarter, there can be no manner of doubt that, by introducing comparative security and good order into the countries under her authority, she has materially improved their condition, and accelerated their progress to a more advanced state.

Account of the Value of the Foreign Trade of the Port of Baku, on the Caspian Sea, during the Eight Years ending with 1831.

TALC, a species of fossil nearly allied to mica. It is soft, smooth, greasy to the feel, and may be split into fine plates or leaves, which are flexible, but not elastic. It has a greenish, whitish, or silver-like lustre. The leaves are transparent, and are used in many parts of India and China, as they were used in ancient Rome—(*Plin. Hist. Nat. lib. xxxvi. c. 22.*)—in windows instead of glass. In Bengal, a seer of talc costs about 2 rupees, and will sometimes yield a dozen panes 12 inches by 9, or 10 by 10, according to the form of the mass, transparent enough to allow ordinary subjects to be seen at 20 or 30 yards' distance. It should be chosen of a beautiful pearl colour; but it has, in general, either a yellowish or faint blue tinge. Its pure translucent flakes are frequently used by the Indians, for ornamenting the baubles employed in their ceremonies. Talc is employed in the composition of *rouge végétal*. The Romans prepared with it a beautiful blue, by combining it with the colouring fluid of particular kinds of testaceous animals. Talc is met with in Aberdeenshire, Perthshire, and Banffshire in Scotland; and in various parts of the Continent, where rocks of serpentine and porphyry occur. The talc brought from the Tyrolese mountains is called in commerce Venetian talc. Several varieties are found in India and Ceylon.—(*Thomson's Chemistry; Rees's Cyclopædia; Milburn's Orient. Com.; Ainslie's Mat. Indica.*)

TALLOW (Fr. *Suif*; Ger. *Talg*; It. *Sero, Segò*; Rus. *Salo, toplenoe*; Sp. *Sebo*), animal fat melted and separated from the fibrous matter mixed with it. Its quality depends partly on the animal from which it has been prepared; but more, perhaps, on the care taken in its purification. It is firm, brittle, and has a peculiar heavy odour. When pure, it is white, tasteless, and nearly insipid; but the tallow of commerce has usually a yellowish tinge; and is divided, according to the degree of its purity and consistence, into candle and soap tallow.

Tallow is an article of great importance. It is manufactured into candles and soap; and is extensively used in the dressing of leather, and in various processes of the arts. Besides our extensive supplies of native tallow, we annually import a very large quantity, principally from Russia. The exports of tallow from Petersburg amount, at an average, to between 3,500,000 and 4,000,000 poods, of which the largest portion by far is brought to England; the remainder being exported to Prussia, France, the Hanse Towns, Turkey, &c.

We borrow from the work of Mr. Borrisow, on the Commerce of Petersburg, the following details with respect to the tallow trade of that city:—

Tallow is divided into different sorts; namely, white and yellow *candle tallow*, and common and Siberian *soap tallow*; although it is allowed that the same sort often differs in quality.

Tallow is brought to Petersburg from the interior; and the best soap tallow from Siberia, by various rivers, to the lake Ladoga; and thence, by the canal of Schlussemburg, to the Neva.

An *ambara*, or warehouse, is appropriated to the reception of tallow, where, on its arrival, it is selected and assorted (*bracketed*). The casks are then marked with three circular stamps, which state the quality of the tallow, the period of selecting, and the name of the selector (*bracker*).

The casks in which white tallow is brought have a singular appearance; their form being conical, and their diameter at one end about 2½ feet, and at the other only 1½ foot: the casks of yellow tallow are of the common shape. There are also o'hers, denominated 3 casks.

To calculate the tare, the tallow is removed from a certain number of casks, which are weighed, and an average tare is thence deduced for the whole lot. A cask weighs 8½, 9, 10, or 11 per cent., but the average is generally about 10 per cent. of the entire weight of tallow and cask.

Yellow candle tallow, when good, should be clean, dry, hard when broken, and of a fine yellow colour throughout. The white candle tallow, when good, is white, brittle, hard, dry, and clean. The best white tallow is brought from Woronesch. As for soap tallow, the more greasy and yellow it is, the better the quality. That from Siberia is the purest, and commonly fetches a higher price than the other sorts.

Formerly the oil and tallow warehouses were the same; and this occasioned great difficulties in shipping, because all vessels or lighters taking in tallow or oil were obliged to haul down to the *ambara*, and wait in rotation for their cargoes. The consequence was, that when much business was doing, a vessel was often detained for several weeks at the *ambara* before she could get her cargo on board. Now the tallow and oil warehouses are separated, and every article has its own place. When a shipment of tallow is made, the agent is furnished by the selector (*bracker*) with a sample from each cask.

Captains, in order to obtain more freight, usually load some casks of tallow upon deck; but it is more for the interest of the owner to avoid this if possible, because the tallow loses, through the heat of the sun, considerably both in weight and quality.

One hundred and twenty poods of tallow, gross weight, make a Petersburg last, and 63 poods an English ton.

Of 1,177,908 cwt. of tallow imported in 1829, 1,164,180 came from Russia, 6,143 from the United States, 3,799 from Turkey, 1,992 from France, and 1,626 from Sweden.

We subjoin an official account of the export of tallow from Russia in 1832.

Exports of Tallow from Russia in 1832.

From	Poods.	To	Poods.	To	Poods.
Petersburgh	3,717,426	Sweden	11,801	Austria	13,703

Sundry	25,583	France	57,776		
		Spain, Portugal, and Italy	3	Total	4,205,919
Total	4,205,919				

The exports of tallow from Petersburg, in 1833, amounted to above 4,100,000 poods (see *ante*, p. 898.), being the largest quantity ever shipped in 1 year. The shipments to Great Britain were about 3,600,000 poods. Supposing the tallow to have been worth, when delivered to the shipper, 35*l.* a ton, its total value will have been 2,306,150*l.*! This statement shows the great importance of this trade.

The price of tallow fluctuated very much during the war. This was occasioned, principally, by the obstacles that were at different periods thrown in the way of supplies from Russia. The price of tallow is also affected by the state of the seasons. Some very extensive speculations have at various periods been attempted in tallow; but seldom, it is believed, with much advantage to the parties.

Account of the Price of Tallow in the London Market, in the Month of January each Year, from 1813.

TALLY TRADE, the name given to a system of dealing carried on in London and other large towns, by which shopkeepers furnish certain articles on credit to their customers, the latter agreeing to pay the stipulated price by certain weekly or monthly instalments.

In the metropolis there are about 60 or 70 tally-shops of note; and from 500 to 600 on a smaller scale. They are also spread over the country to a considerable extent, particularly in the manufacturing districts. The customers of the tally-shops are mostly women; consisting, principally, of the wives of labourers, mechanics, porters, &c., servant girls, and females of loose character. Few only of the more respectable classes have been infatuated enough to resort to them. Drapery goods, wearing apparel, coals, household furniture, hardware, &c. are furnished; and even funerals are performed; but few or no articles of food, except tea, are sold upon the tally plan.

We believe that this is the very worst mode in which credit is afforded. The facility which it gives of obtaining an article when wanted, and the notion so apt to be entertained that the weekly or monthly instalments may be paid without difficulty, makes those who resort to the tally-shops overlook the exorbitant price, and usual bad quality, of the articles they obtain from them; and generates habits of improvidence that seldom fail to involve the parties in irretrievable ruin. It is not going too far to say that nine tenths of the articles supplied by tally-shops might be dispensed with. As already observed, women are the principal customers; and it is not easy to exaggerate the mischief that has been entailed on the families of many industrious labourers by their wives having got entangled with tally-shops. They buy goods without the knowledge of their husbands; and these are not unfrequently pawned, and the proceeds spent in

* The ships receive, at Elseneur, orders for their ultimate destination, and most of them are for Great Britain.

gin. So destructive, indeed, is the operation of the system, that the establishment of a tally-shop in any district is almost certain to occasion an increase in the paupers belonging to it. Even the unmarried females who do not pay are demoralised and ruined by the system; because, if a woman who buys 3 gowns, pays for the 2 first, and runs away from the payment of the last, she gains nothing *in point of saving*, while she becomes indifferent to an act of dishonesty. As tally debts can only be collected whilst a supply of goods is kept up, as soon as that supply is stopped, the debtor either flies to another district, or awaits a summons. Where the wife has contracted the debt, she usually appears before the commissioners, who in general order the debt to be paid by weekly or monthly instalments. But it often occurs, from the wife not being able to keep up such payments, that execution issues, and the poor husband is frequently arrested and lodged in prison for a debt, of the existence of which he was entirely ignorant. In this way, numbers of the working classes are completely ruined; they lose their employment, and themselves and families are reduced to beggary. The intelligent keeper of Whitecross-street prison (Mr. Barrett) states, that from 150 to 200 persons are annually imprisoned there for tally-shop debts, in sums of from 10s. to 5*l.*, and that in one year 30 prisoners were at the suit of one tally-shop alone! Such imprisonments, however, are now much decreased, in consequence, as is believed, of the Court of Requests discouraging the tally system, by ordering claims of *this* kind to be paid by *extremely small* instalments, and these at *very distant* intervals; and also in consequence of no composition being allowed by the charities for the relief of poor prisoners with reference to such debts.

It is estimated that in London alone about 850,000*l.*, or nearly 1,000,000*l.* sterling, is annually returned in this trade. From his large profits (generally from 25 to 40 per cent.), it is obvious that in a few transactions the tally-shop keeper becomes independent of the existing debt; and with capital and good management, it is said that some have realised considerable sums of money in this business.

According to the custom of the trade, Mondays, Tuesdays, Wednesdays, and Thursdays, are the days set apart for collecting money from the customers. The tally-man sends round his collector through the different "walks," and the amount of a collection, which keeps the collector engaged from morning till night, even in a good tally concern, seldom exceeds 4*l.* a day. The payments are invariably made in *shillings* and *siapences* — but the people seldom or never pay at the tally-shops; they rarely call there unless something else is wanted. The tally-shop keeper trusts one party on the recommendation of another; but guarantees are never required — certainly no *written* guarantees; and a verbal guarantee is, according to Lord Tenterden's act, not binding. It is part of the collector's business, besides getting money, to beat up for fresh customers in his walk.

The greater number of the small tally concerns are kept by Scotchmen; it is a curious fact, that when a "Tally-walk" is to be sold, which is often the case, a Scotchman's walk will bring 15 per cent. more than an Englishman's! It is believed to contain a better description of customers.

From the causes above mentioned, assisted, perhaps, by the salutary influence of Savings' Banks, this obnoxious trade is understood to be rather on the wane. It will never, however, be completely rooted out, except by adopting the plan we have previously suggested — (see CREDIT,) — for placing all small debts beyond the pale of the law; and the fact, that the adoption of this plan would have so beneficial a result, is an additional and powerful recommendation in its favour. In cases where failures take place, the creditors of a tally-shop keeper are in general *terrified* into the acceptance of a small composition. The very sight of the tally Ledgers, from 10 to 20 in number, containing debts from 5*s.* to 5*l.*, dotted over the pages, like a small pattern on a piece of printed cotton, and spread over every district in and round London, determines the creditors to accept of any offer, however small, rather than encounter the collection of such disreputable assets. In an affair of this kind recently concluded, where the business was under the management of a respectable accountant in the city, the whole debts due to the concern, good, bad, and doubtful, amounted to 8,700*l.*, while the number of debtors was 7,600! giving an average of 2*s.* 10*d.* each.

N.B. — This article has been compiled wholly from *private*, but *authentic*, information.

TAMARINDS (Ger. *Tamarinden*; Fr. *Tamarins*; It. and Sp. *Tamarindo*; Arab. *Umblic*; Hind. *Tintiri*), the fruit of the *Tamarindus Indica*, a tree which grows in the East and West Indies, in Arabia, and Egypt. In the West Indies the pods or fruit, being gathered when ripe, and freed from the shelly fragments, are placed in layers in a cask, and boiling syrup poured over them, till the cask be filled: the syrup pervades every part quite down to the bottom; and when cool, the cask is headed for sale. The East India tamarinds are darker coloured and drier, and are said to be preserved without sugar. When good, tamarinds are free from any degree of mustiness; the seeds are

hard, flat, and clean; the strings tough and entire; and a clean knife thrust into them does not receive any coating of copper. They should be preserved in closely covered jars. — (*Thomson's Dispensatory*.) The duty on tamarinds produced, in 1832, 788*l.* 12*s.* 10*d.*

TAPIOCA, a species of starch or powder prepared from the roots of the *Jatropha manihot*, an American plant. The roots are peeled, and subjected to pressure in a kind of bag made of rushes. The juice which is forced out is a deadly poison, and is employed by the Indians to poison their arrows; but it deposits gradually a white starch, which, when properly washed, is innocent. What remains in the bag consists chiefly of the same starch. It is dried in smoke, and afterwards passed through a kind of sieve. Of this substance the cassava bread is made. — (*Thomson's Chemistry*.)

TAR (Fr. *Goudron*; Ger. *Theer*; It. *Catrame*; Pol. *Smola gesta*; Rus. *Degot*, *Smolu shítkaia*; Sw. *Tjära*), a thick, black, unctuous substance, chiefly obtained from the pine, and other turpentine trees, by burning them in a close smothering heat.

The tar of the north of Europe is very superior to that of the United States, and is an article of great commercial importance. The process followed in making it has been described as follows by Dr. Clarke: — "The inlets of the gulf (Bothnia) every where appeared of the grandest character; surrounded by noble forests, whose tall trees, flourishing luxuriantly, covered the soil quite down to the water's edge. From the most southern parts of Westro-Bothnia, to the northern extremity of the gulf, the inhabitants are occupied in the manufacture of tar; proofs of which are visible in the whole extent of the coast. The process by which the tar is obtained is very simple: and as we often witnessed it, we shall now describe it, from a tar-work we halted to inspect upon the spot. The situation most favourable to the process is in a forest near to a marsh or bog; because the roots of the fir, from which tar is principally extracted, are always most productive in such places. A conical cavity is then made in the ground (generally in the side of a bank or sloping hill); and the roots of the fir, together with logs and billets of the same, being neatly trussed in a stack of the same conical shape, are let into this cavity. The whole is then covered with turf, to prevent the volatile parts from being dissipated, which, by means of a heavy wooden mallet, and a wooden stamper worked separately by two men, is beaten down and rendered as firm as possible above the wood. The stack of billets is then kindled, and a slow combustion of the fir takes place, without flame, as in making charcoal. During this combustion the tar exudes; and a cast iron pan being at the bottom of the funnel, with a spout which projects through the side of the bank, barrels are placed beneath this spout to collect the fluid as it comes away. As fast as the barrels are filled, they are bunged, and ready for immediate exportation. From this description it will be evident that the mode of obtaining tar is by a kind of distillation *per descensum*; the turpentine, melted by fire, mixing with the sap and juices of the fir, while the wood itself, becoming charred, is converted into charcoal. The most curious part of the story is, that this simple method of extracting tar is precisely that which is described by Theophrastus and Dioscorides; and there is not the smallest difference between a tar-work in the forests of Westro-Bothnia, and those of ancient Greece. The Greeks made stacks of pine; and having covered them with turf, they were suffered to burn in the same smothered manner; while the tar, melting, fell to the bottom of the stack, and ran out by a small channel cut for the purpose."

Of 10,752 lasts of tar imported in 1831, 7,779 were brought from Russia, 1,086 from Sweden, and 1,243 from the United States. The last contains 12 barrels, and each barrel 31½ gallons.

Tar produced or manufactured in Europe is not to be imported for home consumption, except in British ships, or in ships of the country of which it is the produce, or from which it is imported, under penalty of forfeiting the same, and 100*l.* by the master of the ship. — (3 & 4 Will. 4. c. 54.)

TARE, an abatement or deduction made from the weight of a parcel of goods, on account of the weight of the chest, cask, bag, &c. in which they are contained. Tare is distinguished into *real tare*, *customary tare*, and *average tare*. The first is the actual weight of the package; the second, its supposed weight according to the practice among merchants; and the third is the medium tare, deduced from weighing a few packages, and taking it as the standard for the whole. In Amsterdam, and some other commercial cities, tares are generally fixed by custom; but in this country, the prevailing practice, as to all goods that can be unpacked without injury, both at the Custom-house and among merchants, is to ascertain the real tare. Sometimes, however, the buyer and seller make a particular agreement about it. We have, for the most part, specified the different tares allowed upon particular commodities, in the descriptions given of them in this work. — (For the tares at Amsterdam, Bordeaux, &c., see these articles; see also **ALLOWANCES**.)

TARE, VETCH, OR FITCH, a plant (*Vicia sativa*, Lin.) that has been cultivated in this country from time immemorial; principally for its stem and leaves, which are used in the feeding of sheep, horses, and cattle; but partly, also, for its seed. Horses thrive better upon tares than upon clover and rye grass; and cows that are fed upon

them give most milk. The seed is principally used in the feeding of pigeons and other poultry. In 1829, we imported 87,101 bushels of tares, principally from Denmark and Prussia.

TARIFF, a Table, alphabetically arranged, specifying the various duties, drawbacks, bounties, &c. charged and allowed on the importation and exportation of articles of foreign and domestic produce.

We intended at one time to have given the tariffs of some of the principal foreign states, and had some of them translated for that purpose; but, as the duties and regulations in them are perpetually changing, they would very soon have become obsolete, and would have tended more to mislead than to instruct. The circulars issued by foreign houses usually specify the duties on importation and exportation. But the reader will find, under the articles DANTZIC, HAVRE, NEW YORK, TRIESTE, &c., pretty full details as to the principal foreign tariffs. Subjoined is the British tariff.

TARIFF (BRITISH). — 1st of January, 1854.

DUTIES OF CUSTOMS INWARDS.

Duties Inwards. — The first column of the following Table contains an account of the existing duties payable on the importation of foreign products into Great Britain for home use, as the same were fixed by the act 3 & 4 Will. 4. c. 56. The next column exhibits the duties payable on the same articles in 1819, as fixed by the act 59 Geo. 3. c. 52; and the third and last column exhibits the duties as they were fixed in 1787, by Mr. Pitt's Consolidation Act, the 27 Geo. 3. c. 13. The reader has, therefore, before him, and may compare together, the present customs duties with the duties as they stood at the end of the late war, and at its commencement. No Table of the sort is to be met with in any other publication. We owe it to the kindness of Mr. J. D. Hume, of the Board of Trade, under whose direction it has been prepared. The duties are rated throughout in Imperial weights and measures.

A Table of the Duties of Customs payable on Goods, Wares, and Merchandise imported into the United Kingdom from Foreign Parts.

Note. — Goods on which duties are payable by measures of capacity, are rated according to the Imperial gallon and bushel.

containing more than 100 threads to the inch of warp, until 6 Jan. 1834, per square yard	0	1	7							
from 5 Jan. 1834, per square yard	0	1	6							
Note. — The duties were levied on the goods above mentioned by act 6 Geo. 4. c. 111.; previously to which they were chargeable with duties according to their length and breadth respectively, which, consequently, do not admit of being compared with the above. It may, however, be observed, that not a single entry has been made under this scale, since 1825; and the previous duties may be considered equally prohibitory.										
Or, and instead of the duties herein-before imposed upon linens according to the number of threads in the warp, at the option of the importer, for every 100 <i>l.</i> value	40	0	0							
A few linens have been occasionally entered under this <i>ad valorem</i> duty.										
Note. — No increased rate of duty to be charged on any linen or lawns for any additional number of threads not exceeding two threads for such as are not of 30 threads to the inch, nor for any additional number of threads not exceeding 5 threads for such as are of 30 threads and upwards to the inch.

smoothed or polished on 1 or more sides, not exceeding 10 inches long by 5 inches wide, per 1,000	0 12 10	Spirits, made and extracted in Ireland, and warehoused there without payment of duty and imported into England, for every 100 gallons Imperial measure, of spirits of the strength of proof, as denoted by Sykes's hydrometer, and so in proportion for any greater or less degree of strength, or any greater or less quantity.—(6 Geo. 4. c. 50. & 4th 4. c. 49.)	37 10 0
not exceeding 10 inches square, per 100	0 2 5	duty paid in Ireland, and imported into England, per gallon	0 4 2
exceeding 10 inches square, per 100	0 4 10	Starch, or British gum, or any preparation of or from starch, per lb.	0 0 34
Hops, per lb.	0 0 2	All other articles, the growth, produce, or manufacture of Great Britain or Ireland, to pass from either country to the other without duty or drawback.	
Plate, of wrought gold, per oz. Troy	0 16 0		

Remarks on Duties Inwards.—The Table of duties inwards previously laid before the reader, affords copious materials for reflection and comparison. Excepting a very few articles, such as silk, linens, gloves, &c., that were prohibited, the highest duties in 1787 seldom exceeded 27*l.* 10*s.* per cent. *ad valorem*. In the interval between 1787 and 1819 a good many changes were made in the mode of assessing the duties; several of those that were charged on the *ad valorem* principle at the former epoch, being changed into rated duties at the latter. The extraordinary rise of duties in the interval referred to is, however, the most striking circumstance. The fact, that in the arithmetic of the customs, 2 and 2, instead of always making 4, sometimes make only 1, was then totally forgotten.

During the war, it does not seem to have once occurred to any of our finance ministers, that every increase of price necessarily lessens consumption; and that, were twice the quantity of a commodity made use of, under a duty of 1s. or 5s. per lb., cwt. &c., that would be made use of under a duty of 2s. or 10s., the revenue would gain nothing by the increase, while the comforts of the consumers would be materially lessened. They proceeded on a more compendious plan; and concluded that, because an article subjected to a duty yielded a certain revenue, it would yield twice, three, or four times as much were the duty doubled, trebled, or quadrupled! Consistently with this principle, if we may so term it, the duties on tea were raised from 12½ to 100 per cent.; those on sugar from 12s. 4d. to 30s. a cwt.; on pepper from 3d. to 2s. 6d. per lb.; on brandy and geneva from 6s. to 22s. 6d. a gallon; on port wine from 37l. 16s. to 114l. 13s. a tun, &c.; while the *ad valorem* duties were mostly all either doubled or trebled! Mr. Vansittart carried this system to an extreme; so much so, that the enormous additions made during his administration to the duties, by checking consumption, or diverting it into illegitimate channels, or both, in most cases added nothing whatever to the revenue, and frequently even occasioned its reduction! Since 1825, however, a very great improvement has been made in the system of duties. Many of those that were most oppressive have been materially reduced, while not a few have been wholly repealed; and we are glad to have to add, that in every instance in which oppressive duties have been adequately reduced, a greater amount of revenue has been derived from the lower rate of duty than from the higher. — (See COFFEE, MALT, SPIRITS, WINE, &c.) The existing tariff is, in fact, in many respects, preferable to that of 1787. The most objectionable of the present duties are those on timber, corn, brandy, geneva, sugar, tobacco, currants, and a few others; and of these, the first-mentioned 4 are not really imposed for the sake of revenue, but to bolster up peculiar interests. We have elsewhere pointed out the practical operation of the duties in question, and their mischievous influence on the public interests. — (See TIMBER, CORN LAWS AND CORN TRADE, BRANDY, &c.) It is not surely possible that these duties can be allowed to continue much longer on their present footing. Experience has shown that, instead of increasing, excessive duties powerfully contribute to diminish revenue; at the same time that they give rise to a vast amount of smuggling and demoralisation, which it is impossible to get rid of otherwise than by their reduction. It is, besides, the bounden duty of government to make the interests of the few submit to those of the many; and there is plainly neither sense nor justice in inflicting an injury on the public by imposing duties, not for the sake of revenue — the only legitimate purpose for which they can be imposed — but to enable a limited number of individuals to linger on in disadvantageous businesses. The change from a bad to a better system ought, no doubt, to be cautiously and gradually brought about. But the longer the period required for the transition, the less ought to be the delay in entering upon it.

Drawbacks. — The fewness of the drawbacks at present, compared with their number a few years ago, is a consequence of the extension of the warehousing and bonding system. When goods of all sorts may be freely imported and lodged in warehouses without paying any duty, the necessity of granting drawbacks is obviated; and, while all commercial operations are facilitated, frauds are prevented.

TARTAR. See ARGAL.

TATTA, a town in the territory of Sinde, situated about 60 miles in a direct line from the sea, at a short distance from the western bank of the river Indus, in lat. 24° 41' N., lon. 68° 17' E. Population uncertain, probably about 10,000. The streets are narrow and dirty; but the houses, though built of mud, chopped straw, and timber, are superior to the low huts seen in the adjoining towns and villages.

Trade. — Being situated a little above the part where the Indus divides into the two great branches by which its waters are poured into the Indian Ocean, it might be supposed that Tatta would be a place of great trade. But, owing to the unwholesomeness of the climate, the barbarism of the tribes on its banks, and other causes, its commerce has never corresponded with what might have been anticipated, looking at its position on the map. It had probably attained the acme of its prosperity in the beginning of the 16th century. In 1555, the Portuguese, by way, as they stated, of avenging the treachery of the king of Sinde, inhumanly massacred 8,000 of the inhabitants, and burned the town. — (*Conquêtes des Portugais*, tome iv. p. 183.) It is probable that Tatta never fully recovered from this dreadful blow; but Mr. Hamilton mentions, that in the 17th century it was extensive and populous, possessing much commerce, with manufactures of silk, wool, and cabinet ware. The decayed state in which we now find it, has been a consequence of the misgovernment and rapacity of its present rulers, the Amcers of Sinde, under whose sway it fell more than 40 years ago.

In 1635, the English established a factory at Tatta, in the view of facilitating the disposal of woollens and other goods in the countries traversed by the Indus; and the building occupied by the factory, though far from magnificent, was recently, if it be not still, the best, not in Tatta only, but in the whole country of Sinde.

The chief exports are rice, shawls from Cashmere, opium from Malwah, hides, ghee, cotton, goats' wool, carpets, drugs, &c. Putchcock, an article largely consumed in China, is a peculiar export of Sinde. The imports comprise a variety of articles, but the quantities are trifling; they consist principally of spices, dye stuffs, hardware, tin, iron, &c., broad cloths, English cottons, silks, &c. But at present the trade is quite inconsiderable; and no one could believe, *a priori*, that the natural emporium of so noble a river as the Indus, traversing many rich and extensive countries, would cut so insignificant a figure in the trading world.

Indus.—Its navigation by Alexander the Great has conferred on the Indus a classical celebrity not to be matched by any other river of the East. Its magnitude, too, is worthy of its fame. It may be navigated by flat-bottomed boats as far as Attock; and its tributary stream, the Ravee, one of the Punjab rivers, is navigable as far as Lahore; both places being fully 1,000 miles from the sea. Unluckily, its mouths are much encumbered by sand banks; and, owing to the violence of the *bore* or tide, their navigation is attended with considerable difficulty and danger. This is no doubt the reason that at present the navigation through the delta of the Indus is quite deserted: all the products brought down the river destined for exportation by sea, being conveyed from Tatta over-land to Curachee, a sea-port a little to the north of the most northerly mouth of the river, about 60 miles in a direct line from Tatta. Above this city the current of the river is not rapid. The boats by which it is navigated are called *doonicks*, seldom exceeding 50 tons burden; and drawing, when laden, about 4 feet water. They have two masts, and, with a good wind, make their way against the stream at the rate of about 3 miles an hour. They are a sort of floating houses; resembling in this respect the Chinese junks.

There would seem to be no river in the world where steam navigation might be applied more advantageously than the Indus. But until the country near its embouchure fall under the sway of some more enlightened and less rapacious rulers than those by whom it is now possessed, little improvement need, we are afraid, be expected. But should Sind be conquered by some civilised people, or should its present rulers learn to respect the right of property, and to encourage industry, it would not be easy to exaggerate the importance of the Indus as a commercial highway. The navigable rivers of the Punjab that fall into it, lay open a vast extent of rich and fruitful country, with great commercial resources. It is not, indeed, possible to estimate the extent of the trade that would be carried on by the channel of the Indus, did security and good order prevail on its banks; and there is reason to think that some progress is making towards their establishment.

The delta of the Indus has little in common with the delta of the Nile, except its shape. Not a fourth part of it is cultivated, and its few inhabitants principally lead a pastoral life. It is overgrown with tamarisks and other wild shrubs; and, though intersected by the numerous mouths of the river, its surface is dry and arid, and it is in a great degree destitute of fresh water. The unfavourable appearance of this tract of country does not, however, generally speaking, depend on any infertility of soil, but on the neglect of cultivation arising out of the oppression under which the people live. Mr. Burnes says, that in most places it requires little or no labour on the part of the husbandman to prepare the land; and the seed, scattered without care or attention, yields a plentiful harvest. But where property is insecure, even this little labour is not expended. — (See a *Memoir on the Indus*, by Lieut. Burnes, in the 3d vol. of the *Journal of the London Geographical Society*; *Hamilton's East India Gazetteer*, articles *Indus*, *Tatta*, &c.)

Money, Weights, and Measures.—Accounts are kept in rupees, carivals, and pice: 12 pice = 1 carival; 50 carivals = 1 rupee. Cowries are current in Sind, 48 cowries = 1 pice.

Small Weights.—24 Moons = 1 Ruttee.
6 Ruttees = 1 Massa.
12 Massas = 1 Toiah.

Gross Weights.—4 Pice = 1 Anna.
16 Annas = 1 Pucca seer.
40 Seers = 1 Maund, or 74 lb. 5 oz.
7 dwts. avoirdupois.

Long Measure.—1 Garce = 2 inches.
16 Garces = 1 Guz; but 1 guz cloth = 34 inches at Tatta.

Grain Measure.—4 Puttoes = 1 Twier.
4 Twiers = 1 Cossa.
60 Cossas = 1 Carval of wheat; or 22 Pucca maunds, or 24 Bombay parabs.

Diamonds and pearls are sold by hubbas and ruttees—8 hubbas = 1 ruttee, about 2 grs. Troy. — *Milburn's Orient. Commerce.*

TEA (in one dialect of Chin. *Cha*; in another *Te*; Du. *Te*; Fr. *Thé*; It. *Te*; Rus. *Tchai*; Hind. *Cha*; Malay, *Teh*), the leaves of the tea tree or shrub (*Thea viridis* Lin.).

I. DESCRIPTION OF THE TEA PLANT.—TEA TRADE OF CHINA.

II. RISE AND PROGRESS OF THE BRITISH TEA TRADE.—CONSUMPTION OF TEA.

III. EAST INDIA COMPANY'S MONOPOLY.—INFLUENCE OF, ON THE PRICE OF TEA.—CONDITIONS UNDER WHICH IT WAS HELD.—ABOLITION OF.

IV. DUTIES ON TEA.—CONSUMPTION OF, ON THE CONTINENT AND IN THE UNITED STATES, &c.

I. DESCRIPTION OF THE TEA PLANT.—TEA TRADE OF CHINA.

Description of the Plant.—Places where it is cultivated.—The tea plant ordinarily grows to the height of from 3 to 6 feet, and has a general resemblance to the myrtle, as the latter is seen in congenial situations in the southern countries of Europe. It is a polyandrous plant, of the natural order *Columnifere*, and has a white blossom, with yellow style and anthers, not unlike those of a small dog-rose. The stem is bushy, with numerous branches, and very leafy. The leaves are alternate, on short, thick, channelled footstalks, evergreen, of a longish elliptic form, with a blunt, notched point, and serrated except at the base. These leaves are the valuable part of the plant. The *Camellias*, particularly the *Camellia Sasanqua*, of the same natural family as the tea tree, and very closely resembling it, are the only plants liable to be confounded with it by a careful observer. The leaves of the particular camellia just named are, indeed, often used in some parts of China, as a substitute for those of the tea tree.

The effects of tea on the human frame are those of a very mild narcotic; and, like those of many other narcotics taken in small quantities, — even of opium itself, — they are exhilarating. The green varieties of the plant possess this quality in a much higher degree than the black; and a strong infusion of the former will, in most constitutions, produce considerable excitement and wakefulness. Of all narcotics, however, tea is the least pernicious; if, indeed, it be so at all in any degree, which we very much doubt.

The tea shrub may be described as a very hardy evergreen, growing readily in the open air, from the equator to the 45th degree of latitude. For the last 60 years, it has been reared in this country, without difficulty, in greenhouses; and thriving plants of it are to be seen in the gardens of Java, Singapore, Malacca, and Penang; all within 6

degrees of the equator. The climate most congenial to it, however, seems to be that between the 25th and 33d degrees of latitude, judging from the success of its cultivation in China. For the general purposes of commerce, the growth of good tea is confined to China; and is there restricted to 5 provinces, or rather parts of provinces, viz. Fokien and Canton, but more particularly the first, for black tea; and Kiang-nan, Kiang-si, and Che-kiang, but chiefly the first of these, for green. The tea districts all lie between the latitudes just mentioned, and the 115th and 122d degrees of East longitude. However, almost every province of China produces more or less tea, but generally of an inferior quality, and for local consumption only; or when of a superior quality, like some of the fine wines of France, losing its flavour when exported. The plant is also extensively cultivated in Japan, Tonquin, and Cochin-China; and in some of the mountainous parts of Ava; the people of which country use it largely as a kind of *pickle preserved in oil*!

Botanically considered, the tea tree is a single species; the green and black, with all the diversities of each, being mere varieties, like the varieties of the grape, produced by difference of climate, soil, locality, age of the crop when taken, and modes of preparation for the market. Considered as an object of agricultural produce, the tea plant bears a close resemblance to the vine. In the husbandry of China, it may be said to take the same place which the vine occupies in the southern countries of Europe. Like the latter, its growth is chiefly confined to hilly tracts, not suited to the growth of corn. The soils capable of producing the finest kinds are within given districts, limited, and partial. Skill and care, both in husbandry and preparation, are quite as necessary to the production of good tea, as to that of good wine.

The best wine is produced only in particular latitudes, as is the best tea; although, perhaps, the latter is not restricted to an equal degree. Only the most civilised nations of Europe have as yet succeeded in producing good wines; which is also the case in the East with tea; for the agricultural and manufacturing skill and industry of the Chinese are there unquestionably pre-eminent. These circumstances deserve to be attended to, in estimating the difficulties which must be encountered in any attempt to propagate the tea plant in colonial or other possessions. These difficulties are obviously very great; and, perhaps, all but insuperable. Most of the attempts hitherto made to raise it in foreign countries were not, indeed, of a sort from which much was to be expected. Within the last few years, however, considerable efforts have been made by the Dutch government of Java, to produce tea on the hills of that island; and having the assistance of Chinese cultivators from Fokien, who form a considerable part of the emigrants to Java, a degree of success has attended them, beyond what might have been expected in so warm a climate. The Brazilians have made similar efforts; having also, with the assistance of Chinese labourers, attempted to propagate the tea shrub near Rio de Janeiro: and a small quantity of tolerably good tea has been produced. But owing to the high price of labour in America, and the quantity required in the cultivation and manipulation of tea, there is no probability, even were the soil suitable to the plant, that its culture can be profitably carried on in that country.

It might probably be successfully attempted in Hindostan, where labour is comparatively cheap, and where the hilly and table lands bear a close resemblance to those of the tea districts of China; but we are not sanguine in our expectations as to the result.

Species of Tea.—*Manner in which they are manufactured.*—The black teas usually exported by Europeans from Canton are as follows, beginning with the lowest qualities:—Bohea, Congou, Souchong, and Pekoe. The green teas are Twankay, Hyson skin, young Hyson, Hyson, Imperial, and Gunpowder. All the black teas exported (with the exception of a part of the bohea, grown in Woping, a district of Canton) are grown in Fokien—a hilly, maritime, populous, and industrious province, bordering to the north-east on Canton. Owing to the peculiar nature of the Chinese laws as to inheritance, and probably, also, in some degree, to the despotic genius of the government, landed property is much subdivided throughout the empire; so that tea is generally grown in gardens or plantations of no great extent. The plant comes to maturity and yields a crop in from 2 to 3 years. The leaves are picked by the cultivator's family, and immediately conveyed to market; where a class of persons, who make it their particular business, purchase and collect them in quantities, and manufacture them in part; that is, expose them to be dried under a shed. A second class of persons, commonly known in the Canton market as "the tea merchants," repair to the districts where the tea is produced, and purchase it in its half-prepared state from the first class, and complete the manufacture by garbling the different qualities; in which operation, women and children are chiefly employed. A final drying is then given, and the tea packed in chests, and divided, according to quality, into parcels of from 100 to 600 chests each. These parcels are stamped with the name of the district, grower, or manufacturer, exactly as is practised with the wines of Bordeaux and Burgundy, the indigo of Bengal, and many other commodities; and, from this circumstance, get the name of *chops*, the Chinese

term for a seal or signet. Some of the leaf-buds of the finest black tea plants are picked early in the spring, before they expand. These constitute pekoe, or black tea of the highest quality; sometimes called "white-blossom" tea, from there being intermixed with it, to give it a higher perfume, a few blossoms of a species of olive (*Olea fragrans*), a native of China. A second crop is taken from the same plants in the beginning of May, a third about the middle of June, and a fourth in August; which last, consisting of large and old leaves, is of very inferior flavour and value. The younger leaf, the more high flavoured, and consequently the more valuable, is the tea. With some of the congous and souchongs are occasionally mixed a little pekoe, to enhance their flavour; and hence the distinction, among the London tea dealers, of these sorts of tea, into the ordinary kinds and those of "Pekoe flavour." Bohea, or the lowest black tea, is partly composed of the lower grades; that is, of the fourth crop of the teas of Fokien, left unsold in the market of Canton after the season of exportation has passed; and partly of the teas of the district of Woping in Canton. The green teas are grown and selected in the same manner as the black, to which the description now given more particularly refers; and the different qualities arise from the same causes. The gunpowder here stands in the place of the pekoe; being composed of the unopened buds of the spring crop. Imperial, hyson, and young hyson, consist of the second and third crops. The light and inferior leaves, separated from the hyson by a winnowing machine, constitute hyson skin,—an article in considerable demand amongst the Americans. The process of drying the green teas differs from that of the black; the first being dried in iron pots or vases over a fire, the operator continually stirring the leaves with his naked hand. The operation is one of considerable nicety, particularly with the finer teas; and is performed by persons who make it their exclusive business.

Tea Trade in China. — The tea merchants commonly receive advances from the Hong merchants and other capitalists of Canton; but, with this exception, are altogether independent of them; nor have the latter any exclusive privilege or claim of pre-emption. They are very numerous; those connected with the green tea districts alone being about 400 in number. The black tea merchants are less numerous, but more wealthy. The greater part of the tea is brought to Canton by land carriage or inland navigation, but chiefly by the first: it is conveyed by porters; the roads of China, in the southern provinces, not generally admitting of wheel carriages, and beasts of burden being very rare. A small quantity of black tea is brought by sea, but probably smuggled; for this cheaper mode of transportation is discouraged by government, which it deprives of the transit duties levied on inland carriage. The length of land carriage from the principal districts where the green teas are grown, to Canton, is probably not less than 700 miles; nor that of the black tea, over a more mountainous country, less than 200 miles. The tea merchants begin to arrive in Canton about the middle of October, and the busy season continues until the beginning of March; being briskest in November, December, and January. Tea, for the most part, can only be bought from the Hong or licensed merchants; but some of these, the least prosperous in their circumstances, are supported by wealthy *outside* merchants, as they are called; and thus the trade is considerably extended. The prices in the Canton market vary from year to year with the crop, the stock on hand, and the external demand, as in any other article, and in any other market. After the season is over, or when the westerly monsoon sets in, in the month of March, and impedes the regular intercourse of foreigners with China, there is a fall in the price of tea, not only arising from this circumstance, but from a certain depreciation in quality, from the age of the tea; which, like most other vegetable productions, is injured by keeping, particularly in a hot and damp climate.

Foreign Trade in Tea. — There seems to be little mystery in the selection and purchase of teas; for the business is both safely and effectively accomplished, not only by the supercargoes of the American ships, but frequently by the masters; and it is ascertained from the sales at the East India House, that there is no difference between the qualities of the teas purchased by the commanders and officers of the Company's ships, without any assistance from the officers of the factory, and those purchased for the Company by the latter. An unusual degree of good faith, indeed, appears to be observed, on the part of the Chinese merchants, with respect to this commodity; for it was proved before the select committee of the House of Commons, in 1830, that it is the regular practice of the Hong merchants to receive back, and return good tea for, any chest or parcel upon which any fraud may have been practised, which sometimes happens in the conveyance of the teas from Canton on board ship. Such restitution has occasionally been made even at the distance of 1 or 2 years. The Company seem to enjoy no advantage over other purchasers in the Canton market, except that which the largest purchaser has in every market, viz. a selection of the teas, on the payment of the same prices as others; and this advantage they enjoy only as respects the black teas; for the Americans are the largest purchasers of green teas.

We subjoin a Table for calculating the cost of tea: —

Comparison of the Cost of Tea per Picul (133½ lbs. Avoirdupois), with the Rate per Pound and Ton, at 9 Cwt. or 1,008 Pounds per Ton.

Per Picul.	Exchange 1s. per Dol.		Exch. 1s. 3d. per Dol.		Exch. 1s. 1d. per Dol.		Exch. 4s. 5d. per Dol.		Exch. 4s. 6d. per Dol.

II. RISE AND PROGRESS OF THE BRITISH TEA TRADE. — CONSUMPTION OF TEA.

The late rise and present magnitude of the British tea trade are among the most extraordinary phenomena in the history of commerce. Tea was wholly unknown to the Greeks and Romans, and even to our ancestors previously to the end of the 16th or the beginning of the 17th century. It seems to have been originally imported in small quantities by the Dutch; but was hardly known in this country till after 1650. In 1660, however, it began to be used in coffee houses; for, in an act passed in that year, a duty of 8d. is laid on every gallon of "coffee, chocolate, sherbet, and tea," made and sold. But it is abundantly evident that it was then only beginning to be introduced. The following entry appears in the Diary of Mr. Pepys, secretary to the Admiralty: — "September 25. 1661. I sent for a cup of tea (a China drink), of which I had never drunk before." In 1664, the East India Company bought 2 lbs. 2 oz. of tea as a present for his Majesty. In 1667, they issued the first order to import tea, directed to their agent at Bantam, to the effect that he should send home 100 lbs. of the best tea he could get! — (See the references in *Milburn's Orient. Com.* vol. ii. p. 530.; *Macpherson's Hist. of Com. with India*, pp. 130—132.) Since then, the consumption seems to have gone on regularly though slowly increasing. In 1689, instead of charging a duty on the decoction made from the leaves, an excise duty of 5s. per lb. was laid on the tea itself. The importation of tea from 1710 downwards is exhibited in the following Tables.

The great increase that took place in the consumption of duty paid tea in 1784 and 1785, over its consumption in the preceding years, is to be ascribed to the reduction that was then effected in the duties. In the nine years preceding 1780, above 180,000,000 lbs. of tea were exported from China to Europe, in ships belonging to the Continent, and about 50,000,000 lbs. in ships belonging to England. But from the best information attainable, it appears that the real consumption was almost exactly the reverse of the quantities imported; and that, while the consumption of the British dominions amounted to above 13,000,000 lbs., the consumption of the Continent did not exceed 5,500,000 lbs. If this statement be nearly correct, it follows that an annual supply of above 8,000,000 lbs. was clandestinely imported. It was well known, indeed, that smuggling was carried on to an enormous extent; and after every other means of checking it had been tried to no purpose, Mr. Pitt proposed, in 1781, to reduce the duties from 119 to 12½ per cent. This measure was signally successful. Smuggling and the practice of adulteration were immediately put an end to, and the legal imports of tea were about trebled. In 1795, however, the duty was raised to 25 per cent.; and after successive augmentations in 1797, 1800, and 1803, it was raised, in 1806, to 96 per cent. *ad valorem*, at which it continued till 1819, when it was raised to 100 per cent. on all teas that brought above 2s. per lb. at the Company's sales.

The following statements show the progress of the consumption of tea in this country from a very remote epoch down to the present time: —

I. Account of the Quantity of Tea retained for Home Consumption in Great Britain from 1789 to 1833, and of the Quantity that paid Duty for Home Consumption in Ireland from 1789 to 1827; specifying the Nett Produce of the Duties in each Country, and the Rates of Duty.

* This amount includes all tea shipped to Ireland for consumption in that country subsequently to the passing of the act 9 Geo. 4. c. 44.

II. Account of the Quantity of Tea remaining for Home Consumption in Great Britain from 1711 to 1786, obtained by deducting the Quantity exported from the Quantity sold at the Company's Sales.

	Lbs.		Lbs.		Lbs.		Lbs.
1711	141,995	1740	1,302,549	1765	4,906,546	1782	4,166,854
1715	120,659	1745	2,209,183	1770	7,723,538	1783	3,087,616
1720	237,904	1750	2,114,092	1775	5,475,498	1784	8,608,473
1725	286,494	1755	2,738,136	1780	5,588,315	1785	13,165,715
1730	537,016	1760	2,293,613	1781	3,578,499	1786	13,985,506
1735	1,380,199						

N.B. — We have extracted this account from that given from the Company's records in *Milburn's Oriental Commerce* (vol. ii. p. 534.). There is an account, furnished by the Excise, of the quantities of tea retained for home consumption from 1725 to 1832, in the *Appendix to the First Report of the Commissioners of Excise Inquiry*. It appears, however, to involve some very material errors. Thus, it represents the consumption from 1763 to 1772, both inclusive, as under 200,000 lbs. a year, at the same time that it makes the consumption, in the immediately preceding and subsequent years, above 4,000,000 lbs. A statement of this sort is obviously inaccurate; and yet it is not accompanied by a single remark or explanation of any sort.

IV. Account of the Quantity of Tea entered for Home Consumption, the Rate of Duty, and the Net Produce of the Duty, in the Year ended 5th of January, 1834.

Year ended 5th of January.	Lbs. Weight of Tea.			Rate of Duty on the Sale Price.	Total Lbs. Weight.	Net Produce.
	Sold at or under 2s. per Lb.	Rate of Duty on the Sale Price.	Sold above 2s. per Lb.			
	Lbs.	L.	Lbs.	L.	Lbs.	L. s. d.
1834	7,663,333	96 per cent.	24,166,287	100 per cent.	31,829,620	3,444,101 18 1

It appears from the first of the foregoing Tables, making allowance for the increase of population, that the consumption of tea in Great Britain has been about stationary, or has rather diminished, from 1800 to the present period. This has been occasioned partly, perhaps, by the increased use of coffee; but more, we think, by the enhanced price arising out of the increase of the duty, and the operation of the monopoly. In Ireland, the consumption has been about stationary since 1861, notwithstanding the population has more than doubled in the interval.

III. EAST INDIA COMPANY'S MONOPOLY — INFLUENCE OF, ON THE PRICE OF TEA — CONDITIONS UNDER WHICH IT WAS HELD — ABOLITION OF.

From its origin down to the present year (1834), the tea trade has been monopolised by the East India Company. Considerable quantities of tea have, indeed, been at different times smuggled into the country; but no British subject, not authorised by the Company, was ever allowed openly to import tea. Being thus the *only sellers*, they had it in their power, by limiting the quantity brought to market, to raise its price above its natural elevation, and to realise immense profits at the expense of the public. They might, no doubt, have declined availing themselves of this power; but no such forbearance could be rationally expected from the Company, or from any other body of men. All individuals and associations exert themselves to obtain the highest price for whatever they have to sell: and it is found that those who are protected from the competition of others, or who have obtained a monopoly of any market, invariably raise the price of their commodities to a very high pitch. The East India Company have done this, probably, to a less extent than most other bodies that have enjoyed such exclusive privileges. Still, however, it is an undoubted fact that *the teas sold by them of late years cost the people of Britain upwards of 1,500,000*l.* a year more than they would have cost had they been sold at the price at which teas of equal quality were sold, under a system of free competition, in New-York, Hamburgh, Amsterdam, &c.*! — (For proofs of this statement, see former edition of this Dictionary, p. 1031.)

The legislature endeavoured, at different periods, to prevent the Company from abusing their monopoly, by enacting regulations as to the sale of tea; and though no longer of any practical importance, it may still be worth while briefly to notice some of the more important, and the means by which they were defeated. In 1745, for example, a very great deduction was made from the amount of the tea duties; and by a statute passed in that year (18 Geo. 2. c. 26.), it was enacted, in order to prevent the Company from depriving the public of the benefit of this reduction, that in case the tea imported by the East India Company shall not always be sufficient to answer the consumption thereof in Great Britain, and to *keep the price of tea in this country upon an equality with the price thereof in the neighbouring Continent of Europe*, it shall be lawful for the said Company, and their successors, to import into Great Britain such quantities of tea as they shall think necessary from any part of Europe: and by another section of the same statute, it is enacted, that if the East India Company shall, at any time, neglect to keep the British market supplied with a *sufficient quantity of tea at reasonable prices*, it shall be lawful for the Lords of the Treasury to *grant licences to any other person or persons*, body politic or corporate, to import tea into Great Britain from any part of Europe.

Had this statute been enforced, it would certainly have restrained the demands of the Company within reasonable limits; but it was very soon forgotten, and the Company continued, as before, to sell their teas at an enormous advance as compared with their prices in Hamburgh and Amsterdam.

The same well-founded jealousy, which dictated the act of 1745, was again displayed in the proceedings at the reduction of the duties in 1784. It was then enacted (24 Geo. 3. c. 38.), that the East India Company should make 4 sales of tea every year, as near as conveniently may be at equal distances of time from each other, and should put up at such sales such quantities of tea as may be judged sufficient to supply the demand; and at each sale, the tea to be put up shall be sold without reserve to the highest bidder, provided an advance of 1*d.* per lb. be bid upon the price at which the same is put up. By another clause it was enacted, that it should not be lawful for the East India Company "to put up their teas for sale at any price which shall, upon the whole of the teas so put up at any sale, exceed the prime cost thereof, with the freight and charges of importation, together with lawful interest from the time of arrival of such teas in Great Britain, and the common premium of insurance as a compensation for the sea risk incurred thereon." The Company were further ordered to keep a stock, equal to at least 1 year's consumption, according to the sales of the preceding year, always before-hand. And they were bound to lay before the Lords of the Treasury, copies of the accounts and estimates upon which their orders for importation, prices for sale, and quantities put up to sale, should be grounded.

The object of these conditions is obvious. They were intended to secure a plentiful supply of tea to the public, and to prevent its being sold at an oppressive increase of price. But monopoly and low prices are altogether incompatible. The conditions now referred to were, as to all practical purposes at least, quite inoperative.

1. In the first place, the Company made various additions to the prime cost, and consequently to the putting up price of their tea, which they ought not to have made, but which the Lords of the Treasury, had they been so disposed, could hardly disallow.

They always, for example, charged the cost of the factory at Canton to the price of tea. This establishment consisted of about 20 persons, and cost at an average about 100,000*l.* a year! We do not presume to say that it was altogether useless. Undoubtedly, however, it might have been conducted at half the expense. It is a fact, that the whole American business at Canton has been transacted by the captains of the ships; and every one knows that they have had fewer disturbances with the natives than the English.

2. In the second place, it was established by the evidence taken before the select committee of 1830, that the Company had for many years thrown the whole losses arising from their outward investment upon tea, by estimating the value of the tael, or Chinese money in which the accounts are kept, at the price which it cost for the purpose of being vested in tea. This was a complete evasion of the provisions of the statute; but it was one which it was very difficult, if not impossible, to defeat.

3. In the third place, the obligation imposed on the Company, of keeping a year's supply of tea in their warehouses, contributed both to raise its price, and deteriorate its quality. From a return made to an order of the select committee of the House of Commons in 1830 (*First Report*, App. p. 23.), it appears that the shortest time any tea sold by the Company had been in store was 14 months; and that, at an average, all the teas sold during the 3 years ending with 1829 had been 17 months in store. But, according to the evidence of the most respectable American witnesses, the black and coarser kinds of tea are depreciated at least 5 per cent. by being kept a twelvemonth, and are, indeed, hardly saleable after the arrival of fresh teas from China. Adding, therefore, warehouse rent, interest of capital, and insurance for 17 months, to the deterioration in point of quality, we may estimate the loss to the public, by this well-meant but most injudicious interference of the legislature, at 15 per cent. upon the price of all the teas sold.

4. In the fourth place, it is obvious, even supposing the prime cost of the Company's teas had not been improperly enhanced, that the regulation obliging them to be sold at an advance of 1*d.* per lb. if offered, on the putting-up price, could not be otherwise than nugatory. Had the trade been open, private merchants would have undersold each other, until the price of tea, like that of sugar or coffee, had been reduced to the very lowest point that would yield the sellers the customary rate of profit. But the Company was in an entirely different situation. Being the *only sellers*, they invariably *understocked* the market. Instead of bringing forward such quantities of tea as might have occasioned its sale at a small advance upon the upset price, they adjusted the supply so that the price was raised to a much higher elevation. Now, it will be observed, that all that this system of management put into the Company's coffers consisted of *extra profit*; for the putting up price embraced every item that could fairly enter into the cost of the tea, including both *interest* on capital and insurance, and including also, as we have seen, several items that had but little to do with it. To show the extent to which this source of profit was cultivated, we may mention, that at the June sale in 1830, the Company put up congou at 1*s.* 8*d.* and 2*s.* 1*d.* per lb.; the lowest sort, or that put up at 1*s.* 8*d.*, being sold partly at 2*s.* 1½*d.*, being an advance of *twenty-two and a half* per cent., and partly at 2*s.* 5*d.*, being an advance of *forty-five* per cent.; while the highest sort, or that put up at 2*s.* 1*d.*, was sold partly at 2*s.* 2*d.*, being an advance of *four* per cent., and partly at 3*s.* 7*d.*, being an advance of no less than *seventy-two* per cent. above the upset price; that is, above a price calculated to yield *ordinary profits*. Mr. Mills, an intelligent and extensive wholesale tea merchant, in a paper laid before the recent committee of the House of Lords on East India affairs, showed, that the advance on the teas sold at the Company's June sale in 1830, above the putting-up price, amounted to 122,177*l.* 18*s.* 1*d.*; and as there are 4 such sales in the year, the total advance must have been about 500,000*l.*; and this was considerably under what it had been a few years previously!

These statements show generally how the Company defeated the provisions of the act of 1784, and, indeed, turned them to its own advantage. But, as already observed, nothing else could be expected. It is nugatory to attempt to combine monopoly with low prices and good qualities. They never have existed, and it is not possible they ever should exist, together. Monopoly is the parent of dearth and scarcity; freedom, of cheapness and plenty.

Great, however, as was the sacrifice entailed on the people of Britain by the Company's monopoly, it is doubtful whether it yielded any considerable amount of revenue to the Company. Every one, indeed, must be satisfied, on general grounds, that it was impossible for the Company to make any thing like the same profits by the privileges conceded to them, that would have been made by private individuals enjoying similar advantages. "The spirit of monopolists," to borrow the just and expressive language of Gibbon, "is narrow, lazy, and oppressive. Their work is more costly and less productive than that of independent artists; and the new improvements so eagerly grasped by the competition of freedom, are admitted with slow and sullen reluctance, in those

proud corporations above the fear of a rival, and below the confession of an error." We have no doubt that the directors of the East India Company were disposed to extend its commerce, and to manage it according to the most approved principles, but they were wholly without the means of giving effect to their wishes. They had to operate through servants; and is it to be imagined that the *employés* of such bodies will ever display that watchful attention to their interests, or conduct the business intrusted to their care with the unsparing economy practised by private merchants trading on their own account, superintending their own concerns, and responsible in their own private fortunes for every error they may commit? The affairs of the Company, notwithstanding the efforts of the directors to introduce activity and economy, have always been managed according to a system of routine. Their captains and mercantile agents were, we doubt not, "all honourable men;" but it were an insult to common sense to suppose that they may be compared for a moment with individuals trading on their own account, in the great requisites of zeal, conduct, and skill.

Several gentlemen of great knowledge and experience, who have carefully inquired into the state of the Company's affairs, have expressed their decided conviction, that they made nothing by the tea trade! — the increased price at which they sold the article not being more than sufficient to balance the immense expenses incident to the monopoly! Perhaps this statement may be somewhat exaggerated, though we incline to think it is not far from the mark. — (See *anté*, p. 535.) Taking, however, the accounts laid by the Company before the late committee on Indian affairs, as they stand, it would appear that the profits realised by them during the 3 years ending with 1827-28 amounted to 2,542,569*l.*, being at the rate of 847,523*l.* a year. — (*Appen. to Second Report of Select Committee of 1830*, p. 95.) But we have already seen that the excess of price received by the Company for their teas, over the price of similar teas sold at New York and Hamburg, has been above 1,500,000*l.* a year; so that, according to the Company's own showing, their monopoly occasioned an *absolute loss* of 652,477*l.* exclusive of its mischievous influence in lessening the consumption of tea, and in confining our trade with China to less than a third of what it will probably amount to under a system giving free scope to the energies of individual enterprise.

The renewal of a monopoly productive of such results was, therefore, wholly out of the question. There was hardly, indeed, in 1833, an individual in the empire out of the pale of the Company who was not anxious for the opening of the trade to China; and the act 3 & 4 Will. 4. c. 93. — (see *anté*, p. 241.) — abolishing the Company's monopoly, and making it lawful for all individuals to import tea, was passed with almost no opposition.

IV. DUTIES ON TEA. — CONSUMPTION OF, ON THE CONTINENT AND IN THE UNITED STATES, ETC.

Down to the 22d of April, 1834, the duty on tea was an *ad valorem* one, being 96 per cent. on all teas sold under 2*s.* a pound, and 100 per cent. on all that were sold at or above 2*s.* Seeing that tea may now be considered almost as a necessary of life, this was, certainly, a high duty; though, as a large amount of revenue must be raised, we do not know that it could be fairly objected to on that ground. But under the monopoly system, the duty was, in fact, about 200 per cent. *ad valorem*! For, the price of the tea sold by the Company being forced up to nearly double what it would have been had the trade been free, it followed, inasmuch as the duty varied directly as the price, that it also was doubled when the latter was doubled. The price of congou at Hamburg, for example, varies from 1*s.* 2*d.* to 1*s.* 4*d.* per lb.; and had the Company supplied our markets with congou at the same rate, it would have cost us, duty included, from 2*s.* 2*d.* to 2*s.* 8*d.* per lb. But instead of this, the congou sold by the Company has been, at an average, a good deal above 2*s.* per lb.; and, the duty being as much, it has invariably cost us from 4*s.* to 5*s.* per lb. Hence, though the duty was only 100 per cent. on the Company's price, it was really above 200 per cent. on the price of tea in an open market! The mischief of the monopoly was thus aggravated almost beyond endurance; inasmuch as every addition made by it to the cost of the article, made an equal addition to the duty on it.

But this system is now happily at an end. The *ad valorem* duties ceased on the 22d of April, 1834; and all tea imported into the United Kingdom for home consumption is now charged with a customs duty as follows: —

Bohea	-	-	-	1 <i>s.</i> 6 <i>d.</i> per lb.
Congou, twankay, hyson skin, orange pekoe, and campoi	-	-	-	2 <i>s.</i> 2 <i>d.</i> —
Souchong, flowery pekoe, hyson, young hyson, gunpowder, imperial, and other teas not enumerated	-	-	-	3 <i>s.</i> 0 <i>d.</i> —

If we compare these duties with the prices of tea at New York and Hamburg, they will be found to be exceedingly heavy, particularly on bohea and congou. It is pretty certain, that, at no distant period, bohea will be sold, exclusive of the duty, at or under

1s. per lb. * ; and supposing this to be the case, the present fixed duty will be equivalent to an *ad valorem* duty of 150 per cent. ! But to impose such a duty on an article fitted to enter largely into the consumption of the lower classes, seems to be in the last degree oppressive and absurd. It will go far to neutralise the beneficial effects that would otherwise result from the abolition of the monopoly ; and cannot fail, by confining the consumption of the article within comparatively narrow bounds, to render the duty less productive than it would be were it lower. Nothing can be more injurious, both in a commercial and financial point of view, than the imposition of oppressive duties on articles, the consumption of which would be materially extended by a fall of price ; and that such is the case with bohea is beyond all question. The Company, by reducing its price from about 2s. 6d. to 1s. 10½d. per lb. (which was, of course, accompanied by a corresponding reduction of duty), increased the consumption from 1,873,881 lbs. in 1822-23, to 6,474,838 lbs. in 1831-32. Here we have the consumption more than trebled by a fall of about 1s. 3d. per lb. And we have not the slightest doubt that a further fall of 1s. 3d. would, by bringing the article fairly within the command of a vastly greater number of consumers, extend the demand for it in a much greater degree. But it is hardly possible that such a reduction should take place, unless 6d. be taken from the duty. We trust, however, that this may be done. At 1s. per lb., the duty would undoubtedly yield more than it will ever do at 1s. 6d. We may also add that nothing would do so much to weaken the pernicious habit of gin-drinking, as a fall in the price of tea, coffee, &c. And it is not to be endured that the price of such desirable articles should be raised to an exorbitant height by duties, that would be more productive of revenue were they effectually reduced.

It has been wholly owing to their exorbitant prices, that notwithstanding the English are the richest people in the world, and that the taste for tea is so very generally diffused amongst us, we consume very little of the superior qualities ! Indeed, some of the finest are not to be met with in our markets ; and while about a dozen kinds of tea are regularly quoted in the *Hamburgh*, *Amsterdam*, and *New York Price Currents*, there are never more than 7, and sometimes only 6, species to be met with here. *Imperial*, a very fine green tea, regularly imported into America, and all parts of the Continent, is unknown in the English market. *Singlo*, once imported by the Company, has disappeared for about 50 years. *Pekoe* and *gunpowder*, the finest qualities of black and green, are little known in the English market ; and have been only imported in small quantities by the officers of the Company's ships.

The abolition of the monopoly will, no doubt, introduce a greater variety of teas ; and, by lowering their price, will materially extend the demand for those of a superior quality. The fixed duty on the finer teas is, when compared to their prices, a good deal less than that laid on bohea and congou. But a preference of this sort ought not to exist, or to exist only in favour of the coarser teas, or of those consumed by the mass of the people. A duty even of 1s. on bohea would be very decidedly higher than a duty of 3s. on imperial and gunpowder.

We subjoin an abstract of the act 3 & 4 Will. 4. c. 101. regulating the tea duties.

Tea importable into the U. K. from the Cape of Good Hope, &c. — From and after the 22d of April, 1831, it shall be lawful to import any tea into the United Kingdom from the Cape of Good Hope, and from places eastward of the same to the Straits of Magellan, and not from any other place. — § 1.

Tea importable into British Possessions, &c. — It shall be lawful to import any tea into any of the islands of Guernsey, Jersey, Alderney, or Sark, or into the British possessions of America, from the Cape of Good Hope and places eastward of the same to the Straits of Magellan, or from the United Kingdom, and not from any other place. — § 2.

Duties. — From and after the 22d of April, 1834, the duties of excise payable upon tea shall cease and determine, except as hereafter provided, and in lieu of such duties, there shall be paid the duties of customs set forth in the Table following ; and such duties shall be raised, levied, collected, and paid unto his Majesty, and shall be appropriated and applied in like manner as if the same had been imposed by an act passed in the present session of parliament for granting duties of customs ; viz.

Table of Duties on Tea in Warehouse, or imported into the United Kingdom :

Tea, viz.	<i>l.</i>	<i>s.</i>	<i>d.</i>		<i>l.</i>	<i>s.</i>	<i>d.</i>
Bohea, per lb.	0	1	6	Souchong, flowery pekoe, hyson, young			
Congou, twankay, hyson skin, orange pekoe,				hyson, gunpowder, imperial, and other			
and campoi, per lb.	0	2	2	sorts not enumerated, per lb.	0	3	0

Provided, that nothing herein contained shall alter or affect the duties payable upon tea sold by the East India Company at their public sales, prior to the said 22d of April, 1834 : provided also, that the allowance commonly called draft, made by the commissioners of excise in the weighing of tea, shall be made by the commissioners of customs under the authority of this act. — § 3.

Abatement for Sea Damage not allowed. — No abatement of duty shall be made on account of damage received by tea during the voyage ; but it shall be lawful for the importer to separate the damaged parts, and to abandon the same to the commissioners of the customs for the duty. — § 4.

Mixed Tea liable to highest Duty. — If different sorts of tea mixed together be imported in the same package, the whole shall be liable to the highest rate of duty to which any of such sorts would be separately liable ; and if 2 or more sorts of tea not perfectly mixed together be imported in 1

* The price of bohea in the New York market, in January, 1831, was from 13 to 16 cents per lb. ; that is, about 7½d. Should the price of bohea sink to this level in London, the duty would be nearly 300 per cent. on its value ! — (See *post*.)

package, the same shall be forfeited, and may be seized, sued for, recovered, and dealt with in the same manner as any forfeiture incurred under any law relating to the customs. — § 5.

Importation of Tea to be under the Customs. — From and after the passing of this act, it shall be lawful for the Lords of the Treasury, by warrant under the hands of 3 or more of them, to order and direct that the importation of tea, and the duties thereon, shall be under the management of the commissioners of customs, instead of the commissioners of excise, and from and after the time specified in such warrant, the same shall be transferred accordingly: provided, that until the transfer of such management, and of the custody of tea in warehouse, shall be fully made under the directions of the Lords of the Treasury, any act, &c. done or performed by, to, or with the commissioners of excise, or their officers, shall have the same effect in law as if it had been done or performed by, to, or with the commissioners of customs, or their officers, under the authority of this act; but nothing hereinbefore contained shall alter or affect any law of excise relating to licences for the sale of tea, or to permits for its removal, or to the internal management of tea by the excise, after the import duties have been paid, and after it has been delivered out of the charge of the officers of the customs. — § 6.

Treasury may discontinue Permits for Tea and other Goods. — It shall be lawful for the Lords of the Treasury, by warrant or order under the hands of 2 or more of them, to discontinue the practice of issuing permits for the removal of tea, and to make and establish any other rules, regulations, and restrictions in lieu of such practice, as shall appear to them necessary for the security of the revenue; and all rules, regulations, and restrictions so made and established, shall have the force of law, as fully as if they were embodied in this act, and shall be obeyed and enforced in like manner as any rules, regulations, &c. are or can be obeyed or enforced under the provisions of any act or acts of parliament relating to the customs, or to the excise; and copies of such rules, regulations, &c. shall be laid before parliament. — § 7.

ASSESSMENT OF THE DUTIES. — A good deal of discussion has recently taken place with respect to these duties. It has been contended, that it will be impossible to assess them fairly; and that it would be better to establish a uniform duty of 2s. a pound. We understand, however, that the *ad valorem* duties formerly charged on teas imported into the United States, were collected with considerable fairness; and we do not see why the same may not be done here. But whatever device may be fallen upon to obviate frauds upon the revenue, or to facilitate the collection of the duties, we protest against its being attempted by an equalisation of the duties. The real objection to the present scale is, not that the duties differ too much, but that they differ too little — that the duty on bohea is much too high, as compared with that on the finer teas. The equalisation of the duties would, indeed, be a proceeding too glaringly opposed to every fair principle, to be tolerated. Should it, however, be found necessary to make any alteration in the duties, on account of the difficulty in the way of their assessment, the better way would probably be, to admit congou at the duty of 1s. 6d. It is only in the substitution of congou for bohea, that any considerable frauds can take place; and this would, of course, effectually obviate them. This plan is objectionable, no doubt, from its leaving the duty on bohea too high; but, as we have only to choose among difficulties, it is, perhaps, as good a one as could be made.

Port Charges in China. — We expressed, in a previous article, (see *ante*, p. 241.) our doubts as to the policy of the clause in the act opening the China trade, which authorised the imposition of peculiar duties on the ships and goods engaged in the trade, for the purpose of defraying the cost of the establishment to be kept up at Canton. Soon after that paragraph was printed, an order in council, was issued, fixing the duties in question at 2s. per ton of tonnage duty, and 7s. per cent. on the value of the imports into and exports from China. These were heavy charges; and as the American and other foreign ships resorting to Canton are not liable to any claims of the sort, their imposition on British ships would have been most injurious to them. The order in council, being, in consequence, loudly and justly objected to, was very properly withdrawn. An arrangement has since been made, by which the expense of the factory is to be defrayed, $\frac{1}{3}$ by the British government, and $\frac{2}{3}$ by the East India Company; so that British ships will not be liable to any charges, except such as are imposed by the Chinese, and which fall on all foreigners alike. — (For an account of these charges, see *ante*, p. 234.)

Capacity of China to furnish additional Supplies of Tea. — It has been sometimes contended, that the tea trade being thrown open, were the duties materially reduced, the increased demand of this country could not be supplied, and that the reduction of the duty would not really benefit the British consumer, but the Chinese government. Our readers will hardly expect that we should enter at any length into the refutation of so absurd a notion. At the commencement of last century, the entire annual consumption of tea in this country, the Continent, and America, did not certainly amount to 500,000 lbs.; whereas the consumption of Great Britain, the Continent, and United States, amounts at present to about 50,000,000 lbs.; and yet every one acquainted with the history of the trade is aware, that though the consumption has increased a *hundred fold*, the prices in all open markets have been regularly declining, and even at the Company's sales they have lately been a good deal less than they were 50 or 60 years since. We may, therefore, rest quite easy upon this point. The production of tea is rapidly extending in China; and the vast extent of that empire, its capacities for raising unlimited quantities of tea, and the extent to which it is there used, negative the idea that any conceivable increase of the consumption of this country should have any perceptible or permanent influence on its cost price.

Retail Dealers in Tea. — Retailers of tea are obliged to take out a licence, which costs 11s. a year. In 1832, their numbers were, in England 76,713, in Scotland 13,701, in Ireland 11,273; making, for the United Kingdom, a grand total of 101,687!

ADULTERATION OF TEA. — It might have been fairly enough anticipated, from the high price of, and the high duty on, tea, and the facility with which it may be mixed up with foreign substances, that it would not escape adulteration; and the records of the courts of justice show that such is the case; several dealers having been convicted of this pernicious practice. The adulteration is usually effected either by the intermixture of sloe or ash leaves with fresh teas; or by mixing the latter with tea that has been already used. The penalties on such offences are stated below; but the best, or rather the only, security on which any reliance can be placed, is to be found in the character and respectability of the parties dealing in tea. Even were he influenced by nothing else, it would be extreme folly in any person carrying on an extensive business to engage in such dishonest practices; for they can hardly fail of being detected; and the ruin of his business, that would follow such exposure, would far more than balance whatever gains he could hope to make by his fraudulent schemes.

Penalties on Adulteration.—If any dealer in or seller of tea dye or fabricate any sloe or other leaves in imitation of tea, or mix or colour leaves of tea with terra Japonica or other ingredient, or vend or expose to sale, or have in possession the same, he shall forfeit for every pound of such adulteration, 10*l.*—(1 Geo. 2. c. 11. s. 11.)

Every person, whether a dealer in or seller of tea, or not, who shall dye or fabricate any sloe leaves, liquorice leaves, or the leaves of tea that have been used, or the leaves of the ash, elder, or other tree, shrub, or plant, in imitation of tea, or who shall mix or colour such leaves with terra Japonica, coppers, sugar, molasses, clay, logwood, or other ingredient, or who shall sell or expose to sale, or have in custody, any such adulterations in imitation of tea, shall for every pound forfeit, on conviction, by the oath of 1 witness, before 1 justice, 5*l.*; or, on nonpayment, be committed to the house of correction for not more than 12 nor less than 6 months.—(17 Geo. 3. c. 29. s. 1.)

Any person having in possession any quantity exceeding 6 pounds of sloe, ash, or elder leaves, or the leaves of any other tree, plant, or shrub, grown or manufactured, and shall not prove to the satisfaction of the justice hearing the matter that the same were gathered with the consent of the owner of the

trees, &c., and that they were gathered for some other purpose than that of being fabricated in imitation of tea, shall forfeit 5*l.* for every pound in his possession, or, on nonpayment, be committed to prison.—Sect. 2.

If an officer of excise, or other person, make oath that he suspects herbs dyed, or otherwise prepared in imitation of tea, are hid or lodged in any place, a justice may issue a warrant for seizing the same by day or night, (in the night, in presence of a constable,) together with all wagons, tubs, and packages in which they may be contained; the herbs may be directed to be burnt, and the wagons, &c. sold, and, after deducting expenses, the proceeds to be shared, $\frac{2}{3}$ to informer, and $\frac{1}{3}$ to poor of the parish. (Obstructing such seizure subjects the offender to a penalty of 50*l.*, or not less than 6 nor more than 12 months' imprisonment.—Sect. 3.)

Herbs not to be burnt, if owner can prove, within 24 hours, that they were gathered with consent of proprietor of trees, plants, or shrubs, and that they were not intended to be fabricated in imitation of tea.—Sect. 4.

Occupier of premises where herbs are found, liable to the penalties, unless he can prove they were lodged without his consent.—Sect. 5.

Consumption of Tea on the Continent and in the United States.—Of the Continental states, Russia and Holland are the only ones in which the consumption of tea is considerable. In 1832, the imports of tea into Russia amounted to 179,474 pounds, or 6,461,064 lbs. The imports consist almost entirely of black tea. The consumption of tea in Holland amounts to about 2,800,000 lbs. a year; the duty on which varies from 1½*d.* to 4½*d.* per lb. The consumption of France is not supposed to exceed 230,000 lbs. The importations into Hamburg vary between 1,500,000 and 2,000,000 lbs., the greater part of which is forwarded to the interior of Germany. The imports into Venice and Trieste do not exceed a few cwt. a year.

The consumption of the United States exceeds 8,000,000 lbs. a year. Duties on tea used to form one of the largest items of American revenue, having in some years produced 650,000*l.* Their magnitude, however, was justly complained of; and it is probably owing to this circumstance that, while the consumption of tea was for several years pretty stationary in the United States, that of coffee increased with even greater rapidity than in England.—(See *anté*, p. 310.) The secretary of the treasury of the United States, in his Report for 1827, observed,—"The use of tea has become so general throughout the United States, as to rank almost as a necessary of life. When to this we add that there is no rival production at home to be fostered by lessening the amount of its importation, the duty upon it may safely be regarded as too high. Upon some of the varieties of the article it considerably exceeds 100 per cent., and is believed to be generally above the level which a true policy points out. A moderate reduction of the duty would lead to an increased consumption of the article, to an extent that, in all probability, would, in the end, rather benefit than injure the revenue. Its tendency would be to enlarge our trade and exports to China; a trade of progressive value, as our cottons and other articles of home production (aside from specie) are more and more entering into it. It would cause more of the trade in teas to centre in our ports; the present rate of duty driving our tea ships, not unfrequently, to seek their markets in Europe, not in the form of re-exportation, but in the direct voyage from China. It would also serve to diminish the risk of the United States losing any portion of a trade so valuable, through the policy and regulations of other nations." These judicious suggestions could not fail to command attention; and the flourishing state of the revenue having admitted of a very great reduction of duties, those on tea have been wholly repealed. As was to be expected, the consumption has since begun rapidly to increase. We subjoin an account of the

Quantity and Value of the different Sorts of Tea imported into and exported from the United States during the Year ended 30th of September, 1832.—(*Papers laid before Congress*, 15th of February, 1833.)

TEAK WOOD, OR INDIAN OAK, the produce of the *Tectona grandis*, a large forest tree, that grows in dry and elevated districts in the south of India, the Burman

empire, Pegu, Ava, Siam, Java, &c. Teak timber is by far the best in the East; it works easily, and, though porous, is strong and durable; it is easily seasoned, and shrinks very little; it is of an oily nature, and, therefore, does not injure iron. Mr. Crawford says, that in comparing teak and oak together, the useful qualities of the former will be found to preponderate. "It is equally strong, and somewhat more buoyant. Its durability is more uniform and decided; and to insure that durability, it demands less care and preparation; for it may be put in use almost green from the forest, without danger of dry or wet rot. It is fit to endure all climates and alternations of climate."—(See *Tredgold's Principles of Carpentry*, p. 206.; *Crawford's East. Archip.*, vol. i. p. 451.; *Rees's Cyclopædia*, &c.)

The teak of Malabar, produced on the high table land of the south of India, is deemed the best of any. It is the closest in its fibre, and contains the largest quantity of oil, being at once the heaviest and the most durable. This species of teak is used for the keel, timbers, and such parts of a ship as are under water: owing to its great weight, it is less suitable for the upper works, and is not at all fit for spars. The teak of Java ranks next to that of Malabar, and is especially suitable for planking. The Rangoon or Burman teak, and that of Siam, is not so close grained or durable as the others. It is, however, the most buoyant, and is therefore, best fitted for masts and spars. Malabar teak is extensively used in the building-yards of Bombay. Ships built wholly of it are almost indestructible by ordinary wear and tear; and instances are not rare of their having lasted from 80 to 100 years; they are said to sail indifferently; but this is probably owing as much to some defect in their construction, as to the weight of the timber. Calcutta ships are never wholly built of teak; the timbers and framework are always of native wood, and the planking and deck only of teak. The teak of Burma, being conveyed with comparatively little difficulty to the ports of Rangoon and Martaban, is the cheapest and most abundant of any. It is largely exported to Calcutta and Madras — (See RANGOON.) — (*Private information.*)

A species of timber called African teak is pretty largely imported into England, from the west coast of Africa. But, in point of fact, it is not teak, and it is destitute of several of its most valuable properties. It is, however, for some purposes, a useful species of timber.

TEASEL, OR FULLERS' THISTLE (Ger. *Weberdistel*, *Kratzdistel*; Fr. *Char-
don à carder*; It. *Cardo da cardare*; Sp. *Cardeucha*, *Cardo peinador*). This plant,
which is cultivated in the north and west of England, is an article of considerable
importance to clothiers, who employ the crooked awns of the heads for raising the nap
on woollen cloths; for this purpose they are fixed round the periphery of a large broad
wheel, against which the cloth is held while the machine is turned. In choosing teas-
els, the preference should be given to those with the largest bur, and most pointed,
which are generally called *male teasels*. They are mostly used in preparing and dressing
stockings and coverlets; the smaller kind, commonly called the fullers' or drapers', and
sometimes the *female teasels*, are used in the preparation of the finer stuffs, as cloths,
rateens, &c.

THREAD (Ger. *Zwirn*; Du. *Garen*; Fr. *Fil*; It. *Refe*; Sp. *Hilo*, *Torzal*; Rus. *Nítiki*), a small line made up of a number of fibres of some vegetable or animal substance, such as flax, cotton, or silk; whence its names of linen, cotton, or silk, thread.

TILES (Ger. *Dachziegel*; Fr. *Tuiles*; It. *Tegole*, *Embrici*; Sp. *Tejas*; Rus. *Tscherepiza*), a sort of thin bricks, dried in kilns, and used in covering and paving different kinds of buildings. The best brick earth only should be made into tiles. — (See **BRICKS AND TILES**.)

TIMBER (Ger. *Bauholz*, *Zimmer*; Du. *Timmerhout*; Fr. *Bois de charpente*, *Bois à bâtir*; It. *Legname da fabbricare*; Sp. *Madera de construccion*; Rus. *Стро́вко́й Гесс*; Pol. *Cembrowina*), the term used to express every large tree squared, or capable of being squared, and fit for being employed in house or ship building. In the language of the customs, when a tree is sawn into thin pieces, not above 7 inches broad, it is called batten; when above that breadth, such thin pieces are called deal. Wood is the general term, comprehending under it timber, dye woods, fire wood, &c.

Timber is generally sold by the load.

The following are the contents of the loads of different species of timber, hewn and unhewn :—

A load of timber unbewn				-	-	-	40 cubic feet.	A load of 2½ inch plank				-	-	-	240 square feet.

TIMBER TRADE. Having, in separate articles, described those species of timber most in demand in this country, we mean to confine ourselves in this article to a few remarks on the policy of the regulations under which the trade in timber is conducted.

1. *Importance of a cheap Supply of Timber.* — It is surely unnecessary to enter into any lengthened statements on this head. If there be one article more than another with which it is of primary importance that a great commercial nation like England should be abundantly supplied on the lowest possible terms, that article is timber. Owing to the deficiency of our home supplies, most of the timber, with the exception of oak, required for building ships and houses; and most part, also, of that employed in the construction of machinery; is imported from abroad. Any individual acquainted with the purposes to which timber is applied, but ignorant of our peculiar policy with respect to it, would never, certainly, imagine that such an article could be made the subject of oppressive duties, and of still more oppressive preferences. Timber is not to be looked at in the same light as most other commodities. It is against all principle to impose duties on materials intended to be subsequently manufactured; but timber is the raw material of the most important of all manufactures — that of the instruments of production! Suppose it were proposed to lay a heavy tax on ships, wagons, looms, or workshops when completed, would not such a monstrous proposal be universally scouted? And yet this is what is really done. The finished articles are not, indeed, directly taxed; but the principal material of which they are made, and without which they could not be constructed, is burdened with an exorbitant duty! To dwell on the absurdity of such a tax would be worse than useless. Of all things essential to the prosperity of manufacturing industry, improved and cheap machinery is the most indispensable. Most individuals amongst us are ready enough to ridicule the contradictory conduct of the French government, who, at the very moment that they are endeavouring to bolster up a manufacturing interest, lay enormous duties on foreign iron, and thus double or treble the price of some of the most important manufacturing implements. Timber is, however, of quite as much importance in this respect as iron; and our conduct in burdening it with exorbitant duties partakes as largely of the *felo-de-se* character as that of our neighbours! Indeed, as will be immediately seen, it is decidedly less defensible. Some plausible, though inconclusive, reasonings might be urged in defence of duties on iron and timber, were they imposed for the sake of revenue: but even this poor apology for financial ignorance and rapacity cannot be set up in defence of the iron duties of France or the timber duties of England. The former, however, are the least objectionable; they were imposed, and are still kept up, to encourage the production of iron in France: whereas the duties on timber in England have been imposed for the sake, principally, of promoting the lumber trade of Canada, and of forcing the employment of a few thousand additional tons of shipping! We do not sacrifice the goose for the sake of the golden eggs, but for the sake of the offal she has picked up.

2. *Origin and Operation of the discriminating Duty in favour of American Timber.* — The practice of encouraging the importation of the timber of Canada and our other possessions in North America, in preference to that of foreign countries, is but of recent growth. It took its rise during the administration of Mr. Vansittart, and bears in every part the impress of his favourite policy. The events that took place in 1808 having seriously affected our previous relations with the Baltic powers, a deficiency in the accustomed supply of timber began to be apprehended; and the ship owners and

Canada merchants naturally enough availed themselves of this circumstance, to excite the fears of the ministry, and to induce them to change the fair and liberal system on which the trade in timber had been conducted down to that time, by granting extraordinary encouragement to its importation from Canada. Even as a temporary expedient, applicable to a peculiar emergency, the policy of giving any such encouragement is extremely doubtful. Supposing timber not to have been any longer obtainable from the north of Europe, its price would have risen, and it would, of course, have been imported from Canada, the United States, or wherever it could be had, without any interference on the part of government. But, in 1809, a large addition was made to the duties previously charged on timber from the north of Europe, at the same time that those previously charged on timber from Canada and our other possessions in America were almost entirely repealed; and in the very next year (1810), the duties thus imposed on Baltic timber were *doubled*! Nor did the increase of duties on such timber stop even here. In 1813, after Napoleon's disastrous campaign in Russia, and when the free navigation of the Baltic had been restored, 25 per cent. was added to the duties on European timber! The increase of the revenue was pleaded as a pretext for this measure; but we believe it was really intended to augment the preference in favour of Canada timber; for how could it be supposed that an increase of the duties on an article imported from a particular quarter of the world, that was already taxed up to the very highest point, could add any thing considerable to the revenue, when a convertible article might be imported from another quarter duty free? The various duties laid on European timber amounted, when consolidated by the act 59 Geo. 3. c. 52., to 3*l.* 5*s.* per load.

Admitting, for the moment, that the peculiar and unprecedented aspect of things in 1808 and 1809 warranted the giving of some preference to the importation of timber from Canada, such preference should plainly have ceased in 1813. So long as the communication with the bridge is interrupted, we may be forced to use a boat to cross the river; but when the communication is again opened, and when there is not the remotest chance of its future interruption, it would be a singular absurdity to refuse to resume the use of the bridge, and to continue the costly and inconvenient practice of being ferried over! This, however, is exactly what we have done in the case of the Canada trade. Because a fortuitous combination of circumstances obliged us, upon one occasion, to import inferior timber at a comparatively high price, we resolve to continue the practice in all time to come! The history of commerce affords no parallel display of gratuitous folly.

The absurdity of this conduct will appear still more striking, if we reflect for a moment on the peculiar situation of the countries in the north of Europe. The nations round the Baltic have made little progress in manufacturing industry. They abound in valuable raw products; but they are wholly destitute of the finer species of manufactured commodities, and of colonies. Nor have they any real inducement to attempt supplying themselves directly with the former, or to establish the latter. Their iron and copper mines, their vast forests, and their immense tracts of fertile and hitherto unoccupied land, afford far more ready and advantageous investments for their deficient capital, than could be found in manufactures or foreign trade. Russia and Prussia have, indeed, been tempted, by our corn and timber laws, to exclude some species of manufactured goods; but it is not possible that they should succeed in materially limiting our exports to them, provided we do not second their efforts by refusing to admit their products.

Of all the countries in the world, there is obviously none which has so many facilities for carrying on an advantageous trade with the North as Great Britain. We have a surplus of all those products of which Russia, Prussia, Sweden, Denmark, and Norway stand most in need; and, on the other hand, they have a surplus of many of those of which we are comparatively destitute. The immense traffic we carry on with the Baltic does not, therefore, depend in any considerable degree on artificial or accidental circumstances. It does not rest on the wretched foundation of Custom-house regulations or discriminating duties, but on the gratification of mutual wants and desires. It has been justly remarked by the Marquis Garnier, the excellent translator of the "*Wealth of Nations*," that no inconsiderable portion of the increased power and wealth of England may be traced to the growing opulence of Russia. But the Russian empire is yet only in the infancy of civilisation; she must continue for a very long period to advance in the career of improvement, and it will be our own fault if we do not reap still greater advantages from her progress.

Such is the nature of that commerce against which the discriminating duties on timber from the north of Europe aimed a severe blow! In 1809, when this system began, 428,000 tons of British shipping entered inwards from the Baltic. In 1814, the year after the 25 per cent. of additional duty had been imposed on Baltic timber, and when all the ports of that sea were open to our ships, only 242,000 tons of British

shipping entered inwards, — being little more than the half of what it amounted to when the system began. In 1816, the British shipping entered inwards from the Baltic amounted to 181,000 tons. It was materially augmented in 1818 and 1819, in consequence of the failure of the crops in this country in 1817 and 1818; but even in 1819 the entries inwards were 55,000 tons under what they had been 10 years before!

By diminishing our imports from the northern nations, the high discriminating duty on timber necessarily diminished our exports to them in the same proportion.

The following extract from the evidence of Mr. Edward Patzeker, a merchant of Memel, given before the committee of the House of Commons on the foreign trade of the country, in 1821, shows the effect that the increased duties on timber had on the commerce with Prussia: —

“Has there been a great alteration in the timber trade between Memel and this country of late years?”

— “Since the war, a great alteration; before the war we used to have 950 to 1,000 English ships in 1 year, and since the war we have had from 200 to 300 only.”

“When you talk of 900 ships, do you mean 900 ships trading between Great Britain and Memel?” —

“Yes.”

“Do you mean that number of cargoes were loaded in the year for England?” — “Yes.”

“How many cargoes were loaded for Great Britain during the last year (1820)?” — “About 270 or 280 cargoes; there have not been more.”

“To what cause do you attribute that diminution in the trade?” — “To the high duties in England; for formerly the duties were only 15s. and some pence; now they are 3*l.* 5s. in a British, and 3*l.* 8s. in a foreign ship.”

“Has that diminished trade in timber produced a great alteration in the circumstances of the people of Prussia?” — “Yes: for it is the only trade which we can carry on; wheat and all the rest of our articles cannot be brought here; *timber* is the only one that can be brought, and the trade from Poland has very much ceased in consequence of the diminished demand for it; the people cannot sell their goods and we cannot take such quantities of timber as we used to do; and, therefore, they cannot take English goods from us.”

“If such an alteration was to take place in the duties on timber in this country, as to give the Prussians a larger share of the trade than they at present enjoy, do you think that would produce increased friendly feelings on the part of the people of your country to the people of this country?” — “It would. *They would certainly take far more goods from hence, as they could get better rid of them.* The Poles, also, would take more of them.” — (*Report, 9th of March, 1821, p. 107.*)

The effect that the increased duties had on the trade with Norway and Sweden, aggravated as they in some degree were by an absurd method of charging the duty on deals, was still more striking and extraordinary. These countries had few products except timber and iron, to exchange for our commodities; and as neither of these could be advantageously imported into England under the new system, the trade with them almost entirely ceased; and they were reluctantly compelled to resort to the markets of France and Holland for the articles they had formerly imported from us. In proof of this, we may mention, that the exports to Sweden, which had amounted in 1814 to 511,818*l.*, declined in 1819 to 46,656*l.*; and the exports to Norway, which had in 1815 amounted to 199,902*l.*, amounted in 1819 to only 64,741*l.** — (*Lords' Report on the Foreign Trade of the Country, 3d of July, 1820, p. 31.*)

This extraordinary falling off in so very important a branch of our commerce having been established beyond all question by the evidence taken before the committees now referred to, an approach to a better system was made in 1821, when the duty on timber from the north of Europe was reduced from 3*l.* 5s. to 2*l.* 15s. per load, at the same time that a duty of 10s. per load was laid on timber from British America. This, however, was a comparatively inefficient measure. It was stated, to be sure, at the time, that the 2*l.* 5s. per load of excess of duty that was thus continued on Baltic timber over that laid on timber imported from Canada, was not more than enough to balance the higher prime cost, the greater freight, and other charges consequent upon the importation of the latter; and that it would, therefore, be in future indifferent to a merchant whether he imported timber from Memel or Miramichi! In point of fact, however, the discriminating duty continued in favour of Canada timber has been far too high to allow of this equalisation being effected. So much so is this the case, that there have been instances of ships loading with timber in the north of Europe, carrying that timber to Canada, and then bringing it to England as Canada timber; the difference of duty having been about sufficient to indemnify the enormous expense of this round-about voyage! We do not mean to say that this has been a common practice; but what are we to think of a commercial regulation that admits of such an adventure being undertaken with any prospect of success? Admitting, however, that the duty had been adjusted so as to have had the anticipated effect, could any thing be more preposterous and absurd than to impose it on such a principle? There are mines of coal in New Holland; but

* Even at present, the official value of the total exports, including colonial produce, from the United Kingdom to Sweden, does not exceed 160,000*l.* a year. Our exports of all sorts to Norway amount to about 150,000*l.* a year, while our imports hardly amount to 85,000*l.* In fact, were it not that Norway finds means of paying us by drafts on Holland, into which her produce is admitted, she could import almost nothing from England. The injury done to our commerce with these two nations, by our heavy discriminating duties on the principal equivalent they have to give in exchange for commodities brought from abroad, was placed in a very striking point of view by Lord Althorp, in the debate on the timber duties, the 18th of March, 1831.

what should we think, were an attempt made to impose such duties on coals from Newcastle as should render it indifferent to a London merchant whether he imported a cargo of coal from the Tyne or Botany Bay? Now, the case of the timber duties is, in point of principle, precisely the same. We may obtain timber from countries so near at hand that our ships may make 3, 4, 5, and even 6 voyages a year to them*; and we refuse to admit it unless loaded with a duty that raises its price to a level with what is brought from the other side of the Atlantic—a voyage which our ships cannot, at most, perform above twice a year!

The following official account shows the extent to which the system of preference has been carried:—

An Account of the Rates of Duty payable in Great Britain on the Principal Articles of Wood.

So long as the foreigner can lay his finger on such a Table as this, it will not be easy to convince him that our commercial system has lost so much of its exclusive character as it really has done during the last few years. Having set such an example to the Russians and Prussians, need we wonder at their having attempted to shut several of our peculiar productions out of their markets? Could we expect that they were to follow our precepts rather than our practice?

3. *Comparative Quality of Baltic and Canada Timber.*—Had the timber of Canada been decidedly superior to that of the north of Europe, something might have been found to say in favour of the discriminating duty: for it might have been contended, with some show of reason, that it was of the utmost consequence, considering the application of timber to ship and house building, and other important purposes, to prevent the importation of an inferior species, even though it might be cheaper. But the system we have adopted is of a totally different character. We have not attempted to shut out an article which, though cheap, is inferior; but have committed the twofold absurdity of shutting out one that is at once *cheap and superior*!

The committee of the House of Lords observe, in their *First Report on the Foreign Trade of the Country*, that “the North American timber is more soft, less durable, and every description of it more liable, though in different degrees, to the dry rot, than timber of the north of Europe. The red pine, however, which bears a small proportion to the other descriptions of timber, and the greater part of which, though imported from Canada, is the produce of the United States, is distinguished from the white pine by its greater durability. On the whole, it is stated by one of the commissioners of his Majesty’s navy, most distinguished for practical knowledge, experience, and skill, that the timber of Canada, both oak and fir, does not possess, for the purpose of ship building, more than half the durability of wood of the same description, the produce of the north of

* According to the evidence of Mr. J. D. Powles, an extensive ship and insurance broker, ships can make six voyages from Norway, 3 or 4 from Prussia, and 2 from Russia, in a season.—(*Commons’ Report*, p. 89.)

Europe. The result of its application to other purposes of building is described by timber merchants and carpenters to be nearly similar."—(p. 4.)

We subjoin the following extracts from the evidence of Sir Robert Seppings, the commissioner alluded to by the committee, whose great intelligence and experience render his opinion of the highest authority:—

"Can you state to the committee the result of any observations that you or others in his Majesty's service have made, on the durability of timber, the produce of the North American colonies, or timber imported from the north of Europe, applied to the same purposes?"—"About the year 1796, there were a certain number of frigates built of the fir of the Baltic, and *their average durability was about eight years.* About the year 1812, there were a considerable number of frigates built also, of fir of the growth of North America, and *their average durability was not half that time.*"

"You have stated that Canada timber is peculiarly subject to the dry rot, and the dry rot is known to have prevailed lately to a great degree in the navy; has that prevailed principally since the application of Canada timber to the uses of the navy?"—"I believe *the navy has suffered very considerably from the introduction of Canada timber,* or timber of the growth of North America; and in consequence, from experience, we have *entirely discontinued the use of it,* except for deals and masts."—(p. 56.)

Mr. Copland, an extensive builder and timber merchant, being asked by the committee what was his opinion with respect to the comparative qualities of American and Baltic timber, answered,—“The timber of the Baltic in general, speaking of Norway, Russian, Prussian, and Swedish timber, is of very superior quality to that imported from America; the bulk of the latter is *very inferior in quality, much softer in its nature, not so durable, and very liable to dry rot;* indeed, it is not allowed by any professional man under government to be used, nor is it ever used in the *best* buildings in London; it is only speculators that are induced to use it, from the price of it being much lower (in consequence of its exemption from duty) than the Baltic timber; if you were to lay two planks of American timber upon each other, in the course of a twelvemonth they would have the dry rot, almost invariably, to a certain extent.”—(p. 56.) And many passages to the same effect might be produced, from the evidence of persons of the greatest experience in building.

Now, we would beg leave to ask whether any thing can be more absolutely monstrous, than to force, by means of a system of discriminating duties, a large proportion of the public to use that very timber in the construction of their ships and houses, which government will not use for either of these purposes, and which the most experienced engineers and builders pronounce to be utterly unfit for them? This is not to impose duties on a fair and equal principle for the sake of revenue, but for the sake of securing a preference to a worthless article: it is not imposing them in the way in which they may be least, but in that in which they are certain to be *most injurious* to those who have to pay them.

It appears from the official account subjoined to this article, that, at an average of the years 1828 and 1829, the revenue would have gained considerably more than 1,500,000*l.* a year, had the same duty been laid on Canada timber that is laid on timber from the north of Europe; and this, therefore, may be considered as the amount of the pecuniary sacrifice we consent to make, in order that our ships and houses may be inoculated with dry rot!

4. *Apologies for the discriminating Duty.*—If any thing ought, more than another, to make legislators pause before enacting a restrictive regulation, it is the difficulty of receding from it. After it has been enforced for a while, a variety of interests usually grow up under its protection, which may be materially injured by its repeal. *All,* however, that the persons so interested can justly claim, is, that sufficient time, and every possible facility, should be afforded them to prepare for a change of system. Because the interests of a comparatively small portion of the community may be injuriously affected by the abolition of a regulation ascertained to be in the last degree inimical to the public, is it, therefore, to be contended that we ought, at all hazards, to continue to enforce the regulation we have so unwisely enacted? To maintain the affirmative, would be to give perpetuity to the worst errors and absurdities; and would be an effectual bar to every sort of improvement. No change, even from a bad to a good system, ought to be rashly set about: but when once the expediency of an alteration has been clearly established, it ought to be resolutely carried into effect.

It is objected to the abolition of the discriminating duties on timber, that it would be injurious to Canada and the shipping interest. We believe, however, that the injury would not be nearly so great as has been represented; that it would, in fact, be quite inconsiderable. So far from the *lumber trade*—or the trade of felling wood, squaring it, and floating it down the rivers to the shipping ports—being advantageous to a colony, it is distinctly and completely the reverse. The habits which it generates are quite subversive of that sober, steady spirit of industry, so essential to a settler in a rude country; to such a degree, indeed, is this the case, that lumberers have been described as the pests of a colony, “made and kept vicious by the very trade by which they live.”—But abstracting altogether from the circumstances now alluded to, Mr. Poulett Thomson showed, in his unanswerable speech on the timber question (March 18. 1831), that the

abolition of the lumber trade would materially benefit the real interests of the colonies. It is ludicrous, indeed, seeing that not one tree in a hundred is fit for the purposes of being squared for timber, to suppose that the discontinuance of the trade could be any serious loss. But the fact is, that when trees are cut down by lumberers, for export as timber, instead of being burnt down, so great a growth of brushwood takes place, that it actually costs more to clear the ground where the lumberers have been, than where they have not been. Mr. Richards, who was sent out by government to report on the influence of the lumber trade, represents it as most unfavourable; and observes, that, "when time or chance shall induce or compel the inhabitants to desist from this employment, agriculture will begin to raise its head." The statements of Captain Moorsom, in his *Letters from Nova Scotia*, are exactly similar. He considers the depression of the timber market, although a severe loss to many individuals, a "decided gain to the colony," from the check it has given to the "lumbering mania."—(p. 53.)

The statements that have been made as to the amount of capital expended on saw mills, and other fixed works for carrying on the lumber trade, have been singularly exaggerated. Mr. Thomson, who had the best means of acquiring accurate information on this point, made the following statement with respect to it in his speech already referred to:—"From the means I have had of calculating the amount of capital embarked in these saw mills, I believe it is about 300,000*l.*: I am sure I may say that if 500,000*l.* were taken as the amount, it would be a great deal above rather than under the real value; but, after all, this description of property is not to be sacrificed by the arrangements proposed, even if they were carried to the fullest extent. I am ready at once to admit, that the consequence of the proposed alteration may be, that it will diminish the exports of timber from Canada to England, and affect the productiveness of the capital vested in the mills to which I have referred; but the committee ought not to lose sight of the fact, that though in this one branch of industry there will be a great falling off, yet the same amount of labour might be applied to much greater advantage on land in the colonies; and the mills, which will be rendered useless for their original purposes, may be converted into useful auxiliaries to the agricultural and other pursuits of the colonists; so that the enormous losses that have been placed in so frightful a point of view, will, as I have shown, be absolutely next to nothing."

So far, therefore, as the interests of the colonies are concerned, it is plain they would not really lose, but gain, by a repeal of the discriminating duties on foreign timber. They would still continue to possess a respectable share of the trade; for their timber, though unfit for more important purposes, is well suited, by its softness and freedom from knots, for the finishing of rooms and cabins, the manufacture of boxes, &c.; and in the mast trade, it is believed, that they would be able to maintain a successful competition with Riga. It might also be expedient to assist in turning the industry of the colonies into the profitable channel of agriculture, by giving their corn and flour a still more decided preference than they now enjoy in our markets. In our opinion, it would be good policy to admit them, at all times, duty free.

The ship owners would undoubtedly have more cause to complain of injury from the equalisation of the duties; but even as respects them, it would not be nearly so great as is commonly supposed. The statement usually put forward by those who represent the timber trade to North America as of vital importance to the shipping interest, is, that it employs 1,800 ships, of 470,000 tons, navigated by 20,000 sailors. But Mr. Poulett Thomson showed, in his previously quoted speech, that this statement is utterly erroneous. The entries inwards of British ships from our possessions in North America correspond with the sums now stated; but, at an average, every ship employed in the trade makes $1\frac{3}{4}$ voyage a year; so that, in point of fact, only 1,028 ships, of 270,000 tons and 11,427 men, are employed in the trade.* From this latter number must, however, be struck off ships employed in other branches of trade; for no one pretends that the only trade we carry on with British North America is the importation of timber. We believe that the number to be so struck off may be safely estimated at 200 ships, of 54,000 tons and 2,200 men, leaving about 800 ships, of 216,000 tons and 9,200 men, to be affected by the change. Inasmuch, however, as about a third part of the timber now brought from Canada would most probably continue to be brought for the purposes already referred to, were the duties equalised, only 534 ships, of 144,000 tons and 6,134 men, would be forced to change their employments. Now of these, a half, at least, would be immediately employed in bringing from the Baltic the same quantity of timber that is brought from America; and as the price of timber would be materially lowered by the reduction of the duty, the demand for it would no doubt materially increase; so that it is abundantly plain that very few, if any, ships would be thrown out of employment by the abolition of the discriminating duties. It

* It is singular that Mr. Bouchette should have fallen into the common but palpable error on this point.—(See the Preface to his valuable work on *British America*.)

is material, too, to observe, that whatever temporary inconvenience the shipping interest might sustain from the change, its future consequences would be singularly advantageous to it. The high price of timber employed in the building of ships is at present the heaviest drawback on the British ship owners; but the equalisation of the duties would materially reduce this price; and we have the authority of the best practical judges for affirming, that were the duty (as it ought to be) entirely repealed, ships might be built decidedly cheaper in England than in any part of the world.

It would be desirable, however, to secure the interests of so important a class as that of the ship owners from any chance even of temporary loss or inconvenience from an equalisation of the duties. And it is fortunate that this object may be attained, not only without any loss, but with certain benefit to the public. The expediency of encouraging emigration to the colonies, as a means of relieving parts of England and Ireland from that mass of paupers by which they are burdened, is no longer questioned; and we incline to think that no more effectual means of promoting emigration could be devised, than the giving a bounty to the owners of ships landing emigrants in Canada, the Cape of Good Hope, or New South Wales. We have already seen that the number of emigrants to British North America, in 1832, amounted to about 66,000 (*antè*, p. 881.); and supposing that a bounty of 30s. or 40s. a head were in future to be paid on the arrival of emigrants at Quebec, it would more than indemnify the ship owners for any inconvenience resulting from a new arrangement of the timber duties; at the same time that the stimulus it would give to emigration would be of the utmost importance to Great Britain and to the colonies.

5. *Alteration proposed in the Timber Duties in 1831.* — To suppose that the timber trade should be allowed to continue on its present footing, seems to be quite out of the question. We have already seen that the discriminating duties impose a pecuniary sacrifice of 1,500,000*l.* a year on the British public, besides forcing the use of a comparatively worthless article where none but the very best ought to be employed. We have also seen that this sacrifice produces no real benefit to the colonies; and that the benefit it does produce to the ship owners is but trifling, and may be more than made up to them without loss to the public. The existing government seems to have been early satisfied of the propriety of attempting to introduce a less objectionable system; and on the 18th of March, 1831, Lord Althorp moved that the duties on Baltic timber should be reduced 6*s.* a load on the 1st of January, 1832; 6*s.* more on the 1st of January, 1833; and 3*s.* on the 1st of January, 1834; making the total reduction 15*s.* a load, and leaving a protection in favour of Canada timber of 30*s.* a load. The only real objection to this scheme was, that it did not go far enough; that “it scotched the snake, without killing it.” There is not the shadow of a ground on which to justify the granting of a bounty (for such is the real operation of the duty) to force the use of an inferior and more costly article; and even if a reasonable bounty could be justified, one of 30*s.* a load is quite excessive. But singular as it may seem, this proposal, moderate as it certainly was, encountered a very keen opposition. Some of those who had previously expressed their concurrence in the expediency of some measure of the sort, thought proper to vote against it; and, upon a division, it was lost by a majority of 46. Lord Althorp seems to have been much discouraged by the result of this motion; for, during the lengthened period that has since elapsed, he has made no attempt to effect any modification of the duties. But notwithstanding these unfavourable appearances, we do not believe that a system so destructive of the public interests will be upheld much longer. It were much to be wished that the duties could be wholly dispensed with. Timber is about the very worst subject for taxation; but, at all events, an end must be put to the discriminating duties. It is not to be endured, that so essential an article — that the *prime necessary of manufacturing industry* — should be loaded with exorbitant duties, imposed, not for the sake of revenue, but for the sake of those who either reap no advantage from them, or none that is material.

I. Account of the Amount of Duties paid in the United Kingdom on Timber and other Articles of Wood, imported from the British Provinces of North America, in each of the Years ending the 5th of January, 1828, the 5th of January, 1829, and the 5th of January, 1830; and of the Amount of Duties which would have been paid on such Timber and other Articles of Wood, if they had been charged with the Rates of Duty payable on similar Articles imported from the Baltic.

Year ending 5th of January,	Amount of Duty paid in the United Kingdom on Timber, Deals, and other Articles of Wood, imported from the British Provinces in North America. TIN (Ger. *Blech*, *Weissblech*; Fr. *Fer blanc*; It. *Latta*, *Banda stagnata*; Sp. *Hoja de lata*; Rus. *Blücha*, *Shest*; Arab. *Resas*; Sans. *Trapu* and *Ranga*), a metal which has a fine white colour like silver; and when fresh, its brilliancy is very great. It has a slightly disagreeable taste, and emits a peculiar smell when rubbed. Its hardness is between that of gold and lead. Its specific gravity is 7.29. It is very malleable; tin-foil, or tin leaf, is about $\frac{1}{1000}$ th part of an inch thick; and it might be beat out into leaves as thin again, if such were required for the purposes of art. In ductility and tenacity it is very inferior. A tin wire 0.078 inch in diameter is capable of supporting a weight of 34.7 pounds only without breaking. Tin is very flexible, and produces a crackling noise when bent. It may be readily alloyed with copper, zinc, &c., forming very valuable compounds. — (*Thomson's Chemistry*.)

The ores of this metal are found in comparatively few places; the principal, and perhaps the only, ones are Cornwall, Galicia, Erzgebirge in Saxony, Bohemia, the Malay countries, China, and Banca in Asia. They are peculiar to primitive rocks, generally in granite, either in veins or beds, and are often associated with copper and iron pyrites.

Tin is much used as a covering to several other metals: iron is tinned, to prevent its rapid oxidation when exposed to air and moisture; and the same process is applied to copper, to avoid the injurious effects to which those who are in the habit of employing cooking utensils made of this metal are always liable. The solutions of tin in the nitric, muriatic, nitro-sulphuric, and tartaric acids, are much used in dyeing, as giving a degree of permanency and brilliancy to several colours, to be obtained by the use of no other mordants with which we are at present acquainted: tin forms the basis of pewter, in the composition of which it is alloyed with lead; when rolled into thin sheets, it is called tin-foil, and is applied, with the addition of mercury, to cover the surface of glass, thus forming looking-glasses, mirrors, &c.; and in combination with sulphur; it constitutes what is called mosaic gold. — (*Joyce's Chem. Min.*)

TIN PLATES, known in Scotland by the name of *white iron*, are applicable to a great variety of purposes, and are in very extensive demand. They are formed of thin plates of iron dipped into molten tin. The tin not only covers the surface of the iron, but penetrates it completely, and gives the whole a white colour. It is usual to add about 1-10th of copper to the tin, to prevent it from forming too thick a coat upon the iron. — (*Thomson's Chemistry*.)

The price of British tin, at an average, from 1811 to 1815, inclusive, was about 7l. a cwt. Its fall from 1815 to 1820, and its comparatively low price since, have been owing to a variety of causes; partly to improvements in the art of working the mines, partly to the increased supply of metal obtained from them, and partly and principally to the competition of the tin of Banca and of the Malay countries. Previously to 1814, we had in some measure a monopoly of the market of the world. But since then the Banca mines have been wrought with unusual spirit; and their produce has been so much increased, as not only fully to supply the market of China, to which we formerly exported from 600 to 1,000 tons, but to meet us in every European market. It appears, from the foregoing Tables, that Malay tin is now very extensively imported, for warehousing, into England, at the same time that large quantities are carried direct to Holland, where there are refining houses. Hence, notwithstanding the fall of price, and the increased produce of the Cornish mines, our exports of tin have continued nearly stationary, or have rather fallen off; having been less in 1831 and 1832, when the produce of the mines exceeded 4,000 tons a year, than in 1820 and 1821, when it was only about 2,000 tons a year.

Duty on British Tin.—All tin produced in Cornwall has been subject, from a very remote period, to a coinage duty of 4l. a ton, payable to the Duke of Cornwall: the tin raised in Devonshire is subject to a similar duty of 1l. 13s. 4d. a ton. This duty produces from 16,000l. to 20,000l. a year; and is felt to be a serious grievance, not only from its amount, but from the vexatious regulations under which it is collected. Though the orders sent the miner were for tin of a peculiar description, he is not allowed to smelt it at once into the required form, but is obliged to cast it, in the first instance, into *blocks*. This regulation being complied with, it might be expected that the tin would be surveyed by officers at the smelting-house, and the duty charged accordingly; but instead of this the miner is obliged to convey it sometimes as far as 8 or 10 miles, to one of the *coinage towns*, where it is, (and where only it can be) coined; that is, a small piece is struck off one of the corners, and the block is impressed with the arms of the duchy, and the duty paid. This useless ceremony being gone through, the tin has frequently to be carried back, before it can be shipped, to the very place whence it was taken to be coined! Another grievance is, that the coinage is only performed quarterly; so that, however pressing the demand for tin may be in the interim, the miner cannot supply it. There are also certain fees payable on the coinage, particularly if it take place during the Christmas and Ladyday quarters; so that if we add to the duty of 4l. a ton, those charges, and make a reasonable allowance for the expense of carriage, and for the trouble and inconvenience to which the miner is put, the whole may be moderately estimated at 5l. a ton.

It is surely high time that this tax, and the preposterous regulations connected with it, were abolished. So long as we enjoyed a sort of monopoly of the tin trade, the duchy duty was comparatively little felt; but now that we have to sustain a competition that has already sunk the price of tin about 50 per cent., and that is every day becoming more severe, it is found to be quite oppressive. And it is not to be endured that the existence of an ancient and important branch of industry, supposed to afford employment for about 20,000 persons, should be endangered, that the Crown may gain a paltry revenue of from 16,000l. to 20,000l. a year. This is a subject which calls loudly for the interference of the legislature; and should another edition of this work be called for, we trust we shall then have to announce the abolition or commutation of the tin duty.—(For further particulars, see an excellent little tract entitled the *Tin Duties*, (ascribed to Sir Charles Lemon) published in 1833. There is a useful and instructive paper on the tin trade in the *Spectator*, No. 217.)

TIN, ORIENTAL (Malay, *Tima*; Hind, *Kalai*; Siamese, *Dihuk*; Burmese, *Kye-p'kyu*, white copper), in commercial language usually called Banca tin. It is found in several provinces of China; but the most extensive and, probably, richest tin district in the world, exists in the Malay countries. This comprehends the whole of the peninsula, from the extreme cape to the latitude of 14° on its western side, and to 11° on its eastern, and comprehends several of the small islands lying in the route between the peninsula and Java, as far as the latitude of 3° south; so that the whole of this tin district has an extreme length of near 1,200 miles. By far the greater number of the mines within these limits are as yet unwrought and unexplored. It was only in the beginning of last century that the mines of Banca, the most productive at present worked, were accidentally discovered. The whole tin of the Malay countries is the produce of alluvial ores, or what is called, in Cornwall, "Stream-work;" and from the abundance in which the mineral has been found by the mere washing of the soil, no attempt has hitherto been made at regular mining, or obtaining the ore from its rocky matrix. Malay tin, consequently, is grain tin, or tin in a very pure state; that being the species which alluvial ore uniformly produces. The mines, or rather excavations, are perpendicular pits of from 15 to 25 feet deep; and when the soil and a superstratum of common clay are removed, the bed containing the ore, consisting of quartz and granitic gravel, is reached. The sand and gravel are separated from the ore by passing a stream of water through the whole materials. The ore so obtained is preserved in heaps, and smelted periodically with charcoal in a blast furnace. The mine or pit is kept clear of water by the Chinese wheel. No cattle are used in any part of the process; human labour being had recourse to throughout the whole of its stages. The most imperfect part of the process is the smelting. The stream ores of Cornwall, which are generally poor, afford from 65 to 75 per cent. of grain tin; whereas, owing to the imperfection of the process, from those of Banca not more than 55 or 60 are usually obtained. The difference in the produce suggested, a few years ago, the practicability of sending the ore to England for the purpose of being smelted; and the experiment was tried; but our customs regulations not allowing the produce to be bonded and re-exported without duty, rendered the scheme abortive.

With very trifling exceptions, the whole tin of the Malay islands is mined and smelted by Chinese settlers; and before their skill and enterprise were applied to its production, the metal seems to have been obtained by the inhabitants of the countries which produced it, by processes hardly more skilful than those by which the precious metals were procured by the native inhabitants of America, prior to the introduction of European skill and machinery. The following estimate has been given of the annual produce of the principal states and places producing tin:—

Piculs.		Piculs.	
East coast of the Malay peninsula —		West coast of the Malay peninsula and islands —	
Junk Ceylon	5,000	Singora and Patani	5,000
Queda	2,000	Tringannu	7,000
Pera	3,000	Pahang	3,000
Salangore	3,000	Singkep	5,000
Malacca	4,000	Banca	35,000
Total	Piculs 17,000	Total	Piculs 55,000

This can be considered only as a rough estimate; but we believe it is not far wide of the truth. At an average of the 2 years, 1826-27 and 1827-28 the exports of Singapore amounted to 16,342 piculs, or about

970 tons. The most considerable port of exportation is Batavia; from which there is sent annually, either directly, or through orders from the Dutch government or the authorities at Banca, 2,000 tons. From Prince of Wales Island there is also a considerable quantity exported; and a smaller one direct to China in junks, from several of the native ports on the eastern shore of the Malay peninsula. The great marts for the consumption of tin are China, Hindostan, and the continent of Europe. The quality of the different descriptions of Malay tin, although there may be some inconsiderable difference in the quality of the original ores, seems to be derived chiefly from the greater or less skill with which the process of smelting is conducted; and this, again, necessarily depends upon the extent of capital, and goodness of the machinery employed. The mining operations of Banca have long been conducted upon a larger scale, and with more skill, than in any other of the Malay countries; and consequently, the metal produced in this island is superior by from 10 to 12 per cent. : in the market of Canton it is called "old tin," in contradistinction to "new tin," the produce of the other Malay countries. Next, in point of quality, to the produce of Banca, are those of Tringanu and Singkep, which are not more than 5 per cent. inferior to it. The tin of the state of Pera, a considerable part of which is produced by the natives themselves, without Chinese assistance, is the worst, and usually about 15 per cent. below that of Banca. The native tin of China is 10 per cent. inferior to that of Banca, and is probably block tin, like the greater part of that of Cornwall; and, like it, the produce of regular mining operations, and not alluvial. The produce of the Chinese mines is said of late years to have greatly decreased; probably owing to the great increase which has recently taken place in the produce of the Malay countries, and the cheapness and abundance with which it finds its way to China. It should be added, that of late years, and chiefly owing to the very low price and abundance of German spelter (zinc) in the Indian market, this commodity has occasionally been fraudulently mixed with tin. The Chinese brokers of Canton, however, are sufficiently expert to detect the adulteration; and it is believed that this discreditable practice has lately ceased.

The price of tin, taking the market of Singapore as the standard, has fluctuated of late years from 14 to 20 Spanish dollars per picul; equal, at the exchange of 4s. per dollar, to 47s. and 67s. per cwt. At an average of these prices, the annual value of the whole Malay tin will be about 240,000*l.* per annum. — (*Craeford's History of the Indian Archipelago*; *Dr. Horsfield's MS. Statistical View of the Island of Banca*; *Singapore Chronicle*; *Canton Register*, &c.)

TOBACCO (Da. *Tobak*; Du. *Tubak*; Fr. *Tabac*; Ger. *Taback*; It. *Tabacco*; Pol. *Tobaku*; Rus. *Tabak*; Sp. *Tabaco*; Arab. *Bujjerhang*; Hind. *Tumbākū*; Malay, *Tambrācoo*), the dried leaves of the *Nicotiana Tabacum*, a plant indigenous to America, but which succeeds very well, and is extensively cultivated, in most parts of the Old World. The recent leaves possess very little odour or taste; but when dried, their odour is strong, narcotic, and somewhat foetid; their taste bitter and extremely acid. When well cured, they are of a yellowish green colour. When distilled, they yield an essential oil, on which their virtue depends, and which is said to be a virulent poison. The leaves are used in various ways; being chewed, smoked, and ground and manufactured into snuff. It is in the last mentioned form that tobacco is principally used in Great Britain; and, though the contrary has been often asserted, its use does not seem to have been productive of any perceptible bad consequence.

1. *Historical Sketch of Tobacco.* — The taste for tobacco, though apparently administering only to a frivolous gratification, has given birth to a most extensive commerce, and been a powerful spur to industry. Being a native of the New World, its introduction into Europe dates only from the early part of the 16th century. Seeds of the plant were sent, in 1560, from Portugal, to Catharine de' Medici, by Jean Nicot, the French ambassador in that country, from whom it has received its botanical name. The notion, at one time so general, that the specific appellation tobacco was derived from its having been imported from Tobago, is now universally admitted to be without foundation. Humboldt has shown, that tobacco was the term used in the Haytian language to designate the pipe, or instrument made use of by the natives in smoking the herb; and the term, having been transferred by the Spaniards from the pipe to the herb itself, has been adopted by the other nations of the ancient world. — (*Essai Politique sur la Nouvelle Espagne*, vol. iii. p. 50. 2d edit.) Tobacco is believed to have been first introduced into England by the settlers who returned, in 1586, from the colony which it had been attempted to found in Virginia, under the auspices of Sir Walter Raleigh, in the preceding year. Harriott, who accompanied this expedition, gives, in his description of Virginia, an account of the tobacco plant, and of the manner in which it was used by the natives; adding, that the English, during the time they were in Virginia, and since their return home, were accustomed to smoke it after the fashion of the Indians, "and found many rare and wonderful experiments of the virtue thereof." — (*Hakluyt*, vol. i. p. 75.)

Raleigh, and other young men of fashion, having adopted the practice of smoking, it spread amongst the English; as it had previously spread amongst the Spaniards, Portuguese, French, and other Continental nations. But it made its greatest progress in this country after the foundation of the colony at James Town in Virginia, in 1607. The soil of the colony being found particularly well fitted for the culture of tobacco, considerable quantities were raised and sent home; and the numerous individuals interested in the colony contributed to introduce that taste for it which was diffused amongst all classes with astonishing rapidity.

James I. attempted, by repeated proclamations and publications, some of them couched in very strong terms, to restrain the use of tobacco. But his efforts had very little effect; and the settlers in Virginia continued to experience a more rapidly increasing and better demand for tobacco than for any other product of the colony.

During the earlier part of the reign of Charles I., the trade in tobacco was mono-

polished by the Crown. This monopoly was not, however, of long continuance, and totally ceased at the breaking out of the civil war.

Tobacco plants had been early introduced into England, and were found to answer remarkably well. Their cultivation was, indeed, prohibited by James, and afterwards by Charles, but apparently without effect. At length, however, the growing consumption of tobacco having excited the attention of the government financiers, it was seen that, by imposing a duty on its importation, a considerable revenue might be raised; but that, were it allowed to be freely cultivated at home, it would be very difficult to collect a duty upon it. In 1643, the Lords and Commons imposed a moderate duty, for the sake of revenue, on plantation tobacco; but instead of directly prohibiting the use of native tobacco, they burdened it with such a duty as, it was supposed, would occasion its culture to be abandoned. The facility, however, with which the duty was evaded, soon satisfied the republican leaders that more vigorous measures were required to stop its cultivation, and consequently to render its importation a source of revenue. Hence, in 1652, an act was passed, prohibiting the growth of tobacco in England, and appointing commissioners to see its provisions carried into effect. This act was confirmed at the Restoration, by the act Charles 2. c. 34, which ordered that all tobacco plantations should be destroyed. These measures were believed, at the time, to have been principally brought about by the solicitations of the planters; but their real intention was not so much to conciliate or benefit the latter, as to facilitate the collection of a revenue from tobacco; and, considered in this point of view, their policy seems quite unexceptionable.

This act did not, however, extend to Ireland; and, of late years, the cultivation of tobacco made considerable progress in that country. Had this been allowed to continue, there can be no question, that in a few years the revenue from tobacco, amounting to about 3,000,000*l.* a year, would have been materially diminished; for it would be quite visionary to suppose that any plan could have been devised for collecting a duty even of 100 per cent. upon tobacco — (see *post.*) — supposing it to have been generally cultivated in Ireland. No one, therefore, can question the wisdom of the late act prohibiting its growth in that country, and of rigorously enforcing its provisions. Any advantage Ireland might have gained by its cultivation, would have been but a poor compensation for the sacrifice of revenue it must have occasioned.

In some countries, as England, tobacco is principally used in the form of snuff; in others it is principally chewed; but in one form or other it is every where made use of. So early as 1624, Pope Urban VIII. issued a bull, excommunicating those who smoked in churches! The practice of smoking was at one time exceedingly prevalent in this country; but during the reign of George III. it was well nigh superseded, at least amongst the higher and middle classes, by the practice of snuff taking. Latterly, however, smoking has been in some measure revived, though it is still very far from being so extensively practised as formerly.

We quote the following statement as to the universality of the use of tobacco from a learned and able paper on its "Introduction and Use," in the 22d volume (p. 142.) of the *Asiatic Journal*: — "In Spain, France, and Germany, in Holland, Sweden, Denmark, and Russia, the practice of smoking tobacco prevails amongst the rich and poor, the learned and the gay. In the United States of America, smoking is often carried to an excess. It is not uncommon for boys to have a pipe or cigar in the mouth during the greatest part of the day. The death of a child is not unfrequently recorded in American newspapers, with the following remark subjoined: — 'supposed to be occasioned by excessive smoking.' If we pass to the East, we shall find the practice almost universal. In Turkey, the pipe is perpetually in the mouth; and the most solemn conferences are generally concluded with a friendly pipe, employed like the *calumet of peace* amongst the Indians. In the East Indies, not merely all classes, but both sexes, inhale the fragrant steam; the only distinction among them consisting in the shape of the instrument employed, and the species of the herb smoked. In China, the habit equally prevails; and a modern traveller in that country (Barrow) states, that every Chinese female, from the age of 8 or 9 years, wears, as an appendage to her dress, a small silken purse or pocket to hold tobacco, and a pipe, with the use of which many of them are not unacquainted at this tender age. This prevalence of the practice, at an early period, amongst the Chinese, is appealed to by M. Pallas as an evidence that 'in Asia, and especially in China, the use of tobacco for smoking is more ancient than the discovery of the New World.' He adds — 'Among the Chinese, and amongst the Mongol tribes who had the most intercourse with them, the custom of smoking is so general, so frequent, and has become so indispensable a luxury; the tobacco purse affixed to their belt so necessary an article of dress; the form of the pipes, from which the Dutch seem to have taken the model of theirs, so original; and, lastly, the preparation of the yellow leaves, which are merely rubbed to pieces and then put into the pipe, so peculiar; that they could not pos-

sibly derive all this from America by way of Europe; especially as India, where the practice of smoking is not so general, intervenes between Persia and China.’”

This, however, is a very doubtful proposition. It seems sufficiently established that the tobacco plant was first brought from Brazil to India about the year 1617; and it is most probable that it was thence carried to Siam, China, and other Eastern countries. The names given to it in all the languages of the East, are obviously of European, or rather American, origin; a fact which seems completely to negative the idea of its being indigenous to the East.

Sources of Supply. Importation into Great Britain.—Tobacco is now very extensively cultivated in France and other European countries, in the Levant, and in India; but the tobacco of the United States is still very generally admitted to be decidedly superior to most others. It is much higher flavoured than the tobacco of Europe; a superiority attributable in some degree, perhaps, to a different mode of treatment; but far more, it is believed, to differences of soil and climate.

Previously to the American war, our supplies of tobacco were almost entirely derived from Virginia and Maryland; and they are still principally imported from these states; so much so, that of 33,107,679 lbs. of unmanufactured tobacco imported in 1831, 32,712,108 lbs. came from the United States. Mr. Jefferson, in his *Notes on Virginia*, has given a very unfavourable view of the effects of the tobacco culture. It was, indeed, well known to be a crop that speedily exhausted all but the very best lands; and in addition to this, Mr. J. says that “it is a culture productive of infinite wretchedness. Those employed in it are in a continued state of exertion, beyond the powers of nature to support. Little food of any kind is raised by them; so that the men and animals on these farms are badly fed, and the earth is rapidly impoverished.”—(English ed. p. 278.)

Tobacco is extensively cultivated in Mexico, but only for home consumption. It might probably, however, were it not for the restrictions under which it is placed, form a considerable article of export from that country. Under the Spanish government, the tobacco monopoly was one of the principal sources of revenue; yielding from 4,000,000 to 4,500,000 dollars, exclusive of the expenses of administration, amounting to about 800,000 dollars. No tobacco was allowed to be cultivated, except in a few specified places. Commissioners, or *guardas de tabaco*, were appointed, whose duty it was to take care that all tobacco plantations without the privileged districts should be destroyed. The government fixed the price at which the cultivators of tobacco were obliged to sell it to its agents. The sale of the manufactured tobacco was farmed out; and *cigars* were not allowed to be sold, except at the royal *estancos*. No one was allowed to use cigars of his own manufacture. This most oppressive monopoly was established in 1764. It has been continued, from the difficulty of supplying the revenue which it produces, by the present government. — (*Humboldt, Nouvelle Espagne*, vol. iii. p. 49.; *Poinsett's Notes on Mexico*, note 116. Lond. ed.)

Cuba is celebrated for its tobacco, particularly its cigars. These consist of the leaves, formed into small rolls, for the purpose of smoking. Formerly their importation into this country was prohibited; but they may now be imported on paying the exorbitant duty of 9s. per lb. Havannah cigars are usually reckoned the best. Previously to 1820, the cultivation and sale of tobacco were subjected to the same sort of monopoly in Cuba as in Mexico; but, at the period referred to, the trade was thrown open. In consequence of the freedom thus given to the business, the production and exportation of tobacco are both rapidly increasing, though hardly, perhaps, so much as might have been expected; the culture of sugar and coffee being reckoned more profitable. In 1828, the declared value of the tobacco exported from Cuba amounted to 368,000 dollars; but there is good reason to think that its real value considerably exceeded this sum. At present, the total real value of the exports of tobacco from the Havannah and other ports is probably not much under 2,000,000 dollars. The tobacco used in Cuba by the lower classes is chiefly imported from the United States.

Consumption of Duty-paid Tobacco in the United Kingdom.—It appears from the following official account, that the consumption of duty-paid tobacco in Great Britain has increased from about 8,000,000 lbs. in 1789, to 16,214,000 lbs. in 1833; the duty having fluctuated during the same period from 1s. 3d. to 4s. and 3s. per lb. There are, however, sufficient grounds for thinking that the consumption would have been at least *one fourth part* greater, had the duty been less. But, whatever difference of opinion may exist as to the influence of the duty in Great Britain, there can be none as to its influence in Ireland. The subjoined Table shows that during the 5 years ending with 1798, when the duty was 8d. a pound, the annual average consumption of duty-paid tobacco was 7,337,217 lbs. Since 1798, the population of Ireland has been more than *doubled*; and yet, during the 5 years ending with 1833, when the duty was 3s. per lb., the annual average consumption has been only about 4,266,000 lbs.; which, making allowance for the increase of population, shows that the consumption has sunk to little

more than a *fourth part* of what it amounted to at the former period! This statement warrants the conclusion, that were the duty on tobacco in Ireland reduced to 1s. per lb., the consumption would be so much increased, that the revenue would gain, and not lose, by the reduction.

Smuggling. — The price of tobacco in bond varies from 3d. to 6d. per lb.; so that the duty of 3s. amounts to 1,200 per cent. on the inferior, and to 600 per cent. on the superior qualities. Now, though the use of tobacco be a frivolous, it is, at the same time, an innocent gratification; and we do not really see any reason whatever for loading it with such oppressive duties, even supposing it were possible to collect them. The more the wants and desires of men are multiplied, the more inventive and industrious they become; and so far from preventing luxurious indulgences, a wise government should exert itself to increase their number, and to diffuse a taste for them as widely as possible. But supposing it to be otherwise, still the magnitude of the tobacco duty is altogether indefensible: it is neither calculated to produce the largest amount of revenue, nor to eradicate the taste for the article. Its exorbitancy is advantageous to the smuggler, and to him only. With the exception of brandy and geneva, tobacco is the principal article clandestinely imported. If, as one might be half inclined to suspect, the duty were intended to give life and activity to the nefarious practices of the illicit traders, it has completely answered its object; but in every other point of view, its failure has been signal and complete. "According," said Mr. Poulett Thomson, in his admirable speech on the taxation of the empire, on the 26th of March, 1830, "according to all accounts laid before the house on this subject, smuggling in this article in England, Ireland, and Scotland, is carried on to the greatest possible extent. I have heard it stated, and I have the fact upon the best authority, that numbers of vessels are constantly leaving the ports of Flushing, Ostend, &c., carrying contraband tobacco to this country. It is a fact which was established in evidence before a committee of this house, that *seventy* cargoes of tobacco, containing 3,644,000 lbs., were smuggled in 1 year, on the coast of Ireland, from the port of Waterford to the Giant's Causeway alone! In Scotland, smuggling in this article is also carried on to a great extent. There is no doubt," added the Right Honourable gentleman, "that the only mode of meeting this system of smuggling consists in *fairly reducing the duty upon the article*. I believe, that were the duty upon it reduced to 1s. or 1s. 6d. per lb., the public would be greatly served, and smuggling put down."

We question, indeed, whether, allowing for the clandestine importation, the consumption be relatively less at this moment, in Ireland, than at any former period. Under the present system, government collects an exorbitant duty upon about a *fourth part* of the tobacco consumed in Ireland, the other *three fourths* being supplied by the smuggler; the duty being at once an incentive to his energies, and a premium to indemnify him for his risks! A *fourth part* of the demand of Great Britain is, probably, supplied in the same way.

Account of the Number of Pounds' Weight of Leaf Tobacco, manufactured Cigars, and Snuff, that paid Duty in the United Kingdom, for the Year ending the 5th of January, 1834; with the Rates of Duty and Total Amount of the same. — (*Parl. Paper*, No. 212. Sess. 1834.)

Regulations as to Importation. — Tobacco is not to be imported in a vessel of less than 150 tons burden; nor unless in hogsheds, casks, chests, or cases, containing at least 100 lbs. nett weight, if from the East Indies; or 450 lbs. weight, if from any other place; or 100 lbs. weight, if cigars; except tobacco from Turkey, which may be packed in separate bags or packages, provided the outward package be a hogshed, cask, chest, or case, containing 450 lbs. nett at least; and except Guatemalan and Colombian tobacco, which may be imported in packages of not less than 90 lbs. Tobacco is not allowed to be imported, unless into the following ports; viz. London, Liverpool, Bristol, Lancaster, Cowes, Falmouth, Whitehaven, Hull, Glasgow, Port Glasgow, Greenock, Leith, Newcastle, Plymouth, Belfast, Cork, Drogheda, Dublin, Galway, Limerick, Londonderry, Newry, Sligo, Waterford, and Wexford. A rent of four shillings is charged upon every hogshed, cask, chest, or case of tobacco, warehoused in every warehouse provided by the Crown; 2s. being paid immediately upon depositing the tobacco in the warehouse, and 2s. more before the tobacco is taken out for home consumption, or exportation: it may remain for five years in the warehouse without any additional charge for rent. No abatement is made from the tobacco duties on account of damage; but the merchant may, if he choose, abandon the tobacco, which is to be destroyed. The allowance of duty-free tobacco for each sailor on board his Majesty's navy, and for each soldier on foreign service, is fixed at 2 lbs. per lunar month. Tobacco that has been exported, cannot be reimported, without being subject to the same duty as if it were imported for the first time. Tobacco cannot be entered for exportation in any vessel of less than 70 tons burden. — (See a full statement of the regulations in *Ellis's British Tariff for 1832-34*.) When tobacco is reshipped for exportation, an allowance is made for shrinkage, from the seller to the buyer, of 30 lbs. per hhd. on Virginia and Kentucky, and 15 lbs. per hhd. on Maryland, on the landing weights; the draft of the former 8 lbs. and of the latter 4 lbs., with a tret on all sorts of 4 lbs. per 104 lbs.

TON, an English weight containing 20 cwt.

TONNAGE, in commercial navigation, the number of tons burden that a ship will carry.

The mode in which the tonnage of British ships is at present, and has hitherto been, ascertained, is specified in the Registry Act, 3 & 4 Will. 4. c. 55. § § 16. & 17. (see *anté*, p. 977). This mode has, however, led to very inaccurate conclusions; and as most shipping charges depend on the tonnage, it has occasioned the building of ships of an improper form for the purposes of navigation, in order that, by measuring less than their real burden, they might evade a part of the duties. It, therefore, has long been felt to be desirable that some change should be made in the plan of measuring ships. But the practical obstacles in the way of any change are much greater than is commonly supposed. The accurate estimation of the tonnage of a ship is a very difficult problem indeed; and it is indispensable that any system to be adopted in practice be not very complex; for if so, it will either be wholly inapplicable, or it will be sure to be incor-

rectly applied. At best, therefore, only an approximative measurement can be obtained. A committee of scientific and practical gentlemen were appointed some time since to consider the subject; and at their recommendation a bill has been introduced into parliament, embodying a plan for the more correct measurement of ships. As it is probable it will be passed into a law, we subjoin its more important clauses. As much, we believe, has been done to simplify it, as was, perhaps, practicable; but it still appears to us to be abundantly complex.

New Mode by which Tonnage of Vessels is to be ascertained.—The tonnage of every ship or vessel required to be registered, shall be measured and ascertained while her hold is clear, according to the following rule; viz. divide the length of the upper deck between the after part of the stem and the fore part of the sternpost into 6 equal parts. Depths: at the foremost, the middle, and the aftermost of those points of division, measure in feet and decimal parts of a foot the depths from the under side of the upper deck to the ceiling at the timber strake. In the case of a break in the upper deck, the depths are to be measured from a line stretched in a continuation of the deck. Breadths: divide each of those 3 depths into 5 equal parts, and measure the inside breadths at the following points; viz. at 1-5th and at 4-5ths from the upper deck, of the foremost and aftermost depths; and at 2-5ths and 4-5ths from the upper deck, of the midship depth. Length: at $\frac{1}{2}$ the midship depth, measure the length of the vessel from the after part of the stem to the fore part of the sternpost; then to twice the midship depth add the foremost and aftermost depths for the sum of the depths; add together the upper and lower breadths at the foremost division, 3 times the upper breadth, and the lower breadth at the midship division, and the upper and twice the lower breadth at the after division, for the sum of the breadths; then multiply the sum of the depths by the sum of the breadths, and this product by the length, and divide the final product by 3,500, which will give the number of tons for register. If the vessel have a poop or $\frac{1}{2}$ deck, or a break in the upper deck, measure the inside mean length, breadth, and height of such part thereof as may be included within the bulkhead; multiply these 3 measurements together, and, dividing the product by 924, the quotient will be the number of tons, to be added to the result as above found. In order to ascertain the tonnage of open vessels, the depths are to be measured from the upper edge of the upper strake. — § 2.

Mode of ascertaining Tonnage of Steam Vessels.—In ascertaining the tonnage of vessels propelled by steam, instead of deducting the length of the engine-room from the length of the vessel, as is at present by law established, an allowance for the same shall be made by an abatement of *one-fourth* of the whole tonnage of the vessel, to be ascertained in manner aforesaid; but inasmuch as the tendency of every improvement in the construction of such vessels is to diminish the space occupied by the engine, it shall be lawful, by royal proclamation, published in the *London Gazette*, to alter the proportion of allowance to be made in respect of the engine-room, as shall be found just and expedient, according to such diminution of space occupied by the engine as shall from time to time take place in such vessels. — § 4.

For ascertaining Tonnage of Vessels when laden.—For the purpose of ascertaining the tonnage of all such ships, whether belonging to the United Kingdom or otherwise, as there shall be occasion to measure while their cargoes are on board, the following rule shall be observed; viz. measure, 1st, the length on the upper deck between the after part of the stem and the fore part of the sternpost; 2dly, the inside breadth on the under side of the upper deck at the middle point of the length; and, 3dly, the depth from the under side of the upper deck down the pump-well to the skin: multiply these 3 dimensions together, and divide the product by 130, and the quotient will be the amount of the register tonnage of such ships. — § 5.

Amount of Register Tonnage to be carved on main Beam.—The true amount of the register tonnage of every merchant ship or vessel belonging to the United Kingdom, to be ascertained according to the rule by this act established in respect of such ships, shall be deeply carved or cut in figures of at least 3 inches in length, on the main beam of every such ship or vessel, prior to her being registered. — § 6.

The tonnage of goods and stores is taken sometimes by weight, and sometimes by measurement; that method being allowed to the vessel which yields the most tonnage. In tonnage by weight, 20 cwt. make a ton. In tonnage by measurement, 40 cubic feet are equal to a ton. All carriages, or other stores measured by the tonnage, are taken to pieces and packed so as to occupy the least room. Ordnance, whether brass or iron, is taken in tonnage at its actual weight; as are musket cartridges in barrels or boxes, ammunition in boxes, &c.

TOOLS AND MACHINES. Under this designation are comprised all sorts of instruments employed to assist in the performance of any undertaking, from the rudest and simplest to the most improved and complex. But we only mention them here for the purpose of making one or two remarks on the restrictions to which the trade in them is subjected.

Importation and Exportation of Tools and Machines.—Tools and machines being instruments of production, it is obviously of the utmost importance that they should be as much improved as possible, and hence the expediency of allowing their free importation. Their exclusion, or the exclusion of the articles of which they are made, would obviously lay every branch of industry carried on in a nation less advanced than others in their manufacture, under the most serious disadvantages. And supposing the implements it employed to be superior to those of other countries when the exclusion took place, the absence of foreign competition, and of the emulation which it inspires, would most probably, in a very short time, occasion the loss of this superiority. The injury arising from the prohibition of most other articles is comparatively limited, affecting only the producers and consumers of those that are prohibited. But a prohibition of machines strikes at the root of every species of industry: it is not injurious to one, or a few branches, but to all.

The question, whether the exportation of machinery ought to be free, is not so easy of solution. It is the duty of a nation to avail itself of every fair means for its own aggrandisement; and supposing the machinery belonging to any particular people were decidedly superior to that employed by their neighbours, and that they had it in their power to preserve this advantage, their generosity would certainly outrun their sense, were they to communicate their improved machinery to others. We do not, however, believe that it is possible, whatever measures may be adopted in that

view, for one country to monopolise, for any considerable period, any material improvement in machinery or the arts: and on this ground we think that the existing restraints on the exportation of machinery had better be abolished. Drawings and models of all sorts of machines used in Manchester, Glasgow, and Birmingham, are to be found in most parts of the Continent; and at Rouen, Paris, &c., numbers of the best English workmen are employed in the manufacture of prohibited machines. Now, it does certainly appear not a little preposterous to prevent the exportation of a machine, at the same time that we allow (it could not, indeed, be prevented) the free egress of the workmen by whom it is made! The effect of this absurd policy is, not to secure a monopoly of improved machines for the manufacturers of England, but to occasion the emigration of English artisans to the Continent, and the establishment there of machine manufactories under their superintendence. The prejudice that must arise from this state of things to the interests of England, is too obvious to require being pointed out. It is plain, therefore, that the exportation of all sorts of machinery, on payment of a moderate duty, ought to be allowed. A policy of this sort would afford a much more efficient protection to our manufacturers than they enjoy at present; at the same time that it would tend to keep our artisans at home, and make England the grand seat of the tool as well as of the cotton manufacture.

For an account of the restrictions on the exportation of machinery from Great Britain, see *antè*, p. 668.

Account of the Value of the Machinery exported from Great Britain, during the Six Years ending with 1829. — (*Parl. Paper*, No. 573. Sess. 1830.)

Years.	Steam Engines and Parts of Steam Engines.	Mill Work of all Sorts allowed by Law to be exported.	Machinery of all other Kinds allowed by Law to be exported.	Machinery exported under Licence from the Treasury or Privy Council.	Total.

TOPAZ (Ger. *Topas*; Fr. *Topase*; It. *Topazio*; Sp. *Topacio*; Rus. *Topas*). The name topaz has been restricted by M. Haiiy to the stones called by mineralogists Occidental ruby, topaz, and sapphire; which, agreeing in their crystallisation and most of their properties, were arranged under one species by M. Romé de Lisle. The word topaz, derived from an island in the Red Sea, where the ancients used to find topazes, was applied by them to a mineral very different from ours. One variety of our topaz they denominated Chrysolite. Colour, wine yellow. From pale wine yellow it passes into yellowish white, greenish white, mountain green, sky blue: from deep wine yellow into flesh red and crimson red. Specific gravity from 3.464 to 3.641. — (*Thomson's Chemistry*.)

"*Yellow Topaz*. — In speaking of the topaz, a gem of a beautiful yellow colour is always understood: it is wine yellow of different degrees of intensity; and the fuller and deeper the tinge, the more the stone is esteemed. In hardness it yields to the spinelle.

"There are few gems more universal favourites than the yellow topaz, when perfect: the rich warm tone of its colour, the vivacity of its lustre (which it retains even by the side of the diamond), and its large size, compared with many others, are characters which deservedly entitle it to distinction; it bears accordingly a high price when of good quality.

"It is chiefly employed for necklaces, ear-drops, bracelets, &c. in suit. No little skill and taste are required in cutting and duly proportioning this gem; the table should be perfectly symmetrical, and not too large, the bezel of sufficient depth, and the collet side should be formed in delicate steps. It works easily on the mill, and the lapidaries are in general tolerably well acquainted with it; yet it is uncommon to meet with one well cut.

"The yellow topaz varies in price according to its beauty and perfection. A superlatively fine stone, perfect in colour and workmanship, sufficiently large for an amulet, or any other ornament, and weighing nearly 80 carats, was sold for 100*l*.

"Topazes have become more common since our intercourse with Brazil; consequently they are less in demand, and lower in price. A fine stone of 60 carats may be purchased at from 20*l*. to 35*l*.; and smaller, calculated for ring stones, at from 2*l*. to 5*l*.: but it is not usual to sell them by weight.

"*Pink Topaz*. — This is made from the yellow, which, when of intense colour, is put into the bowl of a tobacco pipe or small crucible, covered with ashes or sand: on the application of a low degree of heat, it changes its colour from a yellow to a beautiful pink. This is performed with little hazard; and if the colour produced happens to be fine, the price is much augmented.

"*Red Topaz*. — This beautiful gem, which very seldom occurs naturally, is of a fine crimson colour, tinged with a rich brown; it is extremely rare, and generally taken to be a variety of ruby, for which I have seen it offered for sale. Its price, from its scarcity, is quite capricious; it has an exquisite pleasing colour, very different from the glare of the artificial pink topaz.

"*Blue Topaz*. — is also a beautiful gem, of a fine celestial blue colour. It has occurred of considerable magnitude; the finest specimen known, I brought in the rough from Brazil; when cut and polished, it weighed about 1½ oz. Smaller specimens are not uncommon, and, when light-coloured, are often taken for aqua-marinas, from which they may always be distinguished by their greater weight and hardness, &c.

"*White Topaz*. — is familiarly called *Minas Nova*. It is a beautiful pellucid gem, and is used for bracelets, necklaces, &c. It possesses greater brilliancy than crystal; and, from its hardness, has been used to cover paste, &c., and to form doublets. — (*Mace on Diamonds*, &c. 2d ed. p. 108—112.)

TORTOISESHELL (Fr. *Ecaille de Tortue*; It. *Scaglia de Tartaruga*; Ger. *Schildpau*; Malay, *Sisik kurakura*), the brown and yellow scales of the *Testudo imbricata*, or tortoise, a native of the tropical seas. It is extensively used in the manufacture of combs, snuff-boxes, &c., and in inlaying and other ornamental work. The best tortoiseshell is that of the Indian Archipelago; and the finest of this quarter is obtained on the shores of the Spice Islands and New Guinea. When the finest West Indian tortoiseshell is worth, in the London market, 46s., the finest East Indian is worth 60s. per lb. Under the latter name, however, a great deal of inferior shell is imported, brought from various parts of the East Indies. The goodness of tortoiseshell depends mainly on the thickness and size of the scales, and in a smaller degree on the clearness and brilliancy of the colours. Before the opening of the British intercourse with India, the greater part of the tortoiseshell which eventually found its way to Europe, was first carried to Canton, which then formed the principal mart for the commodity. It is still an article of trade from that city; the value of the tortoiseshell exported by British ships, in 1831 and 1832, having amounted to 19,017 dollars. At present, however, Singapore is the chief mart, the exports from it in 1831 and 1832 having amounted at an average to 208 piculs. The price at Singapore varies from 750 and 900 to from 1,000 to 1,600 dollars per picul, according to quality. — (*Craufurd's Indian Archipelago*; *Singapore Chronicle*; *Canton Register*.)

The imports of tortoiseshell into Great Britain from all places eastward of the Cape of Good Hope, except China, were, in 1830, 32,189 lbs.; in 1831, 50,002; and in 1832, 39,004. — (*Parl. Paper*, No. 425 Sess. 1832.) The duty, which is 2s. per lb. on the shells imported from foreign countries, and 1s. per lb. on those imported from a British possession, produced, in 1832, 458l. 1s. 7d. nett.

TOYS (Ger. *Spielezeug*, *Spellsachen*; Du. *Speelgoed*; Fr. *Jouets*, *Bimbelots*; It. *Trastulli*; Sp. *Dijes*, *Juguetes de ninno*; Rus. *Igrushki*), include every trifling article made expressly for the amusement of children. How frivolous soever these articles may appear in the estimation of superficial observers, their manufacture employs hundreds of hands, and gives bread to many families in London, Birmingham, &c. The greatness of the demand for them may be inferred, from the fact, that a manufacturer of glass beads, and articles of that description, has received a single order for 500l. worth of dolls' eyes! — (*Fourth Report, Artisans and Machinery*, p. 314.) Considerable quantities are also imported from Holland; which supplies us with several sorts of wooden toys on more reasonable terms than we can afford to produce them. But of late years, these have been made in greater abundance in England than formerly. The duty on toys, which is an *ad valorem* one of 20 per cent., produced, in 1832, 3,469l. 1s. 7d., showing that the value of the toys imported for home use amounted to 17,345l.

TRAGACANTH, a species of gum, the produce of the *Astragalus Tragacantha*, a thorny shrub growing in Persia, Crete, and the islands of the Levant. It exudes about the end of June from the stem and larger branches, and soon dries in the sun. It is inodorous; impressing a very slightly bitter taste as it softens in the mouth. It has a whitish colour; is semitransparent; and in very thin, wrinkled, vermiform pieces; it is brittle, but not easily pulverised, except in frosty weather, or in a warmed mortar. It should be chosen in long twisted pieces, white, very clear, and free from all other colours; the brown, and particularly the black pieces, should be wholly rejected. — (*Thomson's Chemistry*; *Dr. A. T. Thomson's Dispensatory*; *Milburn's Orient. Com.*)

The entries of tragacanth for home consumption in 1831 and 1832, were at the rate of 45,836 lbs. a year. In March, 1834, tragacanth sold in the London market at from 11d. 10s. to 16d. per cwt., duty (6s.) included.

TREATIES (COMMERCIAL). By a commercial treaty is meant a treaty between two independent nations, for facilitating, and most commonly, also, regulating, the commerce carried on between them.

Origin, Objects, and Policy of modern Commercial Treaties. — During the middle ages, and down, indeed, to a comparatively recent period, foreigners resident in a country, whether for commercial or other purposes, were, for the most part, subject to very harsh treatment. At one time, it was usual in England to make aliens liable for the debts and crimes of each other; and the practice, formerly so common, of laying heavier duties on the goods imported and exported by aliens than by British subjects, is not even yet, we grieve to say, altogether abandoned. In France, and some other countries, during the 14th and 15th centuries, a stranger was incapable of bequeathing property by will; and the whole of his personal as well as real estate fell, at his death, to the king or the lord of the barony. This barbarous law was known by the name of *Droit d'Aubaine*, and was not completely abolished in France till a very late period. — (*Robertson's Charles V.* vol. i. note 29.) Previously to last century, the laws with respect to shipwreck, though infinitely more humane than they had been at a more remote period, were calculated rather to promote the interests of the sovereign of the country, or the feudal lords on whose territories shipwrecked vessels might be thrown, than those of the unfortunate

owners or survivors. — (See WRECK.*) The most serious obstacles were then, also, opposed, by the prevalent insecurity, and the arbitrary nature of the tolls which the lords were in the habit of exacting, to the transit of commodities through the territories of one state to those of another.

Under such circumstances, it became of much importance for commercial states to endeavour to obtain, by means of treaties, that protection and security for the persons and properties of their subjects, when abroad, against unjust treatment and vexatious exactions, which they could not have obtained from the laws of the countries in which they might happen to reside. Thus, it was stipulated by Edward II., in 1325, that the merchants and mariners of Venice should have power to come to England for 10 years, with liberty to sell their merchandise and to return home in safety, “*without having either their persons or goods stopped on account of other people's crimes or debts.*” — (Anderson, anno 1325.) The commercial treaties negotiated during the 15th, 16th, and 17th centuries, are full of similar conditions; and there can be no doubt that, by providing for the security of merchants and seamen when abroad, and suspending, with respect to them, the barbarous laws and practices then in force, they contributed materially to accelerate the progress of commerce and civilisation.

Commercial treaties were also negotiated at a very early period for the regulation of neutral commerce during war; and for defining the articles that should be deemed contraband, or which it should not be lawful for neutral ships to convey or carry to either belligerent. These are obviously points that can only be decided by express stipulations. †

Instead, however, of confining commercial treaties to their legitimate and proper purposes — the security of merchants and navigators, and the facility of commercial transactions — they very soon began to be employed as engines for promoting the commerce of one country at the expense of another. For more than 2 centuries, those engaged in framing commercial treaties have principally applied themselves to secure, either by force or address, some exclusive advantage in favour of the ships and products of their particular countries. Hence these compacts are full of regulations as to the duties to be charged on certain articles, and the privileges to be enjoyed by certain ships, according as they were either produced by or belonged to particular countries. It was in the adjustment of these duties and regulations that the skill of the negotiator was chiefly put to the test. It was expected that he should be thoroughly acquainted with the state of every branch of industry, both in his own country, and in the country with which he was negotiating; and he was to endeavour so to adjust the tariff of duties, that those branches in which his own country was deficient might be benefited, and those in which the other was superior might be depressed! The idea of conducting a negotiation of this sort on a fair principle of reciprocity is of very late origin; success in circumventing, in over-reaching, or in extorting from fear or ignorance some oppressive, but at the same time worthless privilege, was long esteemed the only proof of superior talent in negotiators.

In an able tract, attributed to Mr. Eden, afterwards Lord Auckland, published in 1787 (*Historical and Political Remarks on the Tariff of the French Treaty*), there is the following outline of the qualifications necessary to the negotiator of a commercial treaty: — “Besides a general knowledge of the trade and reciprocal interests of the contracting parties, he ought to be precisely acquainted with their several kinds of industry and skill; to discover their wants, to calculate their resources, and to weigh with nicety the state of their finances, and the proportionate interest of their money: nay, further, he should be able to ascertain the comparative population and strength of each country, together with the price and quality both of first materials, and also of the labour bestowed upon them: for this purpose he should inquire into the operations of every class of merchants and manufacturers concerned in the trade; should consult their expectations on each of its several branches; and collect their hopes and fears on the effect of such a commercial revolution, on the competition of rival nations. A good treaty of commerce, independent of the art of negotiation, is pronounced, by one who well knew the extent and difficulty of the subject, to be a ‘*masterpiece of skill.*’” — (p. 10.)

Had Mr. Eden concluded by stating, that no individual, or number of individuals, ever possessed, or ever would possess, the various qualifications which in his estimation were required in negotiating a “good commercial treaty,” he would only have affirmed what is most certainly true. We believe, however, that he had formed a totally false

* The practice of confiscating shipwrecked property continued in France till 1681, when it was abolished by an edict of Louis XIV. It was at one time common in Germany, to use the words of M. Bouchaud, “pour les prédicateurs de prier Dieu en chaire, qu'il se fasse bien des naufrages sur leurs côtes!” — (*Théorie des Traités de Commerce*, p. 118.) And the fact, that the celebrated jurist Thomasius wrote a dissertation in defence of such prayers, affords, if possible, a still more striking proof of the spirit of the period.

† There is a good collection of treaties as to this point, in the Appendix to the excellent work of Lampredi, *Del Commercio de' Popoli Neutrali*. — (See CONTRABAND.)

estimate, not only of the qualifications of a negotiator, but of the objects he ought to have in view. It was the opinion of the Abbé Mably — (*Droit Public de l'Europe*, tome ii. p. 561.) — an opinion in which we are disposed, with very little modification, to concur, — that when a few general rules are agreed upon for the effectual security of trade and navigation, including the importation and exportation of all commodities not prohibited by law; the speedy adjustment of disputes; the regulations of pilotage, harbour, and light-house duties; the protection of the property and effects of merchants in the event of a rupture, &c.; all is done that ought to be attempted in a commercial treaty. It may, indeed, be properly stipulated that the goods of the contracting powers shall be admitted into each other's ports on the same terms as "those of the most favoured nations," — that is, that no higher duties shall be charged upon them than on those of others. But here stipulations ought to cease. It is an abuse and a perversion of commercial treaties, to make them instruments for regulating duties or prescribing Custom-house regulations.

We admit, indeed, that occasions may occur, in which it may be expedient to stipulate for a reduction of duties or an abolition of prohibitions on the one side, in return for similar concessions on the other. But all arrangements of this sort ought to be determined by a convention limited to that particular object; and a fixed and not very distant term should be specified, when the obligation in the convention should expire, and both parties be at liberty to continue or abandon the regulations agreed upon. Generally speaking, all treaties which determine what the duties on importation or exportation shall be, or which stipulate for preferences, are radically objectionable. Nations ought to regulate their tariffs in whatever mode they judge best for the promotion of their own interests, without being shackled by engagements with others.* If foreign powers be all treated alike, none of them has just grounds of complaint; and it can never be for the interest of any people to show preferences to one over another. Those, for example, by whom we may be most advantageously supplied with foreign products, require no preferences; and if we exclude them, or give a preference to others, we incontestably injure ourselves: and yet 19 out of 20 of the regulations as to duties in commercial treaties have been founded on this preposterous principle. They have been employed to divert trade into channels, where it would not naturally flow; that is, to render it less secure and less profitable than it would otherwise have been.

A great deal of stress has usually been laid upon the advantages supposed to be derived from the privileges sometimes conceded in commercial treaties. But we believe that those who inquire into the subject will find that such concessions have, in every case, been not only injurious to the party making them, but also to the party in whose favour they have been made. The famous commercial treaty with Portugal, negotiated by Mr. Methuen in 1703, was almost universally regarded, for a very long period, as admirably calculated to promote the interests of this country; but it is now generally admitted, by every one who has reflected upon such subjects, that few transactions have taken place by which these interests have been more deeply injured. It stipulated for the free admission of British woollens into Portugal, from which they happened, at the time, to be excluded; but in return for this concession—a concession far more advantageous to the Portuguese than to us—we bound ourselves "for ever hereafter" to admit wines of growth of Portugal into Great Britain at $\frac{3}{4}$ ds of the duty payable on the wines of France! Thus, in order to open an access for our woollens to the limited market of Portugal, we consented, in all time to come, to drink inferior wine, bought at a comparatively high price!—(See WINE.) This, however, was not all: by excluding one of the principal equivalents the French had to offer for our commodities, we necessarily lessened their ability to deal with us; at the same time that we provoked them to adopt retaliatory measures against our trade. It is owing more to the stipulations in the Methuen treaty than to any thing else, that the trade between England and France—a trade that would naturally be of vast extent and importance—is confined within the narrowest limits; and is hardly, indeed, of as much consequence as the trade with Sweden and Norway.—(See *antè*, p. 644.)

It is visionary to imagine that any nation will ever continue to grant to another any exclusive advantage in her markets, unless she obtain what she reckons an equivalent advantage in the markets of the other. And if a commercial treaty stipulating for an exclusive privilege be really and *bonâ fide* observed by the country granting the privilege, we may be sure that the concessions made by the country in whose favour it is granted are sufficient fully to countervail it. Those who grasp at exclusive privileges in matters of this sort, or who attempt to extort valuable concessions from the weakness or ignorance of their neighbours, are uniformly defeated in their object. All really beneficial commercial transactions are bottomed on a fair principle of reciprocity; and that nation

* This principle is laid down as fundamental by a very high authority, Sir Henry Parnell, in his tract *Sur les Avantages des Relations Commerciales entre la France et l'Angleterre*.

will always flourish most, and have the foundations of her prosperity best secured, who is a universal merchant, and deals with all the world on the same fair and liberal principles.

The justness of these principles, we are glad to observe, is now beginning to be very generally admitted. Stipulations as to duties and Custom-house regulations are disappearing from commercial treaties; and it is to be hoped that, at no distant period, every trace of them may have vanished.

A good work on the principles, style, and history of commercial treaties is a desideratum. The best we have seen are Mascovius *De Fœderibus Commercialium*, 4to. Leipsic, 1735.; and Bouchaud, *Théorie des Traités de Commerce*, 12mo. Paris, 1777. But these are principally works of erudition, and were written before the sound principles of commercial policy had been unfolded. There is no good collection of treaties in the English language; but Mr. Hertslet's work is valuable, as containing the recent treaties in an accessible form. A work containing new treaties and state papers is annually compiled at the Foreign Office; it used to be distributed to a few official personages only, but it is now sold to the public.

We subjoin copies of some of the commercial treaties and conventions existing at this moment between Great Britain and other powers.

AUSTRIA.

Convention of Commerce and Navigation between His Britannic Majesty and the Emperor of Austria, signed at London, December 21. 1829.

Article 1. From the 1st day of February, 1830, Austrian vessels entering or departing from the ports or the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Imperial and Royal Apostolic Majesty's dominions, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Austria, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports of Austria, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Austrian ships: and the same reciprocity shall be observed in the ports of the United Kingdom, in respect to all articles not the growth, produce, or manufacture of the dominions of his Imperial and Royal Apostolic Majesty, which can legally be imported into the ports of the United Kingdom in Austrian ships.

4. All goods which can legally be imported into the ports of either country shall be admitted at the same rate of duty, whether imported in vessels of the other country or in national vessels; and all goods which can be legally exported from the ports of either country shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting in its behalf, or under its authority, in the purchase of any article the growth, produce, or manufacture of either country, imported into the other, on account of or in reference to the national character of the vessel in which such article may be imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. In respect to the commerce to be carried on in Austrian vessels with the British dominions in the East Indies, or now held by the East India Company in virtue of their charter, his Britannic Majesty consents to grant the same facilities and privileges, in all respects, to the subjects of his Imperial and Royal Apostolic Majesty, as are or may be enjoyed under any treaty or act of parliament by the subjects or citizens of the most favoured nation; subject to the laws and regulations which are, or may be, applicable to the ships and subjects of any other foreign country enjoying the like facilities and privileges of trading with the said dominions.

7. All the possessions of his Britannic Majesty in Europe, except the British possessions in the Mediterranean Sea, shall, for all the purposes of this convention, be considered as forming part of the United Kingdom of Great Britain and Ireland.

8. That clause of article 7. of the convention concluded at Paris on the 5th of November, 1815, between the courts of Great Britain, Austria, Prussia, and Russia, which relates to the commerce between the dominions of his Imperial and Royal Apostolic Majesty and the United States of the Ionian Islands, is hereby confirmed.

9. The present convention shall be in force until the 18th day of March, 1836; and further, until the end of twelve months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, on or at any time after the said 18th day of March, 1836; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

10. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 21st day of December,
in the year of our Lord 1829.

ABERDEEN.
W. F. VESEY FITZGERALD.
ESTERHAZY.

Austrian ships may import from the dominions of his Majesty the Emperor of Austria into any of the British possessions abroad, goods the produce of such dominions, and export goods from such British possessions abroad, to be carried to any foreign country whatever. — (*Order in Council*, April 7. 1830.)

DENMARK.

Convention of Commerce between Great Britain and Denmark, signed at London, the 16th of June, 1824.

Article 1. From and after the 1st day of July next, Danish vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Danish Majesty's dominions, shall not be subject to any other or higher duties or charges whatever, than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the

United Kingdom and of Denmark respectively, in vessels of the one country, shall, in like manner, be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports and dominions of the King of Denmark, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Danish ships; and the same reciprocity shall be observed with regard to Danish vessels in the ports of the said United Kingdom of Great Britain and Ireland, in respect to all articles not of the growth, produce, or manufacture of the dominions of his Danish Majesty, which can legally be imported into the ports of the United Kingdom in Danish ships.

4. All goods which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting on its behalf, or under its authority, in the purchase of any article the growth, produce, or manufacture of either country imported into the other, on account of or in reference to the character of the vessel in which such article was imported: it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. The high contracting parties having mutually determined not to include, in the present convention, their respective colonies, in which are comprehended, on the part of Denmark, Greenland, Iceland, and the islands of Ferroe; it is expressly agreed that the intercourse which may at present legally be carried on by the subjects or ships of either of the said high contracting parties with the colonies of the other, shall remain upon the same footing as if this convention had never been concluded.

7. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 16th of June, 1824.

GEORGE CANNING.
W. HUSKISSON.
C. E. MOLTKE.

Separate Article.

The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial regulations of their respective subjects and dominions, upon the principles either of reciprocal or equivalent advantages, as the case may be. And in the event of any articles or article being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed, that the article or articles which may hereafter be so concluded shall be considered as forming part of the aforesaid convention.

Additional Article.

Their Britannic and Danish Majesties mutually agree, that no higher or other duties shall be levied in either of their dominions (their respective colonies being excepted from the convention of this date), upon any personal property of their respective subjects, on the removal of same from the dominions of their said Majesties reciprocally, either upon the inheritance of such property, or otherwise, than are or shall be payable in each state, upon the like property, when removed by a subject of such state, respectively.

FRANCE.

Convention of Commerce between His Britannic Majesty and the Most Christian King, together with two additional Articles thereto annexed, signed at London, January 26, 1826.

Article I. French vessels coming from or departing for the ports of France, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of the United Kingdom, either on entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which British vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; and, reciprocally, from and after the same period, British vessels coming from or departing for the ports of the United Kingdom, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of France, either in entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which French vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; whether such duties are collected separately, or are consolidated in one and the same duty;—his Most Christian Majesty reserving to himself to regulate the amount of such duty or duties in France, according to the rate at which they are or may be established in the United Kingdom: at the same time, with a view of diminishing the burdens imposed upon the navigation of the two countries, his Most Christian Majesty will always be disposed to reduce the amount of the said burdens in France, in proportion to any reduction which may hereafter be made of those now levied in the ports of the United Kingdom.

2. Goods which can or may be legally imported into the ports of the United Kingdom, from the ports of France, if so imported in French vessels, shall be subject to no higher duties than if imported in British vessels; and, reciprocally, goods which can or may be legally imported into the ports of France, from the ports of the United Kingdom, if so imported in British vessels, shall be subject to no higher duties than if imported in French vessels. The produce of Asia, Africa, and America, not being allowed to be imported from the said countries, nor from any other, in French vessels, nor from France in French, British, or any other vessels, into the ports of the United Kingdom, for home consumption, but only for warehousing and re-exportation, his Most Christian Majesty reserves to himself to direct that, in like manner, the produce of Asia, Africa, and America, shall not be imported from the said countries, nor from any other, in British vessels, nor from the United Kingdom in British, French, or any other vessels, into the ports of France, for the consumption of that kingdom, but only for warehousing and re-exportation.

With regard to the productions of the countries of Europe, it is understood between the high contracting parties, that such productions shall not be imported, in British ships, into France, for the consumption of that kingdom, unless such ships shall have been laden therewith in some port of the United Kingdom; and that his Britannic Majesty may adopt, if he shall think fit, some corresponding restrictive measure,

with regard to the productions of the countries of Europe imported into the ports of the United Kingdom in French vessels: the high contracting parties reserving, however, to themselves the power of making, by mutual consent, such relaxations in the strict execution of the present article, as they may think useful to the respective interests of the 2 countries, upon the principle of mutual concessions, affording each to the other reciprocal or equivalent advantages.

3. All goods which can or may be legally exported from the ports of either of the 2 countries, shall, on their export, pay the same duties of exportation, whether the exportation of such goods be made in British or in French vessels, provided the said vessels proceed, respectively, direct from the ports of the one country to those of the other. And all the said goods so exported in British or French vessels, shall be reciprocally entitled to the same bounties, drawbacks, and other allowances of the same nature, which are granted by the regulations of each country, respectively.

4. It is mutually agreed between the high contracting parties, that in the intercourse of navigation between their 2 countries, the vessels of any third power shall, in no case, obtain more favourable conditions than those stipulated, in the present convention, in favour of British and French vessels.

5. The fishing-boats of either of the 2 countries, which may be forced by stress of weather to seek shelter in the ports, or on the coast of the other country, shall not be subject to any duties or port charges of any description whatsoever; provided the said boats, when so driven in by stress of weather, shall not discharge or receive on board any cargo, or portion of cargo, in the ports, or on the parts of the coast where they shall have sought shelter.

6. It is agreed that the provisions of the present convention between the high contracting parties shall be reciprocally extended and in force, in all the possessions subject to their respective dominions in Europe.

7. The present convention shall be in force for the term of 10 years, from the 5th of April of the present year; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate its operation; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years: and it is agreed between them, that, at the end of the 12 months' extension agreed to on both sides, this convention, and all the stipulations thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged in London, within the space of 1 month, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 26th day of January, in the year of our Lord 1826.

GEORGE CANNING.

WILLIAM HUSKISSON.

LE PRINCE DE POLIGNAC.

Additional Articles.

Article 1. French vessels shall be allowed to sail from any port whatever of the countries under the dominion of his Most Christian Majesty, to all the colonies of the United Kingdom (except those possessed by the East India Company), and to import into the said colonies all kinds of merchandise (being productions the growth or manufacture of France, or of any country under the dominion of France), with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the British dominion; and the said French vessels, as well as the merchandise imported in the same, shall not be subject, in the colonies of the United Kingdom, to other or higher duties than those to which British vessels may be subject, on importing the same merchandise from any foreign country, or which are imposed upon the merchandise itself.

The same facilities shall be granted, reciprocally, in the colonies of France, with regard to the importation, in British vessels, of all kinds of merchandise, (being productions the growth and manufacture of the United Kingdom, or any country under the British dominion,) with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the dominion of France. And whereas all goods, the produce of any foreign country, may now be imported into the colonies of the United Kingdom, in the ships of that country, with the exception of a limited list of specified articles, which can only be imported into the said colonies in British ships, his Majesty the King of the United Kingdom reserves to himself the power of adding to the said list of excepted articles any other, the produce of the French dominions, the addition whereof may appear to his Majesty to be necessary for placing the commerce and navigation to be permitted to the subjects of each of the high contracting parties with the colonies of the other, upon a footing of fair reciprocity.

2. French vessels shall be allowed to export from all the colonies of the United Kingdom (except those possessed by the East India Company), all kinds of merchandise which are not prohibited to be exported from such colonies in vessels other than those of Great Britain; and the said vessels, as well as the merchandise exported in the same, shall not be subject to other or higher duties than those to which British vessels may be subject, on exporting the said merchandise, or which are imposed upon the merchandise itself; and they shall be entitled to the same bounties, drawbacks, and other allowances of the same nature, to which British vessels would be entitled, on such exportation.

The same facilities and privileges shall be granted, reciprocally, in all the colonies of France, for the exportation, in British vessels, of all kinds of merchandise, which are not prohibited to be exported from such colonies in vessels other than those of France.

These 2 additional articles shall have the same force and validity as if they were inserted, word for word, in the convention signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Jan. 26. 1826.

GEORGE CANNING.

WILLIAM HUSKISSON.

LE PRINCE DE POLIGNAC.

A Treasury letter, dated 28th of March, 1826, directs that French vessels, and their cargoes legally imported or exported on board the same, according to the terms of the convention in the preceding pages, are, from the 5th of April, 1826, to be charged with such and the like duties only, of whatever kind they may be, that are charged on British vessels, and similar cargoes laden on board thereof; and in like manner the same bounties, drawbacks, and allowances are to be paid on articles exported in French vessels, that are paid, granted, or allowed on similar articles exported in British vessels. And the necessary instructions are to be transmitted to the officers in the colonies for carrying into effect the stipulations contained in the 2 additional articles of the said convention, respecting French vessels and their cargoes, from the 1st of October, 1826.

HANSE TOWNS.

Convention of Commerce between His Britannic Majesty and the Free Hanseatic Republics of Lubeck, Bremen, and Hamburg, signed at London, Sept. 29. 1825.

Article 1. From and after the date hereof, British vessels entering or departing from the ports of the free Hanseatic republics of Lubeck, Bremen, or Hamburg; and Lubeck, Bremen, or Hamburg vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland; shall not be subject to any other or higher ship duties or charges than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All goods, whether the production of the territories of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or of any other country, which may be legally imported from any of the ports of the said republics into the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be imported in Lubeck, Bremen, or Hamburg vessels; and all goods, whether the production of any of the dominions of his Britannic Majesty, or of any other country, which may be legally exported from the ports of the United Kingdom in British vessels, shall, in like manner, be permitted to be exported from the said ports, in Lubeck, Bremen, or Hamburg vessels. And all goods, which may be legally imported into or exported from the ports of Lubeck, Bremen, or Hamburg, in national vessels, shall, in like manner, be permitted to be imported into or exported from the ports of Lubeck, Bremen, or Hamburg, in British vessels.

3. All goods which can be legally imported into the ports of the United Kingdom directly from the ports of Lubeck, Bremen, or Hamburg, or either of them, shall be admitted at the same rate of duty, whether imported in British vessels, or in vessels belonging to either of the said republics; and all goods which can be legally exported from the United Kingdom, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in British or Hanseatic vessels. And the like reciprocity shall be observed, in the ports of the said republics, in respect to all goods which can be legally imported into or exported from any or either of the said ports in vessels belonging to the United Kingdom.

4. No priority or preference shall be given, directly or indirectly, by any or either of the contracting parties, nor by any company, corporation, or agent, acting on their behalf or under their authority, in the purchase of any article, the growth, produce, or manufacture of their states respectively, imported into the other, on account of or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties that no distinction or difference whatever shall be made in this respect.

5. In consideration of the limited extent of the territories belonging to the republics of Lubeck, Bremen, and Hamburg, and the intimate connection of trade and navigation subsisting between these republics, it is hereby stipulated and agreed, that any vessel which shall have been built in any or either of the ports of the said republics, and which shall be owned exclusively by a citizen or citizens of any or either of them, and of which the master shall also be a citizen of either of them, and provided 3-4ths of the crew shall be subjects or citizens of any or either of the said republics, or of any or either of the states comprised in the Germanic Confederation, such vessel, so built, owned, and navigated, shall, for all the purposes of this convention, be taken to be and be considered as a vessel belonging to Lubeck, Bremen, or Hamburg.

6. Any vessel, together with her cargo, belonging to either of the three free Hanseatic republics of Lubeck, Bremen, or Hamburg, and coming from either of the said ports to the United Kingdom, shall, for all the purposes of this convention, be deemed to come from the country to which such vessel belongs; and any British vessel and her cargo trading to the ports of Lubeck, Bremen, or Hamburg, directly or in succession, shall, for the like purposes, be on the footing of a Hanseatic vessel and her cargo making the same voyage.

7. It is further mutually agreed, that no higher or other duties shall be levied, in any or either of the states of the high contracting parties, upon any personal property of the subjects and citizens of each respectively, on the removal of the same from the dominions or territory of such states, either upon inheritance of such property, or otherwise, than are or shall be payable, in each state, upon the like property when removed by a subject or citizen of such state respectively.

8. The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial relations of their respective subjects and dominions, citizens and territories, upon the principle either of reciprocal or equivalent advantages, as the case may be; and, in the event of any article or articles being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed that the article or articles which may hereafter be so concluded shall be considered as forming part of the present convention.

9. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after the King of the United Kingdom of Great Britain and Ireland, on the one part, or the governments of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or either of them, on the other part, shall have given notice of their intention to terminate the same; each of the said high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years: and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either of the parties from the other, this convention, and all the provisions thereof, shall altogether cease and determine, as far as regards the states giving and receiving such notice; it being always understood and agreed, that, if one or more of the Hanseatic republics aforesaid shall, at the expiration of 10 years from the date hereof, give or receive notice of the proposed termination of this convention, such convention shall, nevertheless, remain in full force and operation as far as regards the remaining Hanseatic republics or republic which may not have given or received such notice.

10. The present convention shall be ratified, and the ratification shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Sept. 29. 1825.

GEORGE CANNING.
W. HUBKISSON.
JAMES COLQUHOUN.

MEXICO.

Treaty of Amity, Commerce, and Navigation, between Great Britain and Mexico, signed at London, December 26. 1826.

Article 1. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United States of Mexico, and their citizens.

2. There shall be, between all the territories of his Britannic Majesty in Europe and the territories of Mexico, a reciprocal freedom of commerce. The inhabitants of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places and rivers in the territories aforesaid, saving only such particular ports to which other foreigners shall not be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce.

In like manner, the respective ships of war, and post-office packets of the 2 countries, shall have liberty freely and securely to come to all harbours, rivers, and places, saving only such particular ports (if any) to which other foreign ships of war and packets shall not be permitted to come, to enter into the same, to anchor, and to remain there and refit; subject always to the laws and statutes of the two countries respectively.

By the right of entering the places, ports, and rivers, mentioned in this article, the privilege of carrying on the coasting trade is not understood, in which national vessels only are permitted to engage.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that the inhabitants of Mexico shall have the like liberty of commerce and navigation stipulated for in the pre-

ceding article, in all his dominions situated out of Europe, to the full extent in which the same is permitted at present, or shall be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the dominions of his Britannic Majesty, of any article of the growth, produce, or manufacture of Mexico, and no higher or other duties shall be imposed on the importation into the territories of Mexico, of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation of any articles the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said territories of Mexico, to or from the said dominions of his Britannic Majesty, or to or from the said territories of Mexico, which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of Mexico, on British vessels, than those payable in the same ports by Mexican vessels*; nor, in the ports of his Britannic Majesty's territories, on Mexican vessels, than shall be payable, in the same ports, on British vessels.

6. The same duties shall be paid on the importation into the territories of Mexico, of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in Mexican* or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty, of any article the growth, produce, or manufacture of Mexico, whether such importation shall be in British or in Mexican vessels. The same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation to Mexico of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such exportation shall be in Mexican or in British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation of any articles the growth, produce, or manufacture of Mexico, to his Britannic Majesty's dominions, whether such exportation shall be in British or in Mexican vessels.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or Mexican* vessel, it is hereby agreed that all vessels built in the dominions of his Britannic Majesty, or vessels which shall have been captured from an enemy by his Britannic Majesty's ships of war, or by subjects of his said Majesty furnished with letters of marque by the Lords Commissioners of the Admiralty, and regularly condemned in one of his said Majesty's prize courts as a lawful prize, or which shall have been condemned in any competent court for the breach of the laws made for the prevention of the slave trade, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of Mexico, or captured from the enemy by the ships of Mexico, and condemned under similar circumstances, and which shall be owned by any citizen or citizens thereof, and whereof the master and 3-4ths of the mariners are citizens of Mexico, excepting where the laws provide for any extreme cases, shall be considered as Mexican vessels.

And it is further agreed, that every vessel, qualified to trade as above described, under the provisions of this treaty, shall be furnished with a register, passport, or sea letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries (the form of which shall be communicated), certifying the name, occupation, and residence of the owner or owners, in the dominions of his Britannic Majesty, or in the territories of Mexico, as the case may be; and that he, or they, is, or are, the sole owner or owners, in the proportion to be specified; together with the name, burden, and description of the vessel as to build and measurement, and the several particulars constituting the national character of the vessel, as the case may be.

8. All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have full liberty, in all the territories of Mexico, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes than those employed by Mexicans, nor to pay them any other salary or remuneration than such as is paid, in like cases, by Mexican citizens; and absolute freedom shall be allowed, in all cases, to the buyer and seller, to bargain and fix the price of any goods, imported into or exported from Mexico, as they shall see good, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of his Britannic Majesty, by the citizens of Mexico, under the same conditions.

The citizens and subjects of the contracting parties, in the territories of each other, shall receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries, respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

9. In whatever relates to the succession to personal estates, by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the 2 contracting parties shall enjoy, in their respective dominions and territories, the same privileges, liberties, and rights, as native subjects; and shall not be charged, in any of these respects, with any higher imposts or duties than those which are paid, or may be paid, by the native subjects or citizens of the power in whose dominions or territories they may be resident.

10. In all that relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the subjects of his Britannic Majesty, and the citizens of Mexico, respectively, shall be subject to the local laws and regulations of the dominions and territories in which they may reside. They shall be exempted from all compulsory military service, whether by sea or land. No forced loans shall be levied upon them; nor shall their property be subject to any other charges, requisitions, or taxes, than such as are paid by the native subjects or citizens of the contracting parties in their respective dominions.

11. It shall be free for each of the 2 contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but, before any consul shall act as such, he shall, in the usual form, be approved and admitted by the government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be excepted. The Mexican diplomatic agents and consuls shall enjoy, in the dominions of his Britannic Majesty, whatever privileges, exceptions, and immunities are or shall be granted to agents of the same rank belonging to the most favoured nation; and, in like manner, the diplomatic agents and consuls of his Britannic Majesty in the Mexican territories shall enjoy, according to the strictest reciprocity, whatever privileges, exceptions, and immunities are or may be granted to the Mexican diplomatic agents and consuls in the dominions of his Britannic Majesty.

12. For the better security of commerce between the subjects of his Britannic Majesty and the citizens of the Mexican States, it is agreed that if, at any time, any interruption of friendly intercourse, or any

* See additional articles at the end of this treaty.

rupture, should unfortunately take place between the 2 contracting parties, the merchants residing upon the coasts shall be allowed 6 months, and those of the interior a whole year, to wind up their accounts, and dispose of their property; and a safe-conduct shall be given them to embark at the port which they shall themselves select. All those who are established in the respective dominions and territories of the 2 contracting parties, in the exercise of any trade or special employment, shall have the privilege of remaining and continuing such trade and employment therein, without any manner of interruption, in full enjoyment of their liberty and property, as long as they behave peaceably, and commit no offence against the laws: and their goods and effects, of whatever description they may be, shall not be liable to seizure or sequestration, or to any other charges or demands than those which may be made upon the like effects or property belonging to the native subjects or citizens of the respective dominions or territories in which such subjects or citizens may reside. In the same case, debts, between individuals, public funds, and the shares of companies, shall never be confiscated, sequestered, or detained.

13. The subjects of his Britannic Majesty, residing in the Mexican territories, shall enjoy, in their houses, persons, and properties, the protection of the government; and, continuing in possession of what they now enjoy, they shall not be disturbed, molested, or annoyed, in any manner, on account of their religion, provided they respect that of the nation in which they reside, as well as the constitution, laws, and customs of the country. They shall continue to enjoy, to the full, the privilege already granted to them of burying, in the places already assigned for that purpose, such subjects of his Britannic Majesty as may die within the Mexican territories; nor shall the funerals and sepulchres of the dead be disturbed in any way, or upon any account. The citizens of Mexico shall enjoy, in all the dominions of his Britannic Majesty, the same protection, and shall be allowed the free exercise of their religion, in public or private, either within their own houses, or in the chapels and places of worship set apart for that purpose.

14. The subjects of his Britannic Majesty shall, on no account or pretext whatsoever, be disturbed or molested in the peaceable possession and exercise of whatever rights, privileges, and immunities they have at any time enjoyed within the limits described and laid down in a convention signed between his said Majesty and the King of Spain, on the 14th of July, 1786: whether such rights, privileges, and immunities shall be derived from the stipulations of the said convention, or from any other concession which may, at any time, have been made by the King of Spain, or his predecessors, to British subjects and settlers residing and following their lawful occupations within the limits aforesaid: the 2 contracting parties reserving, however, for some more fitting opportunity, the further arrangements on this article.

15. The government of Mexico engages to co-operate with his Britannic Majesty for the total abolition of the slave trade, and to prohibit all persons inhabiting within the territories of Mexico, in the most effectual manner, from taking any share in such trade.

16. The 2 contracting parties reserve to themselves the right of treating and agreeing hereafter, from time to time, upon such other articles as may appear to them to contribute still further to the improvement of their mutual intercourse, and the advancement of the general interests of their respective subjects and citizens; and such articles as may be so agreed upon, shall, when duly ratified, be regarded as forming a part of the present treaty, and shall have the same force as those now contained in it.

17. The present treaty shall be ratified, and the ratifications shall be exchanged at London, within the space of 6 months, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of December, in the year of our Lord 1826.

WILLIAM HUSKISSON,
JAMES J. MORIER.

SEBASTIAN CAMACHO.

Additional Articles.

1. Whereas in the present state of Mexican shipping, it would not be possible for Mexico to receive the full advantage of the reciprocity established by the articles 5, 6, 7. of the treaty signed this day, if that part of the 7th article which stipulates that, in order to be considered as a Mexican ship, a ship shall actually have been *built* in Mexico, should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of 10 years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships, *whosoever built*, being *bona fide* the property of and wholly owned by one or more citizens of Mexico, and whereof the master and 3/4ths of the mariners, at least, are also natural-born citizens of Mexico, or persons domiciliated in Mexico, by act of the government, as lawful subjects of Mexico, to be certified according to the laws of that country, shall be considered as Mexican ships: his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of 10 years, to claim the principle of reciprocal restriction stipulated for in the article 7. above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity, in favour of Mexican shipping.

2. It is further agreed that, for the like term of 10 years, the stipulations contained in articles 5. and 6. of the present treaty shall be suspended; and in lieu thereof, it is hereby agreed that, until the expiration of the said term of 10 years, British ships entering into the ports of Mexico, from the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, and all articles the growth, produce, or manufacture of the United Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and, reciprocally, it is agreed, that Mexican ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the States of Mexico, and all articles the growth, produce, or manufacture of the said States, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of 10 years, the stipulations of the said 5th and 6th articles shall, from thenceforward, be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of December, in the year of our Lord 1826.

WILLIAM HUSKISSON,
JAMES J. MORIER.

SEBASTIAN CAMACHO.

An order in council, dated September 3. 1827, orders, that vessels of the United States of Mexico, entering the ports of the United Kingdom of Great Britain and Ireland in ballast, or laden direct from any of the ports of Mexico, or departing from the ports of the said United Kingdom, together with the cargoes on board the same, such cargoes consisting of articles which may be legally imported or exported,

shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports, or on similar articles when imported into, or exported from, such ports in British vessels; and also such articles, when exported from the said ports in vessels of the United States of Mexico respectively, shall be entitled to the same bounties, drawbacks, and allowances that are granted on similar articles when exported in British vessels.

N. B. — Treaties similar to the above have been negotiated with Colombia, Buenos Ayres, &c.

NETHERLANDS.

Treaty between His Britannic Majesty and the King of the Netherlands, respecting Territories and Commerce in the East Indies, signed at London, March 17. 1824.

Article 1. The high contracting parties engage to admit the subjects of each other to trade with their respective possessions in the Eastern Archipelago, and on the continent of India, and in Ceylon, upon the footing of the most favoured nation; their respective subjects conforming themselves to the local regulations of each settlement.

2. The subjects and vessels of one nation shall not pay, upon importation or exportation, at the ports of the other in the Eastern seas, any duty at a rate beyond the double of that at which the subjects and vessels of the nation to which the port belongs, are charged.

The duties paid on exports or imports at a British port, on the continent of India, or in Ceylon, on Dutch bottoms, shall be arranged so as, in no case, to be charged at more than double the amount of the duties paid by British subjects, and on British bottoms.

In regard to any article upon which no duty is imposed, when imported or exported by the subjects, or on the vessels, of the nation to which the port belongs, the duty charged upon the subjects or vessels of the other shall, in no case, exceed 6 per cent.

3. The high contracting parties engage, that no treaty hereafter made by either, with any native power in the Eastern seas, shall contain any article tending, either expressly, or by the imposition of unequal duties, to exclude the trade of the other party from the ports of such native power; and that if, in any treaty now existing on either part, any article to that effect has been admitted, such article shall be abrogated upon the conclusion of the present treaty.

It is understood that, before the conclusion of the present treaty, communication has been made by each of the contracting parties to the other, of all treaties or engagements subsisting between each of them, respectively, and any native powers in the Eastern seas; and that the like communication shall be made of all such treaties concluded by them, respectively, hereafter.

4. Their Britannic and Netherland Majesties engage to give strict orders, as well to their civil and military authorities, as to their ships of war, to respect the freedom of trade, established by articles 1, 2, and 3; and, in no case, to impede a free communication of the natives in the Eastern Archipelago, with the ports of the 2 governments, respectively, or of the subjects of the 2 governments with the ports belonging to native powers.

5. Their Britannic and Netherland Majesties, in like manner, engage to concur effectually in repressing piracy in those seas: they will not grant either asylum or protection to vessels engaged in piracy, and they will, in no case, permit the ships or merchandise captured by such vessels, to be introduced, deposited, or sold, in any of their possessions.

6. It is agreed that orders shall be given by the 2 governments, to their officers and agents in the East, not to form any new settlement on any of the islands in the Eastern seas, without previous authority from their respective governments in Europe.

7. The Molucca Islands, and especially Amboyna, Banda, Ternate, and their immediate dependencies, are excepted from the operation of the 1st, 2d, 3d, and 4th articles, until the Netherland government shall think fit to abandon the monopoly of spices; but if the said government shall, at any time previous to such abandonment of the monopoly, allow the subjects of any power, other than an Asiatic native power, to carry on any commercial intercourse with the said islands, the subjects of his Britannic Majesty shall be admitted to such intercourse, upon a footing precisely similar.

8. His Netherland Majesty cedes to his Britannic Majesty all his establishment on the continent of India; and renounces all privileges and exemptions enjoyed or claimed in virtue of those establishments.

9. The factory of Fort Marlborough, and all the English possessions on the island of Sumatra, are hereby ceded to his Netherland Majesty: and his Britannic Majesty further engages that no British settlement shall be formed on that island, nor any treaty concluded by British authority, with any native prince, chief, or state therein.

10. The town and fort of Malacca, and its dependencies, are hereby ceded to his Britannic Majesty; and his Netherland Majesty engages, for himself and his subjects, never to form any establishment on any part of the peninsula of Malacca, or to conclude any treaty with any native prince, chief, or state therein.

11. All the colonies, possessions, and establishments which are ceded by the preceding articles, shall be delivered up to the officers of the respective sovereigns on the 1st of March, 1825. The fortifications shall remain in the state in which they shall be at the period of the notification of this treaty in India; but no claim shall be made, on either side, for ordnance, or stores of any description, either left or removed by the ceding power, nor for any arrears of revenue, or any charge of administration whatever.

12. It is agreed that all accounts and reclamations, arising out of the restoration of Java, and other possessions, to the officers of his Netherland Majesty in the East Indies, — as well those which were the subject of a convention made at Java on the 24th of June, 1817, between the commissioners of the 2 nations, as all others, — shall be finally and completely closed and satisfied, on the payment of the sum of 100,000*l.*, sterling money, to be made in London on the part of the Netherlands, before the expiration of the year 1825.

13. The present treaty shall be ratified, and the ratifications exchanged at London, within 3 months from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and affixed thereunto the seal of their arms.

Done at London, the 17th day of March, in the year of our Lord 1824

GEORGE CANNING. CHARLES WATKINS WILLIAMS WYNN. H. FAGEL. A. R. FALCK.

PORTUGAL.

Treaty of Commerce between Great Britain and Portugal, signed at Lisbon, December 27. 1703.

Article 1. His Sacred Royal Majesty of Portugal promises, both in his own name and that of his successors, to admit, for ever hereafter, into Portugal, the woollen cloths, and the rest of the woollen manufactures of the Britons, as was accustomed till they were prohibited by the laws; nevertheless, upon this condition;

2. That is to say, that her Sacred Royal Majesty of Great Britain shall, in her own name and that of her successors, be obliged for ever hereafter to admit the wines of the growth of Portugal into Britain; so that at no time, whether there shall be peace or war between the kingdoms of Britain and France, any thing more shall be demanded for these wines, by the name of custom or duty, or by whatsoever other title, directly or indirectly, whether they shall be imported into Great Britain in pipes or hogshheads, or other casks, than what shall be demanded from the like quantity or measure of French wine, deducting or abating a third part of the custom or duty; but if at any time this deduction or abatement of customs, which is to be made as aforesaid, shall in any manner be attempted and prejudiced, it shall be

just and lawful for his Sacred Royal Majesty of Portugal again to prohibit the woollen cloths, and the rest of the British woollen manufactures.

3. The most excellent Lords the plenipotentiaries promise, and take upon themselves, that their above named masters shall ratify this treaty, and that within the space of 2 months the ratifications shall be exchanged.

Given at Lisbon, the 27th of December, 1703.

JOHN METHUEN.

MARCHIS ALEGRENTENSIS.

Treaty of Commerce and Navigation between Great Britain and Portugal, signed at Rio de Janeiro, the 19th of February, 1810.

1. Peace established.

2. There shall be reciprocal liberty of commerce and navigation between the respective subjects of the 2 high contracting parties, in all the territories and dominions of either. They may trade, travel, sojourn, or establish themselves, in all the ports, cities, towns, countries, provinces, or places whatsoever, belonging to each of the 2 high contracting parties, except in those from which all foreigners whatsoever are generally and positively excluded, the names of which places may be hereafter specified in a separate article of this treaty. Provided, however, that it be thoroughly understood that any place belonging to either of the two high contracting parties, which may hereafter be opened to the commerce of the subjects of any other country, shall thereby be considered as equally opened, and upon correspondent terms, to the subjects of the other high contracting party, in the same manner as if it had been expressly stipulated by the present treaty. And his Britannic Majesty, and his Royal Highness the Prince Regent of Portugal, do hereby bind themselves not to grant any favour, privilege, or immunity in matters of commerce and navigation, to the subjects of any other state, which shall not be also at the same time respectively extended to the subjects of the high contracting parties, gratuitously, if the concession in favour of that other state should have been gratuitous, and on giving, *quam proximè*, the same compensation or equivalent, in case the concession should have been conditional.

3. The subjects of the 2 sovereigns respectively shall not pay, in the ports, harbours, roads, cities, towns, or places whatsoever, belonging to either of them, any greater duties, taxes, or imposts (under whatsoever names they may be designated or included), than those that are paid by the subjects of the most favoured nation; and the subjects of each of the high contracting parties shall enjoy, within the dominions of the other, the same rights, privileges, or exemptions, in matters of commerce and navigation, that are granted, or may hereafter be granted, to the subjects of the most favoured nation.

4. His Britannic Majesty and his Royal Highness the Prince Regent of Portugal do agree, that there shall be a perfect reciprocity on the subject of the duties and imposts to be paid by the vessels of the high contracting parties, within the several ports and anchoring places belonging to each of them; to wit, that the vessels or the subjects of his Britannic Majesty shall not pay any higher duties or imposts (under whatsoever name they be designated or implied), within the dominions of his Royal Highness the Prince Regent of Portugal, than the vessels belonging to the subjects of his Royal Highness the Prince Regent of Portugal shall be bound to pay within the dominions of his Britannic Majesty, and *vice versa*. And this agreement shall particularly extend to the payment of the duties known by the name of *Port Charges, Tonnage and Anchorage Duties*, which shall not, in any case, or under any pretext, be greater for British vessels within the dominions of Portugal, than for Portuguese vessels within the dominions of his Britannic Majesty, and *vice versa*.

5. The 2 high contracting parties do also agree, that the same rates of bounties and drawbacks shall be established in their respective ports upon the exportation of goods, whether those goods be exported in British or Portuguese vessels; that is, that British vessels shall enjoy the same favour in this respect, within the dominions of Portugal, that may be shown to Portuguese vessels within the dominions of his Britannic Majesty, and *vice versa*. The 2 high contracting parties do also agree, that goods coming respectively from the ports of either of them, shall pay the same duties, whether imported in British or Portuguese vessels; or otherwise, that an increase of duties may be imposed upon goods coming into the ports of the dominions of Portugal from those of his Britannic Majesty in British ships, equivalent, and in exact proportion, to any increase of duties that may hereafter be imposed upon goods coming into the ports of his Britannic Majesty from those of his Royal Highness the Prince Regent of Portugal, imported in Portuguese ships. And in order that this matter may be settled with due exactness, and that nothing may be left undetermined concerning it, it is agreed, that Tables shall be drawn up by each government, respectively, specifying the difference of duties to be paid on goods so imported; and the Tables (which shall be made applicable to all the ports within the respective dominions of each of the contracting parties) shall be adjudged to form part of this present treaty.

In order to avoid any differences or misunderstandings with respect to the regulations which may respectively constitute a British or Portuguese vessel, the high contracting parties agree in declaring, that all vessels built in the dominions of his Britannic Majesty, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the countries belonging to Portugal, or ships taken by any of the vessels of war belonging to the Portuguese government, or any of the inhabitants of the dominions of Portugal, having commissions or letters of marque and reprisal from the government of Portugal, and condemned as lawful prize in any court of admiralty of the Portuguese government, and owned by the subjects of his Royal Highness the Prince Regent of Portugal, and whereof the master and 3-4ths of the mariners, at least, are subjects of his Royal Highness the Prince Regent of Portugal, shall be considered as Portuguese vessels.

6. The mutual commerce and navigation of the subjects of Great Britain and Portugal, respectively, in the ports and seas of Asia, are expressly permitted, to the same degree as they have heretofore been allowed by the 2 Crowns; and the commerce and navigation thus permitted, shall be placed on the footing of the commerce and navigation of the most favoured nation trading in the ports and seas of Asia; that is, that neither of the high contracting parties shall grant any favour or privilege in matters of commerce and navigation to the subjects of any other state trading within the ports and seas of Asia, which shall not be also granted, *quam proximè*, on the same terms, to the subjects of the other contracting party. His Britannic Majesty engages not to make any regulation which may be prejudicial or inconvenient to the commerce and navigation of the subjects of his Royal Highness the Prince Regent of Portugal within the ports and seas of Asia, to the extent which is or may hereafter be permitted to the most favoured nation. And his Royal Highness the Prince Regent of Portugal does also engage not to make any regulations which may be prejudicial or inconvenient to the commerce and navigation of the subjects of his Britannic Majesty within the ports, seas, and dominions opened to them by virtue of the present treaty.

7. Packets shall be established for the purpose of furthering the public service of the 2 courts, and facilitating the commercial intercourse of their respective subjects. A convention shall be concluded forthwith on the basis of that which was signed at Rio de Janeiro, on the 14th day of September, 1808, in order to settle the terms upon which the packets are to be established, which convention shall be ratified at the same time with the present treaty.

8. All goods and articles whatsoever of the produce, manufacture, industry, or invention of the dominions and subjects of his Britannic Majesty, shall be admitted into all the ports and dominions of his Royal Highness the Prince Regent of Portugal, as well in Europe as in America, Africa, and Asia, whether consigned to British or Portuguese subjects, on paying, generally and solely, duties to the amount of 15 per cent. according to the value which shall be set upon them by a tariff or Table of valuations, called in the Portuguese language *pauta*, the principal basis of which shall be the sworn invoice cost of

the aforesaid goods, merchandises, and articles, taking also into consideration (as far as may be just or practicable) the current prices thereof in the country into which they are imported. This tariff or valuation shall be determined and settled by an equal number of British and Portuguese merchants of known integrity and honour, with the assistance, on the part of the British merchants, of his Britannic Majesty's consul general, or consul; and on the part of the Portuguese merchants, with the assistance of the superintendent, or administrator general of the customs, or of their respective deputies. And the aforesaid tariff shall be made and promulgated in each of the ports belonging to his Royal Highness the Prince Regent of Portugal, in which there are or may be Custom-houses. And it shall be revised and altered if necessary, from time to time, either in the whole, or in part, whenever the subjects of his Britannic Majesty, resident within the dominions of his Royal Highness the Prince Regent of Portugal, shall make a requisition to that effect through the medium of his Britannic Majesty's consul general, or consul, or whenever the trading and commercial subjects of Portugal shall make the same requisition on their own part.

If any British goods should hereafter arrive in the ports of the Portuguese dominions without having been specifically valued and rated in the new tariff or *pauta*, they shall be admitted on paying the same duties of 15 per cent. *ad valorem*, according to the invoices of the goods, which shall be duly presented and sworn to by the parties importing the same. And in case that any suspicion of fraud, or unfair practices, should arise, the invoices shall be examined, and the real value of the goods ascertained by a reference to an equal number of British and Portuguese merchants of known integrity and honour; and in case of a difference of opinion amongst them, followed by an equality of votes upon the subject, they shall then nominate another merchant, likewise of known integrity and honour, to whom the matter shall be ultimately referred, and whose decision thereon shall be final and without appeal. And in case the invoice should appear to have been fair and correct, the goods specified in it shall be admitted, on paying the duties above mentioned of 15 per cent.; and the expenses, if any, of the examination of the invoice, shall be defrayed by the party who called its fairness and correctness into question. But if the invoice should be found to be fraudulent and unfair, then the goods and merchandises shall be bought up by the officers of the customs on the account of the Portuguese government, according to the value specified in the invoice, with an addition of 10 per cent. to the sum so paid for them by the officers of the customs, the Portuguese government engaging for the payment of the goods so valued and purchased by the officers of the customs within the space of 15 days; and the expenses, if any, of the examination of the fraudulent invoice shall be paid by the party who presented it as just and fair.

17. Articles of military and naval stores brought into the ports of his Royal Highness the Prince Regent of Portugal, which the Portuguese government may be desirous of taking for its own use, shall be paid for without delay at the prices appointed by the proprietors, who shall not be compelled to sell such articles on any other terms.

If the Portuguese government shall take into its own care and custody any cargo, or part of a cargo, with a view to purchase, or otherwise, the Portuguese government shall be responsible for any damage or injury that the same may receive while in the care and custody of the officers of the Portuguese government.

18. His Royal Highness the Prince Regent of Portugal is pleased to grant to the subjects of Great Britain the privilege of being *assiguantes* for the duties to be paid in the Custom-houses of his Royal Highness's dominions, on the same terms, and on giving the same security, as are required from the subjects of Portugal.

On the other hand, the subjects of the Crown of Portugal shall receive, as far as it may be just or legal, the same favour in the Custom-houses of Great Britain as is shown to the natural subjects of his Britannic Majesty.

19. His Britannic Majesty does promise and engage, that all goods and articles whatsoever, of the produce, manufacture, industry, or invention of the dominions or subjects of the Prince Regent of Portugal, shall be admitted into the ports and dominions of his Britannic Majesty, on paying generally and only the same duties that are paid upon similar articles by the subjects of the most favoured nation.

If any reduction of duties should take place exclusively in favour of British goods imported into the dominions of Portugal, an equivalent reduction shall take place on Portuguese goods and merchandises imported into his Britannic Majesty's dominions, and *vice versa*; the articles upon which such equivalent reduction is to take place being settled by previous concert and agreement between the 2 high contracting parties.

It is understood, that any such reduction so granted by either party to the other, shall not be granted afterwards (except upon the same terms and for the same compensation) in favour of any other state or nation whatsoever. And this declaration is to be considered as reciprocal on the part of the 2 high contracting parties.

20. But as there are some articles of the growth and production of Brazil, which are excluded from the markets and home consumption of the British dominions, such as sugar, coffee, and other articles (similar to the produce of the British colonies; his Britannic Majesty, willing to favour and protect (as much as possible) the commerce of the subjects of his Royal Highness the Prince Regent of Portugal, consents and permits that the said articles, as well as all others the growth and produce of Brazil, and all other parts of the Portuguese dominions, may be received and warehoused in all the ports of his dominions, which shall be by law appointed to be warehousing ports for those articles, for the purpose of re-exportation, under due regulation, exempted from the greater duties with which they would be charged were they destined for consumption within the British dominions, and liable only to the reduced duties and expenses on warehousing and re-exportation.

21. In like manner, notwithstanding the general privilege of admission thus granted in the 15th article of the present treaty by the Prince Regent of Portugal, in favour of all goods the produce and manufacture of the British dominions, his Royal Highness reserves to himself the right of imposing heavy, and even prohibitory duties on all articles known by the name of *British East Indian Goods* and *West Indian Produce*, such as sugar and coffee, which cannot be admitted for consumption in the Portuguese dominions, by reason of the same principle of colonial policy which prevents the free admission into the British dominions of corresponding articles of Brazilian produce.

But his Royal Highness the Prince Regent of Portugal consents that all the ports of his dominions, where there are or may be Custom-houses, shall be free ports for the reception and admission of all articles whatsoever, the produce and manufacture of the British dominions, not destined for the consumption of the place at which they may be received or admitted, but for re-exportation, either for other ports of the dominions of Portugal, or for those of other states. And the articles thus received and admitted (subject to due regulations) shall be exempted from the duties with which they would be charged, if destined for the consumption of the place at which they may be landed or warehoused, and liable only to the same expenses that may be paid by articles of Brazilian produce received and warehoused for re-exportation in the ports of his Britannic Majesty's dominions.

22. His Royal Highness the Prince Regent of Portugal is pleased to declare the port of St. Catherine to be a *Free Port*, according to the terms mentioned in the preceding article of the present treaty.

23. His Royal Highness the Prince Regent of Portugal is pleased to render Goa a *Free Port*, and to permit the free toleration of all religious sects whatever in that city and its dependencies.

24. All trade with the Portuguese possessions situated upon the eastern coast of the continent of Africa (in articles not included in the exclusive contracts possessed by the Crown of Portugal) which may have been formerly allowed to the subjects of Great Britain, is confirmed and secured to them now, and for ever, in the same manner as the trade which has hitherto been permitted to Portuguese subjects in

the ports and seas of Asia is confirmed and secured to them by virtue of the 6th article of the present treaty.

25. His Britannic Majesty consents to waive the right of creating factories or incorporated bodies of British merchants, within the dominions of Portugal: provided, however, that this shall not deprive the subjects of his Britannic Majesty, residing within the dominions of Portugal, of the full enjoyment, as individuals engaged in commerce, of any of those rights and privileges which they did or might possess as members of incorporated commercial bodies; and also that the commerce and trade carried on by British subjects shall not be restricted, or otherwise affected, by any commercial company whatever, possessing exclusive privileges and favours within the dominions of Portugal. And his Royal Highness the Prince Regent of Portugal does also engage, that he will not permit that any other nation or state shall possess factories or incorporated bodies of merchants within his dominions, so long as British factories shall not be established therein.

26. The two high contracting parties agree, that they will forthwith proceed to the revision of all other former treaties subsisting between the 2 Crowns, for the purpose of ascertaining what stipulations contained in them are, in the present state of affairs, proper to be continued or renewed.

It is agreed that the stipulations contained in former treaties concerning the admission of the wines of Portugal on the one hand, and the woollen cloths of Great Britain on the other, shall at present remain unaltered. In the same manner it is agreed, that the privileges and immunities granted by either contracting party to the subjects of the other, whether by treaty, decree, or *alvara*, shall remain unaltered, except the power granted by former treaties, of carrying in the ships of either country goods of any description whatever, the property of the enemies of the other country, which power is now mutually and publicly renounced and abrogated.

27. The reciprocal liberty of commerce and navigation, declared by the present treaty, shall be considered to extend to all goods whatsoever, except those articles the property of the enemies of either power, or contraband of war.

28. Under the name of contraband or prohibited articles shall be comprehended not only arms, cannon, arquebuses, mortars, petards, bombs, grenades, saucisses, carcasses, carriages for cannon, musket-rests, bandoliers, gunpowder, match, saltpetre, ball, pikes, swords, head pieces, helmets, cuirasses, halberds, javelins, holsters, belts, horses, and their harness, but generally all other articles that may have been specified as contraband in any former treaties concluded by Great Britain or by Portugal with other powers. But goods which have not been brought into the form of warlike instruments, or which cannot become such, shall not be reputed contraband, much less such as have been already wrought and made up for other purposes, all which shall be deemed not contraband, and may be freely carried by the subjects of both sovereigns, even to places belonging to an enemy, excepting only such places as are besieged, blockaded, or invested by sea or land.

29. In case any vessels of war, or merchantmen, should be shipwrecked on the coasts of either of the high contracting parties, all such parts of the vessels, or of the furniture or appurtenances thereof, as also of goods as shall be saved, or the produce thereof, shall be faithfully restored upon the same being claimed by the proprietors or their factors duly authorised, paying only the expenses incurred in the preservation thereof, according to the rate of salvage settled on both sides (saving at the same time the rights and customs of each nation, the abolition or modification of which shall, however, be treated upon in the cases where they shall be contrary to the stipulations of the present article); and the high contracting parties will mutually interpose their authority, that such of their subjects as shall take advantage of any such misfortune may be severely punished.

30. It is further agreed, that both his Britannic Majesty and his Royal Highness the Prince Regent of Portugal shall not only refuse to receive any pirates or sea-rovers whatsoever into any of their havens, ports, cities, or towns, or permit any of their subjects, citizens, or inhabitants, on either part, to receive or protect them in their ports, to harbour them in their houses, or to assist them in any manner whatsoever; but further, that they shall cause all such pirates and sea-rovers, and all persons who shall receive, conceal, or assist them, to be brought to condign punishment for a terror and example to others. And all their ships, with the goods or merchandises taken by them, and brought into the ports belonging to either of the high contracting parties, shall be seized, as far as they can be discovered, and shall be restored to the owners, or the factors duly authorised or deputed by them in writing, proper evidence being first given to prove the property, even in case such effects should have passed into other hands by sale, if it be ascertained that the buyers knew or might have known that they had been piratically taken.

31. If at any time there should arise any disagreement, breach of friendship, or rupture between the Crowns of the high contracting parties, which God forbid (which rupture shall not be deemed to exist until the recalling or sending home of their respective ambassadors and ministers), the subjects of each of the 2 parties residing in the dominions of the other, shall have the privilege of remaining and continuing their trade therein, without any manner of interruption, so long as they behave peaceably, and commit no offence against the laws and ordinances; and in case their conduct should render them suspected, and the respective governments should be obliged to order them to remove, the term of 12 months shall be allowed them for that purpose, in order that they might retire with their effects and property, whether intrusted to individuals or to the state.

At the same time it is to be understood that this favour is not to be extended to those who shall act in any manner contrary to the established laws.

32. The present treaty shall be unlimited in point of duration, that the obligations and conditions expressed or implied in it shall be perpetual and immutable; and they shall not be changed or affected in any manner in case his Royal Highness the Prince Regent of Portugal should again establish the seat of the Portuguese monarchy within the European dominions of that Crown.

33. But the 2 high contracting parties do reserve to themselves the right of jointly examining and revising the several articles of this treaty at the end of 15 years, counted in the first instance from the date of the exchange of the ratifications thereof*, and of then proposing, discussing, and making such amendments or additions, as the real interests of their respective subjects may seem to require. It being understood that any stipulation which at the period of revision of the treaty shall be objected to by either of the high contracting parties, shall be considered as suspended in its operation until the discussion concerning that stipulation shall be terminated, due notice being previously given to the other contracting party of the intended suspension of such stipulation, for the purpose of avoiding mutual inconvenience.

34. The several stipulations and conditions of the present treaty shall begin to have effect from the date of his Britannic Majesty's ratification thereof; and the mutual exchange of ratifications shall take place in the city of London, within the space of 4 months, or sooner if possible, to be computed from the day of the signature of the present treaty.

Done in the city of Rio de Janeiro, on the 19th day of February, in the year of our Lord 1810.

STRANGFORD.

CONDE DE LINIARES.

Agreement between the British and Portuguese Commissioners, on Four Points connected with the Execution of the Treaty of 1810. Signed at London, 18th of December, 1812.

1. The official certificate of registry, signed by the proper officer of the British customs, shall be deemed sufficient to identify a British built ship; and on the production of such certificate she shall be admitted as such in any of the ports within the dominions of Portugal.

* These ratifications were exchanged in London, on the 19th of June, 1810.

2. Upon the importation of any goods from the United Kingdom, into any of the ports in the dominions of Portugal, all such goods shall be accompanied by the original cockets, signed and sealed by the proper officers of the British customs at the port of shipping, and the cockets belonging to each ship shall be numbered progressively, the total number stated on the first and last cocket, by the proper officers of customs, at the final clearance of each vessel at the British port: and it is further agreed, that prior to the final clearance by the searchers at the shipping port, the cockets for each ship must be collected and fastened together, to which shall be annexed a paper, with the number of the cockets, sealed with the official seal, and signed by the searchers; the cockets, so collected, shall be produced, together with the manifest sworn to by the captain, to the Portuguese consul, who shall certify the same on the manifest; the cockets, thus secured together, and the manifest, so authenticated, to be returned to the searcher, in order to the final clearance of the ship.

3. It is agreed to place the Portuguese merchant on the same footing with the British, both with regard to the duties of scavage and package payable to the corporation of London, and the duties payable on shipping to the corporation of the Trinity House in London. To effect this, and at the same time to preserve the chartered rights of the corporation of London, and of the Trinity House, it will be necessary that those duties should, in the first instance, be paid as at present; and in all cases where it shall appear that the Portuguese merchant shall have paid more than the British, the difference to be returned without expense, in such manner as the British government shall direct.

4. The importer shall, on making the entry at the Portuguese Custom-house, sign a declaration of the value of his goods, to such amount as he shall deem proper; and in case the Portuguese examining officers should be of opinion that such valuation is insufficient, they shall be at liberty to take the goods, on paying the importer the amount, according to his declaration, with the addition of 10 per cent., and also returning the duty paid.

The amount to be paid on the goods being delivered to the Portuguese officer, which must be within 15 days from the first detention of the goods.

London, 18th of December, 1812.

R. FREWIN.
WM. BURN.

A. T. SM. PAYO.
A. I. DA COSTA.

PRUSSIA.

Convention of Commerce between His Britannic Majesty and the King of Prussia, signed at London, April 2. 1824.

Article 1. From and after the 1st day of May next, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Prussian Majesty's dominions, shall not be subject to any other or higher duties or charges whatever, than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Prussia, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland, into the ports of Prussia, in British ships, shall be subject only to the same duties as are payable upon the like articles it imported in Prussian ships; and the same reciprocity shall be observed in the ports of the United Kingdom, in respect to all articles not the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported into the ports of the United Kingdom in Prussian ships.

4. All goods, which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting on its behalf, or under its authority, in the purchase of any article, the growth, produce, or manufacture of either country, imported into the other, on account of, or in reference to, the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years: and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

7. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the second day of April, in the year of our Lord one thousand eight hundred and twenty-four.

GEORGE CANNING. W. HUSKISSON. WERTHER.

An order in council, dated May 25. 1824, directs that from May 1. 1824, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports; that all articles of the growth, produce, or manufacture of any of the dominions of his Prussian Majesty, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be imported into and exported from the said ports in Prussian vessels; that all articles not of the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported from Prussia into the ports of the United Kingdom in Prussian vessels, shall be subject only to the same duties as are payable upon the like articles if imported in British ships; that all goods which can legally be imported into the ports of the United Kingdom, shall be admitted at the same rate of duty, when imported in Prussian vessels, that is charged on similar articles imported in British vessels; and that all goods which can be legally exported from the ports of the United Kingdom, shall be entitled to the same bounties, drawbacks, and allowances, when exported in Prussian vessels, that are granted, paid, or allowed on similar articles when exported in British vessels.

A Treasury letter, dated October 13. 1824, directs, that with respect to pilotage and all other duties charged on vessels belonging to Prussia, Sweden, and Norway, Denmark, Hanover, and Hanburgh, which have entered, or which may enter, the ports of the United Kingdom, either from stress of weather or from any other causes, it was the intention of the Lords of the Committee of Privy Council for Trade, that such dues should not be higher than are charged upon British vessels, and that it is only to the case of goods imported into this kingdom, and not brought direct from the country to which the vessel belongs, that the equality of duty does not apply.

An order in council, dated May 3, 1823, states, that his Majesty is pleased to declare, that the ships of and belonging to the dominions of his Majesty the King of Prussia are entitled to the privileges granted by the law of navigation, and may import from the dominions of his Majesty the King of Prussia, into any of the British possessions abroad, goods the produce of such dominions, and may export goods from such British possessions abroad, to be carried to any foreign country whatever.

RUSSIA.

Convention between His Britannic Majesty and the Emperor of Russia, signed at Petersburg in February, 1825.

Article 1. It is agreed that the respective subjects of the high contracting parties shall not be troubled or molested, in any part of the ocean commonly called the Pacific Ocean, either in navigating the same, in fishing therein, or in landing at such parts of the coast as shall not have been already occupied, in order to trade with the natives, under the restrictions and conditions specified in the following articles.

2. In order to prevent the right of navigating and fishing, exercised upon the ocean by the subjects of the high contracting parties, from becoming the pretext for an illicit commerce, it is agreed that the subjects of his Britannic Majesty shall not land at any place where there may be a Russian establishment, without the permission of the governor or commandant; and, on the other hand, that Russian subjects shall not land, without permission, at any British establishment on the north-west coast.

3. The line of demarcation between the possessions of the high contracting parties, upon the coast of the continent, and the islands of America to the north-west, shall be drawn in the manner following:—

Commencing from the southernmost point of the island called Prince of Wales Island, which point lies in the parallel of 54 degrees 40 minutes north latitude, and between the 131st and 133d degree of west longitude (meridian of Greenwich), the said line shall ascend to the north along the channel, as far as the point of the continent where it strikes the 56th degree of north latitude; from this last mentioned point, the line of demarcation shall follow the summit of the mountains situated parallel to the coast, as far as the point of intersection of the 141st degree of west longitude (of the same meridian); and, finally, from the said point of intersection, the said meridian line of the 141st degree, in its prolongation as far as the Frozen Ocean, shall form the limit between the Russian and British possessions on the continent of America to the north-west.

4. With reference to the line of demarcation laid down in the preceding article, it is understood;

1st. That the island called Prince of Wales Island shall belong wholly to Russia.

2d. That wherever the summit of the mountains which extend in a direction parallel to the coast, from the 56th degree of north latitude to the point of intersection of the 141st degree of west longitude, shall prove to be at the distance of more than 10 marine leagues from the ocean, the limit between the British possessions and the line of coast which is to belong to Russia, as above mentioned, shall be formed by a line parallel to the windings of the coast, and which shall never exceed the distance of 10 marine leagues therefrom.

5. It is moreover agreed, that no establishment shall be formed by either of the 2 parties, within the limits assigned by the 2 preceding articles to the possessions of the other: consequently, British subjects shall not form any establishment either upon the coast, or upon the border of the continent comprised within the limits of the Russian possessions, as designated in the 2 preceding articles; and, in like manner, no establishment shall be formed by Russian subjects beyond the said limits.

6. It is understood, that the subjects of his Britannic Majesty, from whatever quarter they may arrive, whether from the ocean, or from the interior of the continent, shall for ever enjoy the right of navigating freely, and without any hindrance whatever, all the rivers and streams which, in their course towards the Pacific Ocean, may cross the line of demarcation upon the line of coast described in article 3. of the present convention.

7. It is also understood that, for the space of 10 years from the signature of the present convention, the vessels of the 2 powers, or those belonging to their respective subjects, shall mutually be at liberty to frequent, without any hindrance whatever, all the inland seas, the gulfs, havens, and creeks, on the coast mentioned in article 3., for the purposes of fishing and of trading with the natives.

8. The port of Sitka, or Novo Archangelsk, shall be open to the commerce and vessels of British subjects for the space of 10 years from the date of the exchange of the ratifications of the present convention. In the event of an extension of this term of 10 years being granted to any other power, the like extension shall be granted also to Great Britain.

9. The above-mentioned liberty of commerce shall not apply to the trade in spirituous liquors, in fire-arms or other arms, gunpowder, or other warlike stores; the high contracting parties reciprocally engaging not to permit the above-mentioned articles to be sold or delivered, in any manner whatever, to the natives of the country.

10. Every British or Russian vessel navigating the Pacific Ocean, which may be compelled, by storms or by accident, to take shelter in the ports of the parties, shall be at liberty to refit therein, to provide itself with all necessary stores, and to put to sea again, without paying any other than port and light-house dues, which shall be the same as those paid by national vessels. In case, however, the master of such vessel should be under the necessity of disposing of a part of his merchandise in order to defray his expenses, he shall conform himself to the regulations and tariffs of the place where he may have landed.

11. In case of complaint of an infraction of the articles of the present convention, the civil and military authorities of the high contracting parties, without previously acting or taking any forcible measure, shall make an exact and circumstantial report of the matter to their respective courts, who engage to settle the same, in a friendly manner, and according to the principles of justice.

12. The present convention shall be ratified, and the ratifications shall be exchanged at London, within the space of 6 weeks, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at St. Petersburg, the 28th [16th] of February, 1825.

STRATFORD CANNING.
THE COUNT DE NESSELRODE.
PIERRE DE POLETICA.

THE TWO SICILIES.

Treaty of Commerce and Navigation between His Britannic Majesty and the King of the Two Sicilies, signed at London, September 26. 1816.

Article 1. His Britannic Majesty consents, that all the privileges and exemptions which his subjects, their commerce and shipping, have enjoyed, and do enjoy, in the dominions, ports, and domains of his Sicilian Majesty, in virtue of the treaty of peace and commerce concluded at Madrid on the 10th of May (23d of May), 1667, between Great Britain and Spain; or of the treaties of commerce between the same powers, signed at Utrecht, the 9th of December, 1713, and at Madrid, the 13th of December, 1715; and of the convention concluded at Utrecht, the 8th of March, 1719-1713, between Great Britain and the kingdom of Sicily, shall be *abolished*; and it is agreed upon in consequence, between their said Britannic and Sicilian Majesties, their heirs and successors, that the said privileges and exemptions, whether of persons, or of flags and shipping, are and shall continue for ever abolished.

2. His Sicilian Majesty engages not to continue, nor hereafter to grant, to the subjects of any other power whatever, the privileges and exemptions abolished by the present convention.

3. His Sicilian Majesty promises that the subjects of his Britannic Majesty shall not be subjected, within his dominions, to a more rigorous system of examination and search by the officers of customs, than that to which the subjects of his said Sicilian Majesty are liable.

4. His Majesty the King of the Two Sicilies promises that British commerce in general, and the British subjects who carry it on, shall be treated throughout his dominions upon the same footing as the most favoured nations, not only with respect to the persons and property of the said British subjects, but also with regard to every species of article in which they may traffic, and the taxes or other charges payable on the said articles, or on the shipping in which the importation shall be made.

5. With respect to the personal privileges to be enjoyed by the subjects of his Britannic Majesty in the kingdom of the Two Sicilies, his Sicilian Majesty promises that they shall have a free and undoubted right to travel, and to reside in the territories and dominions of his said Majesty, subject to the same precautions of police which are practised towards the most favoured nations. They shall be entitled to occupy dwellings and warehouses, and to dispose of their personal property of every kind and description, by sale, gift, exchange, or will, and in any other way whatever, without the smallest loss or hindrance being given them on that head. They shall not be obliged to pay, under any pretence whatever, other taxes or rates than those which are paid, or that hereafter may be paid, by the most favoured nations in the dominions of his said Sicilian Majesty. They shall be exempt from all military service, whether by land or sea; their dwellings, warehouses, and every thing belonging or appertaining thereto for objects of commerce or residence, shall be respected. They shall not be subjected to any vexatious search or visits. No arbitrary examination or inspection of their books, papers, or accounts, shall be made under the pretence of the supreme authority of the state, but these shall alone be executed by the legal sentence of the competent tribunals. His Sicilian Majesty engages on all these occasions to guarantee to the subjects of his Britannic Majesty who shall reside in his states and dominions, the preservation of their property and personal security, in the same manner as those are guaranteed to his subjects, and to all foreigners belonging to the most favoured and most highly privileged nations.

6. According to the tenor of the articles 1. and 2. of this treaty, his Sicilian Majesty engages not to declare null and void the privileges and exemptions which actually exist in favour of British commerce within his dominions, till the same day, and except by the same act, by which the privileges and exemptions, whatsoever they are, of all other nations, shall be declared null and void within the same.

7. His Sicilian Majesty promises, from the date when the general abolition of the privileges according to the articles 1, 2. and 6. shall take place, to make a reduction of 10 per cent. upon the amount of the duties payable according to the tariff in force the 1st of January, 1816, upon the total of the merchandise or production of the United Kingdom of Great Britain and Ireland, her colonies, possessions, and dependencies, imported into the states of his said Sicilian Majesty, according to the tenor of article 4. of the present convention; it being understood that nothing in this article shall be construed to prevent the King of the Two Sicilies from granting, if he shall think proper, the same reduction of duty to other foreign nations.

8. The subjects of the Ionian Islands shall, in consequence of their being actually under the immediate protection of his Britannic Majesty, enjoy all the advantages which are granted to the commerce and to the subjects of Great Britain by the present treaty; it being well understood that, to prevent all abuses, and to prove its identity, every Ionian vessel shall be furnished with a patent, signed by the Lord High Commissioner or his representative.

9. The present convention shall be ratified, and the ratifications thereof exchanged in London, within the space of 6 months, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed it, and thereunto affixed the seal of their arms.

Done at London, the 26th of September, 1816.

CASTLEREAGH.

CASTELICALA.

Separate and Additional Article.

In order to avoid all doubt respecting the reduction upon the duties in favour of British commerce, which his Sicilian Majesty has promised in the 7th article of the convention signed this day between his Britannic Majesty and his Sicilian Majesty, it is declared, by this present separate and additional article, that by the concession of 10 per cent. of diminution, it is understood that in case the amount of the duty should be 20 per cent. upon the value of the merchandise, the effect of the reduction of 10 per cent. is to reduce the duty from 20 to 18; and so for other cases in proportion. And that for the articles which are not taxed *ad valorem* in the tariff, the reduction of the duty shall be proportionate; that is to say, a deduction of a tenth part upon the amount of the sum payable shall be granted.

The present separate and additional article shall have the same force and validity as if it had been inserted word for word in the convention of this day — it shall be ratified, and the ratification thereof shall be exchanged at the same time.

In witness whereof the respective plenipotentiaries have signed it, and have thereunto affixed the seal of their arms.

Done at London, the 26th of September, 1816.

TURKEY.

Capitulations and Articles of Peace between Great Britain and the Ottoman Empire, as agreed upon, augmented, and altered, at different Periods, and, finally, confirmed by the Treaty of Peace concluded at the Dardanelles, in 1809.

SULTAN MEHEMED,

MAY HE LIVE FOR EVER.

“ Let every thing be observed in conformity to these capitulations, and contrary thereto let nothing be done.”

1. The English nation and merchants, and all other merchants sailing under the English flag, with their vessels and merchandise of all descriptions, may pass safely by sea, and go and come into our dominions, without any the least prejudice or molestation being given to their persons, property, or effects, by any person whatsoever, but they shall be left in the undisturbed enjoyment of their privileges, and be at liberty to attend to their affairs.

2. If any of the English coming into our dominions by land be molested or detained, such persons shall be instantly released, without any further obstruction being given to them.

3. English vessels entering the ports and harbours of our dominions shall and may at all times safely and securely abide and remain therein, and at their free will and pleasure depart therefrom, without any opposition or hindrance from any one.

4. If it shall happen that any of their ships suffer by stress of weather, and not be provided with necessary stores and requisites, they shall be assisted by all who happen to be present, whether the crews of our Imperial ships, or others, both by sea and land.

5. Being come into the ports and harbours of our dominions, they shall and may be at liberty to pur-

chase at their pleasure, with their own money, provisions and all other necessary articles, and to provide themselves with water, without interruption or hindrance from any one.

6. If any of their ships be wrecked upon any of the coasts of our dominions, all beys, cadis, governors, commanders, and others our servants, who may be near or present, shall give them all help, protection, and assistance, and restore to them whatsoever goods and effects may be driven ashore; and in the event of any plunder being committed, they shall make diligent search and inquiry to find out the property, which, when recovered, shall be wholly restored by them.

7. The merchants, interpreters, bankers, and others, of the said nation, shall and may, both by sea and land, come into our dominions, and there trade with the most perfect security; and in coming and going, neither they nor their attendants shall receive any the least obstruction, molestation, or injury, either in their persons or property, from the beys, cadis, sea captains, soldiers, and others our slaves.

17. Our ships and galleys, and all other vessels, which may fall in with any English ships in the seas of our dominions, shall not give them any molestation, nor detain them by demanding any thing, but shall show good and mutual friendship the one to the other, without occasioning them any prejudice.

19. If the corsairs or galliots of the Levant be found to have taken any English vessels, or robbed or plundered them of their goods and effects, also if any one shall have forcibly taken any thing from the English, all possible diligence and exertion shall be used and employed for the discovery of the property, and inflicting condign punishment on those who may have committed such depredations; and their ships, goods, and effects, shall be restored to them without delay or intrigue.

21. Duties shall not be demanded or taken of the English, or the merchants sailing under the flag of that nation, on any piastres and sequins they may import into our sacred dominions, or on those they may transport to any other place.

36. English merchants, and all others sailing under their flag, may, freely and unrestrictedly, trade and purchase all sorts of merchandise (prohibited commodities alone excepted), and convey them, either by land or sea, or by way of the river Tanais, to the countries of Muscovy or Russia, and bring back thence other merchandise into our sacred dominions, for the purposes of traffic, and also transport others to Persia and other conquered countries.

38. Should the ships bound for Constantinople be forced by contrary winds to put into Caffa, or any other place of those parts, and not be disposed to buy or sell any thing, no one shall presume forcibly to take out or seize any part of their merchandise, or give to the ships or crews any molestation, or obstruct the vessels that are bound to those ports.

40. On their ships arriving at any port, and landing their goods, they may, after having paid their duties, safely and securely depart, without experiencing any molestation.

41. English ships bound to Constantinople, Alexandria, Tripoli of Syria, Scanderoon, or other ports of our sacred dominions, shall in future be bound to pay duties, according to custom, on such goods only as they shall, of their own free will, land with a view to sale; and for such merchandise as they shall not discharge, no duty shall be demanded, neither shall the least obstruction or hindrance be given to them.

44. English and other merchants navigating under their flag, who trade to Aleppo, shall pay such duties on the silks, brought and laden by them on board their ships, as are paid by the French and Venetians, and not one asper more.

55. The Imperial fleet, galleys, and other vessels, departing from our sacred dominions, and falling in with English ships at sea, shall in no wise molest or detain them, nor take from them any thing whatsoever. English ships shall no longer be liable to any further search, or exaction at sea under colour of search or examination.

70. English ships coming to the ports of Constantinople, Alexandria, Smyrna, Cyprus, and other ports of our sacred dominions, shall pay 300 aspers for anchorage duty, without an asper more being demanded of them.

72. No molestation shall be given to any of the aforesaid nation buying camlets, mohairs, or program yarn, at Angora and Beghbazar, and desirous of exporting the same from thence, after having paid the duty of 3 per cent., by any demand of customs for the exportation thereof, neither shall one asper more be demanded of them.

75. That it being represented to us that English merchants have been accustomed hitherto to pay no custom or scale duty, either on the silks bought by them at Brussa and Constantinople, or on those which come from Persia and Georgia, and are purchased by them at Smyrna from the Armenians; if such usage or custom really exists, and the same be not prejudicial to the empire, such duty shall not be paid in future.

(N. B.— These capitulations may be found entire in *Hertslet's Treaties*; and in *Chitty's Commercial Law*, vol. ii. pp. 290—311. Appen.)

Treaty between Great Britain and the Sublime Porte, concluded at the Dardanelles, the 5th of January, 1809.

1. From the moment of signing the present treaty, every act of hostility between England and Turkey shall cease.

5. In return for the indulgence and good treatment afforded by the Sublime Porte to English merchants, with respect to their goods and property, as well as in all matters tending to facilitate their commerce, England shall reciprocally extend every indulgence and friendly treatment to the flags, subjects, and merchants of the Sublime Porte, which may hereafter frequent the dominions of his Britannic Majesty for the purposes of commerce.

6. The last Custom-house tariff established at Constantinople, at the ancient rate of 3 per cent., and particularly the article relating to the interior commerce, shall continue to be observed, as they are at present regulated, and to which England promises to conform.

10. English patents of protection shall not be granted to dependants, or merchants who are subjects of the Sublime Porte, nor shall any passport be delivered to such persons, on the part of ambassadors or consuls, without permission previously obtained from the Sublime Porte.

Done near the Castles of the Dardanelles, the 5th of January, 1809, which corresponds with the year of the Hegira 1223, the 19th day of the Moon Zilkade.

SEYD MEHEMMED EMIN VAHID EFFENDI
ROBERT ADAIR.

UNITED STATES.

Convention of Commerce between Great Britain and the United States of America, signed at London, the 3d of July, 1815.

Article 1. There shall be between all the territories of his Britannic Majesty in Europe, and the territories of the United States, a reciprocal liberty of commerce. The inhabitants of the 2 countries respectively shall have liberty freely and securely to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; and also to hire and occupy houses and warehouses for the purpose of their commerce; and generally the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce; but subject always to the laws and statutes of the 2 countries respectively.

2. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty in Europe, of any articles, the growth, produce, or manufacture of the United States, and no

higher or other duties shall be imposed on the importation into the United States, of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any higher or other duties or charges be imposed in either of the two countries on the exportation of any articles to his Britannic Majesty's territories in Europe, or to the United States, respectively, than such as are payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation or importation of any articles, the growth, produce, or manufacture of the United States, or of his Britannic Majesty's territories in Europe, to or from the said territories of his Britannic Majesty in Europe, or to or from the said United States, which shall not equally extend to all other nations.

No higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels, than those payable in the same ports by vessels of the United States; nor in the ports of any of his Britannic Majesty's territories in Europe on the vessels of the United States, than shall be payable in the same ports on British vessels.

The same duties shall be paid on the importation into the United States of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, whether such importation shall be in the vessels of the United States, or in British vessels; and the same duties shall be paid on the importation into the ports of any of his Britannic Majesty's territories in Europe, of any articles, the growth, produce, or manufacture of the United States, whether such importation shall be in British vessels, or in vessels of the United States.

The same duties shall be paid, and the same bounties allowed, on the exportation of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, to the United States, whether such exportation shall be in vessels of the United States, or in British vessels; and the same duties shall be paid, and the same bounties allowed, on the exportation of any articles, the growth, produce, or manufacture of the United States, to his Britannic Majesty's territories in Europe, whether such exportation shall be in British vessels, or in vessels of the United States.

It is further agreed, that in all cases where drawbacks are or may be allowed upon the re-exportation of any goods, the growth, produce, or manufacture of either country respectively, the amount of the said drawbacks shall be the same, whether the said goods shall have been originally imported in a British or American vessel; but when such re-exportation shall take place from the United States in a British vessel, or from the territories of his Britannic Majesty in Europe in an American vessel, to any other foreign nation, the 2 contracting parties reserve to themselves, respectively, the right of regulating or diminishing, in such case, the amount of the said drawback.

The intercourse between the United States and his Britannic Majesty's possessions in the West Indies, and on the continent of North America, shall not be affected by any of the provisions of this article, but each party shall remain in the complete possession of its rights, with respect to such an intercourse.

3. His Britannic Majesty agrees that the vessels of the United States of America shall be admitted and hospitably received at the principal settlements of the British dominions in the East Indies, viz. *Calcutta, Madras, Bombay, and Prince of Wales' Island*, and that the citizens of the said United States may freely carry on trade between the said principal settlements and the said United States, in all articles of which the importation and exportation respectively, to and from the said territories, shall not be entirely prohibited; provided only, that it shall not be lawful for them, in any time of war between the British government and any state or power whatever, to export from the said territories, without the special permission of the British government, any military stores, or naval stores, or rice. The citizens of the United States shall pay for their vessels, when admitted, no higher or other duty or charge than shall be payable on the vessels of the most favoured European nations, and they shall pay no higher or other duties or charges on the importation or exportation of the cargoes of the said vessels, than shall be payable on the same articles when imported or exported in the vessels of the most favoured European nations.

But it is expressly agreed, that the vessels of the United States shall not carry any articles from the said principal settlements to any port or place, except to some port or place in the United States of America, where the same shall be unladen.

It is also understood, that the permission granted by this article is not to extend to allow the vessels of the United States to carry on any part of the coasting trade of the said British territories; but the vessels of the United States having, in the first instance, proceeded to one of the said principal settlements of the British dominions in the East Indies, and then going with their original cargoes, or any part thereof, from one of the said principal settlements to another, shall not be considered as carrying on the coasting trade. The vessels of the United States may also touch for refreshments, but not for commerce, in the course of their voyage to or from the British territories in India, or to or from the dominions of the Emperor of China, at the Cape of Good Hope, the island of St. Helena, or such other places as may be in the possession of Great Britain, in the African or Indian seas; it being well understood, that, in all that regards this article, the citizens of the United States shall be subject in all respects to the laws and regulations of the British government from time to time established.

4. It shall be free for each of the 2 contracting parties respectively to appoint consuls, for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall in the usual form be approved and admitted by the government to which he is sent; and it is hereby declared, that in case of illegal and improper conduct towards the laws or government of the country to which he is sent, such consul may either be punished according to law, if the laws will reach the case, or be sent back, the offended government assigning to the other the reasons for the same.

It is hereby declared, that either of the contracting parties may except from the residence of consuls such particular places as such party shall judge fit to be so excepted.

5. This convention, when the same shall have been duly ratified by his Britannic Majesty and by the President of the United States, by and with the advice and consent of their Senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said United States for 4 years from the date of its signature; and the ratifications shall be exchanged in 6 months from this time, or sooner if possible.

Done at London, the 3d of July, 1815.

FRED. J. ROBINSON.
HENRY GOULBURN.
WILLIAM ADAMS.

JOHN Q. ADAMS.
H. CLAY.
ALBERT GALATIN.

This convention was subsequently prolonged by conventions for that purpose in 1818 and 1827.

TREBISOND, anciently Trapezus, from its resemblance to a trapezium, a town of Asia Minor, on the south-east coast of the Black Sea, lat. $40^{\circ} 1' N.$, lon. $39^{\circ} 44' 52'' E.$ Population variously estimated at from 15,000 to 30,000. The town is built on the declivity of a hill rising gently from the sea. It is a place of great antiquity; and, from the year 1203 to the final subversion of the Eastern empire by Mohammed II., in the 15th century, was the seat of a dukedom, or, as it was sometimes called, an empire, comprising the country between the Phasis and the Halys. Its fortifications are still of considerable strength, at least for a Turkish city. The space included within the walls

is of great extent; but it is principally filled with gardens and groves. The houses are mean in their outward appearance, and comfortless within. — (*Tournefort, Voyage du Levant*, tome ii. pp. 231—239; *Kinncir's Journey through Asia Minor*, &c. p. 338.)

Harbour. — Trebisond has two ports, one on the W. and one on the E. side of a small peninsula, or point of land, projecting a short way into the sea. That on the east is the best sheltered, and is the place of anchorage for the largest ships. It is, however, exposed to all but the southerly gales; but it does not appear, that, with ordinary precaution, any danger need be apprehended. The ground, from $\frac{1}{4}$ to $\frac{1}{2}$ a mile E. from the point, is clean, and holds extremely well. Ships moor with open hawse to the N., and a good hawser and stream anchor on shore, as a stern-fast. At night, the wind always comes off the land. Captain Middleton says that the only bad weather is from the N. W.; but that, though the swell be considerable, it does not cause any heavy strain upon the cables. — (*Nautical Magazine*, vol. ii. p. 181.) — At Platana, near Trebisond, and quite as exposed, Turkish vessels have from time immemorial rode in safety the whole winter; a satisfactory proof that the dangers supposed to be incident to the roads along the coast are wholly visionary. — (*Ibid.* p. 214.)

Navigation of the Black Sea. — We are happy to have this opportunity to state that Captain Middleton, who has been repeatedly in the Black Sea, agrees entirely with Tournefort — (see *anté*, p. 860.) — as to the groundlessness of the notions that have got abroad of its navigation being peculiarly dangerous. He shows that the "thick weather," supposed to prevail in this sea, is "quite imaginary." — "There are fogs in it occasionally, but these *never last long*; and, like fogs every where else, are unaccompanied by much wind. Gales sometimes occur, but they rarely amount to storms, and their duration is short. Except on its northern coast, it has deep water all over. It may, in fact, be considered a sea almost without a hidden danger." The only difficulty attaching to its navigation consists, as formerly observed (*anté*, p. 860.), in making the Bosphorus. But this, also, has been much exaggerated; and ships able to keep out to sea, and properly navigated, quit it without encountering any considerable risk. — (For further particulars as to this interesting subject, the reader is referred to Captain Middleton's paper in the 2d volume of the *Nautical Magazine*, — a useful and excellent publication, well entitled to the public patronage.)

Trade. — In antiquity, and in more modern times, previously to the conquest of Constantinople by the Turks, and the exclusion of all foreign vessels from the Black Sea, Trebisond was the seat of an extensive trade. Any one, indeed, who casts his eye over a map of Asia, must be satisfied that this city is the natural emporium of all the countries to the S. E. of the Black Sea, from Kars on the east, round by Diarbeker to Amasia on the west. Erzeroum, the principal city of Armenia, is only about 135 miles S. E. from Trebisond. Its merchants are distinguished by their superior attainments, and by their enterprise and activity. For a lengthened period, they have derived most part of their supplies of European commodities by way of Smyrna or Constantinople: nothing, however, but the impossibility of obtaining them at so convenient a port as Trebisond, could have made them resort to such distant markets as those now mentioned; and it may well excite surprise, considering the period during which the Black Sea has been open, that efforts were not sooner made to establish an intercourse with Armenia, Georgia, and the north-western parts of Persia, through this channel. We are glad, however, to have to state, that within these few years this has been done; and notwithstanding the difficulties that necessarily attach to every attempt to open new channels of commerce with semi-civilised nations, the experiment has proved more than ordinarily successful.

The policy of Russia has recently, also, given to Trebisond an importance it did not formerly possess. Previously to 1831, foreign commodities were admitted at the low duty of 5 per cent. into the Russian port of Redoutkalé, and others on the coast of Mingrelia, whence they were distributed over Georgia, and as far as Persia. But a ukase, issued at the epoch referred to, put an end to all the immunities with respect to duties enjoyed by the Russian provinces to the south of Mount Caucasus, and extended to them the same customs regulations that obtain in the other parts of the empire. Considerable deductions are, it is true, made from the duties charged on certain articles imported into these provinces, provided they be carried in the first instance to Odessa, and there reshipped for Mingrelia; but those that go direct to the latter are subjected to the same duties and conditions as if they went to Petersburg or Riga. Printed cottons, and some other important articles, are in all cases prohibited.

The opening of a port on the S. E. extremity of the Black Sea, to which goods might be sent direct from Europe, and be thence conveyed to Armenia, Persia, &c., has, under these circumstances, become an object of a good deal of interest to the commercial world. There can be no doubt, indeed, did any thing like order or regular government prevail in the Turkish provinces of Asia Minor, Armenia, &c., that Trebisond would speedily become a considerable emporium. At present, however, and for a long time back, these beautiful provinces, in common with most other parts of the Turkish empire, have been in a state of extreme disorder; and, owing to the imbecility and ignorance of the government, there seems but little prospect of improvement so long as it is suffered to exist.

The principal articles of import are manufactured cottons, mostly from Great Britain, sugar, coffee, rum, salt, tin, wine, &c. Cottons are sold at long credits; sugar, coffee, &c. are sold at shorter credits, and are more regularly paid. The exports consist of silk, sheep's wool, tobacco, shawls and carpets, galls, and drugs of various sorts, box wood, nuts, &c. There are very rich copper mines in the mountains to the south of Trebisond; but they are but little wrought; and the Turks are so blind to their own interests, as to prohibit the exportation of copper, as well as of corn, and wax. It is difficult, therefore to obtain return cargoes. More than half the articles imported, are destined for Persia. In 1832, no fewer than 9,189 packages passed through Trebisond for Tabreez; and it is believed, that of these, fully 8,000 consisted of British manufactures.

Money, Weights, and Measures, same as at Constantinople; which see.

Arrivals. — In 1832, there arrived at Trebisond, 6 ships under the British flag, of the burden of 718 tons. — (*Parl. Paper*, No. 756. Sess. 1833.) — During the same year, there arrived 19 foreign vessels, of the burden of 4,438 tons: of these, 10 were Austrian; 5 Sardinian; and 4 Russian. The total imports may, perhaps, be valued at about 300,000*l.* The exports are comparatively trifling.

TRIESTE, a large city and sea-port of the Austrian dominions, the capital of a district of Illyria, situated near the N. E. extremity of the Gulf of Venice, lat. 45° 38' 37" N., lon. 13° 46' 27" E. Population 48,000. It is divided into the old and new towns. The former is built upon elevated ground; the latter, which is lower down, is laid out with greater regularity, and is partly intersected by a canal, into which vessels not drawing more than 9 or 10 feet water enter to load and unload.

Harbour. — The harbour of Trieste, though rather limited in size, is easy of access and convenient. It is protected from southerly gales by the *Molo Teresiano*, so called from the Empress Maria Theresa, at the extremity of which the new light-house, mentioned below, has been constructed. The port, with the mole, forms a crescent 1½ mile in length, being a continued quay, faced with hewn stones, with stairs and jetties for the convenience of embarkation. On the north side of the port is a dock or harbour, appropriated exclusively for vessels performing quarantine. It is walled round; and is furnished with hotels, warehouses, and every sort of accommodation required for the use of passengers and goods. Ships under 300 tons burden lie close to the quays; those of greater size mooring a little farther out.

The principal defects of the port are, its limited size, and its being exposed to the N.W. winds, which sometimes blow with much violence, and throw in a heavy sea. The gales, however, are seldom of long continuance; and the holding ground being good, when the anchors are backed and proper precautions taken, no accidents occur. The tide at Trieste is scarcely perceptible; but the depth of water is influenced by the wind, being increased by a long continued sirocco or S. E. wind, and diminished by the prevalence of the E. N. E. wind, known by the name of *Bora*. The access to the port is not obstructed by any bar or shallow; and there is good anchorage in the roads, in from 6 to 8 and 10 fathoms water. A good sailing vessel may beat in by night or by day, except it blow hard from the N. E. or E. N. E., when she had better anchor in the Bay of Roses, or Pirano, where she will ride in perfect safety.

Pilots.—Ships bound for Trieste are under no obligation to take pilots; but those entering the port for the first time would do well to take one on making the coast of Istria. Boats are always hovering off Rovigno; they are not manned by regular pilots, but by fishermen, who, though unfit to be trusted with the management of the ship, know the bearings of the places and the depth of water. The fee usually paid them for pilotage is 20 dollars; in addition to which, they are supported at the ship's expense during the performance of quarantine.

Light-houses.—The light-house at the extremity of the Theresian mole is 106 feet (Eng.) high. The light is intermittent; and may be seen, supposing the eye of the observer to be elevated 12 feet above the level of the sea, about 12 nautical miles, or from Pirano on the side of Istria, and the shoals of Grado on the Italian coast. A light-house has also been erected on the point of Salvo, bearing from Trieste W. by S., distant about 18 miles. The lantern is elevated about 103 feet above the level of the sea. From this point Pirano Bay opens, where vessels may anchor in safety in all sorts of weather.

Money.—Mercantile accounts are usually kept at Trieste in what is commonly called *convention money*, from an agreement entered into with respect to it by some of the German princes, in 1763. The current coins that are legal tender are dollars, $\frac{1}{2}$ dollars or florins, and zwanzigers, or pieces of 20 kreutzers. Ten dollars are coined out of the Cologne marc (3,608 gr. Eng.) of pure silver, so that the value of the dollar is 4s. 3d. sterling.

The florin, or $\frac{1}{2}$ dollar = 2s. 1½d. sterling; zwanzigers, or pieces of 20 kreutzers (60 to the marc), = 8½d. sterling. Hence it follows that 1s. sterling = 28½ kreutzers (60 to a florin); and the pound sterling = 9 fl. 24½ kr., or, as it is commonly taken, 9 fl. 25 kr. All contracts are either expressly declared, or are understood, to be in silver money; gold coins, not being legal tender, pass only as merchandise.

Weights and Measures.—Those chiefly in use at Trieste are those of Vienna and Venice. The commercial pound contains 4 quarters, 16 ounces, or 32 loths: it is = 8,639 English grains. Thus, 100 lbs. at Trieste = 123½ lbs. avoirdupois; or 90½ lbs. of Trieste = 112 lbs. avoirdupois.

The principal dry measure is the stajo or staro = 234 Winch. bushels. The Vienna metzen, which is sometimes used, = 1723 Winch. bushel. The polonick = 0861 Winch. bushel.

The principal liquid measure is the orna or eimer = 40 boccali = 15 wine or 12½ Imperial gallons very nearly. The barile = 17¾ English wine gallons.

The orna of oil contains 5½ cistis, and weighs about 107 commercial pounds. It is = 17 wine or 14½ Imperial gallons.

The ell woollen measure = 26½ English inches. The ell for silk = 25½ English inches.

Trade.—Trieste has no command of internal navigation; but being the most convenient, or rather the only sea-port, not merely of the Illyrian provinces, but of the duchy of Austria, and the greater part of Hungary, she possesses an extensive commerce. This has been increased by the facilities afforded to all sorts of mercantile transactions by the privilege of *porto franco* conferred on the town, and a considerable extent of contiguous country. Under this franchise, all goods, with but very few exceptions, may be imported into and exported from the city free of all duties whatever. Foreign products, when taken for consumption into the interior, are subject to the duties mentioned under the head *Tariff*, in a subsequent part of this article.

Exports.—These are very various, consisting partly of the raw, and partly of the manufactured products of Austria Proper, Illyria, Dalmatia, Hungary, and Italy; with foreign articles imported and warehoused. Among the principal articles of raw produce may be specified, corn, chiefly wheat and maize, with rice, wine, oil, shumac, tobacco, wax, &c.; silk, silk rags and waste, hemp, wool, flax, linen rags, hides, furs, skins, &c.; the produce of the mines makes an important item, consisting of quicksilver, cinabar, iron, lead, copper, brass, litharge, alum, vitriol, &c.; the forests of Carniola furnish timber, for ship building and other purposes, of excellent quality and in great abundance, with staves, cork wood, box, hoops, &c.; marble also ranks under this head. Of manufactured articles, the most important are, thrown silk, silk stuffs, printed cottons from Austria and Switzerland, coarse and fine linens, and all sorts of leather; under this head are also ranked soap, Venetian treacle, liquors, &c., with jewellery, tools and utensils of all sorts, glass ware and mirrors, Venetian beads, refined sugar, and a host of other articles. Of foreign articles imported and reshipped, the most important are sugar, coffee, and dye stuffs. Trieste is also a considerable *dépot* for all sorts of produce from the Black Sea, Turkey, and Egypt.

It is not possible to obtain any accurate account of the quantity and value of the exports; but Mr. Money, the British consul, who has carefully inquired into the subject, supposes that they may amount in all, exclusive of those shipped for Venice, Fiume, and other Austrian ports, to about 1,800,000 £ a year, which he divides as follows:—

Raw Produce , viz. — Grain, rice, oil, honey, wax, shumac, tobacco, &c.	£	350,000
Silk, hemp, wool, rags, hides and skins	-	380,800
Metals, mineral and other products; as, quicksilver, iron, lead, copper, brass, zinc, litharge, argol, antimony, arsenic, alum, vitriol, potash, turpentine, marbles, &c.	-	270,000
Timber, plank, boards, &c.	-	180,000
Manufactures of silk, cotton, wool, linen, leather, &c.	-	235,000
Soap, candles, Venetian treacle, and medicines	-	80,000
Tools, machinery, arms, &c.	-	25,000
Household furniture, musical instruments, glass and glass wares, porcelain, &c.	-	20,000
Foreign Articles reshipped for exportation, exclusive of those for Lombardy and the Papal States	-	300,000
Total	-	£ 1,800,000

Mr. Money further supposes that these articles are distributed amongst the countries trading with Trieste, as follows:—

To Turkey and the Levant	£	380,000
Egypt	-	300,000
Greece, the Ionian Islands, and Malta	-	130,000
the Kingdom of the Two Sicilies	-	350,000
Ports in France, Sardinia, and Tuscany	-	100,000
Spain, Portugal, and Barbary	-	120,000
Great Britain	-	220,000
Ports in the North of Germany	-	150,000
the United States of America	-	30,000
South America and the West Indies	-	20,000
Total exports	-	£ 1,800,000

Perhaps these estimates are a little below the mark. We have been assured by high mercantile authority, that the entire value of the exports from Trieste to foreign countries is not under 2,000,000*l.* a year.

Imports.—There is a great difference between the imports into and the exports from Trieste; the value of the former being certainly not less than 4,000,000*l.* sterling. The excess of imports is explained, partly by the fact that large quantities of foreign goods imported into Trieste are subsequently transhipped by coasting vessels to Venice, Fiume, and other ports, partly by the residence of English and other foreigners at Vienna, and partly by there being an excess of exports as compared with imports from other parts of the empire. The great articles of import are sugar, cotton goods and raw cotton, oil, coffee, wheat, silks, indigo and other dye stuffs, valonia, &c. The following Table contains all the information that can be desired as to the import trade of Trieste in 1829, 1830, and 1831:—

Statement of the Quantity and Value, in British Money, Weights, and Measures, of the principal Articles imported into Trieste during each of the Three Years ending with 1831, specifying the Quantity and Value of those furnished by each Country.

Tariff.—Trieste being a free port, goods destined for its consumption, and that of the adjoining territory, pay no duties whatever, and are exported and imported without notice by the customs. Goods brought from the interior for export at Trieste, are charged an export duty on passing the Custom-house line. Goods imported at Trieste, to be conveyed through the Austrian dominions to those of any other power, are charged a small transit duty. The principal foreign goods taken for consumption in the interior of the empire, pay the duties specified in the subjoined Table.

See Table in next page.

Gunpowder, salt, and tobacco, being articles monopolised by government, are not allowed to be imported into Trieste except for sale to the government or its contractors. Vessels arriving with gunpowder on board, deliver it at the arsenal, and on their clearing out it is returned to them free of expense. The utmost vigilance is exerted to prevent the introduction of tobacco; but with very little effect. The only articles, the exportation of which from the Austrian dominions is at present prohibited, are gold and silver in bars, and silk cocoons.

Statement of the Customs' Duties on the principal Articles imported from Trieste into the Interior of the Austrian Empire.

N.B. — Trieste being without the line of customs, these duties on exportation are payable on goods entering the territory or liberties of the port, whether for consumption or for exportation by sea. The duties on raw and thrown silk are tantamount to a prohibition.

Smuggling. — In consequence of the prohibition of tobacco, and of the high duties imposed on refined sugar, coffee, &c., these articles are very extensively smuggled into the Austrian dominions. Most part, too, of the cotton goods sent from this country to Trieste and Venice, are sold to smugglers, by whom they are introduced into the interior with very little difficulty. It would be absurd, indeed, to suppose, seeing the extent to which smuggling is practised in England and France — (see *ante*, p. 1053.) — that it should not be in a flourishing condition in Austria, whose frontier is so much more difficult to guard. It is, in fact, carried on to a very great extent; prohibited and overtaxed goods being introduced with the greatest regularity, either by defeating the vigilance of the officers, or, which is said to be the more common case, by making them parties to, and gainers by, the fraud. The transit of foreign goods through the Austrian states gives considerable facilities to the smuggler. But, independently of this, their introduction is so very easy, that nothing but the repeal of the existing prohibitions, and the effectual reduction of the duties, can give any considerable check to smuggling.

We would fain hope that the Austrian government is becoming sensible of this truth. Its commercial policy is, in many respects, far from illiberal; and the alterations recently made in the tariff have contributed to facilitate importation. The slightest reflection must, indeed, satisfy every one, that in such a country, restrictions on importation can be of no real advantage to the home producers; and that their only effect is to divert trade into illegitimate channels, to deprive the public treasury of the revenue it might derive from moderate duties, and to enrich those who despise and trample on the law, at the expense of the sober and industrious citizen.

Considering the vast variety of valuable and desirable products furnished by Lombardy, Hungary, Austria Proper, and the other Austrian States, it is not easy to estimate the extent to which their commerce might be carried, under a free system that should develop all the resources of the country. At

present, however, there is, in Austria and most other parts of the Continent, a strong disposition to believe that our recommendations of a freer system of commercial policy are dictated solely by selfish, interested motives. They naturally attach greater weight to our practice than to our professions. So long, indeed, as our present corn laws and timber duties are suffered to pollute our statute book, so long shall we make but few practical converts to our doctrines. Such a modification of the former as would render our ports always open to the importation of corn under reasonable duties, combined with the equalisation of the timber duties, and the reduction of the exorbitant duties on olive oil and cheese, would show that we are disposed to practise those liberal doctrines we so freely recommend to others; and would do more to extend our trade with Italy and Austria than any measure it is in our power to adopt.

Shipping.—Since the loss of Flanders, the mercantile navy of Austria has been confined wholly to the ports on the Adriatic. But it is, notwithstanding, very considerable; and engrosses at this moment a very large share of the trade of the Mediterranean and Black Sea. The oak timber of Carniola and the Dalmatian coast is reckoned about the very best in the world; so that the Austrian ships, being built of it, are very strong, at the same time that they are particularly handsome. They are also well manned and provided. The seamen are expert, temperate, and orderly; and Mr. Money says, that the laws for the regulation of the merchant service are excellent.

By far the greater number of vessels of large burden belong to Trieste. The rest belong to Venice, Fiume, Ragusa, and the Bocche di Cattaro. On the other hand, the smaller vessels employed in the coasting trade, which is very considerable, are more equally divided; Venice having, probably, as many as Trieste, while a good number belong to the ports of Istria, Hungary, and Dalmatia.

The foreign trade of this port comprises all voyages beyond the limits of the Adriatic; and may be divided as follows:—

1. The Levant trade, including the Ionian Islands, Greece, Constantinople, Smyrna, Odessa, &c., the ports in Syria, Cyprus, Candia, and Egypt, more especially Alexandria.

2. The *ponente* or Mediterranean trade, in the west, comprising the coast of Barbary, Spain, France, and Italy; being principally carried on with Marseilles, Genoa, and Leghorn.

3. The commerce on the ocean, which the Austrian merchants have attempted with considerable success. Several ships sail for Brazil, the United States, England, Hamburg, &c.

The number of Austrian vessels at present employed in foreign trade is believed to be about 780, of the burden of about 153,000 tons, manned by about 15,000 men and boys. In the coasting trade about 200 vessels are employed, averaging 40 tons each. The fishing trade is inconsiderable.

There has been no sensible increase or diminution in the tonnage for the last 5 years; but there is every probability of a gradual increase in future, proportioned to the anticipated improvement of trade in the Mediterranean, which has of late years been interrupted and depressed by political events.

The following Table shows the number of ships, and their tonnage, arriving at, and sailing from Trieste during each of the 3 years ending with 1831, specifying the number and tonnage of those under each flag.

Movement of Shipping at Trieste, during each of the Three Years ending with 1831.

Customs Regulations.—The Custom-house at Trieste has nothing whatever to do with the entry, reporting, &c. of vessels. When a ship arrives, she is reported to the Health Office; which publishes a list of arrivals and departures, with a statement of their cargoes, as they appear in the manifests. Ships are cleared by the same office; the masters being assisted by the consuls of the country to which they belong. As soon as a vessel has performed quarantine, she loads or unloads without any interference or inspection by the customs officers, or by any one else. Goods unsuspicious of contagion may be landed during quarantine.

Being a free port, the bonding and warehousing system is, of course, unknown at Trieste.

Port Charges.—These are paid at the office of the harbour master on clearing out. They are the same, whatever may be the ship's stay; and are, perhaps, the most moderate of any in Europe.

Port Charges paid by Austrian and Foreign Ships.

Austrian, and foreign privileged ships:				Fl. kr.	Foreign ships not privileged:				Fl. kr.
Anchorage, per ton admeasurement	-	-	-	0 4	Anchorage, light-house, and cargo as above, per ton admeasurement, and per ton weight of goods	-	-	-	0 10

or about 4*l.* 18*s.* sterling.

or about 12*l.* 10*s.* sterling.

If the ship depart in ballast or with less than a cargo, there is a further charge of 9 kreutzers per ton, or 45 florins; making in all, 175 florins.

Importations and Arrivals of 1833.—The following statement is interesting, as it exhibits the principal articles imported into Trieste from America, the West Indies, and Western Europe, in 1833, specifying the quantities furnished by each country, and the ships by which the same was imported. It shows that Austrian ships are pretty extensively employed in the Transatlantic trade.

Principal Importations and Arrivals during 1833.

Great Britain.—In 42 British, 1 Sardinian, and 1 Austrian vessel: coffee, 2 tons Jamaica, 152 tons Havannah, 88 tons St. Jago, 168 tons Rio, 7 tons Surinam, 5 tons Mocha, 7 tons Cheribon, and 11 tons Trieste; sugar, 146 casks refined, 2,256 casks crushed, 400 boxes white Havannah, 185 cases Bahia, 288 cases Pernambuco, 116 tierces white, and 65 cases muscovado Brazil; cocoa, 15 tons; cassia lignea, 155 tons; cinnamon, 5 tons; pepper, 250 tons; pimento, 52 tons; ginger, 59 tons; cochineal, 4 serons; rum, 628 puncheons; indigo, 268 chests and 8 serons; logwood, 50 tons; Nicaragua wood, 21 tons; tin, 3,769 ingots; 125 barrels bars, 1,544 boxes plates; iron, 377 tons; lead, 151 ingots; cotton, 719 bales American; nankeen, 21,900 pieces; manufactures, 5,842 packages; herrings, 1,629 barrels; pilchards 1,000 barrels; hides, 41,784.

United States.—In 21 American and 6 Austrian vessels: coffee, 203 tons Havannah, 111 tons St. Jago, 530 tons Rio, 11 tons Berlicke, 76 tons Mocha, 187 tons Porto Rico, 365 tons St. Domingo, and 101 tons Trieste; sugar, 47 casks crushed, 300 boxes yellow Havannah, and 497 bags Manila; cocoa, 2 tons; pepper, 360 tons; pimento, 50 tons; cassia lignea, 27 tons; indigo 154 chests; rum, 261 puncheons; logwood, 955 tons; Nicaragua wood, 147 tons; fustic, 90 tons; nankeen, 4,500 pieces; cotton, 3,911 bales; hides, 29,345.

Brazil.—In 42 British, 4 American, 1 Hamburg, 5 Danish, 1 French, 1 Neapolitan, 3 Sardinian, 3 Spanish, 1 Swedish, and 11 Austrian vessels.—(28 vessels from Rio, 29 Bahia, 10 Pernambuco, 1 Para, and 2 from Santos): coffee, 3,704 tons Rio, 124 tons Bahia; sugar, 4,203 cases, 267 barrels, 1,511 bags white, and 602 cases muscovado Rio; 7,192 cases, 145 barrels white, and 2,087 cases muscovado Bahia; 2,510 cases, 1,806 barrels, 54 bags white, and 127 cases muscovado Pernambuco; and 9,061 bags Santos; cocoa, 116 tons Para; rum, 138 puncheons; cotton, 362 bales Bahia, 50 bales Para; fustic, 45 tons; hides, 39,453.

Cuba.—In 2 British, 6 American, 1 Belgian, and 2 Spanish vessels.—(9 vessels from St. Jago, and 2 from Matanzas): coffee, 1,192 tons St. Jago, 251 tons Matanzas; sugar, 172 boxes white, 1,621 boxes yellow Matanzas, 168 boxes white, 819 boxes yellow St. Jago; logwood, 15 tons; fustic, 117 tons.

St. Domingo.—In 1 British vessel: coffee, 158 tons; cotton, 41 bales; logwood, 3 tons.

Sumatra.—In 2 American vessels: pepper, 550 tons.

Maracalla.—In 1 French, 22 Austrian, 4 Neapolitan, 7 Roman, and 4 Sardinian vessels: coffee, 91 tons St. Jago, 242 tons Rio, 4 tons Jamaica, 61 tons Porto Rico, 95 tons St. Domingo, and 5 tons Trieste; sugar, 2,218 casks refined, 100 cases white Bahia; cocoa, 3 tons; pepper, 63 tons; pimento, 34 tons; cloves, 263 packages; cinnamon, 1 ton; cassia lignea, 1 ton; cochineal, 21 serons; cotton, 270 bales; logwood, 716 tons; Nicaragua wood, 85 tons; rum, 55 puncheons; nankeen, 4,000 pieces; lead, 9,168 ingots; hides, 9,107.

Bordeaux.—In 4 French and 1 Swedish vessel: coffee, 21 tons Havannah; 216 tons St. Jago; sugar, 50 boxes white Havannah; pepper, 8 tons.

Gibraltar and Malta.—In 6 British, 9 Austrian, and 1 Roman vessel: coffee 4 tons Havannah, 5 tons Porto Rico; sugar, 20 tons Rio, 25 tons; pimento, 5 tons; rum, 4 puncheons; logwood, 41 tons; cotton, 125 bales; hides, 1,655.

Spain.—In 9 Spanish, 1 Austrian, and 1 Russian vessel: coffee, 18 tons St. Jago; lead, 8,761 ingots; hides, 500.

Portugal.—In 2 British, 7 Austrian, 1 Danish, and 2 Sardinian vessels: coffee, 91 tons Rio; sugar, 167 cases Bahia, 153 cases Pernambuco, 121 cases Rio, and 201 barrels white, 10 cases muscovado Brazil; cocoa, 220 tons; cotton, 3,503 bales; cassia lignea, 1 ton; hides, 13,597.

Hamburgh.—In 3 Austrian, and 3 Bremen vessels: sugar, 12 casks refined; fish oil, 1,744 barrels; calf skins, 251 bales; zinc, 14,192 bars; herrings, 51 barrels.

Holland.—In 2 Austrian, and 1 Danish vessel: sugar, 113 casks refined, 176 casks crushed; tobacco, 154 bales; cheese, 117 packages; sandal wood, 3,127 pieces; tin, 50 ingots.

Norway.—In 1 British, 4 Hanoverian, 1 Danish, and 1 Dutch vessel: stockfish, 1,703 tons.

Sweden.—In 2 Swedish vessels: tar, 2,314 barrels.

Statement of Lang, Freeland, & Co.

Quarantine is strictly enforced at Trieste, and the establishments for facilitating its performance are complete and efficient. The Board of Health at this port is the central or principal one for the Austrian States; and maintains an active correspondence with all the principal ports, both in the Mediterranean and elsewhere. There are 2 lazarettos,—that called St. Teresa, or Lazaretto Nuovo, is appropriated to vessels from the Levant and Egypt, which are, for the most part, subjected to the long or full quarantine of 40 days. It is spacious, and properly guarded; having a sufficient number of military and medical officers and assistants; with extensive quays and magazines for housing and airing goods, dwelling houses and apartments for resident officers and passengers, &c. It is, in fact, one of the most perfect establishments of the kind in existence. The other, or old (*Vecchio*) lazaretto, contiguous to the great mole, is appropriated to ships and passengers performing a quarantine of not more than 28 days; and, though inferior to the former, is sufficiently capacious and convenient. The sanitary offices, including that of harbour master, are near the centre of the port; where also are moored vessels under observation for a term not exceeding 8 days. Here also are facilities for communicating *viva voce* with persons under quarantine; and spacious warehouses, with adequate guards and other officers. But, notwithstanding these conveniences, if a vessel arrive having an infectious malady on board, she is not allowed to enter either lazaretto at Trieste, but is sent to an island near Venice, fitted out for the purpose, where assistance may be afforded with less risk of propagating infection.

The Ordinary Board of Health consists of a president; two assistants, one of whom is a doctor of medicine; and three provisors, two of whom are merchants.

Quarantine Charges payable at the Port of Trieste, by all Ships.

Quarantine Dues payable on Goods.—Non-susceptible goods pay *ad valorem* at the rate of 6 kreutzers per 100 florins or 1 mille. Susceptible goods pay an extra charge, according to tariff, or to circumstances. Besides the above *ad valorem* duty, goods not susceptible pay 4 kreutzers ($1\frac{1}{3}d.$) per every 1,000 lbs. weight of Vienna. Grain is subject to an extra charge of about $\frac{1}{2}$ per cent.

Brokers, Commission Merchants, Brokerage, &c.—There are a few exceptions to the freedom generally enjoyed of settling and exercising any trade at Trieste. Brokers, for example, are limited in number, and appointed by the Chamber of Commerce. They are obliged to give security, are under various regulations, and may not themselves trade as principals. They are of 3 classes: 1st, brokers for the sale and purchase of merchandise, who are again subdivided into particular classes, according to the articles they are conversant with, as grain, oil, cotton, drugs, hides and leather, colonial produce, manufactures, &c.; 2d, bill brokers, or exchange agents; and, 3d, ship and insurance brokers. Such authorised brokers are alone allowed to extend contracts, certificates, surveys, or other documents; and they are considered as public functionaries, whose depositions are received as legal evidence.

Any one may be a commission merchant or factor, but he may not issue printed circulars or lists of prices; nor will his books, however regularly kept, be considered as evidence in a court of justice, unless he is *matriculated*, for which the possession of a certain amount of capital is required. This, however, is little more than mere form, and a great deal of business is done by persons acting both as merchants and brokers, without being duly authorised.

The usual rate of a merchant's or factor's commission on the purchase of goods is 2 per cent. On sales, $\frac{1}{2}$ per cent.; *del credere* is sometimes added.

A merchant's commission for collecting freights, and doing other shipping business, is 2 per cent. on the inward cargo; and by custom of the place, the house to which a ship is consigned or recommended by the charterers, is entitled to a commission of 2 per cent. on the outward cargo, whether it has or has not been instrumental in procuring the goods that are laden outwards.

A broker's commission for freighting a ship, or procuring a charter, is 2 per cent. This does not include the charge for writing charter, or for any other services performed in the clearance. In case of general

cargoes, when the broker has to collect goods from different merchants, he charges 3 per cent. commission. A bill broker's commission (courtage) is sometimes 1 per mille, more commonly $\frac{1}{2}$ per mille. Brokerage for the sale or purchase of merchandise varies from $\frac{1}{2}$ per cent. to 1 per cent., according to circumstances, and the nature of the article.

Insurance.—The insurance of ships is carried on to a considerable extent at Trieste. The security is unexceptionable, the terms more moderate than in England, and losses are said to be adjusted promptly and liberally. The oppressive duties on policies of insurance in England have been the cause that most insurances on ships for the Adriatic, that were formerly effected in London, Liverpool, &c., are now effected at Trieste. The insurance of houses is universal; and that of lives is also, of late years, practised to a considerable extent. House insurance is carried on by joint stock companies, of limited responsibility.

Bankruptcy is not of very frequent occurrence at Trieste. The laws with respect to it do not differ much from those in force in most other countries. Frauds are punishable by imprisonment; but here, as elsewhere, they are very difficult to detect. Honest bankrupts are discharged, on making a complete disclosure of their affairs, and a surrender of their assets. Property settled on a wife is not affected by the debts of the husband; a regulation which, it is evident, must lead to fraud.

Communications by Land.—The intercourse between Trieste and Austria, Hungary, &c. is necessarily all carried on by land. The roads leading to Vienna, and to the Hungarian towns, particularly the first, are kept in good repair, and the tolls are moderate; but owing to the rugged nature of the country, the ascent is in some places very considerable. The diligence from Trieste to Vienna, 340 English miles, performs the journey in 72 hours. The draught horses employed on the roads are excellent; but, in some of the mountainous districts, bullocks are used.

Repeated surveys have been made of the country between Vienna and Trieste, in the view of forming a canal. But the difficulties in the way of such a project seem to be all but insuperable. The ground is not only rugged, but the subsoil of the country stretching northwards to a considerable distance from Trieste is so very porous, that, unless precautions were taken to obviate it, the water in the canal would speedily escape. A rail-road has been proposed, and it might, no doubt, be accomplished. But the expense would be so very great, that it is extremely problematical whether it would ever yield any thing like a return. We subjoin a statement of the

Rates of Land Carriage from Trieste to various Places.

Carrening, Stores, &c.—Timber at Trieste is excellent, workmen good, and their wages moderate; so that it is a very favourable place for carrening and repairing. Water is very good, but rather scarce; so that, if a large supply be required, due notice must be given. Ships are served in regular rotation. Beef is very good, but rather high priced. Butter and cheese are dear; and fuel is excessively so. On the whole, therefore, Trieste cannot be considered as a favourable place for the provisioning of a ship. Subjoined is an account of the

Average Prices of the principal Articles of Provisions at Trieste in 1831.

Banking.—There are no public banks at Trieste. The Bank of Vienna has an office here, but it is merely for the exchange of its notes for cash, or, more frequently, of large notes for small ones. These notes, being guaranteed by government, are legal tender, and in general circulation, but no other company is allowed to issue notes to be used as a circulating medium. There is not, however, any deficiency of currency. Banking business is transacted by private companies, or by individuals, who are subject to certain regulations, and are obliged to lay before competent authority an attested statement of the capital embarked in their concerns. Their business principally consists in procuring bills of exchange from other places for the use of the merchants of Trieste, or in discounting, (in which latter operation they have many private competitors,) at the rate of from 4 to 6 per cent. per annum, according to the nature of the paper offered, and in proportion to the scarcity or abundance of cash.

The principal bankers of Trieste are of undoubted solidity, and do not indulge in dangerous speculations; and notwithstanding the apparent want of great banking establishments, the business of buying and selling, and of making payments and remittances, whether in bills or specie, is transacted at this port with great facility; and there seldom arises any distress, pressure, or stagnation, from want of money or credit.

It is not usual for respectable bankers to give interest on deposits. The partners in joint stock companies, banks, &c. are, in general, responsible only to the extent of their declared capital; and the individuals composing them are only liable each to the extent of their share. The same individual is frequently a general merchant, a partner in a banking house, and a member of an insurance company. All these businesses may at present be said to be prosperous.

Credit.—Goods imported into Trieste are sometimes sold for ready money, a discount being usually understood, and allowed in such case, of 2 or 2½ per cent. But they are commonly sold at 3 months, credit, that is, by bills of that date; occasionally, but rarely, they are sold at 6 months.

Bills thus obtained, though offering no other guarantee than the signature of the drawer or acceptor, may be discounted or insured at a moderate rate by companies who dedicate themselves to this branch of business, and who, from their extensive dealings, are good judges of the risk. This practice has become almost universal; and it not only facilitates sales, but has a tendency to prevent bankruptcies, as it is difficult for a house long to conceal its insolvency; and its credit is, by this mode of trial, soon ascertained.

Tares.—Real tare is allowed on most articles of export; and on all articles of import, except cotton and sugar. The tare on Brazil sugar in chests depends on their length and size, but in general it amounts to from 15 to 18 per cent.; on Brazil sugar in bags the tare is 3 per cent.; on Havannah sugar a tare is allowed of 62 lbs. English per box, being from 13 to 14 per cent.; on Jamaica sugar the tare is 14 per cent. Tare on American cotton, 4 per cent.

The answers to the *Circular Queries* by Mr. Taylor Money, consul general at Milan, are amongst the most valuable that have been received, and reflect the greatest credit on his industry and talent for observation. We have been largely indebted to them.

TRINITY HOUSE. This society was incorporated by Henry VIII., in 1515, for the promotion of commerce and navigation, by licensing and regulating pilots, and ordering and erecting beacons, light-houses, buoys, &c. A similar society, for the like purposes, was afterwards established at Hull; and also another at Newcastle-upon-Tyne, in 1537; which 3 establishments, says Hakluyt, were in imitation of that founded by the Emperor Charles V. at Seville in Spain; who, observing the numerous shipwrecks in the voyages to and from the West Indies, occasioned by the ignorance of seamen, established, at the *Casa de Contratacion*, lectures on navigation, and a pilot-major for the examination of other pilots and mariners; having also directed books to be published on that subject for the use of navigators.

Henry VIII., by his charter, confirmed to the Deptford Trinity House Society all the ancient rights, privileges, &c. of the shipmen and mariners of England, and their several possessions at Deptford, from which it is plain that the Society had existed long previously. The corporation was confirmed, in 1685, in the enjoyment of its privileges and possessions, by letters patent of the 1st of James II. by the name of the Master, Wardens, and Assistants of the Guild or Fraternity of the most glorious and undivided Trinity, and of St. Clement's, in the Parish of Deptford Strond, in the County of Kent. At first, the corporation appears to have consisted of seamen only; but many gentlemen, and some noblemen, are now amongst its members, or elder brethren. It is governed by a master, 4 wardens, 8 assistants, and 31 elder brothers: but the inferior members of the fraternity, named younger brethren, are of an unlimited number; for every master or mate, expert in navigation, may be admitted as such. Besides the power of erecting light-houses, and other sea-marks, on the several coasts of the kingdom, for the security of navigation — (see **LIGHT-HOUSES**), — the master, wardens, assistants, and elder brethren are invested by charter with the following powers; viz. the examination of the mathematical scholars of Christ's Hospital, and of the masters of his Majesty's ships; the appointment of pilots to conduct ships into and out of the Thames; the amercement of such unlicensed persons as presume to act as masters of ships of war, or pilots, in a pecuniary fine; settling the several rates of pilotage; granting licences to poor seamen, not free of the city, or past going to sea, to row on the river Thames for their support; preventing aliens from serving on board English ships without licence; hearing and determining the complaints of officers and seamen of British ships, subject to an appeal to the Lords of the Admiralty, &c. To this company belongs the Ballast Office, for clearing and deepening the Thames, by taking up a sufficient quantity of ballast for the supply of all ships that sail out of the river, for which they pay certain rates. — (See **BALLAST**.) The corporation is authorised to receive voluntary subscriptions, benefactions, &c.; and to purchase, in mortmain, lands, tenements, &c. to the amount of 500*l.* per annum. The ancient Hall of the Trinity House at Deptford, where the meetings of the brethren were formerly held, was pulled down in 1787, and an elegant building erected for the purpose in London, near the Tower.

Trinity House Revenues, &c.—The gross revenue under the management of the Trinity House amounts to about 135,000*l.* a year; but the nett revenue is rather under ½ that sum. It arises from the dues payable to the corporation on account of light-houses, buoyage and beaconage, and ballastage; and from the interest of money in the funds, and the rent of freehold property. In 1831, the receipts were as under:—

	<i>L.</i>	<i>s.</i>	<i>d.</i>	<i>L.</i>	<i>s.</i>	<i>d.</i>	<i>L.</i>	<i>s.</i>	<i>d.</i>
<i>Light-houses.</i> —Total sums received on account of light-houses				79,249	11	11½			
Deduct commission on collection	6,174	6	9½	47,323	6	4½			
Charges on account of maintenance, &c.*	41,148	19	7½				31,926	5	6½
<i>Nett light-house revenue</i>									
<i>Buoyage and Beaconage</i> —gross amount of				12,084	16	11½			
Deduct commission on collection				8,283	4	11			
Charges	786	6	0½						
<i>Nett buoyage, beaconage, and revenue</i>							3,801	12	0½
<i>Ballastage</i> —gross amount of									
Deduct charges	30,239	17	9						
<i>Nett ballastage revenue</i>	23,741	15	11				6,498	1	10
<i>Rent of Land and houses, dividends on account of funded property, &c., all charges deducted</i>							10,003	2	3
<i>Total nett revenue</i>							52,229	1	7½

* This includes a sum of 10,171*l.* laid out on *new* light-houses, and 1,052*l.* of incidental charges.

† See *Parl. Paper*, No. 88, Sess. 1833. For an account of the light-house revenue, see this work, p. 759, for buoyage and beaconage, see p. 190, and for ballastage, see p. 60.

By far the greater portion of this large sum is laid out on pensions to poor disabled seamen, and on the maintenance of their widows, orphans, &c. We have seen the number of persons so relieved stated at 3,000; and we believe that the fund is both judiciously and economically administered. Still, however, as we have remarked in another article — (*ante*, p. 758.) — it does appear to us, considering the vast importance to a maritime nation like this of keeping the charges on shipping as low as possible, that it would be good policy to provide otherwise for the poor persons now dependent on the Trinity House, and to reduce the charges on account of lights, &c. to the lowest sum that would suffice to maintain the establishment in a proper state of efficiency. No one, certainly, would wish to see the poor seamen deprived of any part of the pittance they now receive; but a larger amount might be given them from other sources, and be, at the same time, less felt by the public. Every one knows that nothing contributes so much to facilitate a commercial intercourse by land as good roads and low tolls; and good lights, buoys, beacons, &c., and light charges, have precisely the same influence at sea.

TRIPANG, or SEA SLUG (*Biche de Mer*), a species of fish of the genus *Holothuria*, found chiefly on coral reefs in the Eastern seas, and highly esteemed in China, into which it is imported in large quantities. It is an unseemly looking substance, of a dirty brown colour, hard, rigid, scarcely possessing any power of locomotion, or appearance of animation. Sometimes the slug is as much as 2 feet in length, and from 7 to 8 inches in circumference. A span in length, and 2 or 3 inches in girth, is, however, the ordinary size. The quality and value of the fish, however, do not by any means depend upon its size, but upon properties in it neither obvious to, nor discernible by, those who have not been long and extensively engaged in the trade. In shallow water the animal is taken out by the hand, but in deeper water it is sometimes speared. When taken it is gutted, dried in the sun, and smoked over a wood fire; this being the only preparation it receives. The fishery is carried on from the western shores of New Guinea, and the southern shores of Australia, to Ceylon inclusive. Indeed, within the last few years it has been successfully prosecuted on the shores of the Mauritius. The whole produce goes to China. In the market of Macassar, the great staple of this fishery, not less than thirty varieties are distinguished, varying in price from 5 Spanish dollars a *picul* (133½ lbs.) to 14 times that price, each variety being distinguished by well known names! The quantity of tripang sent annually to China from Macassar is about 7,000 *piculs*, or 8,333 cwt.; the price usually varying from 8 dollars a *picul* to 110 and 115, according to quality. — (*Crawford's Indian Archipelago*, vol. iii. p. 441.) There is also a considerable export of tripang from Manilla to Canton.

Besides tripang, *fish-maws* and *sharks' fins* are exported to China from every maritime country of India.

TROY WEIGHT, one of the most ancient of the different kinds used in Britain. The pound English Troy contains 12 ounces, or 5,760 grains. It is used in the weighing of gold, silver, and jewels; the compounding of medicines; in experiments in natural philosophy; in comparing different weights with each other; and is now (by 5 Geo. 4. c. 74.) made the standard of weight.

TROY WEIGHT, *Scotch*, was established by James VI. in the year 1618, who enacted that only one weight should be used in Scotland, viz. the French Troy stone of 16 pounds, and 16 ounces to the pound. The pound contains 7,609 grains, and is equal to 17 oz. 6 dr. avoirdupois. The cwt., or 112 lbs. avoirdupois, contains only 103 lbs. 2½ oz. of this weight, though generally reckoned equal to 104 lbs. This weight is very nearly identical with that formerly used at Paris and Amsterdam; and is generally known by the name of Dutch weight. Though prohibited by the articles of Union, it has been used in most parts of Scotland in weighing iron, hemp, flax, and other Dutch and Baltic goods, meal, butcher's meat, lead, &c. — (See WEIGHTS AND MEASURES.)

TRUCK SYSTEM, a name given to a practice that has prevailed, particularly in the mining and manufacturing districts, of paying the wages of workmen in goods instead of money. The plan has been, for the masters to establish warehouses or shops; and the workmen in their employment have either got their wages accounted for to them by supplies of goods from such *depôts*, without receiving any money; or they have got the money, with a tacit or express understanding that they were to resort to the warehouses or shops of their masters for such articles as they were furnished with.

Advantages and Disadvantages of the Truck System. — A great deal of contradictory evidence has been given, and very opposite opinions have been held, as to the practical operation and real effect of this system on the workmen. Nor is this to be wondered at, seeing that every thing depends on the mode in which it is administered, and that it may be either highly advantageous or highly injurious to the labourer. If a manufacturer of character establish a shop supplied with the principal articles required for the use of the workmen in his employment, and give them free liberty to resort to it or not as they please, it can, at all events, do them no harm, and will, most likely, render them material service. The manufacturer, having the command of capital, may, in general, lay in his goods to greater advantage than they can be laid in by the greater number of retail tradesmen in moderate-sized towns; and not being dependent on the profits of his shop for support, he is, even though he had no advantage in their purchase, able to sell his goods at a cheaper rate than they can be afforded by the majority of shopkeepers. Sometimes, also, a factory is established in a district where shops either do not exist at all, or are very deficient; and in such cases the master consults the interest and convenience of those dependent on him when he provides a supply of the principal articles required

for their subsistence. It is easy, therefore, to see, that the keeping of shops by masters for the use of their workmen may be very beneficial to the latter. But to insure its being so, it is indispensable that the masters should be above taking an advantage when it is within their reach, and that their conduct towards the workmen should not be in any degree influenced by the circumstance of the latter dealing or not dealing with their shops.

Such disinterestedness is, however, a great deal more than could be rationally expected from the generality of men; and hence, though many instances may be specified in which the truck system was advantageous to the workmen, those of a contrary description were, unfortunately, far more numerous. It is obvious, indeed, that a practice of this sort affords very great facilities for fraudulent dealings. Under the old law, a manufacturer who had a shop, had means, supposing he were inclined to use them, not possessed by any ordinary shopkeeper as respects his customers, for forcing upon his workmen inferior goods at an exorbitant price. They are at first supplied on liberal terms, and are readily accommodated with goods in anticipation of wages, till they get considerably into debt. The pernicious influence of this deceitful system then begins fully to disclose itself. The workmen cease to be free agents; they are compelled to take such goods and at such prices as the master pleases; for, were they to attempt to emancipate themselves from this state of thralldom by leaving their employment, they would be exposed to the risk of prosecution and imprisonment for the debts they had incurred. It is not easy to imagine the extent to which these facilities for defrauding the labouring class were taken advantage of in various districts of the country. In many instances, indeed, the profits made by the shops exceeded those made by the business to which they were contingent; and thousands of workmen, whose wages were nominally 30s. a week, did not really receive, owing to the bad quality and high price of the goods supplied to them, more than 20s., and often not so much.

Abolition of the Truck System. — A system of dealing with the labouring classes, so very susceptible of abuse, and which, in point of fact, was very extensively abused, was loudly and justly complained of. A bill was in consequence introduced for its suppression by Mr. Littleton, which, after a great deal of opposition and discussion, was passed into a law — 1 & 2 Will. 4. c. 32. — (*See abstract subjoined.*)

Those who opposed this act did so on two grounds; — 1st, that it was improper to interfere at all in a matter of this sort; and, 2d, that the interference would not be effective. The first of these objections does not appear entitled to any weight. In suppressing the truck system, the legislature did nothing that could in anywise regulate or fetter the fair employment of capital: it interfered merely to put down abuse; to carry, in fact, the contract of wages into full effect, by preventing the workman from being defrauded of a portion of the wages he had stipulated for. The presumption no doubt is, in questions between workmen and their employers, that government had better abstain from all interference, and leave it to the parties to adjust their disputes on the principle of mutual interest and compromised advantage. Still, however, this is merely a presumption; and must not be viewed as an absolute rule. Instances have repeatedly occurred, where the interference of the legislature to prevent or suppress abuse, on occasions of the sort now alluded to, has been imperiously required, and been highly advantageous. Those who claim its interposition are, indeed, bound to show clearly that it is called for to obviate some gross abuse, or that it will materially redound to the public advantage; and this, we think, was done in the completest manner, by the opponents of the truck system. Regard for the interests of the more respectable part of the masters, as well as for those of the workmen, required its abolition; for, while it continued, those who despised taking an advantage of their dependants were less favourably situated than those who did. It is ludicrous, therefore, in a case of this sort, to set up a cuckoo cry about the “freedom of industry.” The good incident to the truck system was in practice found to be vastly overbalanced by the abuses that grew out of it; and as these could not, under the existing law of debtor and creditor, be separately destroyed, the legislature did right in attempting to suppress it altogether.

It was said, indeed, that this would be found to be impracticable; that the manufacturers would enter underhand into partnerships with the keepers of shops, and that the system would really be continued, in another and, perhaps, more objectionable form. This anticipation has, we believe, been in some degree realised; but the system has notwithstanding been in many places abandoned, and is nowhere practised to any thing like the extent to which it was carried previously to the passing of Mr. Littleton's act. It will not, however, be completely rooted out, till all small debts, however they originate, be put beyond the pale of the law. We have already vindicated the expediency of this measure on other grounds — (*see CREDIT*); and the influence it would have in effectually destroying whatever is most pernicious in the truck system, is a weighty additional recommendation in its favour. Were all right of action upon debts for less than 50l. or 100l. taken away, no master would think of acquiring a control over the free agency of

his workmen, by getting them in debt to him; and no workman would, under such circumstances, submit to be directed in his choice of shops or goods. The case of the Scotch colliers affords a curious illustration of what is now stated. Down to 1775, these persons were really *adscripti glebæ*, or prædial slaves; that is, they and their descendants were bound to perpetual service at the works to which they belonged,—a right to their labour being acquired by any new proprietor to whom the works were sold! The 15 Geo. 3. c. 28. was passed for the emancipation of the colliers from this state of bondage. It, however, failed of practically accomplishing its object; for the masters speedily contrived, by making them advances in anticipation of their wages, to retain them as completely as ever under their control! To obviate this abuse, the 39 Geo. 3. c. 56. was passed; which most properly took from the masters all title to pursue the colliers for loans, unless advanced for the support of the collier and his family during sickness. This act had the desired effect; and the colliers have since been as free as any other class of labourers. — (See my edition of the *Wealth of Nations*, vol. ii. p. 186.) In fact, were small debts put beyond the pale of the law, it would not be necessary to interfere directly with the truck system; for it would not then be possible to pervert it to any very injurious purpose.

The following are the principal clauses in the act 1 & 2 Will. 4. c. 37., entitled, "An Act to prohibit the Payment, in certain Trades, of Wages in Goods, or otherwise than in the Current Coin of the Realm:"—

1. In all contracts hereafter to be made for the hiring of any artificer in any of the trades herein-after enumerated, or for the performance by any artificer of any labour in any of the said trades, the wages of such artificer shall be made payable only in the current coin of this realm, and not otherwise; any contract to the contrary being illegal, null, and void.

2. If such contract contain any stipulations as to the manner in which the wages shall be expended, it is void.

3. Wages must be paid to the workman in coin only. Payment in goods illegal and void.

4. Artificers may recover wages, if not paid in the current coin.

5. In an action brought for wages, no set-off shall be allowed for goods supplied by the employer, or by any shop in which he is interested.

6. No employer shall have any action or suit in equity against his artificer, for goods supplied to him on account of wages, or supplied by any shop in which he has an interest.

7. If the artificer, or his wife or children, become chargeable to the parish, the overseers may recover any wages earned within the 3 preceding months, and not paid in cash.

8. Nothing in this act is to invalidate the payment of wages in bank notes or drafts on any bankers within 15 miles, if artificer consents.

9. Any employer of any artificer in any of the trades herein-after enumerated, who shall, by himself or by the agency of any other person, directly or indirectly enter into any contract, or make any payment hereby declared illegal, shall for the first offence forfeit a sum not exceeding 10*l.* nor more than 5*l.*, and for the second offence any sum not exceeding 20*l.* nor less than 10*l.*, and for a third offence he shall be guilty of a misdemeanour, and be punished by fine only, at the discretion of the court, so that the fines shall not in any case exceed 100*l.*

10. Offences shall be inquired of and fines recovered before 2 justices, and the amount of the fines shall be in the discretion of such justices, or in case of misdemeanor of the court before which the offence may be tried; and in case of a second offence, it shall be sufficient evidence of the previous conviction, if a certificate, signed by the officer having the custody of the record, be produced, stating in a compendious form the general nature of the offence. But a second or third offence shall only be punished as a first or second offence, if committed within 10 days after the prior conviction; and a fourth or any subsequent offence shall be punished as a third offence. But no second or third offence shall be prosecuted after more than 2 years from the commission of the next preceding offence.

11. Justices may compel the attendance of witnesses, on the request of the parties. Penalty for non-attendance without excuse, and after proof of due service of summonses at the usual place of abode for such persons, 24 hours at the least before the time appointed for appearance, a commitment to some prison within the jurisdiction of the justices, without bail or mainprize, for not exceeding 14 days, or until such person shall submit to be examined.

Sections from 12. to 18. inclusive, regulate proceedings.

19. Act only to apply to the following trades:—Making, casting, converting, or manufacturing of iron or steel, or any parts, branches, or processes thereof; working any mines of coal, ironstone, limestone, salt rock; or working or getting stone, slate, or clay; or making or preparing salt, bricks, tiles, or quarries; or making or manufacturing any kinds of nails, chains, rivets, anvils, &c., keys, &c., or any other articles or hardwares made of iron or steel, or of iron and steel combined, or of any plated articles of cutlery, or of any goods or wares made of brass, tin, lead, pewter, or other metal, or of any japanned goods or wares whatsoever; or making, spinning,

throwing, doubling, winding, weaving, combing, knitting, bleaching, dyeing, printing, or otherwise preparing any kinds of woollen, worsted, yarn, stuff, kersey, linen, fustian, cloth, serge, cotton, leather, fur, hemp, flax, mohair, or silk manufactures; or any manufactures whatsoever made of the said last mentioned materials, whether the same be or be not mixed one with another; or making or otherwise preparing, ornamenting, or finishing any glass, porcelain, china, or earthenware whatsoever, or any parts, branches, or processes thereof, or any materials used in any of such last mentioned trades; or mixing or preparing of bone, thread, silk or cotton lace, or of lace made of any mixed materials.

20. Not to extend to any domestic servant, or servant in husbandry.

21. No one engaged in any of the trades or occupations enumerated, or his father, son, or brother, shall act as a justice. 22. County magistrates to act in cases where those of towns are disqualified as above.

23. Not to prevent any employer from supplying or contracting to supply to any artificer any medicine or medical attendance, or any fuel, or any materials, tools, or implements to be by such artificer employed in his trade or occupation, if such artificer be employed in mining, or any hay, corn, or other provender to be consumed by any horse or other beast of burden employed by any such artificer in his trade and occupation; nor from deducting to any artificer employed in any of the trades or occupations enumerated the whole or any part of any tenement at any rent; nor from supplying or contracting to supply to any such artificer any victuals dressed or prepared under the roof of any such employer, and not consumed by such artificer; nor from making or contracting to make any deduction from the wages of any artificer for any such rent, or medicine or medical attendance, or fuel, materials, tools, implements, hay, corn, or provender, or for such victuals, or for any money advanced to such artificer for any such purpose; but such deduction shall not exceed the true value of such fuel, materials, tools, implements, hay, corn, and provender, and shall not be in any case made from the wages of such artificer unless the agreement for such deduction shall be in writing and signed by such artificer.

24. Not to prevent any such employer from advancing to any such artificer any money to be by him contributed to any friendly society or bank for savings, or for his relief in sickness, or for the education of any child of such artificer, nor from deducting or contracting to deduct any money from the wages of such artificers for the education of any such child, provided the agreement for such deduction shall be in writing and signed by such artificer.

25. Workmen, labourers, and other persons in any manner engaged in any employment or operation, in or about the several trades and occupations aforesaid, shall be deemed "artificers;" and all masters, bailiffs, foremen, managers, clerks, and other persons engaged in the hiring, employment, or superintendence of the labour of any such artificers shall be deemed to be "employers;" and any money or other thing had or contracted to be paid, or given as a remuneration for any labour done or to be done, whether within a certain time or to a certain amount, or for a time or an amount uncertain, shall be deemed to be the "wages" of such labour; and any agreement, understanding, device, contrivance, collusion, or arrangement whatsoever on the subject of wages, whether written or oral, whether direct or indirect, to which the employer and artificer are parties, or are assenting, or by which they are mutually bound to each other, or whereby either of them shall have endeavoured to impose an obligation on the other of them, shall be deemed a "contract."

TRUFFLES, a sort of vegetable production, like a mushroom, formed under ground. A few have been found in Northamptonshire; they are pretty abundant in Italy, the south of France, and several other countries. They are reckoned a great delicacy. The *pâtés au truffes d'Angoulême* are highly esteemed, and are sent as presents to very distant places. — (*Rees's Cyclopædia*.)

TUNIS, the capital of the regency of the same name, on the northern coast of Africa, the Goletta fort being in lat. 36° 48' 30" N., lon. 10° 25' 45" E. The bay of Tunis is somewhat in the form of a horseshoe. Its western extremity, Cape Carthage,

is situated about 4 miles N.E. from the Goletta; and its eastern extremity, Cape Zafran, bears from Cape Carthage E. by S., distant about 13 miles. The bay is about 16 miles deep, and has good anchorage all over, in from 10 to 4 fathoms water. It is exposed to the N. and N.E. gales; but they seldom occasion any damage. Tunis lies on the west side of the bay, being separated from it by a large lagoon, having, where deepest, about 7 feet water. The port is at the Goletta, or channel, passing through the narrow belt of land separating the lagoon from the sea; the entrance to it is by a canal, in which there is at all times 15 feet water; and ships may use it on paying a fee of 3 dollars a day. It is not, however, much resorted to; all vessels of considerable burden loading and unloading from their moorings in the bay, by means of lighters. The population of Tunis has been variously estimated; and may probably amount to 100,000, being the most populous of any African city after Cairo. The streets are narrow, unpaved, and filthy. The buildings, though of stone, are mean and poor; and the inhabitants present the picture of poverty and oppression. There is a fort at the Goletta, of considerable strength.

Trade. — Notwithstanding the various drawbacks arising out of the nature of the government, and the ignorance and prejudices of the people, commerce and industry are in a more advanced state in Tunis, than in any other part of Northern Africa, Egypt excepted. Though subject to droughts, the climate is, on the whole, excellent. The soil still preserves that exuberant fertility for which it was famous in antiquity.

Non quicquid Libycis terit
Fervens area messibus. — (*Senec. in Thyest.*)

It seldom receives any other manure than that of sometimes burning the weeds and stubble; and yet, in despite of its slovenly culture, the crops are luxuriant; and there is generally a considerable excess of wheat and barley for exportation. Corn is principally shipped at Biserta, about 50 miles W. of Tunis. Olive oil is one of the principal articles of export. It is of various qualities; some good, and some very indifferent. Susa is said to be the best place for its shipment. Soap of an excellent quality is largely manufactured in the regency. It may be had either soft or in wedges. The soft is made of barilla and pure oil, and is much esteemed. The hard soap is made from the lees of oil, and is reckoned very strong. The principal soap-works are at Susa. Little, however, is prepared on a speculative anticipation of a demand for exportation; but any quantity may be had by contracting for it a few months before the period when it is wanted. A sort of woollen scull-caps are largely exported. They are in extensive demand all over the Levant, and are nowhere made in such perfection as here. Ivory and gold dust, hides, wax, morocco leather, sponge, barilla, coral, dates, ostrich feathers, &c. are among the articles of export.

The imports from Europe consist of woollens, coarse German and Irish linens, cotton stuffs, hardware, sugar, coffee, spices, tin plates, lead, alum, dye stuffs, wine, silk, Spanish wool, &c. There is very little direct trade between Tunis and England; but a good deal is indirectly carried on, through the intervention of Malta and Gibraltar. Marseilles has probably the largest share of the trade with the regency. In 1830, there entered the different ports of Tunis 194 ships, of the burden of 20,747 tons, exclusive of those engaged in the trade with the other African states and Turkey.

Exclusive of the trade by sea, a considerable trade is carried on between Tunis and the interior of Africa, by means of caravans. These import slaves, gold dust, ivory, feathers, drugs, &c. They carry back cotton stuffs, linens, hardware, spices, cochineal, &c.

Naval and military stores imported into Tunis pay no duty. Other articles pay a duty of 3 per cent. *ad valorem* on a rated tariff. Obstructions arising out of monopolies, &c. are occasionally thrown in the way of exportation; and in general it is necessary, before proceeding to ship, to obtain a *liskery*, or licence to that effect from the bey. That, however, may be, for the most part, procured without much difficulty.

Money. — Accounts are kept in piastres of 16 carobas or 52 aspers. The piastre is worth about 12. 1/2 sterling. The asper is an imaginary money. The value of foreign coins depends on the state of the exchange.

Weights. — Gold, silver, and pearls are weighed by the ounce of 8 meticals; 16 of these ounces make the Tunis pound = 7.7735 Eng. grs. The principal commercial weight is the cantaro, containing 100 lbs., or rottoli, being equivalent to 111.05 lbs. avoird., or 50.56 kilogram.

Measures. — The principal corn measure is the caliz, divided into 16 whibas; and the whiba into 12 sahas. One caliz = 114 Imperial bushels.

The wine measure is the millerale of Marseilles = 14.1 Imp. gallons, or 64.35 litres. It is divided into 6 1/2 mitres.

The principal oil measure is the metal or mettar = 5.125 wine gallons, or 19.59 litres; but it is of different dimensions in different parts of the country; and is larger at Susa, whence most of the oil is exported, than at Tunis.

The pic, or principal long measure, is of 3 sorts; viz. the pic woollen measure = 26.5 Eng. inches; the pic silk measure = 24.8 do.; and the pic linen measure = 18 1/2 do.

For further particulars, see that chapter of *Shaw's Travels in Barbary*, &c. (one of the most learned and excellent works of the kind in the English language), that treats of the kingdom of Tunis; *Macgill's Account of Tunis*, passim; *Jackson's Commerce of the Mediterranean*, pp. 55–96.; *Kelly's Cambist*, &c.

RUINS OF CARTHAGE. — The famous city of Carthage, one of the greatest emporiums of the ancient world, long the mistress of the sea, and the most formidable enemy of Rome, was situated near the cape which still bears her name, about 10 miles N.E. from Tunis. Such, however, have been the alterations on the coast, that the port of the city, within whose ample expanse whole navies used to ride, is now wholly filled up; antiquaries differ as to its situation; and the sea has in some places receded from 2 to 3 miles from the ruins of the buildings by which it was formerly skirted. The common sewers are still in a very perfect state, as are several cisterns, public reservoirs, and other remains of that sort, with the fragment of a noble aqueduct that supplied the city with water. But besides these, and a very few Punic inscriptions that have been dug up, there is nothing left to attest the ancient grandeur and magnificence of the city, or to identify it with the illustrious people by whom it was founded and occupied till its destruction by Scipio Nasica. There are no temples, no triumphal arches, no granite columns or obelisks covered with Phœnician characters, and no ancient entablatures. These have all fallen a sacrifice to hostile attacks, or to the destroying hand of time.

Nunc passim, vix reliquias, vix nomina servans,
Obruitur, propriis non agnoscentia ruinis.

Such mutilated fragments of buildings as still remain, are evidently the work of a later age; of those who occupied the city between the period when a colony was sent to it by Augustus, and its final subversion by the Saracens in the 7th century.

TURBITH, OR TURPETH, the cortical part of the root of a species of *Convolvulus*, brought from different parts of the East Indies. It is a longish root, about the thickness of the finger, resinous, heavy, of a brownish hue without and whitish within. It is imported cloven in the middle, lengthwise, and the heart or woody matter taken out. The best is ponderous, not wrinkled, easy to break, and discovers to the eye a large quantity of resinous matter. At first it makes an impression of sweetness on the taste; but, when chewed for some time, betrays a nauseous acrimony. It is used in medicine, but only to a small extent. — (*Lewis's Mat. Med.*)

TURBITH (MINERAL), the name given by chemists to the subsulphate of mercury.

TURBOT (*Pleuronectes maximus*), a well known and highly esteemed species of fish. Very considerable quantities of turbot are now taken on various parts of our coasts, from the Orkneys to the Land's End, yet a preference is given in the London markets to those caught by the Dutch. The latter are said to have sometimes drawn as much as 80,000*l.* in a single year, for turbot sold in London.

Fresh turbot, however taken, or in whatever ship imported, may be imported free of duty. — (*See Fish.*)

TURMERIC, the root of the *Curcuma longa*. It is externally greyish, and internally of a deep lively yellow or saffron colour; very hard; and not unlike, either in figure or size, to ginger. That should be preferred, which is large, new, resinous, difficult to break, and heavy. It is imported from Bengal, Java, China, &c.; but some of a superior quality is said to have been brought from Tobago. Small quantities of it have also been grown in England. It has a somewhat aromatic, and not very agreeable smell; and a bitterish, slightly acid, and rather warm taste. It used to be in considerable estimation as a medicine; but in Europe it is now used only as a dye. It yields a beautiful bright yellow colour; which, however, is extremely fugitive, and no means have hitherto been discovered of fixing it. It is sometimes employed to heighten the yellows made with weld, and to give an orange tint to scarlet; but the shade imparted by the turmeric soon disappears. The Indians use it to colour and season their food. — (*Lewis's Mat. Med.*; *Bancroft on Colours*, vol. i. p. 276.)

The imports of turmeric from all places eastward of the Cape of Good Hope were, in 1830, 1,567,764 lbs.; in 1831, 1,292,028 lbs.; and in 1832, 1,004,045 lbs.

Its price in bond in the London market, in March, 1834, was — Bengal, per cwt., 15*s.* to 16*s.*; Java, 24*s.* to 25*s.*; China, 25*s.* to 26*s.*

The duty on turmeric is 2*s.* 4*d.* per cwt. on that brought from a British possession, and 10*s.* per cwt. on that from a foreign country. The only effect of this injurious distinction is to force the use of an inferior article.

TURPENTINE (Ger. *Turpentin*; Fr. *Térébenthine*; It. *Trementina*; Rus. *Skipidar*; Pol. *Terpentina*). There are several species of turpentine, but all of them possess the same general and chemical properties.

1. *Common Turpentine*, is a resinous juice which exudes from the Scotch fir or wild pine (*Pinus sylvestris*). The trees which are most exposed to the sun, and have the thickest barks, yield it in the greatest abundance. They begin to produce it when about 40 years old. The bark of the tree is wounded, and the turpentine flows out in drops, which fall into a hole, or sort of cup, previously dug at the foot of the tree, holding about 1½ pint. It is purified by being exposed to liquefy in the sun's rays, in barrels perforated in the bottom, through which it filters. In the United States, the collection of turpentine is confided chiefly to negroes, each of whom has the charge of from 3,000 to 4,000 trees. The process lasts all the year, although the incisions are not made in the trees till the middle of March, and the flow of the turpentine generally ceases about the end of October. The boxes are emptied 5 or 6 times during the year; and it is estimated that 250 boxes will produce a barrel weighing 320 lbs. Turpentine has a strong, somewhat fragrant odour, and a bitter disagreeable taste; its consistence is greater than that of honey; its colour dirty yellow; and it is more opaque than the other sorts. We import it almost entirely from the United States.

2. *Venice Turpentine*, is the produce of the larch (*Pinus Larix*). It is obtained by boring a hole into the heart of the tree about 2 feet from the ground, and fitting into it a small tube through which the turpentine flows into vessels prepared for its reception. It is purified by straining through cloths, or hair sieves. It is more fluid, having the consistence of new honey, a yellowish colour, and is less unpleasant to the smell and taste, than the common turpentine. Genuine Venetian turpentine is principally obtained from the forests of Baye, in Provence; but much of that to be found in the shops comes from America, and is, perhaps, obtained from a different species of fir.

3. *Canadian Balsam, or Turpentine*, is obtained from incisions in the bark of the *Pinus Balsamea*, a native of the coldest regions of North America. It is imported in casks, each containing about 1 cwt. It has a strong, not disagreeable odour, and a

bitterish taste; is transparent, whitish, and has the consistence of copaiva balsam.— (See BALSAM.)

4. *Chian*, or *Cyprus Turpentine*, is obtained from the *Pistacia Terebinthus*, a native of the north of Africa and the south of Europe, and cultivated in Chios and Cyprus. It flows out of incisions made in the bark of the tree in the month of July; and is subsequently strained and purified. It has a fragrant odour, a moderately warm taste, devoid of acrimony or bitterness, and a white or very pale yellow colour; it is about as consistent as thick honey, is clear, transparent, and tenacious. From its comparative high price, Chian turpentine is seldom procured genuine, being for the most part adulterated either with Venetian or common turpentine. The different species of turpentine may be dissolved in rectified spirit, or pure alcohol; and, by distillation, they all give similar oils, which, from their being distilled (and not from any resemblance to alcohol, or spirits properly so called), are vulgarly termed spirits of turpentine. If the distillation be performed with water, the produce is an essential oil, the common spirit of turpentine; and if the distillation be carried on in a *retort*, without water, the product is more volatile and pungent,—a concentrated oil, as it were,—and is called the ethereal spirit of turpentine. The residuum that is left, in both cases, is a brownish resinous mass, brittle, capable of being melted, highly inflammable, insoluble in water, but mixing freely with oils: it is the common rosin of commerce.— (*Lib. of Entert. Knowledge, Vegetable Substances; Thomson's Dispensatory.*)

The entries of turpentine for home consumption in 1831 and 1832 amounted, at an average, to 322,359 cwt. a year. It is almost entirely imported from the United States; so much so, that of 317,895 cwt. imported in 1831, 317,095 were supplied by them: the residue came from France.

TURPENTINE, OIL OF (Ger. *Terpentinöl*; Fr. *Eau de raze, Huile de térébenthine*; It. *Acqua di rasa*; Sp. *Aguarras*), the essential oil drawn from turpentine by distillation. There are two sorts of this oil: the best, red; and the second, white. It is very extensively used by house painters, and in the manufacture of varnish, &c. The distillers have been charged with using it in the preparation of gin. Oil of turpentine is very often adulterated.

TURQUOISE (Ger. *Türkiss*; Fr. *Turquoise*; It. *Turchina*; Sp. *Turquesa*), a precious stone in considerable estimation. Its colour, which is its principal recommendation, is a beautiful celestial blue, which migrates into pale blue, and is sometimes tinged with green. Specific gravity, 3.127. It is destitute of lustre, opaque, and does not admit of a very high polish. It is much worn in necklaces, and in every part of ornamental jewellery, from the size of a pin's head to that of an almond: it contrasts beautifully with brilliants, or pearls, set in fine gold, and appears to most advantage when cut spheroidal.— (*Mace on Diamonds*, 2d ed. p. 129.)

Real turquoises are exclusively furnished by Persia. The mines whence they are obtained are situated near Nishapore. They are the property of the Crown, and are farmed to the highest bidder. They bring a rent of from 2,000*l.* to 2,700*l.* a year.— (*Fraser's Travels on the Shores of the Caspian*, pp. 343–347.)

TUTENAG, the name given in commercial language to the zinc or spelter of China.— (See ZINC.) This commodity used to be smuggled from China (the exportation of unwrought metals from that empire being prohibited) to Hindostan, the Malay Archipelago, and neighbouring countries, to the amount, it is supposed, of about 50,000 cwt. a year. In 1820, the British free traders introduced German spelter for the first time into the Indian market. In 1826, the importation of tutenag from China into Calcutta ceased; and it has now been totally superseded throughout India by spelter. Of this latter commodity there were exported from Great Britain to all places eastward of the Cape of Good Hope, except China, at an average of the 3 years ending with 1832, 49,946 cwt. a year, besides the quantities furnished by Hamburgh, Rotterdam, Antwerp, and other continental ports.

TYRE, the principal city of Phœnicia, and the most celebrated emporium of the ancient world. This famous city was situated on the S. E. coast of the Mediterranean, where the inconsiderable town of Tsour now stands, in lat. 33° 17' N., lon. 35° 14' 35" E. The trade that is at present carried on at Tsour is too trifling to deserve notice; but as this work is intended to give some account, however imperfect, of the revolutions in the channels of commercial enterprise, we may, perhaps, be excused for submitting a few statements with respect to the commerce carried on by so renowned a people as the Tyrians.

Tyre was founded by a colony from Sidon, the most ancient of the Phœnician cities. The date of this event is not certainly known, but Larcher supposes it to have been 1,690 years before the Christian era.— (*Chronologie d'Hérodote*, cap. ii. p. 131.) It is singular, that while Homer mentions Sidon, he takes no notice of Tyre, whose glory speedily eclipsed that of the mother city; but this is no conclusive proof that the latter was not then a considerable emporium. The prophets Isaiah, Jeremiah, and Ezekiel, who flourished from 700 to 600 years before Christ, represent Tyre as a city of unrivalled wealth, whose “merchants were princes, and her traffickers the honourable of

the earth." Originally, the city was built on the main land : but having been besieged for a lengthened period by the Babylonian monarch Nebuchadnezzar, the inhabitants conveyed themselves and their goods to an island at a little distance, where a new city was founded, which enjoyed an increased degree of celebrity and commercial prosperity. The old city was, on that account, entitled Palætyre, and the other simply Tyre. The new city continued to flourish, extending its colonies and its commerce on all sides, till it was attacked by Alexander the Great. The resistance made by the Tyrians to that conqueror showed that they had not been enervated by luxury, and that their martial virtues were nowise inferior to their commercial skill and enterprise. The overthrow of the Persian empire was effected with less difficulty than the capture of this single city. The victor had not magnanimity to treat the vanquished as their heroic conduct deserved. In despite, however, of the cruelties inflicted on the city, she rose again to considerable eminence. But the foundation of Alexandria, by diverting the commerce that had formerly centered at Tyre into a new channel, gave her an irreparable blow ; and she gradually declined till, consistently with the denunciation of the prophet, her palaces have been levelled with the dust, and she has become " a place for the spreading of nets in the midst of the sea."

Commerce, Colonies, &c. of Tyre. — Phœnicia was one of the smallest countries of antiquity. It occupied that part of the Syrian coast which stretches from Aradus (the modern Rouad) on the north, to a little below Tyre on the south, a distance of about 50 leagues. Its breadth was much less considerable, being for the most part bounded by Mount Libanus to the east, and Mount Carmel on the south. The surface of this narrow tract was generally rugged and mountainous ; and the soil in the valleys, though moderately fertile, did not afford sufficient supplies of food to feed the population. Libanus and its dependent ridges were, however, covered with timber suitable for ship building ; and besides Tyre and Sidon, Phœnicia possessed the ports of Tripoli, Byblos, Berytus, &c. In this situation, occupying a country unable to supply them with sufficient quantities of corn, hemmed in by mountains, and by powerful and warlike neighbours, on the one hand, and having, on the other, the wide expanse of the Mediterranean, studded with islands, and surrounded by fertile countries, to invite the enterprise of her citizens, they were naturally led to engage in maritime and commercial adventures ; and became the boldest and most experienced mariners, and the greatest discoverers, of ancient times.

From the remotest antiquity, a considerable trade seems to have been carried on between the Eastern and Western worlds. The spices, drugs, precious stones, and other valuable products of Arabia and India, have always been highly esteemed in Europe, and have exchanged for the gold and silver, the tin, wines, &c. of the latter. At the first dawn of authentic history, we find Phœnicia the principal centre of this commerce. Her inhabitants are designated in the early sacred writings by the name of Canaanites, — a term which, in the language of the East, means merchants. The products of Arabia, India, Persia, &c. were originally conveyed to her by companies of travelling merchants, or caravans ; which seem to have been constituted in the same way, and to have performed exactly the same part in the commerce of the East, in the days of Jacob, that they do at present. — (*Gen.* xxxvii. 25. &c.) At a later period, however, in the reigns of David and Solomon, the Phœnicians, having formed an alliance with the Hebrews, acquired the ports of Elath and Eziongaber, at the north-east extremity of the Red Sea. Here they fitted out fleets, which traded with the ports on that sea, and probably with those of Southern Arabia, the west coast of India, and Ethiopia. The ships are said to have visited Ophir ; and a great deal of erudition has been expended in attempting to determine the exact situation of that emporium or country. We agree, however, with Heeren, in thinking that it was not the name of any particular place ; but that it was a sort of general designation given to the coasts of Arabia, India, and Africa, bordering on the Indian Ocean ; somewhat in the same loose way as we now use the terms East and West Indies. — (See the chapter on the *Navigation and Commerce of the Phœnicians*, in the translation of Heeren's work.)

The distance of the Red Sea from Tyre being very considerable, the conveyance of goods from the one to the other by land must have been tedious and expensive. To lessen this inconvenience, the Tyrians, shortly after they got possession of Elath and Eziongaber, seized upon Rhinoculura, the port in the Mediterranean nearest to the Red Sea. The products of Arabia, India, &c., being carried thither by the most compendious route, were then put on board ships, and conveyed by a brief and easy voyage to Tyre. If we except the transit by Egypt, this was the shortest and most direct, and for that reason, no doubt, the cheapest, channel by which the commerce between Southern Asia and Europe could then be conducted. But it is not believed that the Phœnicians possessed any permanent footing on the Red Sea after the death of Solomon. The want of it does not, however, seem to have sensibly affected their trade ; and Tyre continued, till the foundation of Alexandria, to be the grand emporium for Eastern products, with

which it is abundantly supplied by caravans from Arabia, the bottom of the Persian Gulf, and from Babylon, by way of Palmyra.

The commerce of the Phœnicians with the countries bordering on the Mediterranean was still more extensive and valuable. At an early period, they established settlements in Cyprus and Rhodes. The former was a very valuable acquisition, from its proximity, the number of its ports, its fertility, and the variety of its vegetable and mineral productions. Having passed successively into Greece, Italy, and Sardinia, they proceeded to explore the southern shores of France and Spain, and the northern shores of Africa. They afterwards adventured upon the Atlantic; and were the first people whose flag was displayed beyond the pillars of Hercules.*

Of the colonies of Tyre, Gades, now Cadiz, was one of the most ancient and important. It is supposed by M. de St. Croix to have originally been distinguished by the name of Tartessus or Tarshish, mentioned in the sacred writings. — (*De l'Etat et du Sort des Anciennes Colonies*, p. 14.) Heeren, on the other hand, contends, as in the case of Ophir, that by Tarshish is to be understood the whole southern part of Spain, which was early occupied and settled by Phœnician colonists. — (See also *Huet, Commerce des Anciens*, cap. 8.) At all events, however, it is certain that Cadiz early became the centre of a commerce that extended all along the coasts of Europe as far as Britain, and perhaps the Baltic. There can be no doubt that by the Cassiterides, or Tin Islands, visited by the Phœnicians, is to be understood the Scilly Islands and Cornwall. — (See *Tin*.) The navigation of the Phœnicians, probably, also, extended a considerable way along the western coast of Africa; of this, however, no details have reached us.

But, of all the colonies founded by Tyre, Carthage has been by far the most celebrated. It was at first only a simple factory; but was materially increased by the arrival of a large body of colonists, forced by dissensions at home to leave their native land, about 883 years before Christ. — (*St. Croix*, p. 20.) Imbued with the enterprising mercantile spirit of their ancestors, the Carthaginians rose in no very long period to the highest eminence as a naval and commercial state. The settlements founded by the Phœnicians in Africa, Spain, Sicily, &c. gradually fell into their hands; and after the destruction of Tyre by Alexander, Carthage engrossed a large share of the commerce of which it had previously been the centre. The subsequent history of Carthage, and the misfortunes by which she was overwhelmed, are well known. We shall only, therefore, observe, that commerce, instead of being, as some shallow theorists have imagined, the cause of her decline, was the real source of her power and greatness; the means by which she was enabled to wage a lengthened, doubtful, and desperate contest with Rome herself for the empire of the world.

The commerce and navigation of Tyre probably attained their maximum from 650 to 550 years before Christ. At that period the Tyrians were the factors and merchants of the civilised world; and they enjoyed an undisputed pre-eminence in maritime affairs. The prophet Ezekiel (chap. xxvii.) has described in magnificent terms the glory of Tyre; and has enumerated several of the most valuable productions found in her markets, and the countries whence they were brought. The fir trees of Senir (Hermon), the cedars of Lebanon, the oaks of Bashan (the country to the east of Galilee), the ivory of the Indies, the fine linen of Egypt, and the purple and hyacinth of the isles of Elishah (Peloponnesus), are specified among the articles used for her ships. The inhabitants of Sidon, Arvad (Aradus), Gebel (Byblos), served her as mariners and carpenters. Gold, silver, lead, tin, iron, and vessels of brass; slaves, horses, mules, sheep, and goats; pearls, precious stones, and coral; wheat, balm, honey, oil, spices, and gums; wine, wool, and silk; are mentioned as being brought into the port of Tyre by sea, or to its markets by land, from Syria, Arabia, Damascus, Greece, Tarshish, and other places, the exact site of which it is difficult to determine.†

Such, according to the inspired writer, was Tyre, the “Queen of the waters,” before she was besieged by Nebuchadnezzar. But, as has been already remarked, the result of that siege did not affect her trade, which was as successfully and advantageously carried on from the new city as from the old. Inasmuch, however, as Carthage soon after began to rival her as a maritime and mercantile state, this may, perhaps, be considered as the era of her greatest celebrity.

It would not be easy to over-rate the beneficial influence of that extensive commerce from which the Phœnicians derived such immense wealth. It inspired the people with whom they traded with new wants and desires, at the same time that it gave them the means of gratifying them. It every where gave fresh life to industry, and a new and powerful stimulus to invention. The rude uncivilised inhabitants of Greece, Spain,

* Mons Calpe and Mons Abyla, the Gibraltar and Ceuta of modern times.

† There is, in Dr. Vincent's *Commerce and Navigation of the Ancients in the Indian Ocean* (vol. ii. pp. 624–652), an elaborate and (like the other parts of that work) prolix commentary on this chapter of Ezekiel, in which most of the names of the things and places mentioned are satisfactorily explained. — (See also *Heeren on the Phœnicians*, cap. iv.)

and Northern Africa acquired some knowledge of the arts and sciences practised by the Phœnicians; and the advantages of which they were found to be productive secured their gradual though slow advancement.

Nor were the Phœnicians celebrated only for their wealth, and the extent of their commerce and navigation. Their fame, and their right to be classed amongst those who have conferred the greatest benefits on mankind, rest on a still more unassailable foundation. Antiquity is unanimous in ascribing to them the invention and practice of all those arts, sciences, and contrivances that facilitate the prosecution of commercial undertakings. They are held to be the inventors of arithmetic, weights and measures, of money, of the art of keeping accounts, and, in short, of every thing that belongs to the business of a counting-house. They were, also, famous for the invention of ship building and navigation; for the discovery of glass — (see GLASS); for their manufactures of fine linen and tapestry; for their skill in architecture, and in the art of working metals and ivory; and still more for the incomparable splendour and beauty of their purple dye. — (See the learned and invaluable work of the President de Goguet, *Sur L'Origine des Loix*, &c. Eng. trans. vol. i. p. 296., and vol. ii. pp. 95—100.; see also the chapter of Heeren on the *Manufactures and Land Commerce of the Phœnicians*.)

But the invention and dissemination of these highly useful arts form but a part of what the people of Europe owe to the Phœnicians. It is not possible to say in what degree the religion of the Greeks was borrowed from theirs; but that it was to a pretty large extent seems abundantly certain. Hercules, under the name of Melcarthus, was the tutelary deity of Tyre; and his expeditions along the shores of the Mediterranean, and to the straits connecting it with the ocean, seem to be merely a poetical representation of the progress of the Phœnician navigators, who introduced arts and civilisation, and established the worship of Hercules, wherever they went. The temple erected in honour of the god at Gades was long regarded with peculiar veneration.

The Greeks were, however, indebted to the Phœnicians, not merely for the rudiments of civilisation, but for the great instrument of its future progress — the gift of letters! No fact in ancient history is better established than that a knowledge of alphabetic writing was first carried to Greece by Phœnician adventurers: and it may be safely affirmed, that this was the greatest boon any people ever received at the hands of another.

Before quitting this subject, we may briefly advert to the statement of Herodotus with respect to the circumnavigation of Africa by Phœnician sailors. The venerable father of history mentions, that a fleet fitted out by Necho king of Egypt, but manned and commanded by Phœnicians, took its departure from a port on the Red Sea, at an epoch which is believed to correspond with the year 604 before the Christian era, and that, keeping always to the right, they doubled the southern promontory of Africa; and returned, after a voyage of 3 years, to Egypt, by the Pillars of Hercules. — (*Herod. lib. iv. § 42.*) Herodotus further mentions, that they related that, in sailing round Africa, they had the sun on their right hand, or to the north, — a circumstance which he frankly acknowledges seemed incredible to him, but which, as every one is now aware, must have been the case if the voyage was actually performed.

Many learned and able writers, and particularly Gosselin (*Recherches sur la Géographie Systématique et Positive des Anciens*, tome i. pp. 204—217.), have treated this account as fabulous. But the objections of Gosselin have been successfully answered in an elaborate note by Larcher (*Hérodote*, tome iii. pp. 458—464. ed. 1802.; and Major Rennell has sufficiently demonstrated the practicability of the voyage (*Geography of Herodotus*, p. 682. &c.). Without entering upon this discussion, we may observe, that not one of those who question the authenticity of the account given by Herodotus, presume to doubt that the Phœnicians braved the boisterous seas on the coasts of Spain, Gaul, and Britain; and that they had, partially at least, explored the Indian Ocean. But the ships and seamen that did this much, might, undoubtedly, under favourable circumstances, double the Cape of Good Hope. The relation of Herodotus has, besides, such an appearance of good faith; and the circumstance which he doubts, of the navigators having the sun on the right, affords so strong a confirmation of its truth; that there really seems no reasonable ground for doubting that the Phœnicians preceded, by 2,000 years, Vasco de Gama in his perilous enterprise.

Present State of Syria. — The principal modern ports on the coast of Syria are Alexandretta, Latakia, Tripoli, Beyrout, Seyde, and Acre. The commerce which they carry on is but inconsiderable. This, however, is not owing to the badness of the ports, the unsuitableness of the country, or to any natural cause, but wholly to long continued oppression and misgovernment. There is a passage in the dedication to Sandys' *Travels*, that describes the modern state of Syria, Asia Minor, Egypt, &c. with a force and eloquence which it is not very likely will soon be surpassed: —

“Those countries, once so glorious and famous for their happy estate, are now, through vice and ingratitude, become the most deplored spectacles of extreme misery; the wild beasts of mankind having broken in upon them and rooted out all civilitie, and the

pride of a sterne and barbarous tyrant possessing the thrones of ancient and just dominion. Who, ayiming orely at the height of greatnesse and sensualitie, hath in tract of time reduced so great and goodly a part of the world, to that lamentable distresse and servitude under which (to the astonishment of the understanding beholders) it now faints and grogeth. Those rich lands at this present remain waste and overgrowne with bushes, receptacles of wild beasts, of thieves and murderers; large territories dispeopled or thinly inhabited; goodly cities made desolate; sumptuous buildings become ruines; glorious temples either subverted, or prostituted to impietie; true religion discountenanced and oppressed; all nobilitie extinguished; no light of learning permitted, nor vertue cherished: violence and rapine insulting over all, and leaving no securitie save to an abject mind and unlookt or povertie."

Those who compare this beautiful passage with the authentic statements of Volney— incomparably the best of the modern travellers who have visited the countries referred to— will find that it is as accurate as it is eloquent.

U. V.

VALONIA, a species of acorn, forming a very considerable article of export from the Morea and the Levant. The more substance there is in the husk, or cup of the acorn, the better. It is of a bright drab colour, which it preserves so long as it is kept dry: any dampness injures it; as it then turns black, and loses both its strength and value. It is principally used by tanners, and is always in demand. Though a very bulky article, it is uniformly bought and sold by weight. A ship can only take a small proportion of her registered tonnage of valonia, so that its freight per ton is always high. The price in the London market, in March, 1834, varied from 12*l.* to 15*l.* per ton.

The entries of valonia for home consumption in 1831 and 1832 amounted, at an average, to 146,846 cwt. a year. Of 134,307 cwt. of valonia, imported in 1831, 102,226 were brought from Turkey and Continental Greece, exclusive of the Morea; 17,645 cwt., mostly at second hand, from Italy and the Italian islands; 7,461 cwt. from the Ionian Islands; 3,116 from the Morea and the Greek islands; and 3,859 cwt. from the Philippines.

VALPARAISO, the principal sea-port of Chili, in lat. 33° 1' 48" S., lon. 71° 31' 8" W. Population uncertain, perhaps 6,000 or 7,000. The water in the bay is deep, and it affords a secure anchorage, except during northerly gales, to the violence of which it is exposed; but as the holding ground is good, and the pull of the anchor against a steep hill, accidents seldom occur to ships properly found in anchors and cables. There is no mole or jetty; but the water close to the shore is so deep, that it is customary for the smaller class of vessels to carry out an anchor to the northward, and to moor the ship with the stern ashore by another cable made fast to the shore. Large ships lie a little further off, and load and unload by means of lighters. The best shelter is in that part called the Fisherman's Bay, lying between the castle and fort St. Antonio, where, close to a clear shingle beach, there is 9 fathoms water. In the very worst weather, a landing may be effected in this part of the bay.—(See *Miers's Travels in Chili and La Plata*, vol. i. p. 440., where there is a plan of Valparaiso.) The harbours of Valdivia and Concepcion are much superior to that of Valparaiso; the former being, indeed, not only the best in Chili, but second to few in any part of the world. But Valparaiso, being near the capital, Santiago, and being the central *dépôt* for the resources of the province, is most frequented. The town is inconveniently situated, at the extremity of a mountainous ridge; most of the houses being built either upon its acclivity or in its breaches. Large quantities of corn and other articles of provision are shipped here for Callao and Panama, but principally for the former. Exclusive of wheat, the principal articles of export are tallow and hides, copper, the precious metals, indigo, wool, sarsaparilla, &c. It appears from the accounts laid before the reader in another article—(see *antè*, p. 943.),—that the produce of the gold mines of Chili had materially increased during the 20 years ending with 1829, as compared with the previous 20 years. At present, the average produce of both the gold and silver mines may, we believe, be taken at about 175,000*l.* a year. There is a great want of capital in the country; and the anarchy and insecurity that have prevailed since the commencement of the revolutionary war have been very unfavourable to all sorts of industry. There can, however, be no doubt that Chili has already gained considerably, and that she will every day gain more, by her emancipation from the yoke of Old Spain. The trade we carry on with this distant country already amounts to above 1,000,000*l.* a year; and there can be no doubt that it will become far more extensive. In 1831, the declared or real value of the exports of British produce and manufactures from this country to Chili amounted to 651,617*l.*; of this sum, the exports of cotton goods amounted to about 460,000*l.*, those of woollens to 158,000*l.*,

linen to 19,000*l.* &c. Chili also imports spices, tea, wine, sugar, coffee, tobacco, &c. A small part, however, of the imports are re-exported for Peru.

A country with a scanty population, which imports so extensively, cannot be in the wretched condition that Mr. Miers and other disappointed travellers would have us believe. The candour and good sense of M. de la Perouse are above all question; and every one who compares his remarks on the condition of Chili with what has now been stated, must see that its commerce, at least, has gained prodigiously by the revolution.

"The influence of the government is in constant opposition to that of the climate. The system of prohibition exists at Chili in its fullest extent. This kingdom, of which the productions would, if increased to their maximum, supply all Europe; whose wool would be sufficient for the manufactures of France and England; and whose herds, converted into salt provisions, would produce a vast revenue;—this kingdom, alas! has no commerce. Four or five small vessels bring, every year, from Lima, tobacco, sugar, and some articles of European manufacture, which the miserable inhabitants can obtain only at second or third hand, after they have been charged with heavy customs duties at Cadiz, at Lima, and lastly, at their arrival in Chili; in exchange they give their tallow, hides, some deals, and their wheat, which, however, is at so low a price, that the cultivator has no inducement to extend his tillage. Thus Chili, with all its gold, and articles of exchange, can scarcely procure sugars, tobacco, stuffs, linens, cambrics, and hardware, necessary to the ordinary wants of life." — (*Perouse's Voyage*, vol. i. p. 50. Eng. ed.)

Instead, however, of 4 or 5 small ships from Lima, in 1831, 43 British ships, carrying 8,281 tons, entered Valparaiso only, besides several at the other ports! All sorts of European goods are carried direct to Chili, and are admitted at reasonable duties. The advantages resulting from this extensive intercourse with foreigners, and from the settlement of English adventurers in the country, have been already immense, and will every day become more visible. It was impossible, considering the ignorance of the mass of the people, that the old system of tyranny and superstition could be pulled to pieces without a good deal of violence and mischief; but the foundations of a better order of things have been laid; nor can there be a doubt that Chili is destined to become an opulent and a flourishing country.

Monies, Weights, and Measures of Chili are the same as those of Spain; for which, see CADIZ. The quintal of 4 arrobas, or 100 lbs., = 101.44 lbs. avoirdupois. The fanega, or principal corn measure, contains 3,439 English cubic inches, and is therefore = 1.599 Winchester bushels. Hence 5 fanegas = 1 Winchester quarter very nearly. The vara, or measure of length, = 33.384 Eng. inches.

VAN DIEMEN'S LAND, a large island belonging to Great Britain, forming part of Australia, lying between 41° 20' and 43° 30' S. lat., and 144° 40' and 148° 20' W. lon. It is supposed to contain about 15,000,000 acres. — (See the *Mercator's Chart* prefixed to this work.)

This land was discovered by the Dutch navigator Tasman, in 1642, and was named in honour of Anthony Van Diemen, at that time governor-general of the Dutch possessions in the East Indies. Previously to 1798, it was supposed to form part of New Holland, but it was then ascertained to be an island. It was taken possession of by the British in 1803; and in 1804, Hobart Town, the capital, was founded.

The surface is generally hilly and mountainous; but, though none of the land be of the first quality, there are several moderately fertile plains, and a good deal of the hilly ground is susceptible of being cultivated. On the whole, however, it is not supposed that more than about a third part of the entire surface of the island can be considered arable; but about a third more may be advantageously used as sheep pasture. As compared with New Holland, it is well watered. The climate, though very variable, is, generally speaking, good, and suitable for European constitutions; and it is not exposed to the tremendous droughts that occasion so much mischief in New South Wales. Wheat is raised in considerable quantities. Wool, however, is at present the staple produce of the colony.

Van Diemen's Land, like New South Wales, was originally intended to serve as a penal colony, and convicts are still sent to it; latterly, however, it has received a very considerable number of free settlers. In 1830, the total population of the island, exclusive of aborigines, amounted to 23,169, of whom about 10,000 were convicts. The disparity between the sexes is not quite so great here as in New South Wales.

The prosperity of the colony was formerly a good deal retarded by the enormities committed by a banditti of runaway convicts, known by the name of bush-rangers; and more recently by the hostilities of the natives. Vigorous measures have, however, been adopted for the suppression of such outrages, by confining the natives within a limited district; and it is to be hoped that they may be effectual.

Hobart Town is situated in the southern part of the island, on the west side of the river Derwent, near its junction with Storm Bay, in lat. 42° 54' S., lon. 147° 28' E. The water is deep, and the anchorage good. A jetty has been constructed, accessible to the largest ships. The situation appears to have been very well chosen; and the

town has been judiciously laid out. In December, 1832, the district of Hobart Town contained 10,101 inhabitants, of which were, *free*, males 3,850, females 2,776; *convicts*, males 2,699, females 776. The population of the town itself, at the epoch referred to, was about 9,600. The houses are supposed to be worth, at an average, 50*l.* a year. There are several printing establishments in the town, and no fewer than 9 or 10 newspapers, some of them very well conducted. There is also a Book Society, a Mechanics' Institute, and several respectable schools and academies. The Van Diemen's Land Banking Company, the Derwent Bank, and the Commercial Bank, have each offices in Hobart Town. They are joint stock companies.

Launceston, the second town in the island, is situated in the northern part, at the head of the navigable river Tamar, which falls into Port Dalrymple. Its population may amount to about 5,000. It has a considerable trade with Sydney and Hobart Town, and recently it has begun to trade direct to England.

Trade of Van Diemen's Land. — Imports. — Malt liquors, rum, brandy, and wine, form the principal part of the imports into the colony. Next to them are piece goods, hardware, tea, sugar, &c.

Account of the Exports from the United Kingdom to Van Diemen's Land during each of the Five Years ending with 1831.

Wines	55,532	50,158	15,198	16,081	18,118

Exclusive of the imports from the mother country, Van Diemen's Land imports sugar from the Mauritius, wine and fruit from the Cape, tea from China or Singapore, piece goods from India, tobacco from Brazil, and beef, bacon, cheese, horses, &c. from New South Wales. According to the statement in the papers published by the Board of Trade (vol. i. p. 251.) the total value of the imports in 1830, was 255,298*l.*; of which, 153,478*l.* was supplied by Great Britain, 93,251*l.* by British possessions, and 8,569*l.* by foreign states.

Exports. — Wool forms by far the principal article of export, and next to it is wheat, principally sent to Sydney, whale oil, whalebone, timber, mimosa bark, live stock, potatoes, &c. The increase in the exports of wool is quite extraordinary. It is almost wholly brought to England.

Account of the Imports of Wool from Van Diemen's Land into the United Kingdom from 1827 to 1833, both inclusive.

Years.	Lbs.	Years.	Lbs.	Years.	Lbs.	Years.	Lbs.
1827	192,075	1829	925,320	1831	1,359,203	1833	1,547,201*
1828	528,816	1830	993,279	1832	951,131		

In 1831, the imports of whale oil from Van Diemen's Land amounted to 848 tons; and during the same year, 39,264 cwt. of bark were imported. The total real value of the articles exported in 1830 was estimated at 170,000*l.*, distributed as follows:—

Articles.	Amount.	Articles.	Amount.
Wool	48,000	Hides	600
Wheat	40,000	Seal skins	400
Oil	17,000	Opossum and kangaroo ditto	400
Whalebone	6,000	Mimosa bark	2,000
Flour	5,000	Timber	1,000
Live stock	5,000	Uncenumerated goods	41,600
Potatoes	4,500		
Barley and oats	500		
		Total	170,000

Coins, Weights, and Measures, same as in England. The Spanish dollar circulates at 4*s.* 4*d.*

Shipping, &c. — In 1830, there belonged to the island 26 vessels, of the aggregate burden of 2,151 tons.

* The imports of wool from New South Wales in 1833, were 1,969,508 lbs.; making the total imports from Australia in that year, 3,516,869 lbs.

Arrivals at Hobart Town in 1832.—There arrived during the year, 51 ships, of the burden of 18,214 tons; 25 brigs, of 4,201 tons; and 29 schooners, of 1,948 tons; making in all, 105 vessels, of the burden of 24,363 tons. Of these, were from England 41, New South Wales 35, India and China 3, Swan River 3, New Zealand 6, fishery 2, Mauritius 5, Launceston 10, and Desolation Island 1.

Revenue, &c.—The customs duties collected in the colony amount to about 50,000*l.* a year, and the whole ordinary revenue is about 70,000*l.*; to which has to be added, the revenue derived from the sale of land, and other sources. Government contributes about 120,000*l.* a year in aid of the colonial revenue, to defray the expenses of the convict establishments, &c.

For the regulations as to the granting of land in Van Diemen's Land, &c., see SYDNEY.

Immigrants.—Of these there arrived at Van Diemen's Land, during 1832, men 926, women 769, children 416; in all, 2,111.

Prices of Provisions at Hobart Town, December, 1832.

				The average prices during the year 1852 were—				
Beef, per lb.	-	-	0	9	to	0	10	
Mutton, do.	-	-	0	5	½	-	0	6
Veal, do.	-	-	0	8	-	0	9	
Pork, do.	-	-	0	8	-	0	9	
Goose	-	-	9	0	-	10	0	
Turkey	-	-	12	0	-	14	0	
Bread, the quarter loaf	-	-		0	8			
				Stall-fed beef, per lb.				
				Mutton, do.				
				Pork, do.				
				Veal, do.				
				Hay, from 1 <i>l.</i> to 9 <i>l.</i> 9 <i>s.</i> per ton.				

The average prices during the year 1832 were—

	<i>£.</i>	<i>s.</i>	<i>d.</i>		<i>£.</i>	<i>s.</i>	<i>d.</i>
Stall-fed beef, per lb.	-	-	0	8	to	0	11
Mutton, do.	-	-	0	4½	-	0	7
Pork, do.	-	-	0	8	-	0	9
Veal, do.	-	-	0	9	-	0	10
Hay, from 1 <i>l.</i> to 9 <i>s.</i> 9 <i>d.</i> per ton.	-	-	0	9	-	0	10

By comparing these prices with those of Sydney (*ante*, p. 1104.), the greater cheapness of the principal necessaries of life at the latter is obvious; house rent is also higher at Hobart Town. But it would appear that wages are rather higher in Van Diemen's Land than in New South Wales. Drunkenness is the great vice of the free, as well as of the convict population; and it is this, and not the facility of acquiring land, that renders it so difficult to procure good servants in Australia. Lieutenant Breton says, that the free women sent to the colony by government have proved no great acquisition, except by increasing the population; but we hardly think that this can be the case.

Encouragement to Emigrants.—Government has recently come to a resolution to advance, by way of loan, a sum not exceeding 20*l.* each, to a given number of young and married agricultural labourers, intending to emigrate to Australia with their wives and families. The following are the conditions as to this advance:—

Conditions under which Government will make advances to Emigrants to New South Wales and Van Diemen's Land.—No advance will be made except to young and married agricultural labourers, who intend taking their wives and families with them; and a strict inquiry will be instituted into their character and habits of industry, before the assistance they solicit will be granted to them.

No 1 family will be allowed an advance exceeding 20*l.*; and it will be useless therefore for parties, who in any not possess the remainder of the sum requisite for defraying the expense of their passage, to apply for assistance.

Every person desirous of receiving the proposed advance must fill up, and send back to the Under Secretary of State for the Colonial Department, the Return hereto annexed. (Copies of this Return may be had from any of the agents for emigration mentioned below.) If the information contained in this Return, and the answers to the inquiries which may be addressed to the parties who certify the correctness of the return, shall be considered satisfactory, the applicant will receive notice to that effect. He may then proceed to make his agreement with the owners or masters of ships proceeding to New South Wales or Van Diemen's Land; and as soon as any ship-owner or master shall notify (in a form which will be provided for that purpose) that the emigrant has taken the other necessary steps for engaging his passage, an order will be granted for the payment, in the colony, of 20*l.* to the agent or master of the vessel in which this emigrant may arrive. The emigrant will of course be able to obtain a corresponding deduction from the amount to be paid by himself in this country.

The order for payment will be intrusted to the master of the vessel in which the emigrant is to proceed, and will consist of a sealed despatch to the governor, containing the name and

description of the party on whose account the money is to be paid, and enclosing a promissory note, which he will be required to sign in acknowledgment of his debt;—which note must be signed by the captain and chief mate of the vessel. But arrangements will be made, by which the payment of this order will not take place in the colony, until the captain shall have produced the parties, on whose account it is to be made, before the officer appointed for that purpose; and they shall have entered into a fresh obligation for the repayment of the advance made to them. For it is the intention of his Majesty's government, and cannot be too clearly understood by all persons who may accept this loan, that repayment of the debt (in such proportions, and at such intervals, as may not be unsuitable to the circumstances of each emigrant) shall be strictly enforced, by means of the ample powers which the laws of the colony render available for that purpose.

Government agents for emigration have been appointed at Liverpool, Bristol, Dublin, Cork, Limerick, Belfast, and Greenock; who have been instructed to afford gratuitous information to all persons applying to them, as to the best means of carrying their schemes of emigration into effect. Parties, therefore, who may reside in the neighbourhood of these agents, are requested to apply to them either personally (or by letter, post paid) for information on this subject.

All applications for the assistance of government must be made by letter only, addressed to R. W. Hay, Esq., Under Secretary of State, London; and should the number of applications be greater than the funds at their disposal will enable them to comply with, priority of date will form the rule of selection among applications in which there shall appear no other ground of distinction.

Downing Street, 6th April, 1834.

CUSTOM-HOUSE REGULATIONS, RATES OF PILOTAGE, HARBOUR DUES, &c.

Custom-house Regulations.

(Hours for public business from 10 to 3 daily, excepting on Saturday, from 10 to 12.)

Entry of a British vessel, not colonial, with merchandise	-	-	1	10	0
Entry of any foreign vessel	-	-	3	0	0
Permission to trade	-	-	1	1	0
Dues on each bond	-	-	0	10	6
Dues on port clearance and fee	-	-	0	7	6

Transports are free from port charges.

Colonial Vessels.—Entry, and clearance to the out-ports

Fee on ditto	-	-	0	4	0
Entry and clearance to the fishery or to the out-ports	-	-	0	2	0

Fee on ditto

Clearance of an open boat	-	-	0	1	0
Annual licence for a boat	-	-	0	2	6

Duties.—On brandy, per gallon

On Holland's or geneva, per gallon	-	-	0	10	0
On rum, per gallon, the produce of the West Indian colonies	-	-	0	7	6

On British gin, per gallon	-	-	0	7	6
On tobacco, per lb.	-	-	0	1	6

The duty on all spirits, either British or foreign, is increased in proportion to strength, if over proof, according to Sykes's hydrometer.

On all merchandise of foreign produce or manufacture, an *ad valorem* duty of 5 per cent. on importation, agreeably to the act of 4 Geo. 4, c. 36., with the exception of wine, which is subjected to a duty of 10 per cent. Goods of British manufacture are not subjected to any duty.

	<i>£.</i>	<i>s.</i>	<i>d.</i>
Wharfage.—On landing each cask, bale, or package	-	0	9 0
On landing iron, per ton	-	0	9 0
On landing salt, per ton	-	0	3 0
On landing timber, per 1,000 feet	-	0	2 0
On shipping each cask, bale, or package	-	0	0 3
On shipping iron, per ton	-	0	3 0
On shipping salt, per ton	-	0	1 0

Colonial produce, when landed or shipped, is not subjected to any charge, except for a surffiance.

Colonial produce, when landed or shipped, is not subjected to any charge, except for a surffiance.

Fees.—A surffiance to land or ship goods

A warrant to remove goods from under bond	-	-	0	1	0
On landing each cask or package of spirits or wine	-	-	0	6	0

On the registry of vessels not exceeding 40 tons

On the registry of vessels above 40 tons, per ton	-	-	0	1	0
To the chief clerk, on the registry of vessels	-	-	0	10	0

On indorsing change of master

On indorsing change of master	-	-	0	10	0

Warehouse Rent and Charges.—A government order published the 7th of February, 1826, fixes the following rents on spirits and tobacco, in the king's bonded stores, viz.:

1st. All spirituous liquors, 1*s.* 3*d.* per ton of 252 gallons, for every week, or any period less than a week, during which the same shall be deposited.

2dly. Tobacco, 6*d.* per ton for every week, or any period less than a week, during which the same shall be deposited.

3dly. The amount of all such warehouse rent, in respect of any cask or package required to be delivered, must be paid before the same can be so delivered.

4thly. No allowance whatsoever will at any time be made, in respect of, nor will the government be answerable for, any loss by fire, leakage, robbery, or casualty of any kind.

Government Order, 28th of February, 1829.—Representations having been made to the lieutenant governor, of the incon-

venience and delay attending the stowing and unstowing of goods in the bonded warehouses, a gang of men has been appointed to be employed under the storekeeper for this purpose exclusively, and the following scale of charges will be required to be paid :—

For Spirits. — Per pipe, 3 pipe, or puncheon, each, stowing 9d., unstowing 1s. 6d.
Per 1 pipe, hoghead, or barrel, stowing 6d., unstowing 2s.

Per case containing 3 or more dozen bottles, stowing 3d., unstowing 4d.

Per case containing a less quantity than 3 dozen, stowing 2d., unstowing 3d.

For Tobacco. — In large serons, each, stowing 6d., unstowing 9d.

In cases, each, stowing 3d., unstowing 4d.

In kegs, each, stowing 2d., unstowing 3d.

In baskets, rolls, or small serons, stowing 1d., unstowing 1d.

In consequence of this arrangement, it is to be understood that no labourers are to be admitted into, or employed at, the bonded warehouse, except the storekeeper's gang.

Goods intended to be warehoused under bond must be landed before 12 o'clock.

Hours of attendance at the Custom-house quay, from 8 o'clock till 4 from the 1st of September to the 30th of April, and from 9 till 4 from the 1st of May till the 31st of August.

The appointed days for opening the bonding warehouse for the delivery of goods, are, Mondays and Thursdays in every week, at 1 o'clock, on which days the duties must be paid prior to 12 o'clock. Tobacco is issued on the same days, from 10 to 12 o'clock.

Rates of Pilotage at the Derwent.

Draught of water.	Intro.		Out.	
	L.	s. d.	L.	s. d.
10 feet and under	-	- 3 0 11	2	7 4

18 ditto	-	- 8 17 0	6	14 7
19 ditto	-	- 10 11 6	8	6 10
20 ditto	-	- 13 3 3	10	4 9

These details have been principally derived from *An Account of Van Diemen's Land*, published at Hobart Town in 1833; and partly from Lieut. Breton's book, and different *Parliamentary Papers*.

VANILLA, the fruit of the *Epidendrum Vanilla*, a species of vine extensively cultivated in Mexico. It has a trailing stem, not unlike the common ivy, but not so woody, which attaches itself to any tree that grows near it. The Indians propagate it by planting cuttings at the foot of trees selected for that purpose. It rises to the height of 18 or 20 feet; the flowers are of a greenish yellow colour, mixed with white; the fruit is about 8 or 10 inches long, of a yellow colour when gathered, but dark brown or black when imported into Europe; it is wrinkled on the outside, and full of a vast number of seeds like grains of sand, having, when properly prepared, a peculiar and delicious fragrance. It is principally used for mixing with and perfuming chocolate; and is, on that account, largely imported into Spain; but as chocolate, owing to oppressive duties, is little used in England, vanilla is not much known in this country.

Vanilla is principally gathered in the intendency of Vera Cruz, in Mexico, at Misantla, Colipa, Vacuatla, and other places. It is collected by the Indians, who sell it to the whites (*gente de razon*), who prepare it for market. They spread it to dry in the sun for some hours, then wrap it in woollen cloths to sweat. Like pepper, it changes its colour in this operation — becoming almost black. It is finally dried by exposing it to the sun for a day. There are four varieties of vanilla, all differing in price and excellence; viz. the *vanilla fina*, the *zacate*, the *rezacate*, and the *rasura*. The best comes from the forests surrounding the village of Zentila, in the intendency of Oaxaca. According to Humboldt, the mean exportation of vanilla from Vera Cruz may amount to from 900 to 1,000 millares, worth at Vera Cruz from 30,000 to 40,000 dollars. — Vanilla is also imported from Brazil, but it is very inferior. The finest Mexican vanilla is extremely high priced. All sorts are subjected in this country to a duty of 5s. per lb. — (See *Humboldt, Nouvelle Espagne*, 2d edit. tome iii. pp. 37. 46.; *Poinsett's Notes on Mexico*, p. 194. &c.)

VELLUM, a species of fine parchment. — (See PARCHMENT.)

VENICE, a famous city of Austrian Italy, formerly the capital of the republic of that name, situated on a cluster of small islands towards the northern extremity of the Adriatic, in lat. 45° 25' 53" N., lon. 12° 20' 31" E. Population about 100,000. The commerce of Venice, once the most extensive of any European city, is now comparatively trifling; and the population is gradually diminishing both in numbers and wealth. Her imports consist of wheat, and other sorts of grain, from the adjoining provinces of Lombardy and the Black Sea; olive oil, principally from the Ionian Islands; cotton stuffs and hardware from England; sugar, coffee, and other colonial products from England, the United States, Brazil, &c.; dried fish, dye stuffs, &c. The exports principally consist of grain, raw and wrought silk, paper, woollen manufactures, fruits, cheese, &c., the products of the adjoining provinces of Italy, and of her own industry; but her manufactures, so famous in the middle ages, are now much decayed.

At Port Dalrymple.

Proceeding above Whirlpool Reach.

	L.	s.	d.	Remaining below Whirlpool Reach.
7 feet and under	-	- 2 5 6	1	10 4
Above 7 feet, per foot	-	- 0 6 6	0	4 4

If the pilot does not board the vessel outside the middle ground at the Heads at George Town, or, the weather not permitting his going outside, if he be not ready to show the channel by keeping his boat in the fair way until the ship can be boarded, he shall forfeit ½ the pilotage inward.

For every number of inches below 6, no charge is to be made; for ½ a foot and upwards, 1 foot is to be charged.

Colonial vessels are exempted from the payment of pilotage, unless the master shall make the signal for a pilot and accept his service.

Harbour Dues at the Derwent.

	L.	s.	d.
For mooring and unmooring a vessel within the harbour, per register ton	-	- 0 0 1	
For each removal of the ship within the harbour, per register ton	-	- 0 0 1	

Colonial vessels under 50 tons per register, to be exempted from the payment of the foregoing dues, unless the services of the harbour master be specifically required.

At Port Dalrymple.

	L.	s.	d.
For each removal of a ship or vessel from anchorage or moorings, to other anchorage or moorings, under 200 tons	-	- 0 15 0	
200 tons and under 300	-	- 1 0 0	
300 tons and under 400	-	- 1 10 0	
400 tons and under 500	-	- 2 0 0	
500 tons and upwards	-	- 2 10 0	

Each vessel entering the harbour will be charged with 2 removes.

Vessels belonging to the port are not to pay harbour dues. No vessels to be deemed colonial that are not registered in Van Diemen's Land.

Port. — The islands on which Venice is built lie within a line of long, low, narrow islands, running N. and S., and enclosing what is termed the lagoon, or shallows, that surround the city, and separate it from the main land. The principal entrance from the sea to the lagoon is at Malamocco, about $1\frac{1}{2}$ league S. from the city; but there are other, though less frequented, entrances, both to the S. and the N. of this one. There is a bar outside Malamocco, on which there are not more than 10 feet at high water at spring tides; but there is a channel between the western point of the bar and the village of San Pietro, which has 16 feet water at springs, and 14 at neaps. Merchant vessels usually moor off the ducal palace; but sometimes they come into the grand canal which intersects the city, and sometimes they moor in the wider channel of the Giudecca. Vessels coming from the south for the most part make Pirano or Rovigno on the coast of Istria, where they take on board pilots, who carry them to the bar opposite to Malamocco. But the employment of Istrian pilots is quite optional with the master, and is not, as is sometimes represented, a compulsory regulation. When one is taken, the usual fee from Pirano or Rovigno to the bar is 20 Austrian dollars, or about 4*l.* On arriving at the bar, ships are conducted across it and into port by pilots, whose duty it is to meet them outside, or on the bar, and of whose services they must avail themselves. — (For the charges on account of pilotage, see *post*.)

Money. — Formerly there were various methods of accounting here; but now accounts are kept, as at Genoa, in lire Italiane, divided into centesimi, or 100th parts. The lira is supposed to be of the same weight, fineness, and, consequently, value as the franc. But the coins *actually in circulation*, denominated lire, are respectively equal in sterling value to about 5*d.* and $\frac{1}{2}$ *d.* The latter are coined by the Austrian government.

Weights and Measures. — The commercial weights are here, as at Genoa, of two sorts; the *peso sottile* and the *peso grosso*. The French kilogramme, called the libbra Italiana, is also sometimes introduced.

100 lbs. peso grosso = 105.186 lbs. avoirdupois.	100 lbs. peso sottile = 66.428 lbs. avoirdupois.
— 127.830 lbs. Troy.	— 80.728 lbs. Troy.
— 47.698 kilogrammes.	— 30.123 kilogrammes.
— 98.485 lbs. of Hamburg.	— 62.196 lbs. of Hamburg.
— 96.569 lbs. of Amsterdam.	— 60.986 lbs. of Amsterdam.

The moggio, or measure for corn, is divided into 4 staja, 16 quartre, or $6\frac{1}{2}$ quartaroli. The staja = 2.27 Winchester bushels.

The measure for wine, anfora = 4 bizonzi, or 8 mastelli, or 48 sechii, or 192 bozze, or 768 quartuzzi. It contains 137 English wine gallons.

The botta = 5 bizonzi. Oil is sold by weight or measure. The botta contains 2 migliaje, or 80 miri of 25 lbs. peso grosso. The miro = 4.028 English wine gallons.

The braccio, or long measure, for woollens = 26.6 English inches; the braccio for silks = 24.8 do. The foot of Venice = 13.68 English inches. — (*Nelkenbrecher*, and *Dr. Kelly*.)

Historical Notice. — Venice was the earliest, and for a lengthened period the most considerable, commercial city of modern Europe. Her origin dates from the invasion of Italy by Attila in 452. A number of the inhabitants of Aquileia, and the neighbouring territory, flying from the ravages of the barbarians, found a poor but secure asylum in the cluster of small islands opposite to the mouth of the Brenta, near the head of the Adriatic Gulf. In this situation they were forced to cultivate commerce and its subsidiary arts, as the only means by which they could maintain themselves. At a very early period they began to trade with Constantinople and the Levant; and notwithstanding the competition of the Genoese and Pisans, they continued to engross the principal trade in Eastern products, till the discovery of a route to India by the Cape of Good Hope turned this traffic into a totally new channel. The crusades contributed to increase the wealth, and to extend the commerce and the possessions of Venice. Towards the middle of the 15th century, when the Turkish sultan, Mahomet II., entered Constantinople sword in hand, and placed himself on the throne of Constantine and Justinian, the power of the Venetians had attained its maximum. At that period, besides several extensive, populous, and well cultivated provinces in Lombardy, the republic was mistress of Crete and Cyprus, of the greater part of the Morea, and most of the isles in the Egean Sea. She had secured a chain of forts and factories that extended along the coasts of Greece from the Morea to Dalmatia; while she monopolised almost the whole foreign trade of Egypt. The preservation of this monopoly, of the absolute dominion she had early usurped over the Adriatic, and of the dependence of her colonies and distant establishments, were amongst the principal objects of the Venetian government; and the measures it adopted in that view were at once skilfully devised, and prosecuted with inflexible constancy. With the single exception of Rome, Venice, in the 15th century, was by far the richest and most magnificent of European cities; and her singular situation in the midst of the sea, on which she seems to float, contributed to impress those who visited her with still higher notions of her wealth and grandeur. Sannazarius is not the only one who has preferred Venice to the ancient capital of the world; but none have so beautifully expressed their preference.

Viderat Adriacis Venetam Neptunus in undis,

Stare urbem, et toto ponere jura mari.

Nunc mihi Tarpeias quantumvis, Jupiter, arces

Objice, et illa tua mœnia Martis, ait:

Si Tiberim pelago præfers, urbem aspice utramque,

Illam homines dicas, hanc posuisse Deos.

Though justly regarded as one of the principal bulwarks of Christendom against the Turks, Venice had to contend, in the early part of the 16th century, against a combination of the European powers. The famous league of Cambray, of which Pope Julius II. was the real author, was formed for the avowed purpose of effecting the entire subjugation of the Venetians, and the partition of their territories. The emperor and

the kings of France and Spain joined this powerful confederacy. But, owing less to the valour of the Venetians, than to dissensions amongst their enemies, the league was speedily dissolved without materially weakening the power of the republic. From that period the policy of Venice was comparatively pacific and cautious. But notwithstanding her efforts to keep on good terms with the Turks, the latter invaded Cyprus in 1570; and conquered it after a gallant resistance, continued for 11 years. The Venetians had the principal share in the decisive victory gained over the Turks at Lepanto in 1571: but owing to the discordant views of the confederates, it was not properly followed up, and could not prevent the fall of Cyprus.

The war with the Turks in Candia commenced in 1645, and continued till 1670. The Venetians exerted all their energies in defence of this valuable island; and its acquisition cost the Turks above 200,000 men. The loss of Candia, and the rapid decline of the commerce of the republic, now almost wholly turned into other channels, reduced Venice, at the close of the 17th century, to a state of great exhaustion. She may be said, indeed, to have owed the last 100 years of her existence more to the forbearance and jealousies of others than to any strength of her own. Nothing, however, could avert that fate she had seen overwhelm so many once powerful states. In 1797, the "maiden city" submitted to the yoke of the conqueror: and the last surviving witness of antiquity — the link that united the ancient to the modern world — stripped of independence, of commerce, and of wealth, is now slowly sinking into the waves whence she arose.

The foundation of Venice is described by Gibbon, c. 35.; and in his 60th chapter he has eloquently depicted her prosperity in the year 1200. Mr. Hallam, in his work on the *Middle Ages* (vol. i. pp. 470—487.), has given a brief account of the changes of the Venetian government. Her history occupies a considerable space in the voluminous work of M. Sismondi on the *Italian Republics*; but his details as to her trade and commercial policy are singularly meagre and uninteresting. All previous histories of Venice have, however, been thrown into the shade by the admirable work of M. Daru (*Histoire de la République de Venise*, 2d ed. 8 vols. 8vo. Paris, 1821.) Having had access to genuine sources of information, inaccessible to all his predecessors, M. Daru's work is as superior to theirs in accuracy, as it is in most other qualities required in a history.

Trade, Navigation, and Manufactures of the Venetians in the 15th Century. — The Venetian ships of the largest class were denominated galleasses, and were fitted up for the double purpose of war and commerce. Some of them carried 50 pieces of cannon, and crews of 600 men. These vessels were sometimes, also, called argosers or argosies. They had early an intercourse with England; and argosies used to be common in our ports. In 1325, Edward II. entered into a commercial treaty with Venice, in which full liberty is given to them, for 10 years, to sell their merchandise in England, and to return home in safety, without being made answerable, as was the practice in those days, for the crimes or debts of other strangers. — (*Anderson's Chron. Deduction, Anno 1325.*) Sir William Monson mentions, that the last argosie that sailed from Venice for England was lost, with a rich cargo and many passengers, on the coast of the Isle of Wight, in 1587.

In the beginning of the 15th century, the annual value of the goods exported from Venice by sea, exclusive of those exported to the states adjoining her provinces in Lombardy, was estimated, by contemporary writers, at 10,000,000 ducats; the profits of the out and home voyage, including freight, being estimated at 4,000,000 ducats. At the period in question, the Venetian shipping consisted of 3,000 vessels of from 100 to 200 tons burden, carrying 17,000 sailors; 300 ships with 8,000 sailors; and 45 galleys of various size, kept afloat by the republic for the protection of her trade, &c., having 11,000 men on board. In the dock-yard, 16,000 labourers were usually employed.* The trade to Syria and Egypt seems to have been conducted principally by ready money; for 500,000 ducats are said to have been annually exported to these countries; 100,000 were sent to England. — (*Daru*, tome ii. p. 189. &c.) The vessels of Venice visited every port of the Mediterranean, and every coast of Europe; and her maritime commerce was, probably, not much inferior to that of all the rest of Christendom. So late as 1518, 5 Venetian galleasses arrived at Antwerp, laden with spices, drugs, silks, &c. for the fair at that city.

The Venetians did not, however, confine themselves to the supply of Europe with the commodities of the East, and to the extension and improvement of navigation. They attempted new arts, and prosecuted them with vigour and success, at a period when they were entirely unknown in other European countries. The glass manufacture of Venice was the first, and for a long time the most celebrated, of any in Europe; and her manufactures of silk, cloth of gold, leather, refined sugar, &c. were deservedly esteemed. The jealousy of the government, and their intolerance of any thing like free discussion, was unfavourable to the production of great literary works. Every scholar is, however, aware of the fame which Venice early acquired by the perfection to which

* This is the statement of the native authorities; but there can be no doubt that it is much exaggerated; — 1,600 would be a more reasonable number.

she carried the art of printing. The classics that issued from the Aldine presses are still universally and justly admired for their beauty and correctness. The Bank of Venice was established in the 12th century. It continued throughout a bank of deposit merely, and was skilfully conducted.

But the policy of government, though favourable to the introduction and establishment of manufactures, was fatal to their progressive advancement. The importation of foreign manufactured commodities into the territories of the republic for domestic consumption was forbidden under the severest penalties. The processes to be followed in the manufacture of most articles were regulated by law. — "*Dès l'année 1172, un tribunal avoit été créé pour la police des arts et métiers, la qualité et la quantité des matières furent soigneusement déterminées.*" — (Daru, tome iii. p. 153.) Having, in this way, little to fear from foreign competition, and being tied down to a system of routine, there was nothing left to stimulate invention and discovery; and during the last century the manufactures of Venice were chiefly remarkable as evincing the extraordinary perfection to which they had early arrived, and the absence of all recent improvements. An unexceptionable judge, M. Berthollet, employed by the French government to report on the state of the arts of Venice, observed, "*Que l'industrie des Vénitiens, comme celle des Chinois, avoit été précoce, mais étoit restée stationnaire.*" — (Daru, tome iii. p. 161.)

M. Daru has given the following extract from an article in the statutes of the State Inquisition, which strikingly displays the real character of the Venetian government, and their jealousy of foreigners: — "If any workman or artisan carry his art to a foreign country, to the prejudice of the republic, he shall be ordered to return; if he do not obey, his nearest relations shall be imprisoned, that his regard for them may induce him to come back. If he return, the past shall be forgiven, and employment shall be provided for him at Venice. If, in despite of the imprisonment of his relations, he persevere in his absence, an emissary shall be employed to despatch him; and after his death his relations shall be set at liberty!" — (Tom. iii. p. 150.)

The 19th book of M. Daru's history contains a comprehensive and well-digested account of the commerce, manufactures, and navigation of Venice. But it was not possible, in a work on the general history of the republic, to enter so fully into the details as to these subjects as their importance would have justified. The *Storia Civile e Politica del Commercio de' Veneziani*, di Carlo Antonio Marin, in 8 vols. 8vo, published at Venice at different periods, from 1798 to 1808, is unworthy of the title. It contains, indeed, a great many curious statements; but it is exceedingly prolix; and while the most unimportant and trivial subjects are frequently discussed at extreme length, many of great interest are either entirely omitted, or are treated in a very brief and unsatisfactory manner. The commercial history of Venice remains to be written; and were it executed by a person of competent attainments, it would be a most valuable acquisition.

Present Trade of Venice. — From the period when Venice came into the possession of Austria, down to 1830, it seems to have been the policy of the government to encourage Trieste in preference to Venice; and the circumstance of the former being a free port, gave her a very decided advantage over the latter. Latterly, however, a more equitable policy has prevailed. In 1830, Venice was made a free port; and has since fully participated in every privilege conferred on Trieste. But, notwithstanding this circumstance, the latter still continues to preserve the ascendancy; and the revival of trade that has taken place at Venice has not been so great as might have been anticipated. The truth is, that except in so far as she is the *entrepôt* of the adjoining provinces of Lombardy, Venice has no considerable natural advantage as a trading city; and her extraordinary prosperity during the middle ages is more to be ascribed to the comparative security enjoyed by the inhabitants, and to their success in engrossing the principal share of the commerce of the Levant, than to any other circumstance. Still, however, the trade is far from inconsiderable. But, unfortunately, there are no means by which to ascertain its precise amount. The statements subjoined are to be regarded merely as rough approximations; they have, however, been obtained from the best sources, and come as near the mark as it is perhaps possible to attain. By far the largest part of the exports from Venice are made through Trieste by coasting vessels, that are every day passing between the two cities. The smuggling of prohibited and overtaxed articles into Austrian Lombardy is also practised to a great extent. It is believed that fully 2-3ds of the coffee made use of in Lombardy is clandestinely introduced; and sugar, British cottons, and hardware, with a variety of other articles, are supplied through illegitimate channels. The facilities for smuggling, owing to the nature of the frontier, and the ease with which the officers are corrupted, are such, that the articles passing through the hands of the fair trader affords no test of the real extent of the business done. It is to be hoped that the Austrian government will take an enlightened view of this important matter. It cannot but be anxious for the suppression of smuggling; and it may be assured that this is not practicable otherwise than by a reduction of the duties. The regulations as to the payment of the duties on goods destined for the interior, the clearing of ships, &c., are the same at Venice as Trieste; which see.

Shipping. — There belonged to Venice in 1832 —

Vessels.	No.	Tonnage.	Men.
In foreign trade	101	21,841	1,114
coasting do.	107	8,208	616
	211	30,049	1,760

Fishing boats are not of a size to be rated as vessels of tonnage; but Mr. Money thinks that not less than 16,000 of the population subsist by fishing near the port and over the lagoon. The tonnage of Venice has not recently been either on the increase or the decline. Its inconsiderable amount, compared with what it once was, is a striking proof of the decline of this famous emporium.

Banking Establishments. — The old bank of Venice was founded so far back as 1171, being the most ancient establishment of the kind in Europe. It was a bank of deposit; and such was the estimation in which it was held, that its paper continued to bear an agio as compared with coin down to 1797, when the bank fell with the government by which it had been guaranteed. At present there are no corporate banking establishments in the city; and no bank notes are in circulation. There are, however, several private banking houses, which buy, sell, and discount bills; and make advances on land and other securities. They are under no legal regulations of any sort, except formally declaring the amount of their capital to the authorities when they commence business. The legal and usual rate of interest and discount is 6 per cent. It is not the practice to allow interest on deposits. Bills on London are usually drawn at 3 months, and on Trieste at 1 month.

Brokers, Commission, &c. — The number of brokers is limited, and they are licensed by government; but the business of commission merchant and factor is open to every one. Before, however, commencing any trade or profession at Venice, a petition must be presented for leave to the authorities: but this is more a matter of form than any thing else; its prayer being rarely, if ever, refused.

The usual rate of commission and factorage on the purchase or sale of colonial produce is 2 per cent., and on manufactured goods 3 per cent., inclusive of broker's commission, 1 per cent. A ship broker's commission on the freight of a whole cargo is 2 per cent., and on a general cargo 4 per cent. By the custom of the place, merchants charge 2 per cent. on the inward, and 2 per cent. on the outward, freight of all ships consigned to them; and this, though they had done no more than recommend the master to a broker! A bill broker's commission is $\frac{1}{2}$ per mille. Merchants and bankers charge a commission on internal bills of $\frac{1}{2}$ per cent., and on foreign do. of 1 per cent.

Insurances are effected by companies and individuals. The government charges no duty on the policies.

Communications with Lombardy are effected by flat-bottomed vessels, which, passing through the lagoon, enter the canals and rivers, and make their way through most part of the country watered by the Po and its tributaries. The freight of goods from Milan to Venice, distant about 170 miles, is about 1*l.* per ton. The principal products they bring down are grain, silk, hemp, and flax, cheese, rubarb, &c. The country to the north of Venice affords large quantities of deals, which are shipped for Malta, Sicily, and the Levant.

Quarantine is enforced here the same as at Trieste. Ships coming from without the Straits of Gibraltar, provided there be no infectious disease on board, are admitted to *pratique* on performing a short quarantine of 7 days in a part of the lagoon, about a mile from the city. Long quarantine is performed a little farther off. The lazaretto, and establishments for passengers, &c. performing quarantine, are among the best in Europe. Ships having foul bills, or coming from suspicious places, are sent thither from Trieste. — (For the quarantine charges, see *anté*.)

Provisions, Ships' Stores, &c. — These articles may all be had at Venice of excellent quality, but not cheap, with, perhaps, the exception of bread. Water is conveyed to the city by lighters, and is, consequently, pretty dear; fuel is very scarce, and very high priced. We subjoin an account of the

Average Prices in Sterling Money, per Imperial Quarter, of the several Sorts of Grain at Venice for the Ten Years ending with 1831.

Years.	Wheat.	Malze.	Oats.	Rye.	Years.	Wheat.	Malze.	Oats.	Rye.

Tares. — On goods leaving the free port of Venice for the Interior of the Austrian states, the Custom-house allows no tares; but cases, casks, and other coverings go into the scale with their contents, and the duty is levied on the gross weight. Wine, spirits, &c. consumed in this city, being liable to an excise duty to cover the municipal expenses, have an allowance, if in iron-bound casks, of 18 per cent. on the weight; and if not in iron-bound casks, of 12 per cent. The tares allowed between merchants are as follow: —

Cotton wool, Pernambuco and Bahia . . . 2 per cent.
East India, &c. 4 —

Sugar, Brazil 15 to 18 per cent.
Jamaica, mucovado 11 —
Bourbon, brown and yellow, and East India of all colours 5 —
refined, crushed 12 —
Brimstone 10 —
Italian hemp 2 —
Madder root 4 —
Hungary potash 10 —

On other articles, real tares are usually taken.

These details with respect to the present trade of Venice have been mostly derived from the well-digested and very valuable answers returned by the consul-general, Mr. Money, to the *Circular Quæria*.

VERA CRUZ, the principal sea-port on the western coast of Mexico; lat. $19^{\circ} 11' 52''$ N., lon. $96^{\circ} 8' 45''$ W. Population (supposed) 16,000. Opposite the town, at the distance of about 400 fathoms, is a small island, on which is built the strong castle of St. Juan d'Ulloa, which commands the town. The harbour lies between the town and the castle, and is exceedingly insecure; the anchorage being so very bad, that no vessel is considered safe unless made fast to rings fixed for the purpose in the castle wall: nor is this always a sufficient protection from the fury of the northerly winds (*los nortes*), which sometimes blow with tremendous violence. Humboldt mentions, in proof of what is now stated, that a ship of the line, moored by 9 cables to the castle, tore, during a tempest, the brass rings from the wall, and was dashed to pieces on the opposite shore. — (*Nouvelle Espagne*, ed. 2de, tome iv. p. 59.) Its extreme unhealthiness is, however, a more serious drawback upon Vera Cruz, than the badness of its port. It is said to be the original seat of the yellow fever. The city is well built, and the streets clean; but it is surrounded by sand hills and ponds of stagnant water, which, within the tropics, are quite enough to generate disease. The inhabitants, and those accustomed to the climate, are not subject to this formidable disorder; but all strangers, even those from Havannah and the West India islands, are liable to the infection. No precautions can prevent its attack; and many have died at Xalapa, on the road to Mexico, who merely passed through this pestilential spot. During the period that the foreign trade of Mexico was carried on exclusively by the *flota*, which sailed periodically from Cadiz, Vera Cruz was celebrated for its fair, held at the arrival of the ships. It was then crowded with dealers from Mexico, and most parts of Spanish America; but the abolition of the system of regular fleets in 1778 proved fatal to this fair, as well as to the still more celebrated fair of Portobello.

A light-house has been erected on the N.W. angle of the castle of St. Juan. The light, which is a revolving one of great power and brilliancy, is elevated 79 feet above the level of the sea.

The distance in a direct line from Mexico to Vera Cruz is about 70 leagues; but by the road it is about 93. Mexico being situated on a *plateau* elevated about 8,000 feet above the level of the sea, and the country being in many places very rugged, the road originally was so bad as to be hardly practicable, even for mules. During the last 30 years, immense sums have been laid out on its improvement; and a considerable part of it has been completed in the best, and, indeed, most splendid manner; but in many places it is still rough and unfinished, and does not admit of carriages being used. M. Humboldt seems to think, that were this road completed, wheat and flour brought from the table land of Mexico might be shipped at Vera Cruz, and sold in the West Indies cheaper than the wheat and flour of the United States. But we agree with Mr. Poinsett in regarding any such expectation as quite chimerical. Though the advantage on the side of Mexico in respect of superior fertility of soil and cheapness of labour were decidedly greater than it really is, it would not balance the enormous expense of 300 miles of land carriage upon such bulky and heavy articles, more especially as the wagons would, in most cases, have to return empty. It is plain, however, that the advantage of getting the produce of the mines, and the peculiar productions of the country, as cochineal, indigo, sugar, vanilla, tobacco, &c., conveyed with comparative facility to market, and of receiving back European goods at a proportionally less expense, will more than indemnify all the outlay that may be required to perfect the road, and will be of the very greatest importance to the republic; but it is quite out of the question to imagine that Vera Cruz is ever destined to become a rival of New Orleans in the exportation of corn and flour.

For a considerable period after the town of Vera Cruz had thrown off the Spanish yoke, the castle of St. Juan d'Ulloa continued in possession of the Spaniards. During this interval, the commerce of Vera Cruz was almost entirely transferred to the port of Alvarado, 12 leagues to the south-east. Alvarado is built upon the left bank of a river of the same name. The bar at the mouth of the river, about $1\frac{1}{2}$ mile below the town, renders it inaccessible for vessels drawing above 10 or 12 feet water. Large ships are obliged to anchor in the roads, where they are exposed to all the violence of the north winds, loading and unloading by means of lighters. Alvarado is supposed, but probably without much foundation, to be a little healthier than Vera Cruz. The trade has now mostly reverted to its old channel.

But within these few years, Tampico has risen to considerable importance as a commercial sea-port. It is situated about 60 leagues N.N.W. of Vera Cruz, in lat. $22^{\circ} 15' 30''$ N., lon. $97^{\circ} 52'$ W., being about 104 leagues from Mexico. Hitherto it is said to have been free from fever. The shifting of the bar at the mouth of the river, and the shallowness of the water on it, which is sometimes under 8, and rarely above 15 feet, are serious obstacles to the growth of the port. Vessels coming in sight are boarded by pilots, who conduct them, provided they do not draw too much water, over the bar. Those that cannot enter the port load and unload by means of lighters;

mooring so that they may get readily to sea in the event of a gale coming on from the north.

Exports and Imports. — The precious metals have always formed the principal article of export from Mexico. During the 10 years ending with 1801, the average annual produce of the Mexican mines amounted, according to M. Humboldt, to 23,000,000 dollars — (*Nouvelle Espagne*, tome iv. p. 137.); and in 1805, the produce was 27,165,888 dollars. — (*Id.* tome iv. p. 83.) But during the revolutionary war, the old Spanish capitalists, to whom most of the mines belonged, being proscribed, emigrated with all the property they could scrape together: and this withdrawal of capital from the mines, added to the injury several of them sustained by the destruction of their works during the contest, the interruption of all regular pursuits which it occasioned, and the insecurity and anarchy that afterwards prevailed, caused an extraordinary falling off in the produce of the mines. Within these few years, however, a considerable improvement has taken place. The efforts, and the lavish expenditure, of a few of the companies formed in this country for working the mines, have been so far successful, that some of them have been got again into good order, and that a large increase of produce may be fairly anticipated, provided they are permitted to prosecute their operations without molestation. But, as we have elsewhere stated (see *antè*, p. 803.), some of the parties who sold or leased the mines, began to put forward claims never heard of before, the moment they perceived that there was a reasonable prospect of the companies succeeding; and in some instances they have not scrupled to enforce their claims by violence! It is to be hoped that the Mexican government will exert itself to repress these outrages. If it have power to put down, and yet wink at or tolerate such disgraceful proceedings, it will make itself responsible for the consequences; and will merit chastisement as well as contempt.

The total quantity of gold and silver coined in the different Mexican mints during the 4 years ending with 1829, was —

In 1826	-	8,608,278 dollars.		In 1828	-	9,982,905 dollars.
1827	-	10,619,217 —		1829	-	11,787,133 —
				(Part. Paper, No. 333. Sess. 1833.)		

Besides the precious metals, cochineal, sugar, flour, indigo, provisions, leather, sarsaparilla, vanilla, jalap, soap, logwood, and pimento, are the principal articles exported from Vera Cruz.

The Imports consist principally of linen, cotton, woollen, and silk goods, paper, brandy, cacao, quicksilver, iron, steel, wine, wax, &c.

According to the statement published by the Mexican government, the value of the imports and exports at Vera Cruz and Alvarado, in 1824, was as follows: —

	Dollars.
Imports from other Mexican ports	234,087
from American ports	4,360,568
from European and other foreign ports	7,437,375
Total	12,032,030
Exports for other Mexican ports	202,042
for American ports	3,022,422
for European and other ports	1,468,093
Total	4,592,557

This account is exclusive of the imports by government on account of the loan negotiated in London.

According to Humboldt, the imports at Vera Cruz, before the revolutionary struggles, might be estimated, at an average, at about 15,000,000 dollars, and the exports at about 22,000,000 ditto.

It must, however, be observed that this statement refers only to the *registered* articles, or to those that paid the duties on importation and exportation. But exclusive of these, the value of the articles clandestinely imported by the ports on the Gulf; previously to the revolution, was estimated at 4,500,000 dollars a year; and 2,500,000 dollars were supposed to be annually smuggled out of the country in plate and bars, and ingots of gold and silver. A regular contraband trade used to be carried on between Vera Cruz and Jamaica: and notwithstanding all the efforts of government for their exclusion, and the excessive severity of its laws against smuggling, the shops of Mexico were always pretty well supplied with the products of England and Germany. — (*Humboldt, Nouvelle Espagne*, tome iv. p. 125.; *Poinsett's Notes on Mexico*, p. 133.)

M. Humboldt states, that the total population of Mexico, exclusive of Guatemala, may be estimated at about 7,000,000. Of this number $\frac{1}{2}$ about are Indians, the rest being Europeans, or descendants of Europeans, and mixed races. But notwithstanding this large amount of population, the trade we carry on with Mexico is very inferior to that

which we carry on with Brazil. The following is an account of the real or declared value of all sorts of British produce and manufactures exported to the States of Central and Southern America in 1831 :—

Mexico	-	-	-	728,858	States of the Rio de la Plata	-	339,870
Guatemala	-	-	-	nil.	Chili	-	651,617
Colombia	-	-	-	248,250	Peru	-	409,003
Brazil	-	-	-	1,238,371			

The imports of British goods at second hand into Mexico and Colombia, from Jamaica, and the other West India islands, are no longer of any considerable importance; but considerable quantities are imported from New Orleans.

Mexico being, with the exception of the United States, the richest and most populous of all the American countries, the smallness of its trade with England may justly excite surprise. It originates principally, we believe, in the want of good ports and large cities on the coast, and the distance and difficulty of the roads from Vera Cruz and other ports to the healthy and elevated part of the country. These circumstances, coupled with the obstacles which the restrictive policy of the Spaniards threw in the way of the importation of foreign products, led to the establishment of manufactures in the interior. Previously to the commencement of the revolutionary struggles, some of these manufactures were in a very advanced state; and were sufficient to supply the population with most of the clothes and other articles required for their consumption. They have since declined considerably; but as it is pretty certain that the wealth of the inhabitants has declined still more, this circumstance has had little effect in increasing importation.

Revenues.—The revenues of Mexico have been, during the years (ended 30th of January),

1826	-	13,715,801 dollars.	1830	-	14,493,189 dollars.
1827	-	13,189,682 —	1831	-	18,920,299 —
1828	-	10,494,299 —	1832	-	16,413,000 —
1829	-	12,232,385 —			

Of these sums, about $\frac{1}{2}$ have been produced by the customs duties. The latter amounted, in 1832, to 8,502,920 dollars. During the same year, the duties on imported cottons were 1,150,000 dollars, and those on the exportation of the precious metals 309,472 dollars. The total receipts of the Custom-house of Vera Cruz, in 1832, were 2,962,299 dollars, and those of Tampico 1,428,992 dollars.

Port Charges.—Foreign ships pay in the port of Vera Cruz—

Tonnage duty, &c. (per ton)	-	-	-	-	Dols. reals.
Pilotage on entering	-	-	-	-	15 4
— on leaving	-	-	-	-	19 0

A 5th part, or 20 per cent., is deducted from the duties on all commodities brought from a foreign port in Mexican ships. The Mexican Congress is, at this moment, engaged in discussions respecting a modification of the tariff.

Monies, Weights, and Measures, same as in Spain; for which, see CANIZ.

Duties, &c. at Vera Cruz.—The Mexican government issued, on the 16th of November, 1827, a new tariff; to which the following regulations were prefixed:—

Regulations as to the Mexican Tariff.

Vessels of all nations in amity with the United States of Mexico will be admitted to entry at the privileged ports of the republic, upon payment of the duties, and subject to the regulations to be observed at the maritime Custom-house, according to this tariff.

The anchorage duty is abolished, and all vessels arriving from foreign ports are to pay 2 dol. 1 real per ton tonnage duty.

Foreign vessels will not be allowed to trade coastwise with the ports of the republic.

All vessels putting into any of the ports of this republic, by stress of weather or for refitment, will be allowed the requisite time to complete their repairs or provisions, and will only have to pay such charges as are customary.

All vessels on their arrival are to present their manifests by triplicate, specifying the marks and numbers of the packages, with the particulars of their respective contents.

The duties will be levied on all goods according to their specification in the manifest, whether they are landed or not; and any article that shall be found not specified in the manifest, or any alteration in the quantity or quality, will subject such goods to seizure.

The weights and measures designated in the tariff are those used in Mexico; and any article exceeding the maximum annexed to the same shall, for every $\frac{1}{2}$ of such excess in measurement, pay $\frac{1}{2}$ increase of the duty affixed to the said article.

All articles not specified or enumerated in the tariff shall pay a duty of 40 per cent. on the valuation that may be fixed on the same at the port of entry; and for every such valuation, 3 brokers shall be appointed, 1 of whom is to be chosen by the importer, and the other 2 on the part of the Custom-house.

The *averia*, and all other duties lately payable in this republic under various denominations (excepting the State duty), are abolished.

The importer shall be liable for the whole amount of the duties; $\frac{1}{2}$ of which is to be paid within 90 days from the day the goods are landed, and the other $\frac{1}{2}$ within 90 days after the expiration of the latter period. No article will be allowed to be taken out of the Custom-house until the duties shall have been paid, or security given for the due payment of the same, to the satisfaction of the proper authorities.

All articles imported prior to this law taking effect are liable to the international duties as before.

After the duties have been once paid, no deduction or allowance whatever can be made on the same, excepting in cases where an error may have occurred.

No article will be allowed to be re-exported without previous payment of the import duties.

All goods that may arrive damaged shall be examined in presence of the proper authorities, and an allowance made according to the damage such goods shall have sustained.

All goods arriving direct from the place of their growth or manufacture, in vessels under the Mexican flag, are to pay 1-5th less duty than in foreign vessels.

The tariff may be altered at any time, whenever the Congress shall deem it expedient so to do; but no alteration which may be prejudicial to commerce in general shall be put in force until 6 months after such alteration shall have been decided upon.

The basis contained in the preceding articles are not intended to interfere with any separate treaty of commerce which has or may be entered into by this nation.

These regulations are to be put in force within 60 days from the date hercof.

Articles admitted into Mexico Duty free.

Quicksilver.

Carts upon foreign construction.

Wooden frames for houses.

Printed books, maps, and music.

Philosophical, mathematical, and optical instruments.

Slates of all sorts.

Instruments for agriculture, mines, and artificers.

Carding wire.

Plants and seeds

Articles prohibited to be imported into Mexico.

Aniseeds, cummins, and caraways.

Rum and molasses.

Sugar, raw or refined.

Coffee and chocolate.

Rice.

Leather.

Boots and shoes.

Saddlery of every description.

Salted and dried meats of all kinds.

Lard.

Wax, wrought.

Tallow.

Soup, hard or soft.

Epaulets, gold and silver lace, galloons,

&c.

Tapes of cotton.

Shawls of silk or cotton.

Beds, bedding, and bed linen, made up,

of every kind and description.

Copper, in sheets or pigs.

Lead, in sheet, pigs, or shot.

Biscuit.

Flour and wheat.

Vermicelli.

Cotton thread, under No. 20.

Stone ware.

Trunks and portmanteaus.

Woollen cloths, coarse and ordinary.

Parchment.

Wearing apparel of every description.

Common salt.

Hats, common, stuff, and leather.

Tobacco, in leaf or manufactured.

Export Duties.—All articles, the growth and produce of this republic, are free of duty on exportation, excepting gold in coin, or wrought, which pays 2 per cent. *ad valorem*; silver in coin, or wrought, which pays 3½ per cent. *ad valorem*.

N. B. — Gold and silver are, or in ingots or dust, are prohibited under penalty of seizure.

Notices to Masters of Vessels and Passengers proceeding to any Mexican Port.

Notice is hereby given to all masters of vessels proceeding from London to any port or ports of the United States of Mexico, that the passengers they take out should be provided with passports, signed by his Excellency the minister of the republic, otherwise the vessels will be liable to detention on their arrival at those ports, and the passengers on board unprovided with such passports will not be permitted to land in the ports of Mexico. No plea for the want of them will be admitted.

Masters of vessels proceeding to and from those States are required to have on board all necessary papers and vouchers, which, according to the orders conveyed through his Excellency the Mexican minister plenipotentiary at the court of his Britannic Majesty, to this consulate, ought to consist of, besides the regular ship's papers, all the invoices of shippers, with the corresponding bills of lading. Merchandise found on board, which should not appear inserted in the invoices certified by the consul, or that otherwise is falsely described, either in quality or quantity, shall be considered and dealt with as contraband.

A bill of health, certified by the consul, will also be required from vessels on arrival, by the authorities at the Mexican ports.

The above regulations are to be in force from the date of this notice, Nov. 28. 1830.

Notice is hereby given, that the Congress of the United States of Mexico decreed, the 12th of October of the last year, that the Mexican envoys and consular agents must henceforward charge for each passport to Mexico 2 dollars, and for each certification and signature 4 dollars.

20, Austin-friars, 9th of Jan. 1831.

The Vice-Consul, J. SCHEIDNAGEL.

VERDIGRIS (Ger. *Grünspan*; Fr. *Vert-de-gris*, *Verdet*; It. *Verderame*; Sp. *Cardenillo*, *Verdete*, *Verde-gris*; Rus. *Jar*), a kind of rust of copper, of a beautiful bluish green colour, formed from the corrosion of copper by fermented vegetables. Its specific gravity is 1.78. Its taste is disagreeably metallic; and, like all the compounds into which copper enters, it is poisonous. It was known to the ancients, and various ways of preparing it are described by Pliny. It is very extensively used by painters, and in dyeing; it is also used to some extent in medicine. The best verdigris is made at Montpellier; the wines of Languedoc being particularly well suited for corroding copper, and forming this substance. It is generally exported in cakes of about 25 lbs. weight each. It is also manufactured in this country, by means of the refuse of cider, &c.; the high duty of 2s. per lb. on the foreign article giving the home producers a pretty complete monopoly of the market. The goodness of verdigris is judged of from the deepness and brightness of its colour, its dryness, and its forming, when rubbed on the hand with a little water or saliva, smooth paste, free from grittiness. — (*Thomson's Chemistry*; *Rees's Cyclopædia*.)

VERJUICE (Ger. *Agrest*; Fr. *Verjus*; It. *Agresto*; Sp. *Agraz*), a kind of harsh, austere vinegar, made of the expressed juice of the wild apple, or crab. The French give this name to unripe grapes, and to the sour liquor obtained from them.

VERMICELLI (Ger. *Nudeln*; Du. *Meelneepen*, *Proppen*; Fr. *Vermicelli*; It. *Vermicelli*, *Tagliolini*; Sp. *Aletrías*), a species of wheaten paste formed into long, slender, hollow tubes, or threads, used amongst us in soups, broths, &c.

Vermicelli is the same substance as maccaroni; the only difference between them being that the latter is made into larger tubes. Both of them are prepared in the greatest perfection in Naples, where they form the favourite dish of all classes, and the principal food of the bulk of the population. The flour of the hard wheat (*grano duro*) imported from the Black Sea is the best suited for the manufacture of maccaroni. Being mixed with water, it is kneaded by means of heavy wooden blocks wrought by levers, till it acquires a sufficient degree of tenacity; it is then forced, by simple pressure, through a number of holes, so contrived that it is formed into hollow cylinders. The name given to the tubes depends on their diameter; those of the largest size being maccaroni, the next to them vermicelli, and the smallest fedelini. At Genoa, and some other places, the paste is coloured by an admixture of saffron; but at Naples, where its preparation is best understood, nothing is used except flour and water; the

best being made of the flour of hard wheat, and the inferior sorts of the flour of soft wheat. When properly prepared and boiled to a nicety, Neapolitan macaroni assumes a greenish tinge. It is then taken out of the caldron, drained of the water, and being saturated with concentrated meat gravy, and sprinkled with finely grated cheese, it forms a dish of which all classes from the prince to the beggar are passionately fond. But the macaroni used by the poor is merely boiled in plain water, and is rarely eaten with any condiment whatever. The macaroni usually served up in England, is said, by those familiar with that of Naples, to be a positive disgrace to the name it bears. When properly prepared, macaroni is nutritious and easy of digestion. The lazzaroni pique themselves on the dexterity with which they swallow long strings of macaroni and vermicelli without breaking them! (We have derived these details from an excellent article on macaroni in the *Penny Magazine* for the 10th of August, 1833.)

VERMILION. See CINNABAR.

VINEGAR (Ger. *Essig*; Du. *Azyn*; Fr. *Vinaigre*; It. *Aceto*; Sp. and Port. *Vinagre*; Rus. *Ukzus*; Lat. *Acetum*). — (See ACID (ACETIC), for a description of vinegar.) A duty being imposed on vinegar of 2d. the gallon, its manufacture is placed under the control of the excise. A licence, costing 5*l.*, and renewable annually, has to be taken out by every maker of vinegar, or acetous acid.

All places for manufacturing or keeping vinegar must be entered, under a penalty of 50*l.* No vinegar maker is to receive any vinegar, or acetous acid, or sugar wash, or any preparation for vinegar, without giving 12 hours' notice to the excise, under penalty of 100*l.* Any person sending out or receiving vinegar shall, unless the duty on it be paid, and it be accompanied by a permit, forfeit 500*l.* All vinegar makers are to make entries at the next Excise-office of the quantity made within each month, and are bound to clear off the duties within a month of such entry, on pain of double duties. — (See 58 *Geo. 3.*, c. 65., and *Burn's Justice of the Peace*, Marriott's ed.)

ULTRAMARINE (Ger. *Ultramarin*; Fr. *Bleu d'outremer*; It. *Oltamarino*; Sp. *Ultramar*; Rus. *Ultramarin*), a very fine blue powder made from the blue parts of *lapis lazuli*. It has the valuable property of neither fading, nor becoming tarnished, on exposure to the air, or a moderate heat; and on this account is highly prized by painters. Owing to its great price, it is very apt to be adulterated. It was introduced about the end of the fifteenth century.

USANCE, a period of *one, two, or three* months, or of so many days, after the date of a bill of exchange, according to the custom of different places, before the bill becomes due. Double or treble usance, is double or treble the usual time; and $\frac{1}{2}$ usance is $\frac{1}{2}$ the time. When a month is divided, the $\frac{1}{2}$ usance, notwithstanding the differences in the lengths of the months, is uniformly 15 days. Usances are calculated exclusively of the date of the bill. Bills of exchange drawn at usance are allowed the usual days of grace, and on the last of the 3 days the bill should be presented for payment. — (See EXCHANGE.)

W.

WALNUTS, the fruit of the *Juglans*, or walnut-tree, of which there are several varieties. The walnut is a large, handsome tree, with strong spreading branches. The fruit is a pretty large, smooth, ovate nut, containing an oily kernel, divided into four lobes. The nut has been always held in high estimation; it was called by the Romans *Jovis glans*, the acorn or mast of Jove, and hence the name of the tree. The walnut tree is indigenous to Persia and the countries bordering on the Caspian Sea. It has long been introduced into Great Britain; but the fruit seldom ripens in the more northerly parts of the island. Previously to the very general introduction of mahogany, the wood of the walnut tree was extensively used amongst us in making of furniture; and it continues to be largely employed for that purpose in many parts of the Continent. It is

much used by turners; and is superior to every other sort of wood for the mounting of guns; a circumstance which caused great devastation among our walnut plantations during the latter years of the war. Great numbers of walnut trees are annually consumed in the Haute Vienne and other departments of France, in the manufacture of the wooden shoes or clogs used by the peasantry. The nuts are either gathered when ripe, being served up at desserts without any preparation; or they are plucked green, and pickled. — (*Poiret, Histoire Philosophique des Plantes*, tome vii. p. 213.; *Rees's Cyclopaedia*, &c.)

WANGHEES, sometimes called JAPAN CANES, a species of cane imported from China. They should be chosen pliable, tough, round, and taper; the knots at regular distances from each other; and the heavier the better. Such as are dark-coloured, badly glazed, and light, should be rejected. — (*Milburn's Orient. Com.*)

WAREHOUSING SYSTEM. By this system is meant the provisions made for lodging imported articles in public warehouses, at a reasonable rent, without payment of the duties on importation till they be withdrawn for home consumption. If re-exported, no duty is ever paid.

1. *Expediency and Origin of the Warehousing System.* — It is laid down by Dr. Smith, in one of his justly celebrated maxims on the subject of taxation, that "Every tax ought to be levied at the time and in the manner that is most likely to be convenient for the contributor to pay it." — (*Wealth of Nations*, vol. iii. p. 368.) No one can doubt the soundness of this maxim; and yet it was very strangely neglected, down to 1803, in the management of the customs. Previously to this period, the duties on most goods imported had either to be paid at the moment of their importation, or a *bond*, with sufficient security for their future payment, had to be given to the revenue officers. The hardship and inconvenience of such a system is obvious. It was often very difficult to find sureties; and the merchant, in order to raise funds to pay the duties, was frequently reduced to the ruinous necessity of selling his goods immediately on their arrival, when, perhaps, the market was already glutted. Neither was this the only inconvenience that grew out of this system; for the duties having to be paid all at once, and not by degrees as the goods were sold for consumption, their price was raised by the amount of the profit on the capital advanced in payment of the duties; competition, too, was diminished in consequence of the greater command of funds required to carry on trade under such disadvantages; and a few rich individuals were enabled to monopolise the importation of those commodities on which heavy duties were payable. The system had, besides, an obvious tendency to discourage the carrying trade. It prevented this country from becoming an *entrepôt* for foreign products, by hindering the importation of such as were not immediately wanted for home consumption; and thus tended to lessen the resort of foreigners to our markets, inasmuch as it rendered it difficult, or rather impossible, for them to complete an assorted cargo. And in addition to all these circumstances, the difficulty of granting a really equivalent drawback to the exporters of such commodities as had paid duty, opened a door for the commission of every species of fraud.

But these disadvantages and drawbacks, obvious as they may now appear, did not attract the public attention till a comparatively late period. Sir Robert Walpole seems to have been one of the first who had a clear perception of their injurious influence; and it was the principal object of the famous *Excise Scheme*, proposed by him in 1733, to oblige the importers of tobacco and wine to deposit them in public warehouses; relieving them, however, from the necessity of paying the duties chargeable on them till they were withdrawn for home consumption.

No doubt can now remain in the mind of any one, that the adoption of this scheme would have been of the greatest advantage to the commerce and industry of the country. But so powerful was the delusion generated in the public mind with respect to it, that its proposal well nigh caused a rebellion. Most of the merchants of the day had availed themselves of the facilities which the existing system afforded of defrauding the revenue; and they dexterously endeavoured to thwart the success of a scheme which would have given a serious check to such practices, by making the public believe that it would be fatal to the commercial prosperity of the country. The efforts of the merchants were powerfully seconded by the spirit of party, which then ran very high. The political opponents of the ministry, anxious for an opportunity to prejudice them in the

public estimation, contended that the scheme was only the first step towards the introduction of such a universal system of excise as would inevitably prove alike subversive of the comfort and liberty of the people. In consequence of these artful misrepresentations, the most violent clamours were everywhere excited against the scheme. On one occasion Sir Robert Walpole narrowly escaped falling a sacrifice to the ungovernable fury of the mob, which beset all the avenues to the House of Commons; and, after many violent and lengthened debates, the scheme was ultimately abandoned.

The disadvantages of the old plan, and the benefits to be derived from the establishment of a voluntary warehousing system, were most ably pointed out by Dean Tucker, in his "Essay on the Comparative Advantages and Disadvantages of Great Britain and France with respect to Trade," published in 1750. But so powerful was the impression made by the violent opposition to Sir Robert Walpole's scheme, and such is the force of prejudice, that it was not till 1803 that this obvious and signal improvement — the greatest, perhaps, that has been made in our commercial and financial system — could be safely adopted.

2. *Regulations as to Warehousing.* — The statute of 43 Geo. 3. c. 132. laid the foundation of this system; but it was much improved and extended by subsequent statutes, the regulations of which have been embodied in the act 3 & 4 Will. 4. c. 57., which took effect on the 1st of September, 1833.

This act empowers the commissioners of the customs, under the authority and direction of the Lords of the Treasury, to nominate the ports at which goods may be warehoused without payment of duty, and the warehouses in which particular descriptions of goods may be deposited. It also fixes the time during which goods are allowed to remain in the warehouse; and prescribes the regulations as to their removal from port to port, their sale and stowage in the warehouse, the remission of the duties in case of loss by accident, the allowances for waste, &c. But as this statute is of much importance, we subjoin a full abstract of it.

ABSTRACT OF THE ACT 3 & 4 WILL. 4. c. 57. FOR THE WAREHOUSING OF GOODS.

Commencement of Act. — Act to commence the 1st day of September 1833, except where any other commencement is particularly directed. — § 1.

Treasury to appoint warehousing Ports. — It shall be lawful for the commissioners of the treasury to appoint the ports in the U. K. which shall be warehousing ports for the purposes of this act; and it shall be lawful for the commissioners of customs, subject to the directions of the commissioners of the treasury, to appoint in what warehouses or places of special security, or of ordinary security, as the case may require, in such ports, and in what different parts or divisions of such warehouses or places, and in what manner any goods, and what sorts of goods, may be warehoused and secured without payment of any duty upon the first entry thereof, or for exportation only, in cases wherein the same may be prohibited to be imported for home use; and also to direct in what cases (if any) security by bond shall be required in respect of any warehouse so appointed by them. — § 2.

Warehouse of special Security by Appointment. — Whenever any warehouse shall have been approved by the said commissioners, as being a warehouse of special security, it shall be stated in their order of appointment that it is appointed as a warehouse of special security; provided, that all warehouses connected with wharfs for the landing of the goods to be lodged therein, and enclosed together with such wharfs within walls, such as are or shall be required by any act for the constructing of such warehouses and wharfs, and being appointed to be legal quays, shall, without any order of the commissioners of the customs, be warehouses for the purposes of this act, for all goods landed at such wharfs or quays at any port appointed by the commissioners of the treasury to be a warehousing port, and all such warehouses shall be warehouses of special security. — § 3.

Bonds given previous to Act to continue in force. — All appointments of warehouses made under the authority of any other act in force at the commencement of this act shall continue in force as if the same had been made under the authority of this act, and all bonds given in respect of any goods warehoused under any act in force at the commencement of this act shall continue in force for the purposes of this act. — § 4.

Commissioners to provide Warehouses for Tobacco. — The commissioners of customs shall, out of the monies arising from the duties of customs, provide from time to time warehouses for the warehousing of tobacco at the ports into which tobacco may be legally imported; provided, that for every hogshead, chest, or case of tobacco so warehoused the importer or proprietor thereof shall pay, for warehouse rent, such sum or sums, not exceeding any sum payable under any act in force at the commencement of this act, and at such periods and in such manner as the commissioners of the treasury shall direct; and all such sums shall be paid and appropriated as duties of customs. — § 5.

Power to revoke or alter an Appointment. — It shall be lawful for the commissioners of the treasury by their warrant, and for the commissioners of the customs by their order, to revoke any former warrant or any former order, or to make any alteration in or addition to any former warrant or any former order made by them respectively. — § 6.

Publication of Appointment in Gazette. — Every order made by the commissioners of customs in respect of warehouses of special security, as well those of original appointment as those of revocation, alteration, or addition, shall be published in the London Gazette, for those appointed in Great Britain, and in the Dublin Gazette for those appointed in Ireland. — § 7.

Warehouse-keeper may give general Bond. — Before any goods be entered to be warehoused in any warehouse in respect of which security by bond is required, the proprietor or occupier of such warehouse, if he be willing, shall give general security by bond, with 2 sufficient surties, for the payment of the full duties of importation on all such goods as shall at any time be warehoused therein, or for the due exportation thereof; and if such proprietor or occupier be not willing to give such general security, the different importers of the separate quantities of goods shall, upon each importation, give such security in respect of the particular goods imported by them respectively, before such goods be entered to be warehoused. — § 8.

Sale of Goods in Warehouse by Proprietor to be valid. — If any goods lodged in any warehouse be the property of its occupier, and be *bona fide* sold by him, and upon such sale there shall have been a written agreement, signed by the parties, or a written contract of sale made, executed, and delivered by a broker or other person legally authorised on behalf of the parties respectively, and the amount of

the price stipulated in the said agreement or contract shall have been actually paid or secured to be paid by the purchaser, every such sale shall be valid, although such goods shall remain in such warehouse; provided a transfer of such goods, according to such sale, shall have been entered in a book to be kept for that purpose by the officer of the customs having the charge of such warehouse, who is hereby required to keep such book, and to enter such transfers, with the dates thereof, upon application of the owners of the goods, and to produce such book upon demand made. — § 9.

Storage in Warehouse to afford easy Access. — All goods warehoused shall be stowed in such manner as that easy access may be had to every package and parcel of the same; and if the occupier shall omit so to stow the same, he shall for every such omission forfeit the sum of 5*l.*; and if any goods be taken out of the warehouse without due entry of the same with the proper officers of the customs, the occupier of the warehouse shall be liable to the payment of the duties due thereon. — § 10.

Goods fraudulently concealed or removed, forfeited, &c. — If any goods warehoused be fraudulently concealed in or removed from the warehouse, the same shall be forfeited; and if any importer or proprietor of any goods warehoused, or any person in his employ, shall by any contrivance fraudulently open the warehouse or gain access to the goods, except in the presence of the proper officer acting in the execution of his duty, such importer or proprietor shall forfeit and pay for every such offence the sum of 500*l.* — § 11.

Examination on Entry and landing. — Within 1 month after any tobacco shall have been warehoused, and upon the entry and landing of any goods to be warehoused, the proper officer of the customs shall take a particular account of the same, and shall mark the contents on each package, and shall mark the word "prohibited" on such packages as contain goods prohibited to be imported for home use; and all goods shall be warehoused and kept in the packages in which they have been imported, and no alteration shall be made in the packages or the packing of any goods in the warehouse, except in the cases herein provided. — § 12.

Goods to be carried to Warehouse under Authority of Officers of Customs. — All goods entered to be warehoused, or to be re-warehoused, shall be carried to the warehouse under the care or with the authority or permission of the proper officer of customs, and in such manner, and by such persons, and by such roads or ways, and within such spaces of time, as the said officer shall authorise, permit, or direct; and all such goods not so carried shall be forfeited. — § 13.

Goods to be cleared in 3 Years, and Ship's Stores in 1 Year. — All goods which have been warehoused shall be duly cleared, either for exportation or for home use, within 3 years, and all surplus stores of ships within 1 year from the day of the first entry thereof (unless further time be given by the commissioners of the treasury); and if any such goods be not so cleared, it shall be lawful for the commissioners of customs to cause them to be sold, and the produce shall be applied to the payment of warehouse rent and other charges, and the overplus, if any, paid to the proprietor; and such goods, when sold, shall be held subject to all the conditions to which they were subject previous to such sale, except that a further time of 3 months from the date of the sale shall be allowed to the purchaser for clearing such goods from the warehouse; and if the goods so sold shall not be duly cleared within such 3 months, the same shall be forfeited: provided, that if the goods so to be disposed of shall have been imported by the East India Company, or be of the description called "piece goods," imported from places within the limits of their charter into the port of London, the same shall, at the requisition of the commissioners of customs, be duly exposed to sale by the said company at their next ensuing sale, and shall be sold for the highest price then publicly offered for them. — § 14.

In case of Accident, Duty to be remitted. — If any goods entered to be warehoused, or entered to be delivered from the warehouse, be lost or destroyed by any unavoidable accident, either on shipboard or in the landing or shipping of the same, or in the receiving into or delivering from the warehouse, the commissioners of customs shall remit or return the duties payable or paid on the goods so lost or destroyed. — § 15.

Entry for Exportation or Home Use. — No goods which have been warehoused shall be taken or delivered from the warehouse except upon due entry, and under care of the proper officers for exportation, or upon due entry and payment of the full duties payable thereon for home use; except goods delivered into the charge of the searchers to be shipped as stores, and which shall and may be so shipped without entry or payment of any duty for any ship of the burden of 70 tons at least, bound upon a voyage to foreign parts, the probable duration of which out and home will not be less than 40 days: provided that such stores shall be duly borne upon the ship's victualling bill, and shall be shipped in such quantities and subject to such directions and regulations as the commissioners of customs shall direct and appoint. — § 16.

Run for Stores and surplus Stores may be shipped without Entry. — Any run of the British plantations may be delivered into the charge of the searcher, to be shipped as stores for any ship without entry or payment of any duty, and any surplus stores of any ship may be delivered into the charge of the searcher, to be reshipped as stores for the same ship, or for the same master in another ship, without entry or payment of duty, such run and such surplus stores being duly borne upon the victualling bills of such ships respectively; and if the ship for the future use of which any surplus stores have been warehoused shall have been broken up or sold, such stores may be so delivered for the use of any other ship belonging to the same owners, or may be entered for payment of duty, and delivered for the private use of such owners, or any of them, or of the master or purser of such ship. — § 17.

Duties to be paid on original Quantities, except in certain Cases. — Upon the entry of any goods to be cleared from the warehouse, if the same be for home use, the person entering such goods inwards shall deliver a bill of the entry, and duplicates thereof, in like manner as is directed in the case of goods entered to be landed, as far as the same is applicable, and at the same time shall pay down to the proper officer of the customs the full duties of customs payable thereon, and not being less in amount than according to the account of the quantity first taken of the respective packages or parcels of the goods in such entry at the examination thereof at the time of the first entry and landing of the same, without any abatement on account of any deficiency, except as by this act is otherwise provided; and if the entry be for exportation or for removal to any other warehouse, and any of the packages or parcels of the goods be deficient of their respective quantities, according to the account first taken, a like entry inwards shall also be passed in respect of the quantities so deficient, and the full duties shall be paid on the amount thereof before such packages or parcels of goods shall be delivered or taken for exportation or removal, except as by this act is otherwise provided; and if any goods so deficient in quantity shall be such as are charged to pay duty according to the value thereof, such value shall be estimated at the price for which the like sorts of goods of the best quality have been last or lately sold, either at any sale of the East India Company, or in any other manner, as the case may be. — § 18.

Duties on Tobacco, Sugar, and Spirits to be charged on Quantities delivered, except in certain Cases. — The duties payable upon tobacco, sugar, and spirits respectively, when taken out of warehouse for home use, shall be charged upon the quantities ascertained by the weight, measure, or strength of the same actually delivered; except that if the sugar shall not be in a warehouse of special security, no greater abatement on account of deficiency of the quantity first ascertained as aforesaid shall be made than shall be after the rate of 3 per cent. of such quantity for the first 3 months, and 1 per cent. for every subsequent month during which such sugar shall have been warehoused; and except, that if the spirits (being any other spirits than rum of the British plantations) shall not be in a warehouse of special security, no greater abatement on account of deficiency of the quantity or strength first ascertained as aforesaid shall be made than shall be after the several rates of allowances following; viz.

For every 100 gallons, hydrometer proof; viz.

For any time not exceeding 6 months	- 1 gallon
For any time exceeding 6 months and not exceeding 12 months	- 2 gallons
For any time exceeding 12 months and not exceeding 18 months	- 3 gallons

For every 100 gallons, hydrometer proof; viz.

For any time exceeding 18 months and not exceeding 2 years	- 4 gallons
For any time exceeding 2 years	- 5 gallons

Provided that no abatement shall be made in respect of any deficiency in quantity of any spirits occasioned either by leakage or accident, and not by natural evaporation, in whatever warehouse the same may be, except as by this act is otherwise specially provided. — § 19.

Importer may enter Goods for Home Use, &c., although not actually warehoused. — If after any goods have been duly entered and landed to be warehoused, and before the same have been deposited in the warehouse, the importer shall further enter the same or any part thereof for home use or for exportation as from the warehouse, the goods so entered shall be considered as virtually and constructively warehoused, although not actually deposited in the warehouse, and may be delivered and taken for home use or for exportation, as the case may be. — § 20.

Goods may be removed to other Ports to be rewarehoused. — Any goods which have been warehoused at some port in the U. K. may be removed by sea or inland carriage to any other port in the same, in which the like goods may be warehoused upon importation, to be rewarehoused at such other port, and again as often as may be required to any other such port, to be there rewarehoused, subject to the regulations hereinafter mentioned; viz. 12 hours notice in writing of the intention to remove such goods shall be given to the warehouse officer, specifying the particular goods intended to be removed, and the marks, numbers, and descriptions of the packages in which the same are contained, in what ship imported, when and by whom entered inwards to be warehoused, and, if subsequently rewarehoused, when and by whom rewarehoused, and to what port the same are to be removed; and thereupon the warehouse officer shall take a particular account of such goods, and shall mark the contents on every package in preparation for the delivering of the same for the purposes of such removal, and previous to the delivery thereof may cause the proper seals of office to be affixed thereto: provided that tobacco, the produce of the British possessions in America or of the United States of America, and purchased for the use of his Majesty's navy, may be removed by the purser of any ship of war in actual service to the ports of Rochester, Portsmouth, or Plymouth, to be there rewarehoused, in name of such purser, in a warehouse approved for that purpose by the commissioners of customs. — § 21.

Entry of Goods for Removal. — Before such goods be delivered to be removed due entry of the same shall be made, and a proper bill of such entry, with duplicates thereof, be delivered to the collector or comptroller, containing the before-mentioned particulars, and an exact account of the quantities of the different sorts of goods; and such bill of entry, signed by the collector and comptroller, shall be the warrant for the removal of such goods; and an account of the same, containing all such particulars, shall be transmitted by the officers of the port of removal to the officers of the port of destination; and upon the arrival of such goods at the port of destination due entry of the same to be rewarehoused shall in like manner be made with the collector and comptroller at such port, containing all the particulars and accounts before mentioned, together with the name of the port from which such goods have been removed, and the description and situation of the warehouse in which they are to be warehoused; and the bill of such entry, signed by such collector and comptroller, shall be the warrant to the landing officer and the warehouse officer to admit such goods to be there rewarehoused, under such examination as is made of the like goods when first warehoused upon importation from parts beyond the seas; and the particulars to be contained in such notice and in such entries shall be written and arranged in such form and manner as the collector and comptroller shall require; and the officers at the port of arrival shall transmit to the officers at the port of removal an account of the goods so arrived, according as they shall upon examination prove to be, and the warehouse officers at the port of removal shall notify such arrival in their books. — § 22.

Bond to rewarehouse, which may be given at either Port. — The persons removing such goods shall at the time of entering the same give bond, with 1 sufficient surety, for the due arrival and rewarehousing of such goods within a reasonable time, (with reference to the distance between the respective ports, to be fixed by the commissioners of customs), which bond may be taken by the collector and comptroller either of the port of removal or of the port of destination, as shall best suit the residence or convenience of the persons interested in the removal of such goods; and if such bond be given at the port of destination, a certificate thereof, under the hands of the collector and comptroller of such port shall, at the time of entering the goods, be produced to the collector or comptroller of the port of removal. — § 23.

Bond how to be discharged. — Such bond shall not be discharged unless such goods shall have been duly rewarehoused at the port of destination within the time allowed for such removal, or shall have been otherwise accounted for to the satisfaction of the said commissioners, nor until the full duties due upon any deficiency of such goods shall have been paid, nor until fresh security have been given in respect of such goods as herein-after provided, unless such goods shall be lodged in some warehouse in respect of which general security has been given by the proprietor or occupier, or in some warehouse in respect of which no security is required. — § 24.

Goods rewarehoused held on Terms of the first Warehousing. — Such goods when so rewarehoused may be entered and shipped for exportation, or entered and delivered for home use, as the like goods may be when first warehoused upon importation, and the time when such goods shall be allowed to remain rewarehoused at such port shall be reckoned from the day when the same were first entered to be warehoused. — § 25.

On Arrival, after Forms of rewarehousing, Parties may enter to export, &c. — If upon the arrival of such goods at the port of destination the parties shall be desirous forthwith to export the same, or to pay duty thereon for home use, without lodging the same in the warehouse for which they have been entered and examined to be rewarehoused, it shall be lawful for the officers of the customs at such port, after all the formalities of entering and examining such goods for rewarehousing have been duly performed (except the actual labour of carrying and lodging the same in the warehouse), to consider the same as virtually or constructively rewarehoused, and to permit them to be entered and shipped for exportation, or to be entered and delivered for home use, upon payment of the duties due thereon; and the account taken for the rewarehousing of such goods may serve as the account for delivering the same as if from the warehouse, either for shipment or for payment of duties, as the case may be; and all goods so exported, or for which the duties have been so paid, shall be deemed to have been duly cleared from the warehouse. — § 26.

Removal in the same Port. — Any goods which have been warehoused in some warehouse in the port of London may, with the permission of the commissioners of customs first obtained, be removed to any other warehouse in the said port in which the like goods may be warehoused; and any goods which have been warehoused in any other port may, with the permission of the collector and comptroller of such port first obtained, be removed to any other warehouse in the same port in which like goods may be warehoused, under such regulations as the commissioners of customs shall direct. — § 27.

Goods and Parties subject to original Conditions. — All goods which shall have been removed from one warehouse to another, whether in the same or in a different port, and all proprietors of such goods, shall be subject to all the conditions to which they would have been subject had such goods remained in the warehouse where they were originally warehoused. — § 28.

Goods sold, new Owner may give Bond. — If any goods have been warehoused in respect of which general security by bond shall not have been given by the proprietor or occupier, and particular security, as in such case is required, shall have been given by the importer of such goods, and the goods shall have

been sold or disposed of, so that the original bondholder shall be no longer interested in or have controul over such goods, it shall be lawful to admit fresh security to be given by the bond of the new proprietor of such goods, or persons having the controul over the same, with his sufficient surety, and to cancel the bond given by the original bondholder, or to exonerate him and his surety to the extent of the fresh security so given. — § 29.

Bond of Remover to be in force until Bond be given by new Owner. — If the person removing any goods from 1 port to another, and who shall have given bond in respect of such removal and rewarehousing, shall continue to be interested in such goods after the same have been duly rewarehoused, and such goods shall have been so rewarehoused in some warehouse, in respect of which security is required, and the proprietor or occupier of the same shall not have given general security, the bond in respect of such removal and rewarehousing shall be conditioned and continue in force, for the rewarehousing of such goods, until fresh bond be given by some new proprietor or other person, in manner herein-before provided. — § 30.

To sort, separate, and repack in same or equal Packages. — It shall be lawful in the warehouse to sort, separate, pack, and repack any goods, and to make such lawful alterations therein, or arrangements thereof, as may be necessary either for the preservation of such goods, or in order to the sale, shipment, or legal disposal of the same; provided that such goods be repacked in the same packages in which the same goods, or some part of the whole quantity of the same parcel of goods, were imported, or in packages of entire quantity equal thereto, or in such other packages as the commissioners of customs shall permit (not being less in any case, if the goods be to be exported or to be removed to another warehouse, than may be required by law for the importation of such goods); and also in the warehouse to draw off any wine, or any rum of the British plantations into reputed quart bottles or reputed pint bottles, for the purpose only of being exported from the warehouse; and also to draw off any such rum into casks containing not less than 20 gallons each, for the purpose only of being disposed of as stores for ships; and also to draw off any other spirits into reputed quart bottles, under such regulations as the commissioners of customs shall from time to time direct, for the purpose only of being exported from the warehouse; and also to draw off and mix with any wine any brandy secured in the same warehouse, not exceeding the proportion of 10 gallons of brandy to 100 gallons of wine; and also to fill up any casks of wine or spirits from any other casks of the same, respectively secured in the same warehouse; and also in any warehouse of special security to rack off any wine from the lees, and to mix any wines of the same sort, erasing from the casks all import brands; and also to take such moderate samples of goods as may be allowed by the commissioners of customs, without entry and without payment of duty, except as the same may eventually become payable, on a deficiency of the original quantity. — § 31.

No Alteration in Goods or Package but according as the Commissioners direct. — No alteration shall be made in any goods or packages, nor shall any wine, rum, brandy, or spirits be bottled, drawn off, mixed, or filled up, nor shall any samples be taken except after such notices given by the respective importers or proprietors, and at such times and in such manner, and under such regulations and restrictions, as the commissioners of customs shall require and direct. — § 32.

Repacking in proper Packages. — Whereas it may happen, that after the repacking into proper packages of any parcel of goods which have been unpacked and separated or drawn off from the original package in any of the cases herein-before provided for, there may remain some surplus quantities of the respective parcels of such goods, which may not be sufficient to make or fill up any 1 of such proper packages, or it may happen that some part of such goods, when separated from other parts, may be such refuse, or in so damaged a state as to be worthless, or that the total quantity of such parcel of goods may be reduced by the separation of dirt or sediment, or by the dispersion of dust or otherwise; and whereas the duties payable on such goods may have been levied at a rate having regard to a just allowance for the state in which such goods are imported, and it is not proper that any manufacturing process should be performed in such warehouse to the detriment of the revenue; it is therefore enacted, that after such goods have been repacked in proper packages, the commissioners of customs, at the request of the importer or proprietor of such goods, may permit any of such refuse, damaged, or surplus goods not contained in any of such packages, to be destroyed; and if the goods be such as may be delivered for home use, the duties shall be immediately paid upon any part of such surplus as may remain, and the same shall be delivered for home use accordingly; and if they be such as may not be so delivered, such surplus as may so remain shall be disposed of for the purpose of exportation in such manner as the commissioners shall direct; and thereupon the quantity contained in each of such packages shall be ascertained and marked upon the same, and the deficiency shall be ascertained by a comparison of the total quantity in such packages with the total quantity first warehoused, and the proportion which such deficiency may bear to the quantity in each package shall also be marked on the same, and added to such quantity, and the total shall be deemed to be the imported contents of such package, and be held subject to the full duties of importation, except as otherwise provided by this act: provided that it shall be lawful for the commissioners of customs to accept the abandonment, for the duties, of any quantity of tobacco, coffee, pepper, cocoa, lees of wine, and also of any whole packages of other goods, and to cause or permit the same to be destroyed, and to deduct such quantity of tobacco or coffee, or pepper, or cocoa, or the contents of such whole packages, from the total quantity of the same importation, in computing the amount of the deficiency of such total quantity. — § 33.

No Foreign Casks, &c. to be used for repacking. — No foreign casks, bottles, corks, packages, or materials whatever, except any in which some goods shall have been imported and warehoused, shall be used in the repacking of any goods in the warehouse, unless the full duties have been first paid thereon. — § 34.

Silks, Linens, &c. to be delivered out of Warehouse, to be cleaned. — It shall be lawful for the commissioners of the customs to permit any stuffs or fabrics of silk, linen, cotton, or wool, or of any mixture of them with any other material, to be taken out of warehouse to be cleaned, re-fre-hed, dyed, stained, or calendered, or to be bleached or printed, without payment of duty of customs, under security, nevertheless, by bond to their satisfaction, that such goods shall be returned to the warehouse within the time that they shall appoint; and it shall be lawful for the said commissioners, in like manner and under like security, to permit any rice, the produce of places within the limits of the East India Company's Charter, to be delivered out of warehouse to be cleaned, making such allowance for waste as to the said commissioners shall appear to be reasonable. — § 35.

Copper Ore may be taken out of Warehouse to be smelted. — It shall be lawful for the importer or proprietor of any copper ore warehoused to give notice to the proper officers of his intention to take such ore out of warehouse to be smelted, stating in such notice the quantity of copper computed to be contained in such ore, and delivering to such officers sufficient samples or specimens for ascertaining by proper assays, at the expense of the proprietor, such quantity of copper, and giving sufficient security by bond for returning such quantity of copper into the warehouse; and if such officers shall be satisfied of the fairness of the samples or specimens of such ore, and of the assays made of the same, and of the security given, they shall deliver such ore for the purpose of being smelted: provided that if any copper ore intended to be so smelted shall be imported into any port where such ore or where copper cannot be warehoused, the same may be entered as being to be warehoused at the port at which the copper after smelting is to be warehoused, and such ore shall thereupon be taken account of and delivered for the purposes aforesaid, in like manner as if the same had been warehoused: provided also, that all copper so produced by smelting shall be deemed to be copper imported, and shall be warehoused as such. — § 36.

Goods in Bulk delivered. — No parcels of goods so warehoused which were imported in bulk shall be delivered, except in the whole quantity of each parcel, or in a quantity not less than 1 ton weight, unless by special leave of the proper officers. — § 37.

Packages to be marked before Delivery. — No goods so warehoused shall be delivered, unless the same or the packages containing the same shall have been marked in such distinguishing manner as the commissioners of customs shall from time to time direct. — § 38.

Decrease and Increase may be allowed, under Regulations of the Treasury. — It shall be lawful for the commissioners of the treasury to make regulations for ascertaining the amount of the decrease or increase of the quantity of any particular sorts of goods, and to direct in what proportion any abatement of duty payable under this act for deficiencies shall, upon the exportation of any such goods, be made on account of such decrease: provided, that if such goods be lodged in warehouses of special security, no duty shall be charged for any amount whatever of deficiency of any of such goods on the exportation thereof, except in cases where suspicion shall arise that part of such goods has been clandestinely conveyed away, nor shall any such goods (unless they be wine or spirits) be measured, counted, weighed, or gauged for exportation, except in such cases of suspicion. — § 39.

Allowances for Waste of Wine, Spirits, &c. in Warehouses not of special Security. — For any wine, spirits, coffee, cocoa nuts, or pepper lodged in warehouses not of special security, the following allowances for natural waste, in proportion to the time during which such goods have remained in warehouse, shall be made upon the exportation thereof; viz.

Wine, upon every cask; viz.		Spirits, upon every 100 gallons hydrometer proof; viz.	
For any time not exceeding 1 year	- 1 gallon	For any time exceeding 12 months, and not exceeding 18 months	- 3 gallons
For any time exceeding 1 year, and not exceeding 2 years	- 2 gallons	For any time exceeding 18 months, and not exceeding 2 years	- 4 gallons
For any time exceeding 2 years	- 3 gallons	For any time exceeding 2 years	- 5 gallons
Spirits, upon every 100 gallons hydrometer proof; viz.		Coffee, cocoa nuts, pepper, for every 100 lbs., and so in proportion for any less quantity	- 2 lbs.
For any time not exceeding 6 months	- 1 gallon		
For any time exceeding 6 months, and not exceeding 12 months	- 2 gallons		

— § 40.

Embezzlement and Waste by Officers to be made good to Proprietor. — In case any embezzlement, waste, spoil, or destruction shall be made of any goods or merchandise warehoused in warehouses under the authority of this act, through any wilful misconduct of any officer of customs or excise, such officer shall be deemed guilty of a misdemeanor, and shall upon conviction suffer such punishment as may be inflicted by law in cases of misdemeanor; and if such officer shall be so prosecuted to conviction by the importer, consignee, or proprietor of the goods or merchandise so embezzled, wasted, spoiled, or destroyed, no duty of customs or excise shall be payable for such goods or merchandise so embezzled, &c., and no forfeiture or seizure shall take place of any goods and merchandise so warehoused in respect of any deficiency caused by such embezzlement, waste, spoil, or destruction, and the damage occasioned by such embezzlement, &c. of such goods or merchandise shall be repaid and made good to such importer, consignee, or proprietor by the commissioners of customs or excise, under such orders as shall be given by the commissioners of the treasury, or any 3 of them. — § 41.

On Entry outwards Bond for due shipping and landing shall be given. — Upon the entry outwards of any goods to be exported from the warehouse to parts beyond the seas, and before cocket be granted, the person in whose name the same be entered shall give security by bond in double the value of such goods, with 1 sufficient surety, that such goods shall be duly shipped and exported, and shall be landed at the place for which they be entered outwards, or otherwise accounted for to the satisfaction of the commissioners of customs. — § 42.

Bond for Beef and Pork exported from Warehouse. — Upon the entry outwards of any salted beef or salted pork to be exported from the warehouse to parts beyond seas, and before cocket be granted, the person in whose name the same be entered shall give security by bond in treble the value of the goods, with 2 sufficient sureties, of whom the master of the exporting ship shall be 1, that such beef or pork shall be duly shipped and exported, and that no part thereof shall be consumed on board such ship, and that the same shall be landed at the place for which it be entered outwards; and that a certificate of such landing shall be produced within a reasonable time, according to the voyage, to be fixed by the commissioners of customs, and mentioned in the bond, such certificate to be signed by the officers of the customs or other British officer, if the goods be landed at a place in the British dominions, or by the British consul, if the goods be landed at a place not in the British dominions, or such goods shall be otherwise accounted for to the satisfaction of said commissioners; and such master shall make and sign a declaration that such beef or pork is to be laden on board such ship as merchandise, to be carried to and landed at parts beyond the seas, and not as stores for the said ship; and if such ship shall not have on board at the time of clearance outwards a reasonable supply or stock of beef or pork, according to the intended voyage, borne upon the virtualling bill, the master of such ship shall forfeit the sum of 100*l.* — § 43.

Restriction as to the Isle of Man. — No goods shall be exported from the warehouse to the Isle of Man, except such goods as may be imported into the said island with licence of the commissioners of customs, and in virtue of any such licence first obtained. — § 44.

Goods removed from Warehouse under Care of Customs' Officers. — All goods taken from the warehouse for removal or for exportation shall be removed or carried to be shipped, under the care or with the authority or permission of the proper officer of customs, and in such manner, and by such persons, and within such spaces of time, and by such roads or ways as he shall authorise or direct; and all such goods not so removed or carried shall be forfeited. — § 45.

Ships to be not less than 70 Tons for exporting warehoused Goods. — It shall not be lawful for any person to export any goods so warehoused, nor to enter for exportation to parts beyond the seas any goods so warehoused, in any ship not of the burden of 70 tons or upwards. — § 46.

Goods landed in Docks liable to Claims for Freight as before landing. — All goods or merchandise which shall be landed in docks, and lodged in the custody of their proprietors, under this act, not being goods seized as forfeited, shall be subject or liable to the same claim for freight in favour of the master and owner or owners of the respective ships or vessels, or of any other person or persons interested in the freight of the same, as they were subject and liable to before landing; and the directors and proprietors of such docks are empowered and required, upon due notice in that behalf given to them, to detain and keep such goods and merchandise, not being seized as forfeited, in the warehouses belonging to the said docks, until the respective freights to which the same are subject and liable, or until a deposit be made by the owners or consignees of such goods or merchandise, equal in amount to the demands made by the master, owner or owners of the ships or vessels, or other persons, on account of freight; which deposit the directors or proprietors of such docks, or their agents are directed to receive and hold in trust, until the claim or demand for freight upon such goods shall be satisfied; upon proof of which, and demand made by the persons, their executors, &c. by whom the said deposit has been made, and the rates and charges due upon the said goods being paid, the deposit shall be returned to them by the said directors or proprietors. — § 47.

Warehousing Ports, &c. — Certain ports only are warehousing ports; nor may all sorts of goods be warehoused in every warehousing port. We subjoin a list of the warehousing ports in Great Britain and Ireland, and a specification of the goods that may be warehoused in each, classed in tables.

ENGLAND.

Arundel — Goods in Table C.
Barnstable — All goods except tobacco, East India goods, and goods in Table F, other than sugar.

WATCHES (Ger. *Uhren*, *Taschenuhren*; Fr. *Montres*; It. *Oriuoli da tasca*, o *da saccoccia*; Sp. *Relojes de faltriquera*; Rus. *Karmannie tshasiü*), portable machines, generally of a small size and round flat shape, that measure and indicate the successive portions of time; having, for the most part, their motions regulated by a spiral spring. When constructed on the most approved principles, and executed in the best manner, a watch is not only an exceedingly useful, but a most admirable piece of mechanism. It has exercised the genius and invention of the most skillful mechanics, as well as of some of the ablest mathematicians, for nearly 3 centuries. And, considering the smallness of its size, its capacity of being carried about uninjured in every variety of position, the number and complexity of its movements, and the extraordinary accuracy with which it represents the successive portions of time as determined by the rotation of the earth on its axis, we need not wonder at Dr. Paley having referred to it as a striking specimen of human ingenuity.

Spring watches are constructed nearly on the same principle as pendulum clocks. Instead of the pendulum in the latter, a spring is used in the former, the isochronism of the vibrations of which corrects the unequal motions of the balance.

Historical Notice. — The invention of spring watches dates from about the middle of the 16th century, and has been warmly contested for Huygens and Hooke. The English writers generally incline in favour of the latter. Dr. Hutton says — (*Mathematical Dictionary*, art. *Watch*), that the words “Rob. Hooke inventi, 1658,” were inscribed on the dial plate of a watch presented to Charles II. in 1675. But Montucla affirms (*Histoire des Mathématiques*, tom. ii. p. 413. ed. 1800), that Huygens made this “*belle découverte*” in 1656, and presented a spring watch to the States of Holland in 1677. Comparing these statements, it certainly appears that the claim of Huygens to the priority of the discovery is the better established of the two. We do not, however, believe that either of those distinguished persons owed, in this respect, any thing to the other. The probability seems to be, that the happy idea of employing a spring to regulate the motion of watches occurred to them both nearly at the same time.

Improvement of Watches. — Owing to the facility with which the longitude may be determined by the aid of accurately going watches, it is of great importance to have them made as perfect as possible. In this view liberal premiums have been given to the makers of the best marine watches, or chronometers, by the governments of England, France, Spain, &c. In the reign of Queen Anne, parliament offered a reward of 20,000*l.* to any one who should make a watch, or other instrument, capable of determining the longitude at sea, within certain limits. This magnificent premium was awarded, in 1764, to the celebrated John Harrison, for a marine watch, which, being tried in a voyage to Barbadoes, determined its longitude with even more than the required accuracy. Other premiums, though of inferior amount, were subsequently given to Messrs. Mudge, Arnold, Earnshaw, &c. Since 1822, 2 prizes, one of 300*l.* and one of 200*l.*, have been annually given to the makers of the 2 chronometers adjudged to be the best, after having been submitted to a twelve-month's trial at the Royal Observatory at Greenwich. And to such perfection has the manufacture attained, that some of the chronometers employed by navigators, though carried into the most opposite climates, have not varied to the extent of 2 seconds in their mean rate of going throughout the year.

Watch Manufacture. — The watch-making business is carried on to a great extent in London; the artists of which have attained to an unrivalled degree of excellence in this department. There are about 14,000 gold and 85,000 silver watches annually assayed at Goldsmith's Hall, London — (*Jacob on the Precious Metals*, vol. ii. p. 413.) — the aggregate value of which is, probably, not much under 600,000*l.* The manufacture is also carried on to a considerable extent at Liverpool, Coventry, Edinburgh, &c. Watch movements used to be extensively manufactured at Prescott in Lancashire; but latterly, we believe, the manufacturers have been withdrawing to Liverpool.

On the Continent, watches are principally manufactured at Paris, Geneva, and in Neuchâtel. Some of the French and Swiss watches are excellent; but, generally speaking, they are slight, and inferior to those made in London. Paris and Geneva watches are largely exported to foreign countries; and are every where in high estimation, particularly among the ladies.

Watches impressed with any mark or stamp, appearing to be or to represent any legal British assay mark or stamp, or purporting by any mark or appearance to be of the manufacture of the United Kingdom, or not having the name and place of abode of some foreign maker abroad visible on the frame and also on the face, or not being in a complete state, with all the parts properly fixed in the case, may not be imported into the United Kingdom, even for the purpose of being warehoused. — (3 & 4 Will. 4. c. 52. § 58. See *ante*, p. 652.)

Watches in China. — Pretty considerable numbers of European watches are imported into China; and we anticipate, now that the monopoly is put down, a large increase of the trade. It may be worth mentioning, that those among the Chinese, as well as among some other Eastern nations, who can afford it, uniformly wear watches in pairs! This sort of extravagance is not, however, confined to watches, but extends to a variety of other articles. Shawls, for example, are invariably worn in India in pairs of exactly the same pattern; and it is hardly possible, indeed, to find a native dealer who will sell a single shawl.

In 1832, there were exported from Great Britain 18,678 watches of British manufacture; of these, 13,379 were silver, 4,187 metal, 435 gold, 671 being without cases. The duty on foreign watches and clocks is an *ad valorem* one of 25 per cent., and no account is kept of the numbers of each imported. In 1832, their aggregate value amounted to 27,332*l.*; the total value of the foreign clocks and watches exported during the same year being 1,054*l.* — (*Parl. Paper*, No. 490. Sess. 1833.)

WATER. It may be thought unnecessary, perhaps, to say any thing in a work of this sort with respect to a fluid so well known and so abundant. But, besides being an indispensable necessary of life, water is, in most large cities, an *important commercial article*. It is in the latter point of view, principally, that we mean to consider it. — Inasmuch, however, as the mode of supplying different places with water, and its price, necessarily vary in every possible way, we shall limit our remarks on these subjects to the metropolis only. The few remarks we intend to offer of a general nature will apply indifferently to any populous place, the supply of which with water occasions a considerable expense.

1. *Quality of Water.* — Dr. Ure has made the following statements with respect to the quality of water: — “Water,” says he, “is a very transparent fluid, possessing a moderate degree of activity with regard to organised substances, which renders it friendly to animal and vegetable life, for both which it is, indeed, indispensably necessary. Hence it acts but slightly on the organs of sense, and is therefore

said to have neither taste nor smell. It appears to possess considerable elasticity, and yields in a perceptible degree to the pressure of air in the condensing machine.

"Native water is seldom, if ever, found perfectly pure. The waters that flow within or upon the surface of the earth contain various earthy, saline, metallic, vegetable, or animal particles, according to the substances over or through which they pass. Rain and snow waters are much purer than these, although they also contain whatever floats in the air, or has been exhaled along with the watery vapours.

"The purity of water may be known by the following marks or properties of pure water :—

"1. Pure water is lighter than water that is not pure.

"2. Pure water is more fluid than water that is not pure.

"3. It has no colour, smell, or taste.

"4. It wets more easily than the waters containing metallic and earthy salts, called hard waters, and feels softer when touched.

"5. Soap, or a solution of soap in alcohol, mixes easily and perfectly with it.

"6. It is not rendered turbid by adding to it a solution of gold in aqua regia; or a solution of silver, or of lead, or of mercury, in nitric acid; or a solution of acetate of lead in water.

"Water was, till modern times, considered as an elementary or simple substance; but it is now ascertained to be a compound of oxygen and hydrogen."

2. *Supply of Water.*—London was very ill supplied with water previously to the early part of the 17th century, when the New River water was introduced into the city. This exceedingly useful work was planned and carried into effect by the famous Sir Hugh Middleton, who expended his whole fortune on the project; having, like many other public benefactors, entailed poverty on himself and his posterity by embarking in an undertaking productive of vast wealth to others, and of great public utility. The New River has its principal source near Chadwell, between Hertford and Ware, about 20 miles from London; but the artificial channel in which the water is conveyed is about 40 miles in length. Sir Hugh Middleton encountered innumerable difficulties during the progress of the undertaking, which it is probable would have been abandoned, at least for a time, but for the aid afforded by James I. The New River Company was incorporated in 1619, 6 years after the water had been brought to the reservoir at Islington. The undertaking yielded very little profit for a considerable number of years; but it has since become extremely profitable; so much so, that an original 500*l.* share has been sold for 13,000*l.*!

The Chelsea Water-Works Company was formed in 1723, and (with the aid of 3 smaller companies, none of which are now in existence) it, and the New River, supplied all that part of the metropolis north of the Thames with water, down to the year 1810. In that year, however, 3 new companies, the East London, West Middlesex, and Grand Junction, were established, under the authority of different acts of parliament. At this moment the metropolis is supplied with water by the following companies:—

New River,
Chelsea,
East London,
West Middlesex,

Grand Junction,
Lambeth,
Vauxhall, or South London, and
Southwark Water Works.

The following statements with respect to these companies are taken from Mr. Wade's valuable treatise on the police of the metropolis. The Report of the commissioners appointed by government in 1827, to inquire into the state of the supply of water in the metropolis, is the principal authority on which they are founded.

"The *New River Company* get their supply from the spring at Chadwell, between Hertford and Ware. It comes in an open channel, of about 40 miles in length, to reservoirs at Clerkenwell. There are 2 reservoirs, having between them a surface of about 5 acres, and an average depth of 10 feet. These reservoirs are 84½ feet above low water mark in the Thames; and, by means of steam engines and a stand-pipe, an additional height of 60 feet can be given to the water, so that all the mains belonging to this Company are kept full by a considerable pressure of water. The highest service given by the New River is the cistern on the top of Covent Garden Theatre. The aqueduct by which the water is brought has only a fall of 2 inches per mile; thus it wastes, by evaporation, during the drought of summer, and is impeded by frost in the winter. At these times the Company pump an additional supply from the Thames, at Broken Wharf, between Blackfriars and Southwark Bridges. To this, however, they seldom have recourse; and their engine, erected since the works at London Bridge were broken down, has worked only 176 hours in the year. The New River Company supply 66,000 houses with water, at an annual average of about 1,100 hogsheds each, or, in all, about 75,000,000 hogsheds annually.

"The *East London Water Works* are situated at Old Ford, on the river Lea, about 3 miles from the Thames, and a little below the point to which the tide flows up the Lea. By the act of parliament, this Company must take its water when the tide runs up and the mills below have ceased working. The water is pumped into reservoirs and allowed to settle; and a supply of 6,000,000 gallons is daily distributed to about 42,000 houses. This Company supply no water at a greater elevation than 50 feet, and the usual height at which the delivery is made to the tenants is 6 feet above the pavement; they have 206 miles of iron pipes, which, in some places, cost them 7 guineas a yard. This and the New River are the only companies which do not draw their supply of water entirely from the Thames.

"The *West Middlesex* derive their supply of water from the Thames, at the upper end of Hammer-smith, about 9½ miles above London Bridge, and where the bed of the Thames is gravel. The water is forced by engines to a reservoir at Kensington, 309 feet long, 123 wide, and 20 deep, paved and lined with bricks, and elevated about 120 feet above low water in the Thames. They have another reservoir on Little Primrose Hill, about 70 feet higher, and containing 88,000 hogsheds of water, under the pressure of which the drains are kept charged, in case of fires. They serve about 15,000 tenants, and the average daily supply is about 2,250,000 gallons.

"The *Chelsea Water Works* derive their supply from the Thames, about ¼ of a mile east of Chelsea Hospital; and they have 2 reservoirs—one in the Green Park and another in Hyde Park—the former having an elevation of 44 feet, and the latter of 70. These reservoirs, till within these few months, had never been cleaned, nor had there been any preparation made for that purpose in their construction. About ⅓ of the water served out by this Company is allowed to settle in these reservoirs, and the remaining ⅔ are sent directly from the Thames. Latterly, the Company have

Total South of the Thames. — Returns not complete.

The truth is, as we endeavoured to show in the article COMPANIES, that certain restrictions ought, in almost all cases, to be imposed on companies for the supply of water to a large city. These are not undertakings that can be safely trusted to the free principles that may generally be relied upon. If there be only one set of springs adjacent to a town, or if there be certain springs more conveniently situated for supplying it with water than any other, a company acquiring a right to such springs, and incorporated for the purpose of conveying the water to town, would thereby gain an *exclusive advantage*; and if no limits were set to its dividends, its partners might make an enormous profit at the expense of the public, and without its being possible materially to reduce them by means of competition. What has happened in the case of the New River Company sufficiently evinces the truth of what has now been stated. Had its dividends been limited to any thing like a reasonable profit, the water that is at present supplied by its means might have been furnished for a small part of what it actually costs. But in cases of this sort, priority of occupation, even without any other peculiar advantage, goes far to exclude all regular and wholesome competition. A company that has got pipes laid down in the streets may, if threatened by the competition of another company, lower its rates so as to make the latter withdraw from the field; and as soon as this is done, it may revert to its old, or even to higher charges. It is not, in fact, possible, in cumbrous concerns of this sort, to have any thing like competition, in the ordinary sense of the term; and experience shows that whenever it is attempted, it only continues for a limited period, and is sure to be in the end effectually suppressed. We are, therefore, clearly of opinion, that no company ought ever to be formed for the conveyance of water into a large city, without a maximum being set both to the rates and the dividends; giving the company an option, in the event of the maximum rate yielding more than the maximum dividend, either to reduce the rate, or to apply the surplus to the purchase of the company's stock; so that ultimately the charge on account of the dividends may be got rid of.

We are glad to have to add, that we are supported in what is now stated by the *Report of the Select Committee of the House of Commons on the supply of water for the metropolis, printed in 1821*. It is there said — "The public is at present without any protection even against a further indefinite extension of demand. In cases of dispute, there is no tribunal but the Boards of the companies themselves, to which individuals can appeal; and there are no regulations but such as the companies may have voluntarily imposed upon themselves, and may therefore at any time revoke, for the continuance of the supply in its present state, or for defining the cases in which it may be withdrawn from the householder. All these points, and some others of the same nature, indispensably require legislative regulation, where the subject matter is an article of the first necessity, and the supply has, from peculiar circumstances, got into such a course that it is not under the operation of those principles which govern supply and demand in other cases."

"The principle of the acts under which these companies were instituted, was to encourage competition; and certainly in this, as in other cases, it is only from competition, or the expectation of competition, that a perfect security can be had for a good supply. But your committee are satisfied, that, from the peculiar nature of these undertakings, the principle of competition requires to be guarded by particular checks and limits in its application to them, in order to render it effectual, without the risk of destruction to the competing parties, and thereby, ultimately, of a serious injury to the public." And the committee proceeds to remark — "The submission of their accounts annually to parliament, for a few years, would necessarily throw light on this part of the question."

We think that it would be highly expedient to adopt the suggestion of the committee, by calling upon the companies to lay annually detailed statements of their affairs before parliament. They should be obliged in these statements to give an account of the rates charged by them, and to make a special report as to every case in which they have withdrawn water from a householder. It is to no purpose to repeat, in opposition to this proposal, the common-places about competition securing for the citizens a sufficient supply of water at the lowest prices, in the same way that the competition of bakers and butchers secures them supplies of beef and bread! The statements already made show that there is no analogy whatever in the circumstances under which these articles are supplied. If a man be dissatisfied with any particular butcher or baker, he may go to another; but it is not possible for him to change his water merchant, unless he also change the place of his residence. No water company will encroach upon the district assigned to another; and supposing an individual unlucky enough to quarrel with those who have the absolute monopoly of the supply of the district in which he resides, he must either migrate to another, or be without water, unless he can get a supply upon his own premises! Such being the actual state of things, it is quite ludicrous to talk about competition affording any real security against extortion and abuse. Even the publication of the proceedings of the companies would be a very inadequate check on their conduct; but such as it is, it is perhaps the only one that can now be resorted to; and as it would have considerable influence, it ought not, certainly, to be neglected.

3. *Quality of the London Water.* — All the companies, with the exception of the New River and East London Companies, derive their supplies of water from the Thames; and in consequence of their taking it up within the limits to which the tide flows, it is necessarily, in the first instance, loaded with many impurities. But the reports that were recently so very prevalent, with respect to the deleterious quality of the water taken from the river, have been shown to be very greatly exaggerated. The statement of Dr. Bostock, given in the *Report of the commissioners*, shows that by far the greater part of the impurities in the Thames water are mechanically suspended in, and not chemically combined with, it; and that they may be separated from it by filtration, or by merely allowing it to stand at rest. Most of the companies have recently made considerable efforts to improve their water; and though they have not done in this respect as much as they might and ought to have done, a considerable improvement has, on the whole, been effected: and notwithstanding all that has been said to the contrary, we have been assured, by those best qualified to form an opinion on such a subject, that, though not nearly so pure as a little pains would render it, there is not the slightest foundation for the notion that its impurities have been such as to affect, in any degree, the health of the inhabitants.

4. *Water for Ships.* — Various improvements have been made in the art of preserving water on board ships. Of these, the principal are the charring the inside of the casks in which the water is kept, and the substitution of iron tanks for casks. The latter, being made of the required shape, may be conveniently stowed into any part of the ship. In men-of-war, the iron tanks serve as ballast; the water being brought up by a forcing pump. Water is found to preserve better in them than in any other sort of vessel. Drip-stones may be employed with much advantage in the purification of water. When water is taken on board from a river into which the tide flows, it should, of course, be raised at low ebb.

WAX (Ger. *Wachs*; Fr. *Cire*; It. and Sp. *Cera*; Rus. *Wosk*), a vegetable product. Several plants contain wax in such abundance, as to make it worth while to extract it from them. But bees' wax is by far the most generally known. The honey is first

pressed from the comb, and the wax is then melted into cakes. It has a slight odour of honey, is insipid, and of a bright yellow hue. It is brittle, yet soft, and somewhat unctuous to the touch. It is often adulterated with earth, pea meal, resin, &c. The presence of the former may be suspected when the cake is very brittle, or when its colour inclines more to gray than to yellow; and the presence of resin may be suspected when the fracture appears smooth and shining, instead of being granulated. Wax, when bleached or purified, is white, perfectly insipid, inodorous, and somewhat translucent; it is harder, less unctuous to the touch, heavier, and less fusible, than yellow wax. It is sometimes adulterated with the white oxide of lead to increase its weight, with white tallow, and with potato starch. The first is detected by melting the wax in water, when the oxide falls to the bottom; the presence of tallow is indicated by the wax being of a dull opaque white, and wanting the transparency which distinguishes pure wax; and starch may be detected by applying sulphuric acid to the suspected wax, as the acid carbonises the starch, without acting on the wax. — (*Thomson's Chemistry*, and *Dr. A. T. Thomson's Dispensatory*.)

Notwithstanding the large supply of wax produced at home, a considerable quantity is imported from abroad; and there can be no doubt that the import would be much greater, were it not for the magnitude of the duty, which, notwithstanding its late reduction, still amounts to *l.* 10s. per cwt. The total quantity imported, in 1831, amounted to 7,203 cwt.; of which 3,892 cwt. came from Western Africa, 1,551 cwt. from Tripoli, Barbary, &c., 910 cwt. from the United States, and the rest from Russia, Germany, &c.

Account of the Imports and Exports of Wax, the Quantities retained for Home Use, the Rates of Duty thereon, and the Nett Produce of the Duty, in 1831 and 1832. — (*Papers published by the Board of Trade*, vol. ii. p. 29.)

	Imports.		Exports.		Retained for Home Consumption.		Rate of Duty.	Produce of Duty.		
	1831.	1832.	1831.	1832.	1831.	1832.		<i>l.</i>	<i>s.</i>	<i>d.</i>

The price of wax varies (duty included) from 5*l.* to 10*l.* a cwt.

WEIGHTS AND MEASURES. Weights are used to ascertain the gravity of bodies,—a quality depending partly on their magnitude, and partly on their density. Measures are used to determine the magnitude of bodies, or the space which they occupy.

(For an account of the weights and measures used in foreign countries, and their equivalents in English weights and measures, see the notices of the great sea-port towns dispersed throughout this work. Thus, for the Russian weights and measures, see **PETERSBURGH**; for those of China, see **CANTON**; &c.)

Neither the magnitude nor the weight of any one body can be determined, unless by comparing it with some other body selected as a standard. It is impossible, indeed, to form any idea in respect of magnitude or weight, except in relation to some definite space or weight with which we are acquainted. We say that one article weighs 1 pound, another 2 pounds, a third 3, and so on; meaning not only that these weights are to each other as 1, 2, 3, &c., but also that the weight or specific gravity of the first is equal to the known and determinate weight denominated a pound, that the second is equal to 2 pounds, and so on.

Standards of Weight and Measure. — Standards of lineal measure must have been fixed upon at the earliest period, and appear to have consisted principally of parts of the human body,—as the cubit, or length of the arm from the elbow to the tip of the middle finger: the foot; the *ulna*, arm, or yard; the span; the digit, or finger; the fathom, or space from the extremity of one hand to that of the other, when they are both extended in opposite directions; the pace, &c. Large spaces were estimated by measures formed out of multiples of the smaller ones; and sometimes in day's journeys, or by the space which it was supposed an ordinary man might travel in a day, using a reasonable degree of diligence.

But lineal measures can only be used to determine the magnitude of solid bodies; the magnitude of bodies in a liquid or fluid state has to be determined by what are called measures of capacity. It is probable that, in the infancy of society, shells, or other hollow instruments afforded by nature, were used as standards. But the inaccuracy of the conclusions drawn from referring to them must soon have become obvious; and it early occurred, that to obtain an accurate measure of liquids nothing more was necessary than to constitute an artificial one, the dimensions, and consequently the capacity, of which should be determined by the lineal measures previously adopted.

The determination of the gravity or weight of different bodies supposes the invention of the balance. Nothing is known of the steps which led to its introduction; but it was used in the remotest antiquity. It seems probable that, at first, cubes of some common lineal measure, as a foot, or the fraction of a foot, formed of copper, iron, or some other metal, were used as standards of weight. When the standard was selected, if it was de-

sired to ascertain the specific gravity or weight of any given article, all that was necessary was to put it into one of the scales of the balance; and as many cubes, or parts of cubes, on the other, as might be necessary to counterpoise it.

Weights have, however, been frequently derived from grains of corn. Hence, in this, and in some other European countries, the lowest denomination of weight is a *grain*; and 32 of these grains are directed, by the ancient statute called *Compositio Mensurarum*, to compose a pennyweight, whereof 20 make an ounce, 12 ounces a pound, and so upwards.

In every country in which commercial transactions are extensively carried on, the importance of having weights and measures determined by some fixed standard becomes obvious to every one. But as the size of different parts of the human body differ in different individuals, it is necessary to select some durable article, — a metallic rod, for example, — of the length of an ordinary cubit, foot, &c., and to make it a standard with which all the other cubits, feet, &c. used in mensuration shall correspond. These standards have always been preserved with the greatest care: at Rome, they were kept in the temple of Jupiter; and among the Jews, their custody was intrusted to the family of Aaron. — (*Paucton, Métrologie*, p. 223.)

The principal standards used in the ancient world, were, the cubit of the Jews, from which their other measures of length, capacity, and weight were derived; and the foot of the Greeks and Romans.

In England, our ancient historians tell us that a new, or rather a revived, standard of lineal measure was introduced by Henry I., who ordered that the ulna, or ancient ell, which corresponds to the modern yard, should be made of the exact length of his own arm, and that the other measures of length should be raised upon it. This standard has been maintained, without any sensible variation. In 1742, the Royal Society had a yard made, from a very careful comparison of the standard ells or yards of the reigns of Henry VII. and Elizabeth kept at the Exchequer. In 1758, an exact copy was made of the Royal Society's yard; and this copy having been examined by a committee of the House of Commons, and reported by them to be equal to the standard yard, it was marked as such; and this identical yard is declared, by the act 5 Geo. 4. c. 74., to be the standard of lineal measure in Great Britain. The clause in the act is as follows: —

"From and after the 1st day of May, 1825 (subsequently extended to the 1st of January, 1826), the straight line or distance between the centres of the 2 points in the gold studs in the straight brass rod, now in the custody of the clerk of the House of Commons, wherein the words and figures 'STANDARD YARD, 1760,' are engraved, shall be the original and genuine standard of that measure of length or lineal extension called a yard; and the same straight line or distance between the centres of the said 2 points in the said gold studs in the said brass rod, the brass being at the temperature of 62° by Fahrenheit's thermometer, shall be and is hereby denominated the 'IMPERIAL STANDARD YARD,' and shall be and is hereby declared to be the unit or only standard measure of extension, wherefrom or whereby all other measures of extension whatsoever, whether the same be lineal, superficial, or solid, shall be derived, computed, and ascertained; and that all measures of length shall be taken in parts or multiples or certain proportions of the said standard yard; and that 1-36 part of the said standard yard shall be a foot, and the 12th part of such foot shall be an inch; and that the pole or perch in length shall contain 5½ such yards, the furlong 220 such yards, and the mile 1,760 such yards." — § 1.

The superficial measures are formed on the basis of the square of this standard; it being enacted, that

"The rood of land shall contain 1,210 square yards, according to the said standard yard; and that the acre of land shall contain 4,840 such square yards, being 160 square perches, poles, or rods." — § 2.

Uniformity of Weights and Measures. — The confusion and inconvenience attending the use of weights and measures of the same denomination, but of different magnitudes, was early remarked; and there is hardly a country in which efforts have not been made to reduce them to the same uniform system. Numerous acts of parliament have been passed, having this object in view, and enjoining the use of the same weights and measures, under very severe penalties. But, owing to the inveteracy of ancient customs, and the difficulty of enforcing new regulations, these statutes have always had a very limited influence, and the greatest diversity has continued to prevail, except in lineal measures. But the statute of 5 Geo. 4. c. 74. seems to have, at length, effected what former statutes failed of accomplishing. It is, perhaps, indebted for its success in this respect to the moderate nature of the changes which it introduced. We have already seen that it made no alteration in the lineal measures previously in use. Neither did it affect the previously existing system of weights: both the Troy and the Avoirdupois weights having been preserved.

"The Troy weight," says Mr. Davies Gilbert, President of the Royal Society, "appeared to us (the commissioners of weights and measures) to be the ancient weight of this kingdom, having, as we have reason to suppose, existed in the same state from the time of St. Edward the Confessor; and there are reasons, moreover, to believe, that the word Troy has no reference to any town in France, but rather to the monkish name given to London, of Troy Novant, founded on the legend of Brute. Troy weight, therefore, according to this etymology, is, in fact, London weight. We were induced, moreover, to preserve the Troy weight, because all the coinage has been uniformly regulated by it; and all medical prescriptions or formulæ now are, and always have been, estimated by Troy weight, under a peculiar subdivision, which the College of Physicians have expressed themselves most anxious to preserve."

It was resolved, therefore, to continue the use of Troy weight; and also, on account of the accuracy of the Troy standard, to raise the Avoirdupois weight from this basis.

"We found," said Mr. Davies Gilbert, "the Avoirdupois weight, by which all heavy goods have been for a long time weighed (probably derived from Avoirs (Averia), the ancient name for goods or chattels, and Poids, weight), to be universally used throughout the kingdom. This weight, however, seems not to have been preserved with such scrupulous accuracy as Troy weight, by which more precious articles have been weighed; but we had reason to believe that the pound cannot differ by more than 1, 2, or 3 grains, from 7,000 grains Troy; some being in excess, and others, though in a less degree, in defect, but in no case amounting to above 1, 2, or 3 grains. It therefore occurred to us, that we should be offering no violence to this system of weights, if we declared that 7,000 grains Troy should be hereafter considered as the pound Avoirdupois."

In accordance with these views, it was enacted,—"That from and after the 1st day of May, 1825, the standard brass weight of 1 pound Troy weight, made in the year 1758, now in the custody of the clerk of the House of Commons, shall be, and the same is hereby declared to be, the original and genuine standard measure of weight, and that such brass weight shall be, and is hereby denominated, the Imperial Standard Troy pound, and shall be, and the same is hereby declared to be, the unit or only standard measure of weight, from which all other weights shall be derived, computed, and ascertained; and that 1-16th part of the said Troy pound shall be an ounce; and that 1-20th part of such ounce shall be a pennyweight; and that 1-24th part of such pennyweight shall be a grain; so that 5,760 such grains shall be a Troy pound; and that 7,000 such grains shall be, and they are hereby declared to be, a pound Avoirdupois, and that 1-16th part of the said pound Avoirdupois shall be an ounce Avoirdupois, and that 1-16th part of such ounce shall be a dram."

The measures of capacity were found to be, at the period of passing the late statute, in the greatest confusion; and a considerable change has consequently been made in them. The wine gallon formerly amounted to 231 cubic inches, the corn gallon to 268·8, and the ale gallon to 282. But these are superseded by the Imperial gallon, which contains 277·274 cubic inches, or 277½ very nearly. It is deduced as follows:—

"The standard measure of capacity, as well for liquids as for dry goods not measured by heaped measure, shall be the GALLON, containing 10 lbs. avoirdupois weight of distilled water weighed in air, at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches; and a measure shall be forthwith made of brass, of such contents as aforesaid, under the directions of the Lord High Treasurer or the commissioners of his Majesty's treasury; and such brass measure shall be, and is hereby declared to be, the Imperial standard gallon, and shall be, and is hereby declared to be, the unit and only standard measure of capacity, from which all other measures of capacity to be used, as well for wine, beer, ale, spirits, and all sorts of liquids, as for dry goods not measured by heap measure, shall be derived, computed, and ascertained; and all measures shall be taken in parts or multiples or certain proportions of the said Imperial standard gallon; and the quart shall be ¼th part of such standard gallon, and the pint shall be ½th of such standard gallon, and 2 such gallons shall be a peck, and 8 such gallons shall be a bushel, and 8 such bushels a quarter of corn or other dry goods, not measured by heaped measure."—§ 6.

We subjoin a Table showing the contents of the different gallons, both in measure and weight.

	Cubic Inches.	Avoirdupois Weight.			Troy Weight.		
		Lbs.	oz.	dr.	Lbs.	oz.	dwt. gra.
Imperial gallon - - - -	277·274	10	0	0	12	1	16 16
Corn gallon - - - - -	268·8	9	10	1½	11	9	7 12
Wine gallon - - - - -	231	8	5	6½	10	1	9 22
Ale gallon - - - - -	282	10	2	11½	12	4	6 8

Heaped Measures.—The greatest blemish, by far, in the new act, is the continuance and legitimization of the practice of selling by heaped measure. We are astonished at the toleration of such a barbarous custom. All articles that may be sold by heaped measure ought to be sold by weight. In Scotland, indeed, the use of heaped measure was legally abolished above 200 years since; and the present ill-advised attempt to revive a practice productive of nothing but fraud has been universally rejected in that country. The clauses in the act as to heaped measure are as follow:—

The standard measure of capacity for coals, culm, lime, fish, potatoes, or fruit, and all other goods and things commonly sold by heaped measure, shall be the aforesaid bushel, containing 80 lbs. avoirdupois of water as aforesaid, the same being made round, with a plain and even bottom, and being 19¼ inches from outside to outside of such standard measure as aforesaid.—§ 7.

In making use of such bushel, all coals and other goods and things commonly sold by heaped measure, shall be duly heaped up in such bushel, in the form of a cone, such cone to be of the height of at least 6 inches, and the outside of the bushel to be the extremity of the base of such cone; and 3 bushels shall be a sack, and 12 such sacks shall be a chaldron.—§ 8. It was further enacted, by stat. 6 Geo. 4. c. 12, that from and after the 1st of January, 1826, all such heaped measures shall be made cylindrical, and the diameter of such measures shall be at the least double the depth thereof, and the height of the cone or heap shall be equal to ¼ths of the depth of the said measure, the outside of the measure being the extremity of or base of such cone.—§ 2.

Measure of Weight, or Heaped Measure, to be used for Wheat.—Provided always, that any contracts, bargains, sales, and dealings, made or had for or with respect to any coals, culm, lime, fish, potatoes, or fruit, and all other goods and things commonly sold by heaped measure, sold, delivered, done, or agreed for, or to be sold, delivered, done, or agreed for, by weight or measure, shall and may be either according to the said standard of weight, or the said standard for heaped measure; but all contracts, bargains, sales, and dealings, made or had for any other goods, wares, or merchandise, or other thing done or agreed for, or to be sold, delivered, done, or agreed for, by weight or measure, shall be made and had according to the said standard of weight, or to the said gallon, or the parts, multiples, or proportions thereof; and in using the same the measures shall not be heaped, but shall be stricken with a round stick or roller, straight, and of the same diameter from end to end.—(5 Geo. 4. c. 74. § 9.)

Models.—The 12th section of the act directs models of the standard weights and measures to be kept in the different counties, cities, burghs, &c. for the verification of the weights and measures in use in such places.

Contracts for Sale, &c. by Weight or Measure.—All contracts, bargains, sales, and dealings, which shall be made or had within any part of the United Kingdom, for any work to be done, or for any goods, wares, merchandise, or other thing to be sold, delivered, done, or agreed for, by weight or measure, where no special agreement shall be made to the contrary, shall be deemed to be made and had according to the

standard weights and measures ascertained by this act; and in all cases where any special agreement shall be made, with reference to any weight or measure established by local custom, the ratio or proportion which every such local weight or measure shall bear to any of the said standard weights or measures shall be expressed, declared, and specified in such agreement, or otherwise such agreement shall be null and void. — § 15. -

Existing Weights and Measures may be used, being marked.—And as it is expedient that persons should be allowed to use the several weights and measures which they may have in their possession, although such weights and measures may not be in conformity with the standard weights and measures established by this act; it is therefore enacted, that it shall be lawful for any person or persons to buy and sell goods and merchandise by any weights or measures established either by local custom, or founded on special agreement: provided that, in order that the ratio or proportion which all such measures and weights shall bear to the standard weights and measures established by this act shall be and become a matter of common notoriety, the ratio or proportion which all such customary measures and weights shall bear to the said standard weights and measures shall be painted or marked upon all such customary weights and measures respectively; but nothing herein contained shall extend to permit any maker of weights or measures, or any person or persons whomsoever, to make any weight or measure, at any time after the 1st of May, 1825, except in conformity with the standard weights and measures established under this act. — § 16.

False or deficient Weights, &c.—The 21st section declares that all the powers, rules, and regulations in force by former acts for preventing the use of false and deficient measures are to be applied and put in execution, except such as are expressly repealed or altered by this act.

Invariable or Natural Standards. — As the standards adopted in most countries have been in a great degree arbitrary, it has long been the opinion of scientific men, that, to construct a more perfect system of weights and measures, some natural and unchangeable basis should be adopted. It has, indeed, been contended by Paucaon and Bailly, that the measures of the ancients were deduced from a basis of this sort; and that the *stadium* always formed an aliquot part of the earth's circumference, that part differing amongst different nations and authors. But no learning or ingenuity can induce any one to believe what is so obviously incredible. The ancients had no means of determining the earth's circumference with any thing like the accuracy required to render it the great unit of a system of measures; and, what is equally decisive, no ancient author ever makes the slightest allusion to any such standard.

In more modern times, however, the idea of seeking for a unit of weight and measure in some unchanging natural object has been practically carried into effect. The standards that have been usually proposed for this object, have been some aliquot part of the quadrant of the meridian, or the length of a pendulum vibrating seconds in some given latitude. The latter has been in so far adopted into the existing system of weights and measures established by the act of 1823, that the length of the standard yard, as compared with that of a pendulum vibrating seconds in the latitude of London, is specified in the act as follows:—

"Whereas it has been ascertained by the commissioners appointed by his Majesty to inquire into the subject of weights and measures, that the said yard hereby declared to be the Imperial standard yard, when compared with a pendulum vibrating seconds of mean time in the latitude of London, in a vacuum at the level of the sea, is in the proportion of 36 inches to 39 inches and 1,393 ten-thousandth parts of an inch: be it therefore enacted and declared, that if at any time hereafter the said Imperial standard yard shall be lost, or shall be in any manner destroyed, defaced, or otherwise injured, it shall and may be restored by making, under the direction of the Lord High Treasurer, or the commissioners of his Majesty's treasury of the United Kingdom of Great Britain and Ireland, or any 3 of them for the time being, a new standard yard, bearing the same proportion to such pendulum as aforesaid, as the said Imperial standard yard bears to such pendulum."

TABLES OF ENGLISH WEIGHTS AND MEASURES, ACCORDING TO THE NEW OR
IMPERIAL STANDARD.

IMPERIAL TROY WEIGHT.

The standard pound containing 5,760 grs.

		1 Grain	=	0.0648
24 Grains	-	1 Pennyweight	=	1.5559
20 Pennyweights	-	1 Ounce	=	31.1027
12 Ounces	-	1 Pound	=	373.2330

Troy weight is used in the weighing of gold, silver, jewels, &c: It is also used in ascertaining the strength of spirituous liquors; in philosophical experiments; and in comparing different weights with each other.

APOTHECARIES' WEIGHT.

					Fr. Gram.
		1 Grain	-	-	0.0648
60 Grains	-	1 Scruple	-	-	1.296
3 Scruples	-	1 Dram	-	-	3.888
8 Drams	-	1 Ounce	-	-	31.102
12 Ounces	-	1 Pound	-	-	373.233

This weight is essentially the same as Troy weight, but differently divided. It is chiefly used for medical prescriptions; but drugs are mostly bought and sold by avoirdupois weight.

DIAMOND WEIGHT.—Diamonds and other precious stones are weighed by carats, the carat being divided into 4 grains, and the grain into 16 parts. The diamond carat weighs $3\frac{1}{2}$ grains Troy: thus,

Diamond Weight.		Troy Weight. Decigrammes.	
16 Parts	- 1 Grain	$0\frac{8}{10}$ Grains	= 51½
4 Grains	- 1 Carat	$3\frac{1}{2}$ —	= 205½

IMPERIAL AVOIRDUPOIS WEIGHT.

				Fr. Gram.
		1 Dram	=	1.771
16 Drams	-	1 Ounce	=	28.346
16 Ounces	-	1 Pound	=	453.544
28 Pounds	-	1 Quarter	=	12.689 kil.
4 Quarters	-	1 Hundred wt.	=	50.796 —
20 Hundred wt.	-	1 Ton	=	1015.920 —

The dram is subdivided into 3 scruples, and each scruple into 10 grains; the pound, or 7,680 grains avoirdupois, equals 7,000 grains Troy, and hence 1 grain Troy equals 1.097 grains avoirdupois.

Hence also 144 lbs. avoirdupois = 175 lbs. Troy.
and - 192 oz. ditto = 175 oz. ditto.

The stone is generally 14 lbs. avoirdupois weight but for butcher's meat or fish it is 8 lbs. Hence the hundred weight (cwt.) equals 8 stone of 14 lbs. or 14 stone of 8 lbs.

A stone of glass is 5 lbs. A seam of glass 24 stone, or 120 lbs.

Hay and straw are sold by the load of 36 trusses. The truss of hay weighs 56 lbs. and of straw 36 lbs. The truss of new hay is 60 lbs. until the 1st of September.

The custom of allowing more than 16 ounces to the pound of butter used to be very general in several parts of the country.

WOOL WEIGHT.

Like all other bulky articles, wool is weighed by avoirdupois weight, but the divisions differ; thus,

7 Pounds	=	1 Clove.	6½ Tods	=	1 Wey.
2 Cloves	=	1 Stone.	2 Weys	=	1 Sack.
2 Stone	=	1 Tod.	12 Sacks	=	1 Last.

A pack of wool contains 240 lbs.

CHEESE AND BUTTER.

8 Pounds	=	1 Clove.
32 Cloves	=	1 Wey in Essex.
42 do.	=	1 do. in Suffolk.
56 Pounds	=	1 Firkin of Butter.

IMPERIAL LONG MEASURE.

		Fr. Metres.
12 Inches	=	1 Foot = 0.3048
3 Feet	=	1 Yard = 0.9144
5½ Yards	=	1 Pole or Rod = 5.0291
40 Poles	=	1 Furlong = 201.1632
8 Furlongs	=	1 Mile = 1609.3059
3 Miles	=	1 League = 4827.9179
60 Geographical, or 60½ Eng. Miles	=	1 Degree = 11120.7442

Besides the above, there are the palm, which equals 3 inches; the hand, 4 inches; the span, 9 inches; and the fathom, 6 feet.

IMPERIAL SUPERFICIAL MEASURE.

		Fr. Sq. Metres.
144 Inches	=	1 Square foot = 0.0929
9 Square feet	=	1 Square yard = 0.8361
30½ Square yards	=	1 Square pole = 25.2916
40 Square poles	=	1 Rood = 1011.6662
4 Roods	=	1 Acre = 4046.6648

The inch is generally divided, on scales, into 10ths, or decimal parts; but in squaring the dimensions of artificers' work, the duodecimal system is adopted; the inch being divided into 12 parts or lines, each part into 12 seconds, and each second into 12 thirds.

Land is usually measured by a chain of 4 poles, or 22 yards, which is divided into 100 links. Ten chains in length and 1 in breadth make an acre, which equals 160 square perches, or 4,840 square yards.

CUBIC OR SOLID MEASURE.

		Fr. Cubic Metres.
1,728 Cubic inches	=	1 Cubic foot = 0.0283
27 Cubic feet	=	1 Cubic yard = 7.645
40 Feet of rough timber, or 50 Feet hewn do.	=	1 Load or ton = { 1.1326 1.4157
42 Cubic feet	=	1 Ton of shipping = 1.1592

By cubic measure, marble, stone, timber, masonry, and all artificers' works of length, breadth, and thickness, are measured, and also the contents of all measures of capacity, both liquid and dry.

IMPERIAL LIQUID AND DRY MEASURE.

Deducted from the Standard Gallon, containing 10 lbs. weight of distilled water, temperature 62°, barometer 30 inches.

Weight of Water.	Cubic Feet.	Cubic Inches.	Gills.	Pints.	Quarts.	Pothles.	Gallons.	Pecks.	Bushels.	Chums.	Quarters.
5 oz.		8.665	1								
lbs. 1½		31.659	4	1							
2½		69.518	8	2	1						
5		138.637	16	4	2	1					
10		277.274	32	8	4	2	1				
20		554.518	64	16	8	4	2	1			
40	1.2537	2218.191	256	61	32	16	8	4	1		
50	5.1347	8872.763	1,021.256	128	61	32	16	8	4	1	
610	10.2691	17745.526	2,045.512	256	128	61	32	16	8	4	1

The dimensions of the Imperial standard bushel are as follows:—The outer diameter 19½ inches,

and the inner diameter 18½. The depth is 8½, and the height of the cone, for heaped measure, is 6 inches. The contents of the Imperial heaped bushel are 2815.4887 cubic inches. The subdivisions and multiples are in the same proportion.

OLD MEASURES SUPERSEDED BY THE IMPERIAL SYSTEM.

OLD WINE MEASURE.

		Cub. In.	Fr. Litres.
1 Pint	=	28.875	= 0.4731
2 Pints	=	1 Quart = 57.75	= 0.9463
4 Quarts	=	1 Gallon = 231	= 3.785
42 Gallons	=	1 Tierce = 5.614 feet	= 158.9673
2 Tierces	=	1 Puncheon = 11.228	= 317.9345
63 Gallons	=	1 Hogshead = 8.421	= 238.4509
2 Hogshds.	=	1 Pipe or Butt = 16.842	= 476.9018
2 Pipes	=	1 Tun = 33.684	= 953.8036

The pint is subdivided into halves and quarters; the latter is called a gill. A rundlet is 18 gallons, and an anker 9.

Conversion of Old Wine Measure into Imperial Measure.—The old wine gallon contains 231 cubic inches, and the Imperial gallon 277.274 ditto. Hence, to convert wine gallons into Imperial gallons, multiply by $\frac{231}{277.274}$, or by .83511; and to convert Imperial gallons into wine gallons, multiply by the reciprocal fraction $\frac{277.274}{231}$, or by 1.20032. But for most practical purposes, wine measure multiplied by 5 and divided by 6 will give Imperial measure with sufficient accuracy, and conversely.

N. B.—The multipliers and divisors employed to reduce old wine, ale, &c. measures to Imperial measure, serve also to reduce prices by the former to the latter.

We subjoin, from the very complete and valuable work of Mr. Buchanan, of Edinburgh, on Weights and Measures, a

Table of English Wine Gallons, from 1 to 100, with their Equivalents in Imperial Gallons.

13	10.83043	38	31.65821	63	52.48598	88	73.31375
14	11.66354	39	32.49132	64	53.31909	89	74.14686
15	12.49665	40	33.32443	65	54.15220	90	74.97997
16	13.32976	41	34.15754	66	54.98531	91	75.81308
17	14.16287	42	34.99065	67	55.81842	92	76.64619
18	14.99598	43	35.82376	68	56.65153	93	77.47930
19	15.82909	44	36.65687	69	57.48464	94	78.31241
20	16.66220	45	37.48998	70	58.31775	95	79.14552
21	17.49531	46	38.32309	71	59.15086	96	79.97863
22	18.32842	47	39.15620	72	59.98397	97	80.81174
23	19.16153	48	39.98931	73	60.81708	98	81.64485
24	19.99464	49	40.82242	74	61.65019	99	82.47796
25	20.82775	50	41.65553	75	62.48330	100	83.31107

Hence, supposing the former denominations to be preserved, a tierce of wine = 35 Imperial gallons very nearly; a puncheon = 70 ditto very nearly; a hogshead = 52½ ditto very nearly; a pipe or butt = 105 ditto very nearly; and a tun = 210 ditto very nearly.

OLD ALE AND BEER MEASURE.

		Cub. In.	Fr. Litres.
1 Pint	=	35.25	= 0.5776
2 Pints	=	1 Quart = 70.5	= 1.1552
4 Quarts	=	1 Gallon = 282	= 4.6208
8 Gallons	=	1 Firkin ale = 1.305 feet	= 36.9669
9 Gallons	=	1 ditto beer = 1.468	= 41.5872
2 Firkins	=	1 Kilderkin = 2.937	= 83.1744
2 Kilderkins	=	1 Barrel = 5.875	= 166.3488
1½ Barrel	=	1 Hoghead = 8.812	= 249.5232
2 Barrels	=	1 Puncheon = 10.750	= 332.6876
2 Hogheads	=	1 Butt = 17.624	= 499.0464
2 Butts	=	1 Tun = 35.248	= 998.0928

Conversion of Old Ale and Beer Measure into Imperial Measure.—The old ale gallon contains 282 cubic inches, and the Imperial standard gallon 277.274 ditto. Hence, to convert ale gallons into Imperial gallons, multiply by $\frac{282}{277.274}$, or by 1.0170445; and to convert Imperial gallons into ale gallons, multiply by the reciprocal fraction $\frac{277.274}{282}$, or by .9832411. Unless extreme accuracy be required, the first 3 decimals need only be used. And for most practical purposes, ale measure multiplied by 59 and divided by 60 will give Imperial measure with sufficient accuracy, and conversely.

OLD DRY OR WINCHESTER MEASURE.

		Cub. In.	Fr. Litres.
4 Gills	1 Pint	33.6	0.55053
2 Pints	1 Quart	67.2	1.10107
2 Quarts	1 Pottle	134.4	2.20214
2 Pottles	1 Gallon	268.8	4.40428
2 Gallons	1 Peck	537.6	8.80856
4 Pecks	1 Bushel	2150.4	35.23430
4 Bushels	1 Coom	4.977 feet	140.93721
2 Cooms	1 Quarter	9.954	281.87443
5 Quarters	1 Wey or Load	49.770	1409.37216
2 Weys	1 Last	99.540	2818.74432

The Winchester bushel is 18½ inches wide, and 8 inches deep. Corn and seeds are measured by striking the bushel from the brim, with a round piece of light wood, about 2 inches in diameter, and of equal thickness from one end to the other. All other dry goods are heaped.

Conversion of Winchester Bushels into Imperial Bushels.—The Winchester bushel contains 2150.42 cubic inches, and the Imperial standard bushel 2218.192 ditto. Hence, to convert Winchester bushels into Imperial bushels, multiply by $\frac{2150.42}{2218.192}$, or by .969447; and to convert Imperial bushels into Winchester bushels, multiply by the reciprocal fraction $\frac{2218.192}{2150.42}$, or 1.0315157. For practical purposes, multiply Winchester measure by 31 and divide by 32 for Imperial measure, and the contrary.

In some markets, corn is sold by weight, which is the fairest mode of dealing, though not the most convenient in practice. Even where measures are used, it is customary to weigh certain quantities or proportions, and to regulate the prices accordingly. The average bushel of wheat is generally reckoned at 60 lbs.—of barley 48 lbs.—of oats 38 lbs.—

French System of Weights and Measures.—The new metrical system established in France subsequently to the Revolution, is founded on the measurement of the quadrant

peas 64, beans 63, clover 68, rye and canary 53, and rape 48 lbs. In some places, a load of corn, for a man, is reckoned 5 bushels, and a cart load 40 bushels.

COAL MEASURE.

Coals were formerly sold by the chaldron, which bears a certain proportion to Winchester measure.

4 Pecks	-	=	1 Bushel.
3 Bushels	-	=	1 Sack.
3 Sacks	-	=	1 Vat.
4 Vats	-	=	1 Chaldron.
2½ Chaldron	-	=	1 Score.

The coal bushel holds 1 Winchester quart more than the Winchester bushel; its contents being 2217.62 cubic inches. It is 1½ inches wide from outside to outside, and 8 inches deep. In measuring coals it was heaped up in the form of a cone, to the height of at least 6 inches above the brim (according to a regulation passed at Guildhall in 1806), the outside of the bushel being the extremity of the cone, so that the bushel should contain at least 281.9 cubic inches, nearly equal to the Imperial heaped bushel. Hence the chaldron should measure 58.6 cubic feet.

But the sale of coals by measure has, in consequence of the frauds to which it led—(see *ante*, p. 296.)—been abolished; and they are now sold by weight.

Of Wood Fuel, English Measure.—Wood fuel is assized into shids, billets, faggots, fall wood, and cord wood. A shid is to be 4 feet long, and, according as they are marked and notched, their proportion must be in the girth; viz. if they have but 1 notch, they must be 16 inches in the girth; if 2 notches, 23 inches; if 3 notches, 28 inches; if 4 notches, 33 inches; and if 5 notches, 38 inches about. Billets are to be 3 feet long, of which there should be 3 sorts; viz. a single cask, and a cask of 2; the 1st is 7 inches, the 2d 10 inches, and the 3d 14 inches, about; they are sold by the 100 of 5 score. Faggots are to be 3 feet long, and at the band 24 inches about, besides the knot of such faggots; 50 go to the load. Bavins and spray wood are sold by the 100, which are accounted a load. Cord wood is the bigger sort of fire wood, and it is measured by a cord, or line, whereof there are 2 measures; that of 14 feet in length, 3 feet in breadth, and 3 feet in height. The other is 8 feet in length, 4 feet in height, and 4 feet in breadth.

MEASURES OF WOOD.

1,000 Billets of wood	-	=	1 Cord.
10 cwt. of ditto	-	=	1 Cord.
1 Cord of wood	-	=	½ Chaldron of coals.
100 lbs. of wood	-	=	1 Quintal of wood.

of the meridian, or of the distance from the pole to the equator. This distance having been determined with the greatest care, the ten-millionth part of it was assumed as the *mètre*, or unit of length, all the other lineal measures being multiples or submultiples of it, in decimal proportion. The *mètre* corresponds pretty nearly to the ancient French *aune*, or yard, being equal to 3·07844 French feet, or 3·281 English feet, or 39·3708 English inches.

The unit of weight is the *gramme*, which is a cubic centimètre, or the 100th part of a *mètre* of distilled water of the temperature of melting ice; it weighs 15·434 English Troy grains.

In order to express the decimal proportion, the following vocabulary of names has been adopted, in which the terms for multiplying are Greek, and those for dividing are Latin.

For multipliers, the word

<i>Deca</i> prefixed means	-	10 times.
<i>Hecto</i>	-	100
<i>Kilo</i>	-	1,000
<i>Myria</i>	-	10,000

On the contrary, for divisors,
the word *Deci* expresses the 10th part.
Centi - 100th -
Milli - 1,000th -

Thus, *Decamètre* means 10 *mètres*.

Decimètre - the 10th part of a *mètre*.
Kilogramme - 1,000 grammes, &c.

The *are* is the element of square measure, being a square *decamètre*, equal to 3 955 English perches.

The *stère* is the element of cubic measure, and contains 35·317 cubic feet English.

The *litre* is the element of all measures of capacity. It is a cubic *decimètre*, and equals 2·1135 English pints. 100 litres make the hectolitre, which equals 26·419 wine gallons, or 2·838 Winchester bushels.

SYSTEME USUEL, OR BINARY SYSTEM.—This new system has the metrical standards for its basis, but their divisions are binary, that is, by 2, 4, 8, &c.; and instead of the new vocabulary, the names of the ancient weights and measures are used, annexing the term *usuel* to each. Thus the half *kilogramme* is called the *livre usuelle*, and the double *mètre*, the *toise usuelle*.

The following Tables show the proportions between the new or metrical French system and the English system:—

COMPARISON OF FRENCH AND ENGLISH WEIGHTS AND MEASURES, containing the New or Metrical Weights and Measures of France, with their Proportion to those of England, both according to the Decimal System and the *Système usuel*.

DECIMAL SYSTEM.

Long Measures.

French.		English.
Millimètre	-	0·03937 inches.
Centimètre	-	0·39371
Decimètre	-	3·93710
<i>Mètre</i>	-	39·37100
Decamètre	-	32·80816 feet.
Hectomètre	-	328·09167
Kilomètre	-	1093·63890 yards.
Myriamètre	-	10936·38900

or 6 miles 1 furlong 28 poles.

Measures of Capacity.

Millilitre	-	0·06103 cubic inches.
Centilitre	-	0·61023
Déclilitre	-	6·10280
<i>Litre</i> (a cubic decimètre)	-	61·02803
Décalitre	-	or 2·1135 wine pints.
Hectolitre	-	610·28028 cubic inches,
	-	or 2·642 wine gallons.
	-	3·5317 cubic feet, or
	-	26·419 wine gallons, 22 Imperial gallons,
	-	or 2·839 Winchester bushels.
Kilolitre	-	35·3171 cubic feet, or
	-	1 tun and 12 wine gallons.
Myrialitre	-	353·17146 cubic feet.

Superficial Measures.

Centiare	-	=	1·1960 sq. yards.
<i>Are</i> (a square decamètre)	-	=	119·6046
Décare	-	=	1196·0460
Hectare	-	=	11960·4604

or 2 acres 1 rood 35 perches.

Solid Measures.

Décistère	-	=	3·5317 cubic feet.
<i>Stère</i> (a cubic <i>mètre</i>)	-	=	35·3174
Décastère	-	=	353·1741

Weights.

Milligramme	-	=	0·0154 grains.
Centigramme	-	=	0·1543
Déigramme	-	=	1·5434
<i>Gramme</i>	-	=	15·4340
Déigramme	-	=	154·3402

or 564 drams avoirdupois.

Hectogramme - = 3·2154 oz. Troy, or

3·527 oz. avoirdupois.

Kilogramme - = 2 lbs. 8 oz. 3 dwt. 2 grs. Troy,

or 2 lbs. 3 oz. 4·428 drams avoirdupois.

Myriagramme - = 26·795 lbs. Troy, or

22·0485 lbs. avoirdupois.

Quintal - = 1 cwt. 3 qrs. 25 lbs. nearly.

Millier, or Bar - = 9 tons 16 cwt. 3 qrs. 12 lbs.

WELD, or DYERS' WEED (Ger. *Wau*; Du. *Wouw*, *Wouwe*; Fr. *Gaude*; It. *Guadarella*; Lat. *Luteola*), is an imperfect biennial, with small fusiform roots, and a leafy stem from 1 to 3 feet in height. It is a native of Britain, Italy, and various parts of Europe; and is cultivated for the sake of its stalk, flowers, and leaves, which are employed in the dyeing of yellow, whence its botanical name *Reseda luteola*. Weld requires the growth of nearly 2 summers before it comes to maturity; and the crop is liable to fail from so many causes, and is besides so exhausting, that its cultivation is by no means profitable, and is only carried on, in this country at least, to a small extent, principally in Essex. Weld is preferred to all other substances in giving the lively green lemon yellow. It is, however, expensive; and it is found, when employed in topical dyeing, to degrade and interfere with madder colours more than other yellows, and to stain the

parts wanted to be kept white. Hence quercitron bark is now employed in calico printing, to the almost total exclusion of weld. It is still, however, employed in dyeing silk a golden yellow, and in paper staining. — (*Loudon's Ency. of Agriculture*; *Bancroft on Colours*, vol. ii. pp. 95—100.; *Rees's Cyclopædia*.)

WHALEBONE, a substance of the nature of horn, adhering in thin parallel laminæ to the upper jaw of the whale. These vary in size from 3 to 12 feet in length; the breadth of the largest at the thick end, where they are attached to the jaw, is about a foot. They are extremely elastic. All above 6 feet in length is called *size bone*.

Whalebone bore anciently a very high price, when the rigid stays and the expanded hoops of our grandmothers produced an extensive demand for this commodity. The Dutch have occasionally obtained 700*l.* per ton, and were accustomed to draw 100,000*l.* annually from England for this one article. Even in 1763, it brought 500*l.*; but soon fell, and has never risen again to the same value. During the present century, the price has varied between 60*l.* and 300*l.*; seldom falling to the lowest rate, and rarely exceeding 150*l.* Mr. Scoresby reckons the price, in the 5 years ending with 1818, at 90*l.*; while at present (April, 1834), it is stated to be from 130*l.* to 145*l.* This is for what is called the *size bone*, or such pieces as measure 6 feet or upwards in length; those below this standard are usually sold at half price. It may appear singular that whalebone should rise, while oil has been so decidedly lowered; but the one change, it is obvious, causes the other. Oil, being the main product of the fishery, regulates its extent; which being diminished by the low price, the quantity of whalebone is lessened, while the demand for it continuing as great as before, the value consequently rises. — (*Polar Seas and Regions*, p. 321., *Edin. Cab. Lib.*)

It may be worth while to remark, as evincing the ignorance that at one time prevailed with respect to the whale, that, by an old feudal law, the *tail* of all whales belonged to the queen, as a perquisite, to furnish her Majesty's wardrobe with whalebone! — (*Blackstone*, vol. i. p. 233.)

WHALE (COMMON), the *Balæna mysticetus* of Linnæus, a marine animal of the cetaceous species, and the largest of all those with which men are acquainted. The whale has sometimes, it is affirmed, been found 160 feet in length; but this is most probably an exaggeration. In the Northern seas, it is at present seldom found above 60 feet long: being now, however, generally killed before it arrives at its full growth, this is no proof that the animal may not formerly have attained to a much larger size. The bodies of whales are covered, immediately under the skin, with a layer of fat or *blubber*, which, in a large fish, is from 12 to 18 inches thick. In young whales, this fatty matter resembles hog's lard; but in old ones it is of a reddish colour. This is the valuable part of the whale; and the desire to possess it has prompted man to attempt the capture of this mighty animal. The blubber yields, by expression, nearly its own weight of a thick viscid oil (train oil). The common whale is now rarely found, except within the Arctic circle; but at a former period it was not unfrequently met with on our coasts. There is a good account of the common whale, and of the manner in which the fishery is carried on, in Mr. John Laing's "Voyage to Spitzbergen;" one of the shortest, cheapest, and best of the innumerable books published on this hacknied subject.

The *Physeter macrocephalus*, or black-headed spermæti whale, is chiefly found in the Southern Ocean. It usually measures about 60 feet in length, and 30 in circumference at the thickest part. The valuable part of the fish is the spongy, oily mass dug from the cavity of the head; this is crude spermæti; and of it an ordinary sized whale will yield about 12 large barrels.

WHALE FISHERY. We do not propose entering, in this article, into any details as to the mode in which the fishery is carried on; but mean to confine ourselves to a brief sketch of its history, and value in a commercial point of view.

It is probably true, as has been sometimes contended, that the Norwegians occasionally captured the whale before any other European nation engaged in so perilous an enterprise. But the early efforts of the Norwegians were not conducted on any systematic plan, and should be regarded only in the same point of view as the fishing expeditions of the Esquimaux. The Biscayans were certainly the first people who prosecuted the whale fishery as a regular commercial pursuit. They carried it on with great vigour and success in the 12th, 13th, and 14th centuries. In 1261, a tithe was laid upon the tongues of whales imported into Bayonne, — they being then a highly esteemed species of food. In 1388, Edward III. relinquished to Peter de Puayanne a duty of 6*l.* sterling a whale, laid on those brought into the port of Biarritz, to indemnify him for the extraordinary expenses he had incurred in fitting out a fleet for the service of his Majesty. This fact proves beyond dispute that the fishery carried on from Biarritz at the period referred to must have been very considerable indeed; and it was also prosecuted to a great extent from Cibourre, Vieux Boucan, and subsequently from Rochelle and other places.*

* See *Mémoire sur l'Antiquité de la Pêche de la Balæne*, par Noël, 12mo. Paris, 1795.

The whales captured by the Biscayans were not so large as those that are taken in the Polar seas, and are supposed to have been attracted southward in pursuit of herrings. They were not very productive of oil, but their flesh was used as an article of food, and the whalebone was applied to a variety of useful purposes, and brought a very high price.

This branch of industry ceased long since, and from the same cause that has occasioned the cessation of the whale fishery in many other places — the want of fish. Whether it were that the whales, from a sense of the dangers to which they exposed themselves in coming southwards, no longer left the Icy Sea, or that the breed had been nearly destroyed, certain it is, that they gradually became less numerous in the Bay of Biscay, and at length ceased almost entirely to frequent that sea; and the fishers being obliged to pursue their prey upon the banks of Newfoundland and the coasts of Iceland, the French fishery rapidly fell off.

The voyages of the Dutch and English to the Northern Ocean, in order, if possible, to discover a passage through it to India, though they failed of their main object, laid open the haunts of the whale. The companions of Barentz, who discovered Spitzbergen in 1596, and of Hudson, who soon after explored the same seas, represented to their countrymen the amazing number of whales with which they were crowded. Vessels were in consequence fitted out for the Northern whale fishery by the English and Dutch, the harpooners and a part of the crew being Biscayans. They did not, however, confine their efforts to a fair competition with each other as fishers. The Muscovy Company obtained a royal charter, prohibiting the ships of all other nations from fishing in the seas round Spitzbergen, on pretext of its having been first discovered by Sir Hugh Willoughby. There can, however, be no doubt that Barentz, and not Sir Hugh, was its original discoverer; though, supposing that the fact had been otherwise, the attempt to exclude other nations from the surrounding seas, on such a ground, was not one that could be tolerated. The Dutch, who were at the time prompt to embark in every commercial pursuit that gave any hopes of success, eagerly entered on this new career, and sent out ships fitted equally for the purposes of fishing, and of defence against the attacks of others. The Muscovy Company having attempted to vindicate its pretensions by force, several encounters took place between their ships and those of the Dutch. The conviction at length became general, that there was room enough for all parties in the Northern seas; and in order to avoid the chance of coming into collision with each other, they parcelled Spitzbergen and the adjacent ocean into districts, which were respectively assigned to the English, Dutch, Hamburgers, French, Danes, &c.

The Dutch, being thus left to prosecute the fishery without having their attention diverted by hostile attacks, speedily acquired a decided superiority over all their competitors.

When the Europeans first began to prosecute the fishery on the coast of Spitzbergen, whales were every where found in vast numbers. Ignorant of the strength and stratagems of the formidable foe by whom they were now assailed, instead of betraying any symptoms of fear, they surrounded the ships and crowded all the bays. Their capture was in consequence a comparatively easy task, and many were killed which it was afterwards necessary to abandon, from the ships being already full.

While fish were thus easily obtained, it was the practice to boil the blubber on shore in the North, and to fetch home only the oil and whalebone. And, perhaps, nothing can give a more vivid idea of the extent and importance of the Dutch fishery in the middle of the 17th century, than the fact, that they constructed a considerable village, the houses of which were all previously prepared in Holland, on the Isle of Amsterdam, on the northern shore of Spitzbergen, to which they gave the appropriate name of *Smeerenberg* (from *smeeren*, to melt, and *berg*, a mountain). This was the grand rendezvous of the Dutch whale ships, and was amply provided with boilers, tanks, and every sort of apparatus required for preparing the oil and the bone. But this was not all. The whale fleets were attended with a number of provision ships, the cargoes of which were landed at *Smeerenberg*; which abounded during the busy season with well-furnished shops, good inns, &c.; so that many of the conveniences and enjoyments of Amsterdam were found within about 11 degrees of the Pole! It is particularly mentioned, that the sailors and others were every morning supplied with what a Dutchman regards as a very great luxury — *hot rolls* for breakfast. Batavia and *Smeerenberg* were founded nearly at the same period, and it was for a considerable time doubted whether the latter was not the more important establishment. — (*De Reste, Histoire des Pêches*, &c. tome i. p. 42.)

During the flourishing period of the Dutch fishery, the quantity of oil made in the North was so great that it could not be carried home by the whale ships; and every year vessels were sent out in ballast to assist in importing the produce of the fishery.

But the same cause that had destroyed the fishery of the Biscayans, ruined that which

was carried on in the immediate neighbourhood of Spitzbergen. Whales became gradually less common, and more and more timid and difficult to catch. They retreated first to the open seas, and then to the great banks of ice on the eastern coast of Greenland. When the site of the fishery had been thus removed to a very great distance from Spitzbergen, it was found most economical to send the blubber direct to Holland. Sineerenberg was in consequence totally deserted, and its position is now with difficulty discoverable.

But though very extensive, the Dutch whale fishery was not, during the first 30 years of its existence, very profitable. This arose from the circumstance of the right to carry it on having been conceded, in 1614, to an exclusive company. The expense inseparable from such great associations, the wastefulness and unfaithfulness of their servants, who were much more intent upon advancing their own interests than those of the company, increased the outlays so much, that the returns, great as they were, proved little more than adequate to defray them, and the fishery was confined within far narrower limits than it would otherwise have reached. But after various prolongations of the charter of the first company, and the formation of some new ones, the trade was finally thrown open in 1642. The effects of this measure were most salutary, and afford one of the most striking examples to be met with of the advantages of free competition. Within a few years the fishery was vastly extended; and though it became progressively more and more difficult from the growing scarcity of fish, it proved, notwithstanding these disadvantages, more profitable to the private adventurers than it had ever been to the company; and continued for above a century to be prosecuted with equal energy and success. The famous John de Witt has alluded as follows to this change in the mode of conducting the trade :—

“ In this respect,” says he, “ it is worthy of observation, that the authorised Greenland Company made heretofore little profit by their fishery, because of the great charge of setting out their ships; and that the train oil, blubber, and whale fins were not well made, handled, or cured; and being brought hither and put into warehouses, were not sold soon enough, nor to the Company’s best advantage. Whereas now that every one equips their vessels at the cheapest rate, follow their fishing diligently, and manage all carefully, the blubber, train oil, and whale fins are employed for so many uses in several countries, that they can sell them with that conveniency, that though *there are now 15 ships for 1 that formerly sailed out of Holland on that account*, and consequently each of them could not take so many whales as heretofore, and notwithstanding the new prohibition of France and other countries to import these commodities, and though there is greater plenty of them imported by our fishers—yet those commodities are so much raised in the value above what they were whilst there was a company, that the common inhabitants do exercise that fishery with profit, to the much greater benefit of our country than when it was (under the management of a company) carried on but by a few.”—(*True Interest of Holland*, p. 63. 8vo ed. London, 1746.)

The private ships sent by the Dutch to the whale fishery were fitted out on a principle that secured the utmost economy and vigilance on the part of every one connected with them. The hull of the vessel was furnished by an individual, who commonly took upon himself the office of captain; a sail-maker supplied the sails, a cooper the casks, &c. The parties engaged as adventurers in the undertaking. The cargo being brought to Holland and disposed of, each person shared in the produce according to his proportion of the outfit. The crew was hired on the same principle; so that every one had a motive to exert himself, to see that all unnecessary expenses were avoided, and that those that were necessary were confined within the narrowest limits. This practice has been imitated to some extent in this and some other countries, but in none has it been carried so far as in Holland. It appears to us that it might be advantageously introduced into other adventures.

When in its most flourishing state, towards the year 1680, the Dutch whale fishery employed about 260 ships, and 14,000 sailors.

The English whale fishery, like that of Holland, was originally carried on by an exclusive association. The Muscovy Company was, indeed, speedily driven from the field; but it was immediately succeeded by others, that did not prove more fortunate. In 1725, the South Sea Company embarked largely in the trade, and prosecuted it for 8 years; at the end of which, having lost a large sum, they gave it up. But the legislature, having resolved to support the trade, granted, in 1732, a bounty of 20s. a ton to every ship of more than 200 tons burden engaged in it; but this premium being insufficient, it was raised, in 1749, to 40s. a ton, when a number of ships were fitted out, as much certainly in the intention of catching the bounty as of catching fish. Deceived by the prosperous appearance of the fishery, parliament imagined that it was firmly established, and in 1777 the bounty was reduced to 30s. The effects of this reduction showed the factitious nature of the trade, the vessels engaged in it having fallen off in the course of the next 5 years from 105 to 39! To arrest this alarming decline, the bounty was raised to its old level in 1781, and of course the trade was soon restored to its previous state of apparent prosperity. The hostilities occasioned by the American war reduced the Dutch fishery to less than half its previous amount, and gave a proportional extension to that of England. The bounty, which had in consequence become very heavy, was reduced, in 1787, to 30s. a ton; in 1792 it was further reduced to 25s.;

and in 1795 it was reduced to 20s., at which sum it continued till 1824, when it ceased.

It appears from accounts given in Macpherson's *Annals of Commerce* (vol. iii. p. 511., vol. iv. p. 130.), that the total bounties paid for the encouragement of the whale fishery, in the interval between 1750 and 1788, amounted to no less than 1,577,935*l*. It will be seen from the official account which follows, that there are no means of furnishing any accurate account of the sums paid as bounties from the year 1789 to 1813 inclusive; but it is, notwithstanding, abundantly certain that the total bounties paid during the period from 1789 to 1824 considerably exceeded 1,000,000*l*. Here, then, we have a sum of upwards of TWO MILLIONS AND A HALF laid out since 1750 in promoting the whale fishery. Now we believe, that if we estimate the entire average value of the gross produce of the Northern whale fishery (and it is to it only that the preceding statements apply), during the last 3 or 4 years, at 375,000*l* a year, we shall be about the mark. But had the 2,500,000*l*. expended in bolstering up this branch of industry been laid out as capital in any ordinary employment, it would have produced 125,000*l*. a year of *net* profit; and deducting this sum from the above, there remains only 250,000*l*. to replace the capital wasted and ships lost in carrying on the fishery, and to afford a *clear national profit*! Whatever, therefore, may be the value of the whale fishery as a nursery for seamen, it is absurd to regard it as contributing any thing to the public wealth. The remark of Dr. Franklin, that he who draws a fish out of the sea draws out a piece of silver, is ever in the mouths of those who are clamouring for bounties and protection against competition. But we apprehend that even Franklin himself, sagacious as he was, would have found it rather difficult to show how the wealth of those is to be increased, who, in fishing up one piece of silver, are obliged to throw another of equal value into the sea. We subjoin

An Account of the Number of Ships annually fitted out in Great Britain for the Northern Whale Fishery, of the Tonnage and Crews of such Ships, and of the Bounties paid on their Account, from 1789 to 1824.

Years.	Ships.	Tons.	Men.	Bounties paid.	Years.	Ships.	Tons.	Men.	Bounties paid.

1806	91	27,697	3,715						

It is not even certain whether the expenditure of 2,500,000*l*. upon bounties would really have had the effect of establishing the whale fishery upon a solid foundation, but for the occupation of Holland by the French, and the consequent hostilities in which she was involved with this country. These did more to promote and consolidate the British fishery than any thing else. The war entirely annihilated that of the Dutch: and our government having wisely offered to the fishers of Holland all the immunities enjoyed by the citizens of Great Britain in the event of their settling amongst us, many availed themselves of the invitation, bringing with them their capital, industry, and skill. In consequence of this signal encouragement, the whale fishery of England was prosecuted with greater success than at any previous period: and at the termination of the late war, in 1815, there were 134 valuable ships and about 5,800 seamen engaged in the Northern fishery, and about 30 ships and 800 men in that to the South.

After peace was restored, the English capitalists and others became apprehensive lest the Dutch should engage anew with their ancient vigour and success in the whale fishery. But these apprehensions were without any real foundation. The Hollanders, during the 30 years they had been excluded from the sea, had lost all that practical acquaintance with the details of the fishery, for which they had long been so famous, and which is so essential to its success. The government attempted to rouse their dormant energies by the offer of considerable premiums and other advantages to those who embarked in the trade. Three companies were in consequence formed for carrying it on; 1 at Rotterdam, 1 at Harlingen, and 1 in South Holland. But their efforts have been very limited, and altogether unfortunate. In 1826, the company of South Holland was dissolved, while that of Harlingen despatched 4 ships, and that of

Rotterdam 2. In 1827, Rotterdam sent only 1 ship, and Harlingen 2: and in 1828, 1 solitary ship sailed from Holland — a feeble and last effort of the company of Harlingen!

Such has been the fate of the Dutch whale fishery. The attempts to revive it failed, not because the ships sent out were ill calculated for the service, but because they were manned by unskilful seamen. In the early ages of the fishery, this difficulty would have been got over, because, owing to the fewness of competitors, and the scanty supply of oil and whalebone, even a small cargo brought a high price; but at present, when the fishery is prosecuted on a very large scale and at a very low rate of profit by the English, the Americans, the Hamburgers, &c., no new competitor coming into the field could expect to maintain himself unless he had nearly equal advantages. The Dutch have, therefore, done wisely in withdrawing from the trade. Any attempt to establish it by the aid of bounties and other artificial encouragements would be one of which the ultimate success must be very doubtful, and which could lead to no really useful result. During the 20 years preceding the late French war, the fishery of Holland was gradually declining, and had, in a great measure, ceased to be profitable. It would be folly to endeavour to raise anew, and at a great expense, a branch of industry that had become unproductive at a former period, when there is no ground for supposing that it would be more productive at this moment.

We have already noticed several changes of the localities in which the whale fishery has been carried on at different periods; within these few years another has taken place even more important. The seas between Spitzbergen and Greenland are now nearly abandoned by the whalers, who resort in preference to Davis's Straits and Baffin's Bay, or to the sea which washes the coast of West Greenland. The Dutch fishers first began to frequent Davis's Straits in 1719; and as the whales had not hitherto been pursued into this vast recess, they were found in greater numbers than in the seas round Spitzbergen. From about this period it was usually resorted to by about 3-10ths of the Dutch ships. It was not till a comparatively late period that Davis's Straits began to be frequented by English whalers; and even so late as 1820, when Captain Scoresby published his elaborate and valuable work on the whale fishery, that carried on in the Greenland seas was by far the most considerable. But within the last few years, the Greenland fishery has been almost entirely deserted. The various discoveries made by the expeditions recently fitted out by government for exploring the seas and inlets to the westward of Davis's Straits and Baffin's Bay, have made the fishers acquainted with several new and advantageous situations for the prosecution of their business. What further revolutions the fishery may be destined to undergo, it is impossible to foresee; but there can be little doubt that the same results that have happened elsewhere will happen in Davis's Straits, and that it will be necessary to pursue the whale to new and, perhaps, still more inaccessible haunts.

The sea in Davis's Straits is less incommoded with field ice than the Greenland and Spitzbergen seas, but it abounds with icebergs; and the fishery, when carried on in Baffin's Bay and Lancaster Sound, is more dangerous, perhaps, than any that has hitherto been attempted.

The following Table gives a view of the produce of the Northern whale fishery during the 3 years ending with 1827: —

Years.	No. of Ships despatched.	No. of Whales captured.	Quantity of Oil.	Quantity of Whalebone.
			<i>Tons.</i>	<i>Tons.</i>
1825	110	501	6,597	360
1826	94	510	7,087	390
1827	88	1,155	13,179	732

It appears from this and the previous Table, that the number of ships sent out has declined nearly one half since 1820. The bounty was repealed in 1824, and the ships fitted out have since fallen off in the ratio of 112 to 88 or 90. This is a sufficient proof of the insecure foundation on which the trade had previously rested.

The whale fishery has for a lengthened period partaken more of the nature of a gambling adventure than of a regular industrious pursuit. Sometimes the ships do not get half a cargo, and sometimes they come home *clean*. The risk of shipwreck is also very considerable. It appears from Mr. Scoresby's Tables (vol. ii. p. 131.), that of 586 ships sent to the North during the 4 years ending with 1817, *eight* were lost. This period was, however, uncommonly free from disaster. It would seem, too, that the risk of shipwreck is greater in Davis's Straits than in the seas to the east of Greenland. In 1819, of 63 ships sent to Davis's Straits, no fewer than 10 were lost; in 1821, out of 79 ships, 11 were lost; and in 1822, out of 60 ships, 7 were lost. But 1830 has in this respect been the most disastrous. — Of 87 ships that sailed for Davis's Straits, no less than 18, or 22 per cent. of the whole, were totally lost; 24 returned *clean*, or without having caught a single fish; and of the remainder, not 1 had a full cargo, only

1 or 2 being *half fished*! If we estimate the value of the ships cast away, including the outfit, at 7,000*l.* each, the loss from shipwreck only will be 126,000*l.* The following Table exhibits a detailed account of the fishery in 1832:—

Account of the Northern Whale Fishery in 1832; exhibiting the Number and Tonnage of the Ships sent out by each Port, with the Number of Fish taken, and the Quantity of Oil and Bone.

Ports.	No. of Ships.	Tonnage.	Fish.	Oil.	Bone.

Estimated Value.—12,610 tuns of oil, at 20*l.*, 252,200*l.*; 676 tons of whalebone, at 12*l.*, 84,500*l.*, making in all, 336,700*l.*

There has been a somewhat singular change in the ports from which the fishery is chiefly carried on. In London were undertaken all the discoveries which led to its establishment; and for some time a complete monopoly was enjoyed by the great companies formed in that city. Even between the years 1780 and 1790, the metropolis sent out 4 times the number of vessels that sailed from any other port. It was observed, however, that her fishery was, on the whole, less fortunate than that of the new rivals which had sprung up; and her merchants were so much discouraged, that in Mr. Scoresby's time they equipped only 17 or 18 vessels. They have since almost entirely abandoned the trade, employing in 1832 not more than 3 ships.

Hull early became a rival to London, having sent out vessels at the very commencement of the fishery. Although checked at first by the monopoly of the great companies, as soon as the trade became free she prosecuted it with distinguished success. In the end of the last century, that town attained, and has ever since preserved, the character of the first whale-fishing port in Britain.

Whitby engaged in this pursuit in 1753, and carried it on for some time with more than common success; but her operations have since been much limited. Liverpool, after embarking in the undertaking with spirit, has now entirely relinquished it. Meantime the eastern ports of Scotland have steadily carried on, and even extended, their transactions, while those of the country at large were diminishing. The increase has been most remarkable at Peterhead; and indeed this town, as compared especially with London, must derive a great advantage from avoiding, both in the outward and homeward voyages, 600 miles of somewhat difficult navigation.

The following summary has been collected from Mr. Scoresby, as the average quantity of shipping fitted out in the different ports for 9 years, ending with 1818; and the comparison of it with the number sent out in 1832 will show the present state of the trade:—

Average of 1810-18.			1832.	Average of 1810-18.			1832.
England — Berwick	17	-	1	Scotland — Burntisland	0	-	0

Hardly a ship now goes to Greenland.

We have already seen that, as a source of national wealth, the whale fishery is of exceedingly little importance. Neither does it seem to be of so much consequence as a nursery for seamen as is commonly supposed. The number employed in the Northern fishery does not exceed 4,500; and it may be doubted whether the casualties to which they are exposed do not, in a public point of view, more than balance the increased skill and hardihood they acquire in so perilous an occupation.

There seems no reason to apprehend any deficiency in the supply of oil from a falling off in the fishery. We have seen from the foregoing statements, that the fish oil imported in 1832 amounted to 12,610 tuns. But at present nearly half this quantity of olive oil is annually imported; and as olive oil is loaded with a duty of 8*l.* 8*s.* a tun, it is obvious that if this duty were reduced, as it ought to be, to 2*l.* or 3*l.* a tun, the increased quantity imported would go far to balance any falling off in the supply of train oil. When a coarser species is required, rape and linseed oil may be advantageously substituted for that of the whale. Tallow may also be applied to several purposes, to the exclusion of train oil. Although, therefore, the whale fishery should decline, we need not fear that any material injury will thence arise to the industry of the country: and it would be most impolitic to attempt to bolster it up, either by resorting to the exploded

system of bounties, or by laying heavy duties on oil or tallow imported from other countries.

The South Sea fishery was not prosecuted by the English till about the beginning of the American war: and as the Americans had already entered on it with vigour and success, 4 American harpooners were sent out in each vessel. In 1791, 75 whale ships were sent to the South Sea; but the number has not been so great since. In 1829, only 31 ships were sent out, of the burden of 10,997 tons, and carrying 937 men. The *Macrocephalus*, or spermaceti whale, is particularly abundant in the neighbourhood of the Spice Islands; and Mr. Crawford, in his valuable work on the *Eastern Archipelago*, (vol. iii. p. 447.), has entered into some details to show that the fishery carried on there is of greater importance than the spice trade. Unluckily, however, the statements on which Mr. Crawford founded his comparisons were entirely erroneous, neither the ships nor the men employed amounting to more than 1-5th or 1-6th part of what he has represented.

But errors of this sort abound in the works of those who had better means of coming at the truth. Mr. Barrow, in an article on the fisheries, in the *Supplement to the Encyclopædia Britannica*, states the number of ships fitted out for the Northern whale fishery in 1814 at 143, and their crews at 7,150; and he further states the number of ships fitted out for the Southern fishery in 1815 at 107, and their crews at 3,210. In point of fact, however, only 112 whale ships cleared out for the North in 1814, carrying 4,708 men; and in 1815, only 22 whale ships cleared out for the South, carrying 592 men! How Mr. Barrow, who has access to official documents, should have given the sanction of his authority to so erroneous an estimate, we know not. In the same article, Mr. Barrow estimates the entire annual value of the British fisheries of all sorts at 8,300,000*l.* But it might be very easily shown that, in rating it at 3,500,000*l.*, we should certainly be up to the mark, or rather, perhaps, beyond it. — (See FISH.)

We annex a detailed account of the progress of the Southern whale fishery since 1814.

An Account of the Number of Ships annually fitted out in Great Britain, with their Tonnage and Crews, for the Southern Whale Fishery, and of the Bounties on their Account, from 1814 to 1824, both inclusive.

Office of Registrar General of Shipping,
Custom-house, London, Dec. 16, 1830.

JOHN COVEY,
Reg. Gen. of Shipping.

American Whale Fishery. — For a lengthened period, the Americans have prosecuted the whale fishery with greater vigour and success than, perhaps, any other people. They commenced it in 1690, and for about 50 years found an ample supply of fish on their own shores. But the whale having abandoned them, the American navigators entered with extraordinary ardour into the fisheries carried on in the Northern and Southern Oceans. From 1778 to 1775, Massachusetts employed annually 183 vessels, carrying 13,820 tons, in the former; and 121 vessels, carrying 14,026 tons, in the latter. Mr. Burke, in his famous speech on American affairs in 1774, adverted to this wonderful display of daring enterprise as follows: —

“As to the wealth,” said he, “which the colonists have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought these acquisitions of value, for they seemed to excite your envy; and yet the spirit by which that enterprising employment has been exercised ought rather, in my opinion, to have raised esteem and admiration. And pray, Sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the New England people carry on the whale fishery. While we follow them along the trembling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis's Straits; while we are looking for them beneath the Arctic circle, we hear that they have pierced into the opposite region of polar cold; that they are at the antipodes, and engaged under the frozen serpent of the South. Falkland Island, which seemed too remote and too romantic an object for the grasp of national ambition, is but a stage and resting-place for their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both poles. We learn, that while some of them draw the line or strike the

harpoon on the coast of Africa, others run the longitude and pursue their gigantic game along the coast of Brazil. No sea, but what is vexed with their fisheries. No climate that is not witness of their toils. Neither the perseverance of Holland, nor the activity of France, nor the dexterous and firm sagacity of English enterprise, ever carried this most perilous mode of hardy industry to the extent to which it has been pursued by this recent people; a people who are still in the gristle, and not hardened into manhood."

The unfortunate war that broke out soon after this speech was delivered, checked for a while the progress of the fishery; but it was resumed with renewed vigour as soon as peace was restored. The American fishery has been principally carried on from Nantucket and New Bedford in Massachusetts; and for a considerable time past the ships have mostly resorted to the Southern seas. "Although," says Mr. Pitkin, "Great Britain has, at various times, given large bounties to her ships employed in this fishery, yet the whalemens of Nantucket and New Bedford, unprotected and unsupported by any thing but their own industry and enterprise, have generally been able to meet their competitors in a foreign market."—(*Commerce of the United States*, 2d ed. p. 46.) The following statement may not be uninteresting.

Account of Vessels at Sea, from the United States, employed in the Southern, or Sperm Whale Fishery, on the 1st of January, 1833.

Owned in Massachusetts.		Owned in other States.	
	Vessels.		Vessels.
At New Bedford and Fairhaven	90	At New London, Con.	18
Nantucket	57	Bristol, R. I.	10
Edgartown	5	Warren, ditto	5
Falmouth	5	Newport, ditto	4
Plymouth	2	Hudson, New York	4
Salem	2	Poughkeepsie	1
Fall River	1	New York	1
Rochester	1	Sag Harbour	1
Wareham	1	Portsmouth, N. H.	1
Dartmouth	1		
Holmes's Hole	1		
Total absent from Massachusetts	166	Total Owned in Massachusetts	37
		Total	203

The produce in oil, of the sperm whale fishery, in 1832, was as follows:—

	Barrels.		Barrels.
Imported in ships from the Pacific Ocean,—		At Sag Harbcur	1,000
At New Bedford and Fairhaven	50,176	Bristol	209
Nantucket	39,150	Warren	223
Newport	4,139	Sent home by various merchant ships	2,000
Plymouth	2,120	Taken in the Atlantic by small vessels	1,500
Imported in ships from the Brazils,—		Total of sperm oil in 1832	78,749
At New Bedford	5,550	Imported in 1831	107,752
New London	703		
Nantucket	407		

French Whale Fishery.—France, which preceded the other nations of Europe in the whale fishery, can hardly be said, for many years past, to have had any share in it. In 1784, Louis XVI. endeavoured to revive it. With this view he fitted out 6 ships at Dunkirk on his own account, which were furnished with harpooners and a number of experienced seamen brought at a great expense from Nantucket. The adventure was more successful than could have been reasonably expected, considering the auspices under which it was carried on. Several private individuals followed the example of his Majesty, and in 1790 France had about 40 ships employed in the fishery. The revolutionary war destroyed every vestige of this rising trade. Since the peace, the government has made great efforts for its renewal, but hitherto without much success. At present there are only from 12 to 15 ships engaged in the fishery.

(This article has been principally taken from the *Foreign Quarterly Review*, No. 14. to which publication it was contributed by the author of this work.)

WHARF, a sort of quay, constructed of wood or stone, on the margin of a roadstead or harbour, alongside of which ships or lighters are brought for the sake of being conveniently loaded or unloaded.

There are 2 denominations of wharfs, viz. *legal quays* and *sufferance wharfs*. The former are certain wharfs in all sea-ports, at which all goods are required by the 1 Eliz. c. 11. to be landed and shipped; and they were set out for that purpose by commission from the Court of Exchequer, in the reign of Charles II. and subsequent sovereigns. Many others have been legalised by act of parliament. In some ports, as Chepstow, Gloucester, &c., certain wharfs are deemed legal quays by immemorial practice, though not set out by commission, or legalised by act of parliament.

Sufferance wharfs are places where certain goods may be landed and shipped; such as hemp, flax, coal, and other bulky goods; by special sufferance granted by the Crown for that purpose.

WHARFAGE, the fee paid for landing goods on a wharf, or for shipping them off. The stat. 22 Chas. 2. c. 11., after providing for the establishment of wharfs and quays, makes it lawful for any person to lade or unlade goods, on paying wharfage and cranage at the rates appointed by the king in council.

WHEAT (Ger. *Weizen*; Du. *Tarwe*; Da. *Hvede*; Sw. *Hete*; Fr. *Froment*, *Bled*, *Blé*; It. *Grano*, *Formento*; Sp. and Port. *Trigo*; Rus. *Pscheniza*; Pol. *Pszenica*) a species of bread corn (*Triticum* Lin.), by far the most important of any cultivated in Europe. We are totally ignorant of the country whence this valuable grain was first derived; but it was very early cultivated in Sicily. It is raised in almost every part

of the temperate zones, and in some places as high as 2,000 feet above the level of the sea.

The kinds of wheat sown are numerous, but they may be classed under 4 heads: viz. cone or bearded wheat, which, however, is now little cultivated; white wheat, of which there are innumerable varieties, the *white Dantzic* being considered one of the best; red wheat, which is seldom sown where the climate is good and early, and the land in proper condition; and spring wheat. A greater number of people are nourished by rice than by wheat; but owing to the greater quantity of gluten which the latter contains, it makes by far the best bread. Rye comes nearer to wheat in its bread-making qualities than any other sort of grain; still, however, it is very inferior to it. The finest samples of wheat are small in the berry, thin skinned, fresh, plump, and bright, slipping readily through the fingers.

Being very extensively cultivated on soils of very various qualities, and frequently with very imperfect preparation, the produce of wheat crops in Great Britain varies from about 12 to 56 bushels per acre.

The counties most distinguished for the quantity and quality of their wheat are, Kent, Essex, Suffolk, Rutland, Hertfordshire, Berkshire, Hampshire, and Herefordshire, in England; and Berwickshire, and the Lothians, in Scotland. In the northern counties it is, speaking generally, of an inferior quality; being cold to the feel, dark coloured, thick skinned, and yielding comparatively little flour. In the best wheat counties, and in good years, the weight of a Winchester bushel of wheat is from 60 to 62 lbs. In the Isle of Sheppey, in Kent (where, perhaps, the best samples of wheat sent to the London market are produced), this grain, in some favourable seasons, weighs 64 lbs. a bushel. Where the climate is colder, wetter, or more backward, or in bad seasons, the weight of the bushel of wheat is not more than 56 or 57 lbs. It is calculated that the average weight of the bushel of good English wheat is 58½ lbs.; and that the average yield of flour is 13 lbs. of flour to 14 lbs. of grain. — (See Mr. Stevenson's very valuable article on *England*, in *Brewster's Encyclopædia*, vol. viii. p. 720.; *Loudon's Ency. of Agriculture*, &c.)

For a view of the regulations with respect to the importation and exportation of wheat, &c., see CORN LAWS AND CORN TRADE. The price of wheat in 1833 was 52s. 11d. per quarter.

WHISKY, a spirit obtained by distillation from corn, sugar, or molasses, though generally from the former. Whisky is the *national spirit*, if we may so term it, of Scotland and Ireland; but that distilled in the former is generally reckoned superior to that of the latter. — (See SPIRITS.)

WINE (Ger. *Wein*; Fr. *Vin*; It. and Sp. *Vino*; Port. *Vinho*; Rus. *Wino*, *Wino-gradnoe winoe*; Lat. *Vinum*; Gr. *Oivos*; Arab. *Khumr*), the fermented juice of the grape, or berries of the vine (*Vitis vinifera*).

The vine is indigenous to Persia and the Levant; but it is now found in most temperate regions. The limits within which it is cultivated in the northern hemisphere of the Old World vary from about 15° to 48° and 52°; but in North America it is not cultivated farther north than 38° or 40°. It is rarely grown at a greater altitude than 3,000 feet. From Asia the vine was introduced into Greece, and thence into Italy. The Phœceans, who founded Marseilles, carried the vine to the south of France; but it is doubtful whether it was introduced into Burgundy till the age of the Antonines.* The species of *Vitis* indigenous to North America is very different from the *Vitis vinifera*. In favourable seasons, the vine ripens in the open air in England; and in the eleventh and twelfth centuries, considerable quantities of inferior wine were made from native grapes. Vineyards are now, however, unknown in this country; but the grapes raised in hot-houses, and used in desserts, are excellent.

The vine grows in every sort of soil; but that which is light and gravelly seems best suited for the production of fine wines. It succeeds extremely well in volcanic countries. The best wines of Italy are produced in the neighbourhood of Vesuvius; the famous Tokay wine is also made in a volcanic district, as are several of the best French wines; many parts of the south of France bearing evident marks of extinct volcanoes. Hermitage is grown among the *débris* of granite rocks. The most favourable situation for a vineyard is upon a rising ground or hill facing the south-east, and the situation should not be too confined;

————— apertos
Bacchus amat colles.

The art of expressing and fermenting the juice of the grape appears to have been practised from the remotest antiquity. The sacred writings tell us that Noah planted a vine-

* The ancient writers give the most contradictory accounts with respect to the introduction of the vine into Gaul. — (See the learned and excellent work of Le Grand d'Aussy, *Vie Privée des Français*, tome ii. pp. 329—332.) The statement given above seems the most probable.

yard soon after the deluge—(*Gen. ix. 20.*); and a modern Latin poet ingeniously represents the vine as a gift from Heaven, to console mankind for the miseries entailed upon them by that grand catastrophe!

Omnia vastatis ergo quum cerneret arvis
Desolata Deus, nobis felicia vini
Dona dedit; tristes hominum quo munere fovit
Reliquias, mundi solatus vite ruina!

Vanicrii Præd. Rusticum, lib. xi.

Species of Wine.—There are many varieties of vines; and this circumstance, combined with differences of soil, climate, mode of preparation, &c., occasions an extreme variety in the species of wine. But even between places immediately contiguous to each other, and where a cursory observer would hardly remark any difference, the qualities of the wines, though produced by the same species of grape, and treated in the same way, are often very different. A great deal evidently depends upon the aspect of the vineyard; and it is probable that a good deal depends on peculiarities of soil. But whatever may be the cause, it is certain that there are wines raised in a few limited districts, such as Tokay, Johannisberger, Constantia, the best Burgundy, Champagne, claret, &c., that no art or care has hitherto succeeded in producing of equal goodness in other places.

ANCIENT WINES.—The wines of Lesbos and Chios among the Greeks, and the Falernian and Cecuban among the Romans, have acquired an immortality of renown. Great uncertainty, however, prevails as to the nature of these wines. Dr. Henderson thinks that the most celebrated of them all, the Falernian, approached, in its most essential characters, near to Madeira. In preparing their wines, the ancients often inspissated them till they became of the consistence of honey, or even thicker. These were diluted with water previously to their being drunk; and, indeed, the habit of mixing wine with water seems to have prevailed much more in antiquity than in modern times.

MODERN WINES.—The principal wines made use of in this country are port, sherry, claret, Champagne, Madeira, hock, Marsala, Cape, &c.

Port,—the wine most commonly used in England,—is produced in the province of Upper Douro, in Portugal; and is shipped at Oporto, whence its name. When it arrives in this country, it is of a dark purple or inky colour; has a full, rough body, with an astringent bitter-sweet taste, and a strong flavour and odour of brandy. After it has remained some years longer in the wood, the sweetness, roughness, and astringency of the flavour abate; but it is only after it has been kept 10 or 15 years in bottle, that the odour of the brandy is completely subdued, and the genuine aroma of the wine developed. When kept too great an age, it becomes tawny, and loses its peculiar flavour. During the process of melioration, a considerable portion of the extractive and colouring matter is precipitated on the sides of the vessels in the form of crust. In some wines this change occurs much earlier than in others.

A large quantity of brandy is always mixed with the wine shipped from Oporto for England. Genuine unmixed port wine is very rarely met with in this country. We have been so long accustomed to the compounded article, that, were it possible to procure it unmixed, it is doubtful whether it would be at all suited to our taste. According to Mr. Brande's analysis, on which, however, owing to the differences in the quality of the wine, no great stress can be laid, port, as used in England, contains about 23 per cent. of alcohol. In 1833, 2,596,530 gallons of port were retained for consumption in the United Kingdom.

Oporto Wine Company.—The quality of the wine shipped from Oporto has been materially injured by the monopoly so long enjoyed by the Oporto Wine Company. This company was founded in 1756, during the administration of the Marquis Pombal. A certain extent of territory is marked out by its charter as the only district on the Douro in which wine is to be raised for exportation: the entire and absolute disposal of the wines raised in this district is placed in the hands of the Company; who are further authorised to fix the prices to be paid for them to the cultivators, to prepare them for exportation, and to fix the price at which they shall be sold to foreigners! It is obvious that a company with such powers cannot be any thing else than an intolerable nuisance. What could be more arbitrary and unjust than to interdict the export of all wines raised out of the limits of the Company's territory? But even in its own district, its proceedings have been most oppressive and injurious. The Company annually fix, by a fiat of their own, 2 rates of prices—one for the *vinho de feitoria*, or wine for exportation, and the other for *vinho de ramo*, or wine for home consumption—at which the cultivators are to be paid, *whatever may be the quality of their wines!* They have, therefore, no motive to exert superior skill and ingenuity; but content themselves with endeavouring to raise, at the least possible expense, the greatest supply of *vinho de feitoria*, for which the Company allow the highest price. All emulation is thus effectually extinguished, and the proprietors who possess vineyards of a superior quality invariably adulterate their wines with inferior growths, so as to reduce them to the average standard. "In this way," says Dr. Henderson, "the finer products of the Douro vintages have remained in a great measure unknown to us; and port wine has come to be considered as a single liquor, if I may use the expression, of nearly uniform flavour and strength; varying, it is true, to a certain extent in quality, but still always approaching to a definite standard, and admitting of few degrees of excellence. The manipulations, the adulterations—in one word, the *adulterations*—to which the best wines of the Cimo do Douro are subjected, have much the same effect as if all the growths of Burgundy were to be mingled in one immense vat, and sent into the world as the only true Burgundian wine. The delicious produce of Romanée, Chambertin, and the Clos Vougeot, would disappear, and in their places we should find nothing better than a second-rate Beaune or Macon wine."—(*History of Ancient and Modern Wines*, p. 210.)

Not only, however, have the Oporto Wine Company deteriorated the quality, but they have also raised the price of their wines to an enormous height. Secured against the competition of their countrymen, and enjoying, down to 1831, a nearly absolute monopoly of the British markets by means of the high duties on French wines, they have filled their pockets at our expense. *At the very moment when the Company have been shipping wine for England at 40l. a pipe, they have frequently shipped the same wine to other countries at 20l. 1 — (Fleetwood Williams on the Wine Trade.)* And the authentic Tables published by Balbi show that the price of wine has been trebled or quadrupled under the management of this corporation. — (*Essai Statistique sur le Royaume de Portugal*, tome i. p. 157.)

But though the abuses inherent in the constitution of the Company have been carried of late years to an enormous extent, it is long since its injurious effects on the commerce of this country were distinctly perceived and pointed out. So far back as 1767, the Board of Trade laid a memorial before his Majesty in council, in which they state, "With respect to many particular regulations of the Oporto Company, which we think justly objected to by the merchants as highly grievous and oppressive, we have not thought it necessary to enter into a minute description of them, being of opinion that one general and fatal objection lies against them all; viz. — that they all contribute to establish in the Company a monopoly against your Majesty's subjects, from which by treaty they have a right to be exempted."

But notwithstanding this authoritative exposition of the injury done to the English by this monopoly, and the experience which every subsequent year afforded of its mischievous influence, such has been the inveteracy of ancient prejudice, that it was not till the session of 1831 that we took the only step by which we could hope to rid ourselves of its evils, as well as of a host of others, by equalising the duties on French and Portuguese wines, and putting an end to the absurd and injurious preference in favour of the latter established by the Methuen treaty.

England and Brazil are the only countries to which any considerable quantity of port wine is exported. Our imports amounted, at an average of the 10 years ending with 1833, to 22,121 pipes a year; of which, however, a portion is subsequently exported; while the exports from Portugal to all other countries, Brazil inclusive, have not recently amounted to 3,000 pipes. It has been supposed, now that there is no discriminating duty in favour of port, that its consumption in this country will gradually fall off, its place being filled by French and other wines; but though such a result be not improbable, it derives no confirmation from the pretty gradual decrease in the quantities of port retained for home use since 1827, the French wines retained for the same purpose having declined still more rapidly.

Sherry is of a deep amber colour; when good, it has a fine aromatic odour; its taste is warm, with some degree of the agreeable bitterness of the peach kernel. When new, it tastes harsh and fiery; it is mellowed by being allowed to remain 4 or 5 years or longer in the wood; but it does not attain to its full flavour and perfection until it is kept for 15 or 20 years. It is a very strong wine, containing about 19 per cent. of alcohol. It is principally produced in the vicinity of Xeres, not far from Cadiz, in Spain. It is very extensively used in this country as a dinner wine. Dry sherry, or *amontillado*, when genuine and old, fetches a very high price. Perhaps no wine is so much adulterated as sherry. With the exception of Marsala, the consumption of sherry has been far more influenced than that of any other wine by the reduction of the duties in 1825. In 1833, the quantity retained for home consumption amounted to 2,246,085 gallons, being more than double the quantity retained for consumption at an average of 1823 and 1824! — (See *post*.)

Claret, — the term generally used in England to designate the red wines, the produce of the Bordelais. Of these, Lafitte, Latour, Château-Margaux, and Haut-Brion, are so generally esteemed, that they always sell from 20 to 25 per cent. higher than any others of the province. The first mentioned is the most choice and delicate, and is characterised by its silky softness on the palate, and its charming perfume, which partakes of the nature of the violet and the raspberry. The Latour has a fuller body, and at the same time a considerable aroma, but wants the softness of the Lafitte. The Château-Margaux, on the other hand, is lighter, and possesses all the delicate qualities of the Lafitte, except that it has not quite so high a flavour. The Haut-Brion, again, has more spirit and body than any of the preceding, but is rough when new, and requires to be kept 6 or 7 years in the wood; while the others become fit for bottling in much less time.

Among the second-rate wines, that of Rozan, in the parish of St. Margaux, approaches in some respects to the growth of the Château-Margaux; while that of Gorce, in the same territory, is little inferior to the Latour; and the vineyards of Leoville, Larose, Bran-mouton, and Pichon-Longueville, in the canton of Pauillae, afford light wines of good flavour, which, in favourable years, have much of the excellence of the finer growths. In the Entre-deux-Mers, the wines of Canon and St. Emilion, in the vicinity of Libourne, are deemed the best, being of a full body and very durable. When new, these wines are always harsh and astringent; but they acquire an agreeable softness, and are characterised by a peculiar flavour, which has been not unaptly compared to the smell of burning wax. The aroma of the first growths is seldom fully developed till after they have been kept 8 or 9 years: but the secondary qualities come to perfection a year or two sooner. The colour often grows darker as the wine advances in age, in consequence of the deposition of a portion of its tartar; but, when well made, and thoroughly fined, it seldom deposits any crust.

(These particulars are borrowed from the excellent work of Dr. Henderson, on *Ancient and Modern Wines* (p. 184.). We have given, in a previous article — (see BORDEAUX), — full and authentic details as to the trade in claret. We beg, also, to refer the reader to that article for some observations on the wine trade of France, and on the injury done to it by the restrictive system of commerce.)

There is generally a very good supply of claret in bond in the docks in London. Its price varies from about 15*l.* per hogshead for the inferior, to 50*l.* and 55*l.* per hogshead for the superior growths. What are called cargo or shipping clarets may be bought at from 5*l.* to 10*l.* per hogshead. The finest case claret sells in bond at about 50*s.* per dozen; but parcels of very well flavoured wine may be bought at 25*s.*

Champagne, — so called from the province of France of which it is the produce, — is one of the most deservedly esteemed of the French wines. The wines of Champagne are divided into the 2 grand classes of white and red wines; and each of these again into still and sparkling: but there is a great variety in the flavour of the produce of different vineyards. Sillery is universally allowed to be the best of the still wines. It is dry, of a light amber colour, has a considerable body, and a charming aroma. “*Le corps*,” (says M. Jullien,) “*le spiritueux, le charmant bouquet, et les vertus toniques dont il est pourvu, lui assurent la priorité sur tous les autres.*” — (*Topographie de tous les Vignobles*, p. 30.) Dr. Henderson agrees with M. Jullien, in considering it as one of the wholesomest of the Champagne wines. The sparkling wines are, however, the most popular, at least in this country. Of these, the wine of Ay, 5 leagues south from Rheims, is, perhaps, the best. It is lighter and sweeter than Sillery, and has an exquisite flavour and aroma. That which merely creams on the surface (*demi-mousseux*) is preferred to the full frothing wine (*grand-mousseux*). Being bright, clear, and sparkling, it is as pleasing to the eye as it is grateful to the palate.

“*Cernis micanti concolor ut vitro
Latex in auras, gemmeus aspicit,
Scintillet exultum; utque dulces
Naribus illecebras propinet
“Succi latentis proditor halitus!
Ut spuma motu lactea turbido
Crystallinum latis referre
Mox oculis properet nitorem.”*

Hautvilliers, about 4 leagues from Rheims and 1 from Epernay, used formerly to produce wine that equalled, and sometimes surpassed, the wine of Ay. But it is no longer cultivated with the same care; so that, though still very good, it now only ranks in the 2d class.

The best of the red wines of Champagne are those of Verzy, Verzenay, Mailly, Bouzy, and St. Basle. “*Ils ont une belle couleur, du corps, du spiritueux, et surtout beaucoup de finesse, de sève, et de bouquet.*” — (*Jullien*, p. 27.) The Clos St. Thierry, in the vicinity of Rheims, produces wine which, according to M. Jullien, unites the colour and the aroma of Burgundy to the lightness of Champagne.

The province of Champagne produces altogether about 1,100,000 hectolitres of wine; of which, however, the finest growths make but a small part. The principal trade in wine is carried on at Rheims, Avise, and Epernay. The vaults in which the vintages are stored are excavated in a rock of calcareous tufa to the depth of 30 or 40 feet. Those of M. Moët, at Epernay, are the most extensive, and few travellers pass through the place without going to see them. The briskest wines (*grands-mousseux*) keep the worst. — (*Jullien*, p. 34.)

Burgundy. — The best wines of this province, though not so popular in England as those of Champagne, enjoy the highest reputation. “*In richness of flavour and perfume, and all the more delicate qualities of the juice of the grape, they unquestionably rank as the first in the world; and it was not without reason that the dukes of Burgundy, in former times, were designated as the princes des bons vins.*” — (*Henderson*, p. 161.) M. Jullien is not less decided: — “*Les vins des premiers crus, lorsqu'ils proviennent d'une bonne année, réunissent, dans de justes proportions, toutes les qualités qui constituent les vins parfaits; ils n'ont besoin d'aucun mélange, d'aucune préparation, pour attendre leur plus haut degré de perfection. Ces opérations, que l'on qualifie dans certains pays de soins qui aident à la qualité, sont toujours nuisibles aux vins de Bourgogne.*” — (p. 104.)

Romané-Conti, Chambertin, the Clos Vougeôt, and Richebourg, are the most celebrated of the red wines of Burgundy. Chambertin was the favourite wine of Louis XIV. and of Napoleon. It is the produce of a vineyard of that name, situated 7 miles to the south of Dijon, and furnishing each year from 130 to 150 puncheons, from an extent of about 65 acres. It has a fuller body and colour, and greater durability, than the Romané, with an aroma nearly as fragrant.

The white wines of Burgundy are less numerous, and, consequently, less generally known, than the others: but they maintain the highest rank among French white wines, and are not inferior to the red either in aroma or flavour.

The entire annual produce of wine in Burgundy and Beaujolais may at present be estimated, at an average, at nearly 3,000,000 hectolitres, of which about 750,000 suffice for the consumption of the inhabitants. Since the Revolution, the cultivation of the vine has been greatly extended in the province. Many of the new vineyards having necessarily been planted in comparatively unfavourable situations, a notion has been gaining ground that the wines of Burgundy were degenerating. This, however, is

not the case. On the contrary, the quantity of *bons crus*, instead of being diminished, has increased considerably; though, as the supply of inferior wines has increased in a still greater degree, the fine wines bear a less proportion to the whole than they did previously to the Revolution. — (*Jullien*, p. 90.)

The principal trade in Burgundy is carried on at Dijon, Gevrey, Châlons-sur-Saône, &c.

Besides the above, France has a great variety of other excellent wines. Hermitage, Sauterne, St. Péry, &c. are well known in England; and deservedly enjoy, particularly the first, a high degree of reputation.

Account of the Quantity and Value of the Wines exported from France in 1831; distinguishing between those of the Gironde and those of other Departments, and between those exported in Casks and Bottles; and specifying the Quantity and Value of those sent to each Country. — (*Administration des Douanes* for 1831, p. 249.)

Exclusive of the above, there were exported from France, in the same year, 2,753,499 litres of *vins de liqueurs*, valued at 4,130,250 francs.

The total produce of the vineyards of France is estimated at about 35,000,000 hectolitres (770,000,000 Imp. gallons), worth 540,000,000 francs (21,600,000*l.*). We beg to refer the reader to the article *BORDEAUX*, for an account of the influence of the French system of commercial policy on this great department of industry.

Dispute as to the Comparative Merit of Champagne and Burgundy. — The question, whether the wines of Champagne or of Burgundy were entitled to the preference, was agitated during the reign of Louis XIV with extraordinary keenness. The celebrated Charles Coffin, rector of the University of Beauvais, published, during this controversy, the classical ode, partly quoted above, in which Champagne is eulogised, and its superiority vindicated, with a spirit, vivacity, and delicacy worthy of the theme. The citizens of Rheims were not ungrateful to the poet; but liberally rewarded him with an appropriate and munificent donation of the wine he had so happily panegyrised. Grénaue wrote an ode in praise of Burgundy; but, unlike its subject, it was flat and insipid, and failed to procure any recompense to its author. The different pieces in this amusing controversy were collected and published in octavo, at Paris, in 1712. — (See *Le Grand d'Aussy, Vie Privée des Français*, tom. iii. p. 39., and the *Biographie Universelle*, tom. ix. art. *Coffin* (Charles).) Erasmus attributes the restoration of his health to his having drunk liberally of Burgundy; and has eulogised it in the most extravagant terms. An epistle of his, quoted by Le Grand d'Aussy, shows that Falstaff and he could have spent an evening together less disagreeably than might have been supposed: — "Le premier qui enseigna l'art de faire ce vin (Bourgogne), ou qui en fit présent, ne doit-il point passer plutôt pour nous avoir donné la vie que pour nous avoir gratifié d'une liqueur." — (*Vie Privée des Français*, tom. iii. p. 9.)

Consumption of French Wine in England. Discriminating Duties. — Owing to the intimate connection subsisting between England and France for several centuries after the Conquest, the wines of the latter were long in almost exclusive possession of the English market: but the extension of commerce gradually led to the introduction of other species; and in the reigns of Elizabeth and James I., the dry white wines of Spain seem to have been held in the highest estimation. This, however, was only a temporary preference. Subsequently to the Restoration, the wines of France regained their former ascendancy.

In 1687, their importations amounted to 15,518, in 1688 to 14,218, and in 1689 to 11,106 tuns. It is exceedingly doubtful whether so much as a single pipe of port had ever found its way to England previously to this period — (*Henderson*, p. 313.); and it is most probable that the wines of France would have continued to preserve their ascendancy in our markets, had not their importation been artificially checked.

The trade with France had occasionally been prohibited previously to the accession of William III.; but it was not until 1693 that any distinction was made between the duties payable on French and other wines. But Louis XIV. having espoused the cause of the exiled family of Stuart, the British government, in the irritation of the moment, and without reflecting that the blow aimed at the French would infallibly recoil upon themselves, imposed, at the period above-mentioned, a discriminating duty of 8*l.* a tun on French wines, and in 1697 increased it to 3*5*l.**! In consequence of this enormous augmentation of duty on French wines, the merchants began to import wine from Oporto as a substitute for the red wines of Bordeaux, excluded by the high duties. It is probable, however, that these discriminating duties would have been repealed as soon as the excitement which produced them had subsided, and that the trade would have returned to its old channels, had not the stipulations in the famous commercial treaty with Portugal, negotiated by Mr. Methuen in 1703, given them permanence. Such, however, was unluckily the case: for, according to this treaty, we bound ourselves to charge in future *one third* higher duties on the wines of France than on those of Portugal; the Portuguese, by way of compensation, binding themselves to admit our woollens into their markets in preference to those of other countries, at a fixed and invariable rate of duty.

Though very generally regarded at the time as the highest effort of diplomatic skill and address, the Methuen treaty was certainly founded on the narrowest views of national interest, and has proved, in no common degree, injurious to both parties, but especially to England. By binding ourselves to receive Portuguese wines for *two thirds* of the duty payable on those of France, we, in effect, gave the Portuguese growers a monopoly of the British market, and thereby attracted too great a proportion of the deficient capital of Portugal to the production of wine; while, on the other hand, we not only excluded one of the principal equivalents the French had to offer for our commodities, and proclaimed to the world that we considered it better to deal with *two* millions of poor beggarly customers, than with *thirty* millions of rich ones, but we also provoked the retaliation of the French, who forthwith excluded most of our articles from their markets!

The injurious effects of the regulations in the Methuen treaty were distinctly pointed out by Dr. Davenant and Mr. Hume. The latter, in his *Essay on the Balance of Trade*, published in 1752, says, “Our jealousy and hatred of France are without bounds. These passions have occasioned innumerable barriers and obstructions on commerce, where we are commonly accused of being the aggressors. But what have we gained by the bargain? *We lost the French market for our woollen manufactures, and transferred the commerce of wine to Spain and Portugal, where we buy much worse liquor at a much higher price!* There are few Englishmen who would not think their country absolutely ruined, were French wine sold in England so cheap, and in such abundance, as to supplant ale and other home-brewed liquors. But, would we lay aside prejudice, it would not be difficult to prove that nothing could be more innocent; perhaps, more advantageous. Each new acre of vineyard planted in France, in order to supply England with wine, would make it requisite for the French to take an equivalent in English goods, by the sale of which we should be equally benefited.”

In consequence of the preference so unwisely given to the wines of Portugal over those of France, — a preference continued, in defiance of every principle of sound policy and common sense, down to 1831, — the imports of French wine were for many years reduced to a mere trifle; and notwithstanding their increased consumption, occasioned by the reduction of the duties in 1825, the quantity made use of in 1833 did not exceed 232,500 gallons; while the consumption of Portuguese wines amounts to about 2,600,000 Imperial gallons! This is the most striking example, perhaps, in the history of commerce, of the influence of customs duties in diverting trade into new channels, and altering the taste of a people. All but the most opulent classes having been compelled, for a long series of years, either to renounce wine, or to use port, the taste for the latter has been firmly rooted; the beverage that was originally forced upon us by necessity having become congenial from habit. We have little doubt, however, now that the discriminating duty in favour of port is abolished, that the excellence of the French wines will ultimately regain for them some portion of that favour in the English market they formerly enjoyed.*

Madeira, — so called from the island of that name, — is a wine that has long been in extensive use in this and other countries. Plants of the vine were conveyed from Crete to Madeira in 1421, and have succeeded extremely well. There is a considerable difference in the flavour and other qualities of the wines of Madeira: the best are produced on the south side of the island. Though naturally strong, they receive an addition of brandy when racked from the vessels in which they have been fermented, and another portion is thrown in previously to their exportation. This is said to be required to sustain the wine in the high temperature to which it is subjected in its passage to and from India and China, to which large quantities of it are sent; it being found that it is mellowed, and its flavour materially improved, by the voyage. It does not, however, necessarily follow that the wines which have made the longest voyages are always the best. Much must obviously depend on the original quality of the wine; and many of the parcels selected to be sent to India are so inferior, that the wine, when brought to London, does not rank so high as that which has been imported direct. But when the parcel sent out has been well chosen, it is very much matured and improved by the voyage; and it not only fetches a higher price, but is in all respects superior to the direct importations. Most of the adventitious spirit is dissipated in the course of the Indian voyage.

Madeira wines may be kept for a very long period. “Like the ancient vintages of the Surrentine hills, they are truly *firmissima vina*, retaining their qualities unimpaired in both extremes of climate, suffering no decay, and constantly improving as they advance in age. Indeed, they cannot be pronounced in condition until they have been kept for 10 years in the wood, and afterwards allowed to mellow nearly twice that time in bottle: and even then they will hardly have reached the utmost perfection of which they are susceptible. When of good quality, and matured as above described, they lose

* The mischievous operation of the Methuen treaty, and of the discriminating duty on French wines, were very strikingly exhibited by Mr. Hyde Villiers, in his able speech on the 15th of June, 1830. It is highly deserving of the reader's attention.

all their original harshness, and acquire that agreeable pungency, that bitter sweetishness, which was so highly prized in the choicest wines of antiquity; uniting great strength and richness of flavour with an exceedingly fragrant and diffusible aroma. The nutty taste, which is often very marked, is not communicated, as some have imagined, by means of bitter almonds, but is inherent in the wine."—(*Henderson*, p. 253.)

The wines of Madeira have latterly fallen into disrepute in England. The growth of the island is very limited—not exceeding 20,000 pipes, of which a considerable quantity goes to the West Indies and America. Hence, when Madeira was a fashionable wine in England, every sort of deception was practised with respect to it, and large quantities of spurious trash were disposed of for the genuine vintage of the island. This naturally brought the wine into disrepute; so that sherry has been for several years the fashionable white wine. It is difficult, however, to imagine that adulteration was ever practised to a greater extent upon Madeira than it is now practised upon sherry. It is not, therefore, improbable, that a reaction will take place in favour of Madeira. The quantity entered for home consumption in 1827 amounted to 308,295 gallons, whereas the quantity entered for home consumption in 1833 only amounted to 161,042 gallons.

Malmsey, a very rich luscious species of the Madeira, is made from grapes grown on rocky grounds exposed to the full influence of the sun's rays, and allowed to remain on the vine till they are over-ripe.

The trade in Madeira wine is carried on at Funchal, the capital of the island, in lat. 32° 37' N., lon. 17° 6' W. *Weights and Measures* same as at Lisbon.

Teneriffe wine,—so called from the island of that name,—resembles Madeira, and is not infrequently substituted in its place; but it wants the full body and rich flavour of the best growths of Madeira.

German Wines.—The wines of Germany imported into England are principally produced on the banks of the Rhine and the Moselle. The Rhine wines constitute a distinct order by themselves. They are drier than the French white wines, and are characterised by a delicate flavour and aroma, called in the country *gäre*, which is quite peculiar to them, and of which it would, therefore, be in vain to attempt the description. A notion prevails, that they are naturally acid; and the inferior kinds, no doubt, are so; but this is not the constant character of the Rhine wines, which in good years have no perceptible acidity to the taste, at least not more than is common to them with the growths of warmer regions. Their chief distinction is their extreme durability. The wines made in warm dry years are always in great demand, and fetch very high prices.

The Johannisberger stands at the head of the Rhine wines. It has a very choice flavour and perfume, and is characterised by an almost total want of acidity. The vineyard is the property of Prince Metternich. The Steinberger ranks next to the Johannisberger. It is the strongest of all the Rhenish wines, and in favourable years has much flavour and delicacy.

The produce of certain vineyards on the banks of the Moselle is of superior quality. The better sorts are clear and dry, with a light pleasant flavour and high aroma; but they sometimes contract a slaty taste from the strata on which they grow. They arrive at maturity in 5 or 6 years; though, when made in a favourable season, they will keep twice that time, without experiencing any deterioration. — (*Henderson*, p. 226.)

Tokay,—so called from a town in Hungary near which it is produced,—is but little known in England. It is luscious, possessing at the same time a high degree of flavour and aroma. It is scarce and dear; and very apt to be counterfeited.

Marsala.—The Sicilian white wine called Marsala, from the town (the ancient Lily bæum) whence it is shipped, and near which it is made, is now pretty largely consumed in England; the entries for home consumption having increased from 79,686 gallons in 1823, to 312,993 in 1833; an extraordinary increase, particularly when it is considered that during the same period the consumption of most sorts of wine has been nearly stationary. Marsala is a dry wine; the best qualities closely resembling the lighter sorts of Madeira; but the increasing demand for it seems to be owing as much to its cheapness as to any peculiarity of quality. It is, however, an agreeable dinner wine. Marsala has been brought to its present state of perfection and repute by the care and exertions of 2 Englishmen, the Messrs. Woodhouse, established in Sicily, who have an extensive factory in the neighbourhood of Marsala. The wine is shipped in large quantities for America; whence a considerable quantity is again conveyed to the West Indies, where it is not unfrequently disposed of as real Madeira.

With the exception of Marsala, very little wine either of Sicily or Italy is imported into England. The wines of those countries are, indeed, without, perhaps, a single exception, very inferior to those of France. The natives bestow no care upon the culture of the vine; and their ignorance, obstinacy, and want of skill in the preparation of wine, are said to be almost incredible. In some districts, the art is, no doubt, better understood than in others; but had the Falernian, Cecuban, and other famous ancient wines,

not been incomparably better than the best of those that are now produced, they never would have elicited the glowing panegyrics of Horace.

Wines of Greece and Cyprus.—The soil in most parts of Greece and of the Grecian islands is admirably fitted for the growth of the vine; and, in antiquity, they produced some of the choicest wines. But the rapacity of the Turks, and the insecurity of person and property that has always prevailed under their miserable government, has effectually prevented the careful cultivation of the vine; and has occasioned, in many places, its total abandonment. It may, however, be fairly presumed, now that Greece has emancipated herself from the iron yoke of her oppressors, that the culture of the vine will attract some portion of that attention to which it is justly entitled; and that, at no distant period, wine will form an important article of export from Greece.

Nowhere, perhaps, has the destructive influence of Turkish barbarism and misgovernment been so apparent as in Candia and Cyprus. While these 2 renowned and noble islands were possessed by the Venetians, they supplied all Europe with the choicest dessert wines. Bacci affirms, that towards the end of the 16th century, Candia sent annually 200,000 casks of malmsey to the Adriatic; whereas at present it hardly produces sufficient to supply the wants of its few impoverished inhabitants.—(*Henderson*, p. 243.) The wines of Cyprus, particularly those produced from the vineyard called the Commandery, from its having belonged to the Knights of Malta, were still more highly esteemed than those of Crete. In the earlier part of last century, the total produce of the vintage of the island was supposed to amount to above 2,000,000 gallons, of which nearly $\frac{1}{2}$ was exported; but now, the wine grown and exported does not amount to $\frac{1}{10}$ th part of these quantities! The oppression of which they have been the victims, has reduced the peasantry to the extreme of indigence. The present population of the island is not supposed to exceed 60,000,—a number insufficient to have peopled one of its many ancient cities; and small as this number is, it is constantly diminishing by the inhabitants availing themselves of every opportunity of emigrating. Recently Cyprus has passed into the hands of Mohammed Ali; but unless the Paeha establishes a different government in it from what he has established in Egypt, the miserable inhabitants will gain nothing by the change.—(There is a brief but good account of Cyprus in *Kinneir's Travels in Asia Minor*, &c. pp. 176—197.)

Cape Wines.—Of the remaining wines imported into England, those of the Cape of Good Hope form the largest proportion; the quantity annually entered for home consumption being about 540,000 Imperial gallons. The famous Constantia wine is the produce of 2 contiguous farms of that name, at the base of Table Mountain, between 8 and 9 miles from Cape Town. The wine is very rich and luscious; though, according to Dr. Henderson, it yields, in point of flavour and aroma, to the muscadine wines of Languedoc and Roussillon. But, with this exception, most of the Cape wines brought to England have an earthy disagreeable taste, are often acid, want flavour and aroma, and are, in fact, altogether execrable. And yet this vile trash, being the produce of a British possession, enjoys peculiar advantages in our markets; for while the duty on Cape wine is only 2s. 9d. a gallon, that on all other wines is 5s. 6d. The consequences of this unjust preference are doubly mischievous: in the first place, it forces the importation of an article of which little is directly consumed, but which is extensively employed as a convenient menstruum for adulterating and degrading sherry, Madeira, and other good wines; and, in the second place, it prevents the improvement of the wine; for, while the legislature thinks fit to give a bounty on the importation of so inferior an article, is it to be supposed that the colonists should exert themselves to produce any thing better? It is not easy to imagine a more preposterous and absurd regulation. The act enforcing it ought to be entitled, an act for the adulteration of wines in Great Britain, and for encouraging the growth of bad wine in the Cape colony!

Consumption of Wine in Great Britain. Duties.—We have repeatedly had occasion, in the course of this work, to call the reader's attention to the injurious operation of unequal and exorbitant duties. Perhaps, however, the trade in wine has suffered more from this cause than any other department of industry. We have already endeavoured to point out some of the effects resulting from the inequality of the duties, or from the preference so long given to the inferior wines of Portugal and Spain over the superior wines of France. But the exorbitance of the duties was, if possible, still more objectionable than the partial principle on which they were imposed. It appears from the subjoined Table, that during the 3 years ending with 1792, when the duty on French wines was 3s. 9d., and on Portuguese 2s. 6d. per wine gallon, the consumption in Great Britain amounted, at an average, to 7,410,947 gallons a year, producing about 900,000*l.* of revenue. It is probable, had the increase taken place *gradually*, that these duties might have been doubled without any material diminution of consumption. But in 1795 and 1796 they were raised to 8s. 6d. per gallon on French, and to 5s. 8½d. per gallon on Portuguese and Spanish wine; and the consequence of this sudden and inordinate increase, as exhibited in the Table, was, that the consumption fell from nearly 7,000,000 gallons in 1795, to 5,732,385 gallons in 1796, and to 3,970,901 in 1797! But this unanswerable demonstration of the ruinous effect of heavy and sudden additions to the duties did not prevent them being raised, in 1804, to 11s. 5½d. on French, and to 7s. 8d. on Portuguese and Spanish wine. They continued at this rate till 1825; and such was their influence, that, notwithstanding the vast increase of wealth and population since 1790, and the general improvement in the style of living, the total consumption of wine, during the 3 years ending with 1824, amounted, at an average, to only 5,248,767 gallons a year; being no less than 2,162,180 gallons under the annual consumption of the 3 years ending

with 1792! It may, therefore, be truly said, making allowance for the increase of population, that the consumption of wine in Great Britain fell off more than fifty per cent. between 1790 and 1824!

Had Mr. Vansittart continued in power, it is difficult to say when this system might have terminated; but no sooner had Mr. Robinson (now Lord Ripon) become Chancellor of the Exchequer, than he resolved upon the effectual reduction of the wine duties. In pursuance of this wise determination, Mr. Robinson took, in 1825, nearly 50 per cent. from the previously existing duties; and notwithstanding the spirit duties were at the same time reduced in a still greater degree, the consumption of wine in Great Britain has been increased from little more than 4,150,000 to about 5,200,000 Imperial gallons, while the loss of revenue has been but inconsiderable. We are, therefore, justified in affirming that this measure has been very successful, and that it is a most valuable example of the superior productiveness of low duties.*

The duties, as reduced by Mr. Robinson, were 7s. 3d. per Imperial gallon on French wines, 4s. 10d. per do. on all other foreign wines, and 2s. 5d. on those of the Cape of Good Hope. They continued on this footing till the equalisation act (1 & 2 Will. 4. c. 30.), which imposes a duty of 5s. 6d. per Imperial gallon on all foreign wines, and of 2s. 9d. on those of the Cape.

But the equalisation effected by this act ought not to have been brought about by adding any thing to the duties on port, sherry, &c., but exclusively by reducing those on French wines to their level. The subjoined Tables show that the consumption of wine in the United Kingdom was about stationary from 1826 to 1831; and the addition of 8d. a gallon, that was then made to the duties on all sorts of foreign wine except French, from which 1s. 9d. was deducted, appears to have sensibly affected the consumption of 1832. Considering, indeed, the increasing wealth and population of the British empire, and the more generally diffused use of wine, the small increase of the quantities retained for consumption is not a little surprising. A good deal is, we believe, ascribable to adulteration. It is certain, however, that the duties are still too high; but they are principally objectionable from the mode of their assessment. The trade will never be placed on a proper footing till the duty is imposed on an *ad valorem* principle. The imposition of the same duty on inferior and cheap wines, worth 10l. a hogshead, as on the choicest Burgundy and Champagne, worth 50l. or 60l. a hogshead, is so utterly subversive of all principle, that one is astonished it should be maintained for an instant. Its absurdity would not be exceeded, were the same duty charged on small beer that is charged on gin! The effect of this apparently equal, but really most unequal duty, is to exclude all low priced wines from the English markets; and to deprive the middle classes of the gratification derivable from their use. Commercially speaking, Bordeaux is much nearer London than Paris; and, but for this preposterous system, the cheap wines of the Gironde, Languedoc, and Provence might be bought here at a less price than in most parts of France. Were it necessary for the sake of revenue to continue the present system, it might be reluctantly submitted to; but it is abundantly certain, that a fairly assessed *ad valorem* duty would, by increasing the consumption of the middle classes, yield a much larger amount of revenue than is produced by the constant duty: and it is not to be endured, that the trade of the country should be deeply injured, and the enjoyments of the great bulk of the community materially impaired, for no purpose of public utility, but merely that injustice and absurdity may be prolonged! It is said, indeed, that the imposition of an *ad valorem* duty would lead to the commission of fraud; but we have been assured, by those familiar with the customs, that such precautions might easily be adopted as would prevent any danger on this head. And though it were otherwise — though a few thousand gallons of wine were admitted for home consumption at a somewhat lower duty than they ought to have paid — the injury would be of the most trivial kind, and would hardly, indeed, deserve a moment's attention. In the United States, most duties are imposed on an *ad valorem* principle; and it is not alleged that any real difficulty has to be encountered in their collection.

Consumption of Wine in Ireland. Duties.—In 1790, the duties on wine consumed in Ireland were considerably below the level of those imposed in Great Britain, and the average annual quantity of allsorts retained for home consumption in that country amounted to about 1,100,000 Imperial gallons, producing about 138,000l. a year of revenue. Had those to whom the government of Ireland was intrusted possessed the slightest knowledge of the merest elements of finance, or of the condition of the Irish people, they would not have attempted to add to the public revenue by augmenting the duties on wine. Owing to the limited number of the middle classes in Ireland, an increase of duty could not be expected to be productive; and though it had yielded 50,000l., or even 100,000l. a year additional revenue, that would have been no compensation for the injury it was sure to do in checking the diffusion of that taste for luxuries and enjoyments so essential to the improvement of the people. But those who had to administer the affairs of Ireland were insensible to such considerations; and never doubted that 2 and 2 make 4 in the arithmetic of the customs as well as in Cocker! Such, indeed, was their almost incredible rapacity, that in the interval between 1791 and 1814, they raised the duty on French wine from 37l. 7s. a tun to 144l. 7s. 6d.; and that on port from 22l. 4s. 8d. to 95l. 11s. 1! This was a much more rapid increase than had taken place in England; and as the country was far less able to bear even the same increase, the consequences have been proportionally mischievous. In 1815, the quantity of wine retained for home consumption in Ireland had declined, notwithstanding the population had been doubled, to 608,000 Imperial gallons, or to about half the quantity consumed in 1790; and in 1824, the consumption had fallen to 467,600 gallons, while the revenue only amounted to 185,000l.!

It is unnecessary to make any commentary on such statements. But it is mortifying to reflect, that the legislature of a civilised country like Great Britain should have obstinately persevered in such a system for about $\frac{1}{2}$ of a century. We venture to affirm, that those who ransack the financial annals of Turkey and Spain, will find nothing in them evincing in every part greater rapacity, ignorance, and contempt for the public interest, than is displayed in the history of Irish taxation from 1790 to 1819.

The reduction of the duties in 1825 has nearly doubled the consumption of wine in Ireland, and has added considerably to the revenue. The duties are still, however, oppressively high as compared with the means of the population; and hence, notwithstanding the population of Ireland has more than doubled, and the wealth of the country been materially increased in the interval, the quantity of wine retained for home consumption in 1790, exceeded that retained for the same purpose in 1832, by more than 290,000 Imperial gallons! The Irish are particularly attached to French wines; and supposing the duty were fixed on an *ad valorem* principle, so that it should be 2s. 6d. or 4s. a gallon on the finer wines, we have no doubt whatever that the consumption would be speedily doubled or trebled, not only in Ireland, but also in Britain. We subjoin

An Account of the Quantities of all Sorts of Wine retained for Consumption in IRELAND, during the Four Years ending with 1832, and of the Nett Revenue accruing thereon.

Years.	Retained for Consumption.	Revenue.	Years.	Retained for Consumption.	Revenue.

Rates of duty same in Ireland as in Great Britain, since 1814.

* An article in the Edinburgh Review, No. 80., contributed to bring about this measure. See also an excellent tract on the *Wine Trade*, by Mr. Warre, published in 1824.

Adulteration of Wine. — We have already alluded to this practice. It was prosecuted to a very great extent previously to the reduction of the duties in 1825, and is still very far from being suppressed. It has been affirmed, but we are inclined to suspect the statement of exaggeration, that at this moment more than a *third* of all the sherry consumed in London is the produce of the *home presses*! Indeed, wines are every day offered for sale at prices at which every one conversant with the trade knows they could not be afforded were they genuine. Mr. Fleetwood Williams has given, in his valuable pamphlet on the *Wine Trade* (1824), some curious details on this subject.

The imposition of the duties on an *ad valorem* principle, by allowing genuine wine to be sold at a low price, would put an effectual stop to the practices of the adulterators. The increase of the duties in the reigns of William and Anne first gave birth to this discreditable fraternity — (see a curious paper of Addison's, *Tatler*, No. 131.) and it will continue to flourish as long as the duties are maintained on their present footing.

The only security against being imposed upon, is to deal only with respectable houses; with those largely engaged in the trade; and to whom a reputation for selling good wine is of ten times more importance than any thing they could expect to make by adulteration.

Account of the Quantity of French and other Sorts of Wine retained for Home Consumption in GREAT BRITAIN from 1789 to 1832; specifying the Produce of the Duty, and the Rates of Duty thereon.

Bucellas	—	26 0 to 36 0	Pontac	—	15 0 to 20 0

Measures.—According to the system of wine measures that prevailed down to 1826, the gallon contained 251 cubic inches; the tierce, 42 gallons; the puncheon, 84 gallons; the hogshead, 63 gallons; the pipe or butt, 126 gallons; and the tun, 252 gallons. But in the new system of measures introduced by the act 3 Geo. 4. c. 74, the Imperial standard gallon contains 277.274 cubic inches; so that the tierce = 35 (very nearly) Imperial gallons; the puncheon = 70 (very nearly) do.; the hogshead = 52½ (very nearly) do.; the pipe or butt = 105 (very nearly) do.; and the tun = 210 (very nearly) do.—(See WEIGHTS AND MEASURES.)

A very great quantity of wine is sold to the consumer in dozens; much more, indeed, than is sold in any other way; and yet there is no regulation as to the size of bottles,—a defect which has occasioned a great deal of abuse. No one doubts the propriety of making all gallons, bushels, &c. of the same capacity; and why should not similar regulations be enforced in the case of measures so universally used as bottles?

Wine the produce of Europe may not be imported for home consumption, except in British ships, or in ships of the country of which the wine is the produce, or of the country from which it is imported, on forfeiture thereof, and 100*l.* by the master of the ship.—(3 & 4 Will. 4. c. 54.)

No abatement of duties made on account of any damage received by wine.—(3 & 4 Will. 4. c. 52.)

Wine from the Cape must be accompanied by a certificate of its production.—(See *ante*, p. 660.)

Wine exported to foreign parts, from the bonded warehouses, must be shipped in vessels of not less than 70 tons burden.—(3 & 4 Will. 4. c. 57.)

Wine for Officers of Navy.—For the quantity of duty-free wine to be allowed to officers of the navy, and the regulations under which it is to be allowed, see *ante*, p. 667.

Regulations as to mixing, bottling, &c. in Warehouses.—1. Wines, when deposited in warehouses of special security, or in warehouses situated near the places of landing and shipping, and declared in the order of approval to be substantially built, and capable of affording general accommodation to the trade, may be allowed to be fitted up, fined, and racked, as often as the owners may deem necessary, the lees to be destroyed without payment of duty, the quantities destroyed being correctly ascertained for the purpose of being eventually deducted from the official accounts.

2. Bonded brandy may be allowed to be added to wine in the bonded stores for its preservation or improvement, and the whole to pay duty as wine upon being taken out for home consumption, provided the whole quantity of brandy contained in the wine, at the time of entry for home consumption, do not exceed 30 per cent.; and that a proper sample for the purpose of ascertaining the strength be allowed to be taken out by the proper officers.

3. Wines may be allowed to be mixed with wines of the same description as often as necessary for their preservation or improvement; provided that wine so mixed be kept separate from other wine, and that the packages containing the same be branded as *mixed wine*, and the brand or other marks of the original shipper be effaced.—(Treasury Order, 20th of May, 1830.)

Wine may be bottled for exportation in a bonded vault appropriated for the purpose, upon giving 24 hours' notice; but no foreign bottles, corks, or packages may be used, except those in which the wine may have been imported and warehoused, unless the full duties shall have been paid on the same; and not less than 3 dozen reputed quarts, or 6 dozen reputed pint bottles, shall be exported in each package; and if any surplus or sediment remain, it is to be immediately destroyed in the presence of the officer, or the full duties paid upon it.—(3 & 4 Will. 4. c. 57., and Customs Min. 31st of Dec. 1828.)

The brands or marks on the casks into which wines or spirits may be racked at the bonded warehouses are to be effaced, and no other brand or mark to be retained thereon than those which were on the casks when originally imported.—(Treasury Order, 29th of June, 1830.)

WOAD (Ger. *Waid*; Du. *Weede*; Fr. *Pastel*, *Guède*, *Fouède*; It. *Gvadone*, *Guado*, *Glastro*; Sp. *Pustel*, *Glasto*), the *Isatis tinctoria* of botanists, a biennial plant, with a

* The other sorts are quite trifling, and do not deserve notice.

fusiform fibrous root, and smooth branchy stem, rising from 3 to 5 feet in height. Woad is indigenous to most parts of Europe; and was extensively used from a very remote period, down to the general introduction of indigo, in the dyeing of blue. It is still cultivated to a considerable extent in France; but in this country its cultivation is chiefly restricted to a few districts in Lincolnshire. After being bruised by machinery, to express the watery part, it is formed into balls, which ferment and fall into a dry powder, which is sold to the dyer. Woad is now seldom employed without a mixture of indigo. By itself, it is incapable of giving a bright and deep blue colour; but the colour which it does give is very durable. The best methods of conducting the fermentation and preparation of woad are still so very ill understood, that the goodness of any parcel of it can never be ascertained till it be actually used; so that it has the disadvantage of being purchased under the greatest uncertainty as to its true value. At the proper age, indigo plants yield about 30 times as much colouring matter, and of a far superior quality, as an equal weight of woad; so that there is no prospect that any improvement that may be made in its preparation will ever render it, either in goodness or cheapness, a rival of the former. — (*Loudon's Ency. of Agriculture; Bancroft on Colours*, vol. i. p. 167.) We have previously — (see INDIGO) — given some account of the efforts made by the woad growers to prevent the use of indigo.

WOOD. See TIMBER.

WOOL (Ger. *Wolle*; Du. *Wol*; Da. *Uld*; Sw. *Ull*; Fr. *Laine*; It. and Sp. *Lana*; Port. *Lã*, *Lãa*; Rus. *Wolna*, *Scherst*; Pol. *Włna*; Lat. *Lana*), a kind of soft hair or down. The term is not very well defined. It is applied both to the fine hair of animals, as sheep, rabbits, some species of goats, the vicuña, &c.; and to fine vegetable fibres, as cotton. In this article, however, we refer only to the wool of sheep, — an article which has continued, from the earliest period down to the present day, to be of primary importance — having always formed the principal part of the clothing of mankind in most temperate regions.

Species of Wool. — It has been customary in this country to divide wool into 2 great classes — long and short wools; and these again into subordinate classes, according to the fineness of the fibre.

Short wool is used in the cloth manufacture; and is, therefore, frequently called clothing wool. It may vary in length from 1 to 3 or 4 inches: if it be longer, it requires to be cut or broken to prepare it for the manufacture.

The *felting* property of wool is known to every one. The process of hat making, for example, depends entirely upon it. The wool of which hats are made is neither spun nor woven; but locks of it, being thoroughly intermixed and compressed in warm water, cohere and form a solid tenacious substance.

Cloth and woollen goods are made from wool possessing this property; the wool is carded, spun, woven, and then being put into the fulling mill, the process of felting takes place. The strokes of the mill make the fibres cohere; the piece subjected to the operation contracts in length and breadth, and its texture becomes more compact and uniform. This process is essential to the beauty and strength of woollen cloth. But the long wool of which stuffs and worsted goods are made is deprived of its felting properties. This is done by passing the wool through heated iron combs, which takes away the laminæ or feathery part of the wool, and approximates it to the nature of silk or cotton.

Long or combing wool may vary in length from 3 to 8 inches. The shorter combing wools are principally used for hose, and are spun softer than the long combing wools; the former being made into what is called hard, and the latter into soft worsted yarn.

The fineness of the hair or fibre can rarely be estimated, at least for any useful purpose, except by the wool sorter or dealer, accustomed by long habit to discern those minute differences that are quite inappreciable by common observers. In sorting wools, there are frequently 8 or 10 different species in a single fleece; and if the best wool of one fleece be not equal to the finest sort, it is thrown to a 2d, 3d, or 4th, or to a still lower sort, of an equal degree of fineness with it. The best English short native fleeces, such as the fine Norfolk and Southdown, are generally divided by the wool sorter into the following sorts, all varying in fineness from each other: — viz. 1. Prime; 2. Choice; 3. Super; 4. Head; 5. Downrights; 6. Seconds; 7. Fine Abb; 8. Coarse Abb; 9. Livery; 10. Short coarse or breech wool. The relative value of each varies, according to the greater demand for coarse, fine, or middle cloths.

The softness of the fibre is a quality of great importance. It is not dependent on the fineness of the fibre; and consists of a peculiar feel, approaching to that of silk or down. The difference in the value of 2 pieces of cloth made of 2 kinds of wool equally fine, but one distinguished for its softness and the other for the opposite quality, is such, that, with the same process and expense of manufacture, the one will be worth from 20 to 25 per cent. more than the other. Mr. Bakewell showed that the degree of softness

depends principally on the nature of the soil on which sheep are fed : that sheep pastured on chalk districts, or light calcareous soils, usually produce hard wool ; while the wool of those that are pastured on rich, loamy, argillaceous soils, is always distinguished by its softness. Of the foreign wools, the Saxon is generally softer than the Spanish. Hard wools are all defective in their *felting* properties.

In clothing wool, the colour of the fleece should always approach as much as possible to the purest white ; because such wool is not only necessary for cloths dressed white, but for all cloths that are to be dyed bright colours, for which a clear white ground is required to give a due degree of richness and lustre. Some of the English fine woolled sheep, as the Norfolk and Southdown, have black or gray faces and legs. In all such sheep there is a tendency to grow gray wool on some part of the body, or to produce some gray fibres intermixed with the fleece, which renders the wool unfit for many kinds of white goods ; for though the black hairs may be too few and minute to be detected by the wool sorter, yet when the cloth is stoved they become visible, forming reddish spots, by which its colour is much injured. The Herefordshire sheep, which have white faces, are entirely free from this defect, and yield a fleece without any admixture of gray hairs.

The cleanness of the wool is an important consideration. The Spanish wool, for example, is always scoured after it is shorn ; whereas the English wool is only imperfectly washed on the sheep previously to its being shorn. In consequence, it is said that while a pack of English clothing wool of 240 lbs. weight will waste about 70 lbs. in the manufacture, the same quantity of Spanish will not waste more than 48 lbs. Cleanness, therefore, is an object of much importance to the buyer.

Before the recent improvements in the spinning of wool by machinery, great length and strength of staple was considered indispensable in most combing wools. The fleeces of the long woolled sheep fed in the rich marshes of Kent and Lincoln used to be reckoned peculiarly suitable for the purposes of the wool-comber : but the improvements introduced have effected a very great change in this respect ; and have enabled the manufacturer to substitute short wool of 3 inches staple, in the place of long combing wool, in the preparation of most worsted articles. A great alteration has, in consequence, taken place in the proportion of long to short wool since 1800 ; there having been in the interim, according to Mr. Hubbard's calculations — (see *post*) — an increase of 132,053 packs in the quantity of the former produced in England, and a decrease of 72,820 in the quantity of the latter.

Whiteness of fleece is of less importance in the long combing than in clothing wool, provided it be free from gray hairs. Sometimes, however, the fleece has a dingy brown colour, called a *winter stain*, which is a sure indication that the wool is not in a thoroughly sound state. Such fleeces are carefully thrown out by the wool sorter ; being suitable only for goods that are to be dyed black. The fineness of heavy combing wool is not of so much consequence as its other qualities.

The Merino or Spanish breed of sheep was introduced into this country about the close of last century. George III. was a great patron of this breed, which was for several years a very great favourite. But it has been ascertained that, though the fleece does not much degenerate here, the carcase, which is naturally ill formed, and affords comparatively little weight of meat, does not improve ; and as the farmer, in the kind of sheep which he keeps, must look not only to the produce of wool, but also to the butcher market, he has found it his interest rather to return to the native breeds of his own country, and to give up the Spanish sheep. They have, however, been of considerable service to the flocks of England ; having been judiciously crossed with the South-down, Ryeland, &c.

Deterioration of British Wool. — It appears to be sufficiently established, by the evidence taken before the House of Lords in 1828, and other authorities, that a considerable deterioration has taken place in the quality of British wool, particularly during the last 30 years. The great object of the agriculturist has been to increase the weight of the carcase and the quality of the wool ; and it seems very difficult, if not quite impossible, to accomplish this without injuring the fineness of the fleece. Mr. Culley says, that the Herefordshire sheep that produce the finest wool are kept lean, and yield $1\frac{1}{2}$ lb. each ; he adds, “ if they be better kept, they grow large and produce more wool, but of an inferior quality.” This would seem to be universally true. The great extension of the turnip husbandry, and the general introduction of a larger breed of sheep, appears, in every instance, to have lessened the value of the fleece. Speaking of the Norfolk fleeces, Mr. Fison, a wool sorter, says, that 25 years ago the weight was $2\frac{1}{2}$ lbs. a fleece, and that now it is 3 lbs. or $3\frac{1}{2}$ lbs. — (*Report*, p. 356.) But according to a Table furnished by the same gentleman, containing the results of his experience, it appears that of 15 tods, or 420 lbs., of clothing wool grown in Norfolk in 1790, 200 lbs. were *prime*, while, in 1828, the same quantity of Norfolk wool only yielded 14 lbs. *prime* ! — (*Ibid.* p. 207.) The statements of other witnesses are to the same effect. — (*Ibid.*

pp. 388. 640. and 644.) According to the estimate in Mr. Luccock's *Treatise on English Wool* which has always enjoyed the highest reputation, the produce of all sorts of wool in England, in 1800, was 384,000 packs, of 240 lbs. a pack. But Mr. Hubbard, a very intelligent and extensive wool-stapler at Leeds, has shown, that, supposing Mr. Luccock's estimate of the number of sheep to be correct, the quantity of wool now produced cannot, owing to the greater weight of the fleece, be estimated at less than 463,169 packs; being an increase of 20 per cent. ! It is, therefore, probable, notwithstanding the decline in the price of wool, that, taking into account the greater weight of the carcase, and the greater weight of the fleece, sheep produce more at present to the farmer than at any former period.

Number of Sheep in Great Britain. — It is not possible to form any accurate estimate, either of the number of sheep, or of the quantity of wool annually produced. With the exception of Mr. Luccock's, most of the statements put forth with respect to both these points seem much exaggerated. But Mr. L.'s estimate, which is considerably under any that had previously appeared, was drawn up with great care; and is supposed to approach near to accuracy. According to Mr. Luccock, the

Number of long woolled sheep in England and Wales in 1800, was	4,153,368	
of short woolled ditto	14,854,299	
Total number shorn		19,007,667
Slaughter of short woolled sheep per annum	4,221,748	
Carrion of ditto	211,087	
Slaughter of long woolled ditto	1,180,413	
Carrion of ditto	59,020	
Slaughter of lambs	1,400,560	
Carrion of ditto	70,028	
		7,140,856
Total number of sheep and lambs		26,148,463

In some parts of England there has been an increase in the number of sheep since 1800, and in others they have decreased. But we have been assured by competent judges, that, on the whole, the number has not materially varied in the interim.

During the last half century a very decided increase has taken place in the number of sheep in Scotland, and a very great improvement in the breed, particularly in the Highlands. In this district, many of the proprietors have let their estates in large farms to *store farmers*, who have introduced the Cheviot breed of sheep, in the place of the small black-faced heath breed that was formerly the only one to be met with. We may remark, by the way, that a good deal of unmerited odium has attached to the patrons of this system; for, though it be true that, in a few instances, the peasantry were rudely ejected from their little possessions, there can be no doubt that it has, on the whole, been decidedly advantageous. Besides rendering large tracts of country more valuable to the proprietors and the public generally, the condition and habits of the peasantry have been materially improved. Instead of loitering away more than half their time, as was their former practice, they have now either become the servants of the large farmers, or have resorted to towns and villages, and been metamorphosed into industrious tradesmen, fishermen, &c. A very small proportion of the whole has emigrated; and the country is more populous at present than before the sheep farming system began.

In the *General Report of Scotland* (vol. iii. Appen. p. 6.), the number of sheep is estimated at 2,850,000; and, allowing for the increase that has taken place since 1814, we may, perhaps, estimate the total number of sheep in that part of the empire at this moment at 3,500,000.

According to Mr. Wakefield, there is not a single flock of breeding sheep in the whole province of Ulster. — (*Account of Ireland*, vol. i. p. 341.) And though there be considerable flocks in Roscommon and other counties, we believe that, if we estimate the whole number of sheep in Ireland at 2,000,000, we shall be a good deal beyond the mark.

On the whole, therefore, if we are right in these estimates, the total number of sheep in Great Britain and Ireland may be taken at about 32,000,000. This estimate is 10,000,000 under that given by Dr. Colquhoun for 1812; but that learned person assigns no grounds whatever for his estimate, which is utterly inconsistent with all the really authentic information on the subject. It is curious enough to observe the German statistical writers referring to Dr. Colquhoun's statements, as if they were of standard authority. They would be about as near the mark, were they to quote the "Arabian Nights" in proof of any disputed historical fact.

British Trade in Wool. — From 1660 down to 1825, the export of wool was strictly prohibited. A notion grew up towards the end of the 17th, and continued to gain ground during the first half of last century, that the wool of England was superior to that of every other country; that long wool could not be produced anywhere else; and that, if we succeeded in keeping the raw material at home, we should infallibly command the market of the world for our woollen manufactures. In consequence,

innumerable statutes were passed, — the enactments in some of which were the most arbitrary and severe that can be imagined, — to prevent the clandestine exportation of wool. Mr. John Smith was one of the first who, in his excellent work, entitled *Memoirs of Wool**, exposed the injustice and absurdity of this system, by proving, that whatever advantages the manufacturers might gain by preventing the exportation of wool, were more than lost by the agriculturists. But in despite of Mr. Smith's reasonings, which were enforced by many later writers, and which experience had proved to be in all respects accurate, the prohibition of the exportation of wool was continued till 1825, when Mr. Huskisson happily succeeded in procuring the abolition of this miserable remnant of a barbarous policy. The improvement of machinery, by enabling short or clothing wool to be applied to most of those purposes for which long or combing wool had been exclusively appropriated, had annihilated the only apparently tenable argument on which the prohibition of exportation had ever been vindicated; and even this, it will be observed, applied only to a small proportion of the whole wool produced in England.

Down to 1802, the importation of foreign wool into Great Britain had been quite free; and, being the raw material of an important manufacture, the policy of allowing it to be imported free of duty is obvious. In 1802, however, a duty of 5s. 3d. a cwt. was laid on all foreign wool imported. In 1813, this duty was raised to 6s. 8d.; and in 1819, Mr. Vansittart raised it to the enormous amount of 56s. a cwt., or to 6d. per lb. ! Had English wool sufficed for all the purposes of the manufacture, such a duty would have been less objectionable; but the very reverse was the case. The use of foreign wool had become, owing to the deterioration of British wool, and other circumstances, quite indispensable to the prosecution of the manufacture: and as our superiority over the foreigner in several departments of the trade was by no means decided, it is plain that the imposition of a duty which amounted to about 50 per cent. upon the price of a considerable quantity of the wool we were obliged to import, must, had it been persevered in, have ruined the manufacture. It occasioned, indeed, during the period of its continuance, a considerable decline of the exports of woollens, and was productive of other mischievous effects, from which the manufacture suffered for a considerable period after it was repealed.

The evidence as to the absolute necessity of employing foreign wool, taken before the Lords' committee, was as decisive as can well be imagined. Mr. Gott, of Leeds, one of the most extensive and best informed manufacturers of the empire, informed the committee, that, in his own works, he used only foreign wool. On being asked whether he could carry on an export trade to the same extent as at present, if he manufactured his cloth of British wool, Mr. G. replied, that, in certain descriptions of cloth, "*he could not make an article that would be merchantable at all for the foreign market, or even for the home market, except of foreign wool.*" We subjoin a few additional extracts from the evidence of this most competent witness.

"Can you give the committee any information with respect to the competition that now exists between foreigners and this country in woollen cloths?" — "I think the competition is very strong. In some instances the foreigner has, probably, the advantage; and in others, the superiority of the British manufacture, I think, has greatly the advantage; that would apply, I should say, particularly to the fine cloths of Great Britain compared with foreign cloths; in some descriptions of low cloths, the foreigners are nearly on a footing, and in some instances, perhaps, superior to us."

"Speaking of the finer cloths, is the competition such as to render an additional duty on the importation of foreign wool likely to injure the export trade." — "*I have no doubt, speaking on my oath, that it would be fatal to the foreign cloth trade of the country.* I would say further, that it would be equally injurious to coarse manufactures of all kinds made of English wool. The competition now with foreigners is as nearly balanced as possible; and the disturbing operation of attacks of that description would necessarily enable the foreigner to buy his wool cheaper than we should do it in this country: the result would be, that foreigners would, by such a premium, be enabled to extend their manufactures, to the exclusion of British manufactures of all descriptions."

In another part of his evidence, Mr. Gott says, — "If 2 pieces of cloth at 10s. a yard were put before a customer, one made of British wool, the other of foreign wool, one would be sold, and the other would remain on hand: I could not execute an order with it. If any person sent to me for cloth of 7s. or 8s. a yard, and it were made of English wool, it would be sent back to me, and I should resort to foreign wool, or foreign mixed with British, to execute that order."

On Mr. Gott being asked whether, in his opinion, the price of British wool would have been higher, had the duty of 6d. per lb. on foreign wool been continued, he answered, — "My opinion is, that the price of British wool would have been less at this

* This learned and accurate work contains a great deal of information with respect to the progress of manufactures and commerce in England.

time; the demand for British wool would have been very much less. *British manufactures would have been shut out of every foreign market; and the stock of wool would have accumulated, as it will do if ever that duty be imposed again.*" — (Mr. Gott's *Evidence*, pp. 292, 293.)

The view taken by Mr. Gott of the effect of the importation of foreign wool on the price of British wool was supported by the concurrent testimony of all the manufacturing witnesses examined by the committee. Blankets, flannels of all sorts, baizes, carpets, bearskins, &c. are made principally of English wool; and the command of foreign wool enables the manufacturers to use a considerable quantity of English wool in the manufacture of certain descriptions of cloth, which, if made entirely of it, would be quite unsaleable. On Mr. Goodman, a wool-stapler of Leeds, being asked whether, if a duty were laid on foreign wool, it would force the use of English wool in the manufacture of cloths, from which it is now excluded, he answered, — "Certainly not: we could not get people to wear such a cloth; they want a better, finer cloth; it is so much handsomer in its wear, and so much more durable." — (*Report*, p. 241.) Mr. Francis, of Heytesbury, declared that there was no demand for cloth made wholly of British wool; that it was principally applicable to the manufacture of blankets, baizes, &c.; and that the exclusion of foreign wool would only injure the manufacture, without raising the price of British wool. — (p. 268.) Statements to the same effect were made by Mr. Webb (p. 270.), Mr. Sheppard (p. 294.), Mr. Ireland (p. 319.), and, in short, by every one of the witnesses conversant with the manufacture.

The history of the manufacture since 1828 has completely confirmed the accuracy of the statements made by Mr. Gott and the other witnesses. Its progress from that period down to the present time has been one of uninterrupted prosperity; and so far from having been injured by the immense importations that have been made of foreign wool, the price of British wool is higher at this moment (March, 1834), than at any former period! We believe, indeed, that it has now attained an unnatural elevation; and that its extreme high price, by making a corresponding addition to the price of cloth, will react on the manufacture, and will, consequently, by occasioning its depression, lower wool to a more moderate level.

Foreign Wool imported into England. — A very great change has taken place, within the course of the present century, both as respects the quantity of foreign wool imported, and the countries whence it is derived. Previously to 1800, our average imports of wool did not much exceed 3,000,000 lbs., mostly brought from Spain; the wool of which has long maintained a high character. In 1800, our imports amounted to near 9,000,000 lbs.; and they have since gone on gradually increasing, till they now amount to between 25,000,000 and 40,000,000 lbs. Instead, however, of being principally derived from Spain, as was the case down to 1814, the greater part of this immense supply of foreign wool is now furnished by Germany. The late king of Saxony, when elector, introduced the breed of Merino sheep into his dominions, and exerted himself to promote the growth of this valuable race of animals. His praiseworthy efforts have been crowned with the most signal success. The Merino sheep seem to succeed better in Saxony and other German states than in Spain; and have increased so rapidly, that the Spanish wool trade has become insignificant compared with that of Germany! The importations of German wool were quite trifling during the war — amounting, in 1812, to only 28 lbs.; but since the peace they have increased beyond all precedent. In 1814, they amounted to 3,432,456 lbs.; in 1820, they were 5,113,442 lbs.; in 1825, they reached the enormous amount of 28,799,661 lbs.; but this being a year of overtrading, they declined, in 1826, to 10,545,232 lbs. They have since, however, recovered from this depression; and, in 1833, amounted to 25,370,106 lbs. — (There is a very good account of the German wool trade in the *Foreign Quarterly Review*, No. xi. art. 8.)

The breed of sheep that was carried out to New South Wales and Van Diemen's Land has succeeded remarkably well; and Australia promises, at no distant day, to be one of the principal wool-growing countries of the world. The imports into Great Britain have been rapidly increasing. In 1833, they amounted to 3,516,869 lbs., while the imports from Spain only amounted to 3,339,150 lbs. The Spanish flocks suffered severely during the campaigns in Spain; and the best Spanish wool does not now bring more than $\frac{1}{2}$ the price of the best German wool.

WOOLLEN MANUFACTURE, the art of forming wool into cloth and stuffs. This has always ranked as an important branch of national industry; and, until it was recently surpassed by the cotton manufacture, was decidedly the most important of all the manufactures carried on in England.

Rise and Progress of the British Woollen Manufacture. Exports.—There can be no doubt that the arts of spinning wool, and manufacturing the yarn into cloth, were introduced into England by the Romans, — the inhabitants being previously clothed only in skins. From the period of the Romans quitting England, down to the 10th century, there are no notices of the manufacture; and those relating to the period from the 10th to the 13th century are but few and imperfect. It is certain, however, that the manufacture of broad cloths was established soon after the year 1200, if not previously. — (*Smith's Memoirs of Wool*, vol. i. p. 17.) But the woollen manufactures of Flanders being at this period, and long afterwards, in a comparatively advanced state, English wool was exported in large quantities to Bruges and other Flemish cities, whence fine cloths and other products were brought back in exchange. Edward III. took the most judicious measures for improving the English manufacture, by inviting over Flemish weavers, fullers, dyers, and others, and protecting them from the assaults of the rabble. Shortly after the first emigration of Flemings, or in 1337, an act was passed, prohibiting the wear of any cloths made beyond sea, and interdicting the export of English wool. — (*Ibid.* vol. i. p. 25.) But in these turbulent times such restraining acts were little better than a dead letter; and this, indeed, was soon after repealed. — (*Ibid.* vol. i. pp. 32. 39.) From this remote period the manufacture has always been regarded as of primary importance, and has been the object of the especial solicitude of the legislature. It may be doubted, however, whether it has derived any real advantage from the numberless statutes that have been passed in the view of contributing to its advancement. With the exception, indeed, of the prohibition of the export of English wool, which was finally put a stop to in 1660, the other acts, being mostly intended for the regulation of the manufacture, could not be otherwise than mischievous; and the benefit derived by the manufacturers from the prohibition was more apparent than real; inasmuch as it occasioned a diminished growth of wool, at the same time that it was impossible to prevent its clandestine exportation. Mr. Smith has proved that the manufacture made a far more rapid progress during the reign of Elizabeth, when wool might be freely carried out of the kingdom, than it ever did during any equal period subsequent to the restriction on exportation. Foreign wool began to be imported in small quantities in the 13th century.

At first, the manufacture seems to have been pretty equally distributed over the country. In an insurrection that took place in 1525, more than 4,000 weavers and other tradesmen are said to have assembled out of Laneham, Sudbury, and other towns in Suffolk. The manufacture had been previously introduced into Yorkshire. In 1533, an act was passed (34 & 35 Hen. 8. c. 10.), reciting, "that the city of York afore this time had been upholden principally by making and weaving of coverlets, and the poor thereof daily set on work in spinning, carding, dyeing, weaving, &c.;" that the manufacture, having spread into other parts, was "thereby debased and discredited;" and enacting, as a remedy for this evil, that henceforth "none shall make coverlets in Yorkshire, but inhabitants of the city of York!" This may be taken as a fair specimen of the commercial legislation of the time. Indeed, it was enacted, nearly at the same period, that the manufacture should be restricted, in Worcestershire, to Worcester and 4 other towns. Worsteds goods, so called from Worsteds, now an inconsiderable town in Norfolk, where the manufacture was first set on foot, were produced in the reign of Edward II., or perhaps earlier; but Norwich soon after became, and, notwithstanding the competition of Bradford, probably is still, the principal seat of this branch of the manufacture. In an act of Henry VIII. (33 Hen. 8. c. 16.), worsteds yarn is described as "the priva

commodity of the city of Norwich." In 1614, a great improvement took place in the woollen manufacture of the west of England, by the invention of what is called medley or mixed cloth, for which Gloucestershire is still famous. During the reign of Charles II., there were many, though unfounded, complaints of the decay of the manufacture; and by way of encouraging it, an act was passed (30 Car. 2. st. i. c. 3.), ordering that all persons should be buried in woollen shrouds! This act, the provisions of which were subsequently enforced, preserved its place on the statute book for more than 130 years!

Towards the end of the 17th century, Mr. Gregory King and Dr. Davenant — (*Davenant's Works*, Whitworth's ed. vol. ii. p. 233.) — estimated the value of the wool shorn in England at 2,000,000*l.* a year; and they supposed that the value of the wool (including that imported from abroad) was quadrupled in the manufacture; making the entire value of the woollen articles annually produced in England and Wales, 8,000,000*l.*, of which about 2,000,000*l.* were exported. In 1700 and 1701, the official value of the woollens exported amounted to about 3,000,000*l.* a year. Owing to the vast increase in the wealth and population of the country, the manufacture must have been very greatly extended during the last century; but the increase in the amount of the exports was comparatively inconsiderable. At an average of the 6 years ending with 1789, the annual official value of the exports was 3,544,160*l.* a year, being an increase of only about 540,000*l.* on the amount exported in 1700. The extraordinary increase of the cotton manufacture soon after 1780, and the extent to which cotton articles then began to be substituted for those of wool, though it did not occasion any absolute decline of the manufacture, no doubt contributed powerfully to check its progress. In 1802, the official value of the exports rose to 7,321,012*l.* being the largest amount they ever reached till last year, when they amounted to 7,777,952*l.* During the last 3 years, indeed, every part of the manufacture has been in a state of unexampled improvement and extension. It is probable that the extraordinary rise in the price of wool may give a temporary check to the manufacture; but it cannot be of long continuance. During the 5 years ending with 1833, the official and the declared or real values of the woollen manufactures exported from the United Kingdom have been as under: —

	1829.	1830.	1831.	1832.	1833.
Official value of woollen manufactures exported	£ 5,372,490	£ 5,558,709	£ 6,097,558	£ 6,544,576	£ 7,777,952
Declared or real value of ditto - -	4,661,259	4,850,884	5,227,701	5,239,992	6,289,649

Value of the Manufacture. Number of Persons employed. — The most discordant estimates have been given as to both these points. For the most part, however, they have been grossly exaggerated. In a tract published in 1739, entitled *Considerations on the Running (Smuggling) of Wool*, the number of persons engaged in the manufacture is stated at 1,500,000, and their wages at 11,737,500*l.* a year. Dr. Campbell, in his *Political Survey of Great Britain*, published in 1774, observes, — "Many computations have been made upon this important subject, and, amongst others, one about 30 years since, which, at that time, was thought to be pretty near the truth. According to the best information that can be obtained, there may be from 10,000,000 to 12,000,000 sheep in England, some think more. The value of their wool may, one year with another, amount to 3,000,000*l.*; the expense of manufacturing this may probably be 9,000,000*l.*, and the total value 12,000,000*l.* We may export annually to the value of 3,000,000*l.*, though one year we exported more than 4,000,000*l.* In reference to the number of persons who are maintained by this manufacture, they are probably upwards of 1,000,000. Sanguine men will judge these computations too low, and few will believe them too high." — (Vol. ii. p. 158.) But the moderation displayed in this estimate was very soon lost sight of. In 1800, the woollen manufacturers objected strenuously to some of the provisions in the treaty of union between Great Britain and Ireland, and were allowed to urge their objections at the bar of the House of Lords, and to produce evidence in their support. Mr. Law (afterwards Lord Ellenborough), the counsel employed by the manufacturers on this occasion, stated, in his address to their Lordships, on information communicated to him by his clients, that 600,000 packs of wool were annually produced in England and Wales, worth, at 11*l.* a pack, 6,600,000*l.*; that the value of the manufactured goods was 3 times as great, or 19,800,000*l.*; that not less than 1,500,000 persons were immediately engaged in the operative branches of the manufacture; and that the trade collaterally employed about the same number of hands. — (*Account of the Proceedings of the Merchants, Manufacturers, &c.* p. 34.)

It is astonishing that reasonable men, conversant with the manufacture, should have put forth such ludicrously absurd statements. We have already seen that the quantity of wool produced in England and Wales, in 1800, did not really amount to 400,000 packs; and the notion that *three* out of the *nine* millions of people then in the country were directly and indirectly employed in the manufacture, is too ridiculous to deserve notice, though it was generally acquiesced in at the time. — (See *Middleton's Survey of*

Middlesex, 2d ed. p. 644; *Adolphus's Political State of the British Empire*, vol. iii. p. 236.)

Mr. Stevenson, who is one of the very few writers on British statistics to whose statements much deference is due, has given the following estimate of the value of the woollen manufactured goods annually produced in England and Wales, and of the interest, &c. of the capital, and the number of persons employed in the manufacture:—

Total value of manufactured articles	-	-	£18,000,000
Value of raw material	-	-	£6,000,000
Interest on capital, sum to replace its wear and tear, and manufacturers' profits	-	-	2,400,000
Wages of workmen	-	-	9,600,000
			£18,000,000

Number of people employed, 480,000, or perhaps 500,000.

But even this estimate requires to be materially modified. Taking Scotland into account, and allowing for the increase of population and of exportation since Mr. Stevenson's estimate was made, the total value of the various descriptions of woollens annually produced in Great Britain may, at present, be moderately estimated at from 20,000,000*l.* to 22,000,000*l.*, or 21,000,000*l.* at a medium. We have further been assured by the highest practical authorities, that Mr. Stevenson's distribution of the items is essentially erroneous; and that, assuming the value of the manufacture to be 21,000,000*l.*, it is made up nearly as follows:—

Total value of manufactured articles	-	-	£21,000,000
Value of raw material	-	-	£7,000,000
Oil, soap, dye stuffs, &c.	-	-	1,450,000
Wear and tear of capital, and profit	-	-	4,250,000
Wages	-	-	8,300,000
			£21,000,000

At present, the average wages of the people employed may be taken at about 25*l.* a year, making the total number employed 332,000. And, however small this may look as compared with former estimates, we believe it is fully up to the mark, if not rather beyond it.

Most of the innumerable statutes formerly passed for the regulation of the different processes of the manufacture have been repealed within these few years; and the sooner every vestige of the remainder disappears from the statute book, the better.

WRECK, in navigation, is usually understood to mean any ship or goods driven ashore, or found floating at sea in a deserted or unmanageable condition. But in the legal sense of the word in England, *wreck* must have come to land; when at sea, it is distinguished by the barbarous appellations of *flotsam*, *jetsam*, and *ligan*. — (See *Flotsam*.)

In nothing, perhaps, has the beneficial influence of the advance of society in civilisation been more apparent than in the regulations with respect to the persons and property of shipwrecked individuals. In most rude and uncivilised countries, their treatment has been cruel in the extreme. Amongst the early Greeks and Romans, strangers and enemies were regarded in the same point of view. — (*Hostis apud antiquos, peregrinus dicebatur*. — *Pomp. Festus*; see also *Cicero de Offic.* lib. i. c. 12.) Where such inhospitable sentiments prevailed, the conduct observed towards those that were shipwrecked could not be otherwise than barbarous; and in fact they were, in most instances, either put to death or sold as slaves. But as law and good order grew up, and commerce and navigation were extended, those who escaped from the perils of the sea were treated in a way less repugnant to the dictates of humanity; and at length the Roman law made it a capital offence to destroy persons shipwrecked, or to prevent their saving the ship; and the stealing even of a plank from a vessel shipwrecked or in distress, made the party liable to answer for the whole ship and cargo. — (*Pand.* 47. 9. 3.)

During the gloomy period which followed the subversion of the Roman empire, and the establishment of the northern nations in the southern parts of Europe, the ancient barbarous practices with respect to shipwreck were every where renewed. Those who survived were in most countries reduced to servitude; and their goods were every where confiscated for the use of the lord on whose manor they had been thrown. — (*Robertson's Charles V.* vol. i. note 29.) But nothing, perhaps, can so strongly evince the prevalence and nature of the enormities, as the efforts that were made, as soon as governments began to acquire authority, for their suppression. The regulations as to shipwreck in the Laws of Oleron are, in this respect, most remarkable. The 35th and 38th articles state, that "Pilots, in order to ingratiate themselves with their lords, did, like faithless and treacherous villains, sometimes willingly run the ship upon the rocks, &c.;" for which offence they are held to be accursed and excommunicated, and punished as thieves and robbers. The fate of the lord is still more severe. "He is to be apprehended, his goods confiscated and sold, and himself fastened to a post or stake in the midst of his own mansion house, which being fired at the four corners, all shall be burned together; the walls thereof be demolished; the stones pulled down; and the site converted into a market place, for the sale only of hogs and swine, to all posterity." The 31st article recites, that when a vessel was lost by running on shore, and the mariners had landed, they often, instead of meeting with help, "were attacked by people more barbarous, cruel, and inhuman, than mad dogs; who, to gain their monies, apparel, and other goods, did sometimes murder and destroy these poor distressed seamen. In this case, the lord of the country is to execute justice, by punishing them in their persons and their estates; and is commanded to plunge them in the sea till they be half dead, and then to have them drawn forth out of the sea, and stoned to death."

Such were the dreadful severities by which it was attempted to put a stop to the crimes against which they were directed. The violence of the remedy shows better than any thing else how inveterate the disease had become.

The law of England, like that of other modern countries, adjudged wrecks to belong to the king. But the rigour and injustice of this law was modified so early as the reign of Henry I., when it was ruled, that if any person escaped alive out of the ship, it should be no wreck. And after various modifications, it was

decided, in the reign of Henry III., that if goods were cast on shore, having any marks by which they could be identified, they were to revert to the owners, if claimed any time within a year and a day. By the statute 27 Edw. 3. c. 13, if a ship be lost and the goods come to land, they are to be delivered to the merchants, paying only a reasonable reward or SALVAGE (which see) to those who saved or preserved them. But these ancient statutes, owing to the confusion and disorder of the times, were very ill enforced; and the disgraceful practices previously alluded to, continued to the middle of last century. A statute of Anne (12 Ann. st. 2. c. 18.), confirmed by the 4 Geo. 1. c. 72, in order to put a stop to the atrocities in question, orders all head officers and others of the towns near the sea, upon application made to them, to summon as many hands as are necessary, and send them to the relief of any ship in distress, on forfeiture of 100*l.*; and in case of any assistance given, salvage is to be assessed by 3 justices, and paid by the owners. Persons secreting any goods cast ashore, are to forfeit treble their value; and if they wilfully do any act whereby the ship is lost or destroyed, they are guilty of felony without benefit of clergy. But even this statute seems not to have been sufficient to accomplish the end in view; and in 1753, a new statute (26 Geo. 2. c. 19.) was enacted, the preamble of which is as follows:—"Whereas, notwithstanding the good and salutary laws now in being against plundering and destroying vessels in distress, and against taking away shipwrecked, lost, or stranded goods, many wicked enormities have been committed, to the disgrace of the nation, and the grievous damage of merchants and mariners of our own and other countries, be it," &c. : and it is then enacted, that the preventing of the escape of any person endeavouring to save his life, or wounding him with intent to destroy him, or putting out false lights in order to bring any vessel into danger, shall be capital felony. By the same statute, the pilfering of any goods cast ashore is made petty larceny.

By statute 1 & 2 Geo. 4. c. 75. it is enacted, that any person or persons wilfully cutting away, injuring, or concealing any buoy or buoy rope attached to any anchor or cable belonging to any ship, whether in distress or otherwise, shall be judged guilty of felony, and may, upon conviction, be transported for 7 years.

(For an account of the sums to be paid to those assisting in the saving of wreck, see art. SALVAGE in this Dictionary; see also the chapter on Salvage in Mr. Abbott's (Lord Tenterden's) work on the *Law of Shipping*.)

Number of Shipwrecks.—The loss of property by shipwreck is very great. It appears from an examination of *Lloyd's List* from 1793 to 1829, that the losses in the British mercantile navy only amounted, at an average of that period, to about 557 vessels a year, of the aggregate burden of about 66,000 tons, or to above 1-40th part of its entire amount in ships and tonnage. The following account of the casualties of British shipping in 1829 is taken from *Lloyd's List*:—

On Foreign Voyages—157 wrecked; 254 driven on shore, of which 224 are known to have been got off, and probably more; 21 foundered or sunk; 1 run down; 35 abandoned at sea, 8 of them afterwards carried into port; 12 condemned as unseaworthy; 6 upset, 1 of them righted; 27 missing, 1 of them a packet, no doubt foundered. *Coasters and Colliers*—109 wrecked; 297 driven on shore, of which 121 known to have been got off, and probably many more; 67 foundered or sunk, 4 of them raised, 6 run down; 13 abandoned, 5 of them afterwards carried in; 5 upset, 2 of them righted; 16 missing, no doubt foundered. During the year, 4 steam vessels were wrecked; 4 driven on shore, but got off; and 2 sunk.

Of the prodigious number of ships that are thus annually engulfed, many are laden with valuable cargoes; and besides this immense loss of property, there is also a very great loss of life. It is believed, that a little more strength in the building, and care in the selection of the masters, would obviate many of these calamities. And nothing, we are assured, would contribute so much to improve the fabric of ships, as the adoption of the plan we have elsewhere recommended (p. 1024), of allowing them to be built in bond, free of all duty.

During the last war with France, 22 ships of the line went to the bottom, besides 7 fifty-gun ships, 86 frigates, and a vast number of smaller vessels. And the losses sustained by the navies of France, Spain, Holland, Denmark, &c. must have very greatly exceeded those of ours. Hence, as Mr. Lyell has observed, it is probable that a greater number of monuments of the skill and industry of man will, in the course of ages, be collected together in the bed of the ocean, than will be seen at one time on the surface of the continents. — (*Principles of Geology*, 2d ed. vol. ii. p. 265.)

Y.

YARD, a long measure used in England, of 3 feet, or 36 inches. — (See **WEIGHTS AND MEASURES**.)

YARN (Ger. *Garn*; Du. *Garen*; Fr. *Fil*; It. *Filato*; Sp. *Hilo*; Port. *Fio*; Rus. *Prasha*), wool, cotton, flax, &c. spun into thread.

Z.

ZAFFER, or **ZAFRE**. After the sulphur, arsenic, and other volatile parts of cobalt have been expelled by calcination, the residuum is sold, mixed or unmixed with fine sand, under the above name. When the residuum is melted with siliceous earth and potash, it forms a kind of blue glass, known by the name of smaltz — (see **SMALTZ**), — of great importance in the arts. When smaltz is ground very fine, it receives in commerce the name of *powder blue*. Zaffer, like smaltz, is employed in the manufacture of earthenware and China, for painting the surface of the pieces a blue colour. It suffers no change from the most violent fire. It is also employed to tinge the crystal glasses, made in imitation of opaque and transparent precious stones, of a blue colour. It is almost wholly brought from Germany.

Account of the Zaffer imported, exported, and retained for Home Consumption, with the Nett Duty thereon, in 1831 and 1832.

Years.	Imports.	Exports.	Retained for Consumption.	Duty.
	<i>Lbs.</i>	<i>Lbs.</i>	<i>Lbs.</i>	<i>£.</i>
1831	227,512	115	227,682	950
1832	266,935	448	263,932	417

The duty was reduced, in 1832, from 9*s.* 4*d.* to 1*s.* a cwt.

ZEA, INDIAN CORN, OR MAIZE. See MAIZE

ZEDOARY (Ger. *Zittwer*; Fr. *Zédoaire*; It. *Zedoaria*; Sp. *Cedoaria*; Arab. *Judwar*; Hind. *Nirbisi*), the root of a plant which grows in Malabar, Ceylon, Cochinchina, &c., of which there are 3 distinct species. It is brought home in pieces of various sizes, externally wrinkled, and of an ash colour, but internally of a brownish red. Those roots which are heavy and free from worms are to be chosen; rejecting those which are decayed and broken. The odour of zedoary is fragrant, and somewhat like that of camphor; the taste biting, aromatic, and bitterish, with some degree of acrimony. It was formerly employed in medicine; but is scarcely ever used by modern practitioners. — (*Milburn's Orient. Com.*)

ZINC, OR SPELTER (Ger. *Zink*; Fr. *Zinc*; It. *Zinco*; Sp. *Zinco*, *Cinck*; Rus. *Schpiuter*; Lat. *Zincum*), a metal of a brilliant white colour, with a shade of blue, composed of a number of thin plates adhering together. When this metal is rubbed for some time between the fingers, they acquire a peculiar taste, and emit a very perceptible smell. It is rather soft; tingling the fingers, when rubbed upon them, with a black colour. The specific gravity of melted zinc varies from 6·861 to 7·1, the lightest being esteemed the purest. When hammered, it becomes as high as 7·1908. This metal forms, as it were, the limit between the brittle and the malleable metals. Its malleability is by no means to be compared with that of copper, lead, or tin; yet it is not brittle, like antimony or arsenic. When struck with a hammer, it does not break, but yields, and becomes somewhat flatter; and by a cautious and equal pressure, it may be reduced to pretty thin plates, which are supple and elastic, but cannot be folded without breaking. When heated to about 400°, it becomes so brittle that it may be reduced to powder in a mortar. It possesses a certain degree of ductility, and may, with care, be drawn out into wire. Its tenacity is such, that a wire whose diameter is equal to $\frac{1}{10}$ th of an inch, is capable of supporting a weight of about 26 lbs. Zinc has never been found in a state of purity. The word zinc occurs for the first time in the writings of Paracelsus, who died in 1541; but the method of extracting it from its ores was not known till the early part of last century. — (*Thomson's Chemistry.*) The compounds of zinc and copper are of great importance. — (See BRASS.)

Manufacture of Zinc, &c. — There used to be 2 smelting-houses for the preparation of zinc near Bristol, and 3 near Swansea, but they have been all abandoned, with the exception of 1 of the latter. The material used by the English manufacturer is blende, or black jack (sulphuret of zinc); it is commonly found with lead, and is procured of the best quality in Flintshire and the Isle of Man. Besides its employment in the manufacture of brass, bell metal, and other important compounds, zinc has of late years been formed into plates, and applied to many purposes for which lead was formerly used, such as the roofing of buildings, the manufacture of water-spouts, dairy pans, &c. Foreign zinc, being less brittle, is better fitted for rolling than that of England.

The duties on spelter, which were formerly prohibitory, have been reduced to 2*l.* a ton on that formed into plates, or cakes, and to 10*s.* on what is not in cakes; and, in consequence, considerable quantities are now imported, partly for home use, and partly for re-exportation to India and China. Foreign zinc is principally made at Gleinitz, in Upper Silesia; whence it is conveyed by an internal navigation to Hamburg. The freight from the latter to Hull and London is nominal merely; the wool-ships being glad to take it as ballast. Hainault, near Namur, has also some part of the spelter trade. A good deal of spelter is shipped from Hamburg for France and America.

Zinc is produced in the province of Yunnan, in China; and previously to 1820, large quantities of it were exported from that empire to India, the Malay Archipelago, &c. But about that time the free traders began to convey European spelter (principally German) to India; and being, though less pure, decidedly cheaper than the Chinese article, it has entirely supplanted the latter in the Calcutta market: latterly, indeed, it has begun to be imported even into Canton. — (See TUPENAG.) During the 3 years ended with 1832, the exports of foreign spelter from this country for India and China were, in 1830, 62,356 cwt.; 1831, 51,609; 1832, 37,499. And, exclusive of these, considerable quantities were exported from Amsterdam, Rotterdam, &c. We subjoin an

Account of the Zinc or Spelter imported, exported, and retained for Home Consumption, and the Duties thereon, in 1831 and 1832.

Years.	Imports.	Exports.	Retained for Consumption.	Duty.
	<i>Cwt.</i>	<i>Cwt.</i>	<i>Cwt.</i>	<i>l.</i>
1831	76,413	62,684	50,526	10,196
1832	68,764	49,740	25,214	5,784

The price of spelter declined within the last 3 or 4 years, from about 15*l.* to 9*l.* a ton; but it has recently rallied, and is now (April, 1834) about 11*l.* 10*s.* a ton in bond

THE END.

NEW AND GREATLY ENLARGED S U P P L E M E N T.

OCTOBER, 1835.

N. B.—This Supplement embodies that issued in October, 1834. It is intended to supply deficiencies and correct errors in the Dictionary; to bring down the information contained in it to the latest period; and especially to point out whatever changes have been made in the laws respecting commerce, navigation, &c., since it was published. We intend publishing another Supplement in October, 1836; and we earnestly entreat our various friends at home and abroad to transmit to us, through Messrs. Longman and Co., such information as they conceive may enable us to correct, improve, or supply any article either in the Dictionary or in this Supplement. We shall carefully observe any stipulations as to the use of such communications.

ABATEMENT OF DUTIES.—No abatement is to be made, on account of damage on the voyage, from the duties payable on the following drugs, viz. cantharides, coeculus Indicus, Guinea grains, ipecacuanha, jalap, nux vomica, opium, rhubarb, sarsaparilla, and senna. — (4 & 5 Will. 4. c. 89. § 5.)

ALE AND BEER.—In consequence of the complaints, whether well or ill founded, of the inconveniences arising from the increase of beer shops—(see *Dict.* p. 14.), a material change has been made in the mode of licensing houses for the sale of beer. Under the act 1 Will. 4. c. 64. — (*Dict.* p. 14.), the commissioners of excise, or other persons duly authorised, were bound to grant licences, costing 2*l.* 2*s.* a year, to all persons not excepted in the act, empowering them to sell ale, beer, porter, cider, &c. to be drunk *indifferently either on or off the premises*. But the act, of 1834, 4 & 5 Will. 4. c. 85., made the obtaining of a licence to retail beer to be drunk on the premises contingent on the applicant being able to produce a certificate of good character, subscribed by certain persons rated at a certain amount to the poor: it has also raised the cost of such licence to 3*l.* 5*s.*; and reduced the cost of a licence to sell beer not to be drunk on the premises to 1*l.* 1*s.* We subjoin a full abstract of the act:—

Persons applying for a Licence to sell Beer to be drunk on the Premises, to deposit a Certificate of good Character, &c.—Every person applying for a licence to sell beer or cider by retail, to be drunk in the house or on the premises, shall, in addition to the application setting forth the particulars required by the act 1 Will. 4. c. 64., annually produce to and deposit with the commissioners of excise, collector, or other person authorised to grant such licence within the parish or place in which the person applying intends to sell beer or cider by retail, a certificate signed by 6 persons residing in and being and describing themselves to be inhabitants of such parish, place, &c., and respectively rated therein to the poor at not less than 6*l.*, or occupying a house therein rated to the poor at not less than 6*l.*, none of whom shall be maltsters, common brewers, or persons licensed to sell spirituous liquors or beer or cider by retail, nor owners or proprietors of any houses licensed to sell liquors, beer, or cider by retail, stating that the person applying for the licence is of good character; and at the foot of such certificate one of the overseers of the parish, township, or place shall certify (if the fact be so) that such 6 persons are inhabitants respectively rated as aforesaid; and such certificate shall respectively be in the form of the schedule annexed to this act: provided always, that in any parish, township, or district maintaining its own poor, in which there are not 10 inhabitants rated to the amount of 6*l.* each, or not occupying houses respectively rated to the poor at 6*l.* each (not being maltsters, common brewers, or persons licensed to sell spirituous liquors or beer or cider by retail), the certificate of the majority of the inhabitants of such parish, township, or district maintaining its own poor, as are rated to the amount of 6*l.* each, shall be deemed to be a sufficient certificate for the purposes of this act. — § 2.

Penalty on Overseers.—Any overseer who shall, without due cause, refuse to certify that the persons who have signed the certificate are respectively rated to the poor's rate as aforesaid, to forfeit not more than 5*l.* — § 3.

Beer drunk in Sheds.—Any person licensed under the act 1 Will. 4. c. 61., to sell beer, cider, &c. not to be consumed on the premises, who shall employ, permit, or suffer any person or persons to take or carry any beer, &c. from his house or premises, to be drunk or consumed for his benefit or profit, in any other house, tent, shed, &c. belonging to, or hired, used, or occupied by such licensed person, such beer, &c. shall be held to have been consumed on the premises, and the person selling the same shall be subject to the like forfeitures and penalties as if it had been actually drunk or consumed in a house or upon premises licensed only for the sale thereof. — § 4.

Billetting.—Provisions for billeting soldiers under mutiny acts to extend only to those licensed to sell beer or cider to be drunk in the house or on the premises, and not to extend to those licensed to sell beer not to be consumed on the premises. — § 5.

Justices to regulate the Opening and Closing of Houses.—Justices in petty sessions are authorised to fix the hours at which houses and premises licensed to sell beer under this act shall be opened and closed; but any person thinking himself aggrieved by any such order may appeal at any time, within 4 months;

from its date, to the justices in quarter sessions, on giving the justices making the order 14 days' notice of his intention; and the decision of the justices in quarter sessions shall be final: provided, however, that the hour to be fixed for opening any house shall not in any case be earlier than 5 o'clock in the morning, nor for closing the same later than 11 o'clock at night, or before 1 o'clock in the afternoon on Sunday, Good Friday, Christmas Day, or any day appointed for a public fast or thanksgiving; and the hours so fixed by the justices, with reference to the districts within their jurisdictions, shall be taken to be the hours to be observed and complied with under this act as fully as if the same had been specially appointed by it. — § 6.

Constables, &c. to visit licensed Houses. — All constables and officers of police are authorised to enter into all houses licensed to sell beer or spirituous liquors to be consumed upon the premises whenever they shall think proper; and if any person licensed as aforesaid, or any servant or person in his employ or by his direction, shall refuse to admit such constables, &c. into such house or premises, the person having the licence shall for the first offence forfeit and pay any sum not exceeding 5*l.*, together with the costs of conviction, to be recovered within 20 days before 1 or more justices; and it shall be lawful for any 2 or more justices, upon any person being convicted of such offence for the second time, to adjudge (if they think fit) that such offender be disqualified from selling beer, ale, porter, cider, or perry, by retail, for 2 years after such conviction, or for such shorter space as they may think proper. — § 7.

Penalty for making or using false Certificates. — Persons certifying any matter having reference to this act as true, who know the same to be false, or using any certificate, knowing the same to be forged, shall, on conviction of such offence before 2 or more justices, forfeit and pay the sum of 20*l.*; and every licence granted to any person making use of any certificate to obtain the same, such person knowing such certificate to be forged, or the matters certified therein to be false, shall be void to all intents and purposes; and any person using such certificate shall be disqualified for ever from obtaining a licence to sell beer or cider by retail. — § 8.

No Licence to be granted without a Certificate. — No licence for the sale of beer or cider by retail to be consumed or drunk in the house or on the premises shall be granted, except upon the certificate hereby required: provided, that in all extra-parochial places the certificate required by this act may be signed and given by inhabitants rated to the poor at 6*l.* in any adjoining parish or parishes. — § 9.

Retailers to produce their Licences on Requisition of 2 Magistrates. — In case any complaint be laid before 2 justices against any licensed person for an offence against the tenor of his licence, or against this act or the act 1 Will. 4. c. 64, the said justices may require such person to produce his licence before them for their examination; and if he wilfully neglect or refuse so to do, he shall forfeit for such offence any sum, not exceeding 5*l.*, the said justices shall think proper; and such person may be convicted, proceeded against, and dealt with for such offence in the same manner, *mutatis mutandis*, as is directed by the act 1 Will. 4. c. 64. with regard to persons guilty of a first offence against said act; and the penalty imposed for such offence is to be applied in the manner that a penalty for a first offence against said act is directed to be applied. — § 10.

Continuance of Powers, &c. — The powers, provisions, and penalties of 1 Will. 4. c. 64. to apply to persons licensed under this act, and to their sureties, &c. — § 11.

Act 1 Will. 4. c. 64. to continue in force, except as hereby altered. — § 12.

Duties on Beer Licences under the 1 Will. 4. c. 64. repealed, and new Duties granted in lieu thereof. — From and after the passing of this act, the duties payable on excise licences for the sale of beer by retail under the act 1 Will. 4. c. 64. shall cease, and in lieu of such duties there shall be paid upon the licences hereby authorised to be granted the duties following; viz.

For and upon every licence to be taken out by any person for the sale of beer by retail, not to be drunk or consumed in or upon the house or premises where sold, the annual sum of 1*l.* 1*s.*

For and upon every licence to be taken out by any person for the sale of beer by retail, to be drunk or consumed in or upon the house or premises where sold, the annual sum of 5*l.* 3*s.* — Sec. 13.

The duties to be under the management of commissioners of excise, and to be recovered and accounted for under the provisions of the act 1 Will. 4. c. 64. — § 14.

Not to affect Duty on Licences to retail Cider and Perry. — Nothing in this act shall affect the amount of duty payable under the 1 Will. 4. c. 64. on licences to retail cider and perry; but every such licence shall signify whether it be granted for the sale of cider and perry by retail not to be drunk in the house or premises where sold, or for the retail of the same to be drunk in the house or premises where sold. — § 15.

Licences under this Act not to authorise Persons to sell Wine. — No licence granted under the act 1 Will. 4. c. 64. and this act shall authorise any person to take out or hold any licence for the sale of wine, spirits, or sweets or made wines, or mead or metheglin; and if any person licensed under the act 1 Will. 4. c. 64. and this act shall permit or suffer any wine, spirits, &c. to be brought into his house or premises to be drunk or consumed there, or shall suffer them to be drunk or consumed in his house or premises, he shall, over and above any excise penalties to which he may be subject, forfeit 20*l.* — § 16.

Penalty on unlicensed Persons. — Such persons selling beer and cider by retail to be drunk off the premises, 10*l.*; to be drunk on the premises, 20*l.* — § 17.

Board over the Door. — Every person licensed to sell beer, cider, or perry, by retail, under the authority of the act 1 Will. 4. c. 64. and this act, shall, on the board required by the former act to be placed over his door, paint and keep thereon, after the words "licensed to sell beer or cider by retail," the additional words "not to be drunk on the premises," or "to be drunk on the premises," as the case may be, on pain of forfeiting the penalty imposed by such act for not having such board over the door. — § 18.

What is retailing of Beer, &c. — Every sale of beer, or of cider or perry, in any less quantity than 4½ gallons, shall be deemed and taken to be a sale by retail. — § 19.

Penalties for selling Spirits or Wine without Licence. — Persons licensed to sell beer or cider under the act 1 Will. 4. c. 64. and this act, who sell spirits or wine, sweets, &c. without being licensed, are liable to the penalties imposed by the laws of excise for selling spirits or wine, sweets, &c. without licence. — § 20.

Certificate not to be required for Houses in certain Situations, if Population exceed 5,000. — The before-mentioned certificate shall not be required as to any house situated within the cities of London and Westminster, or within any parish or place within the bills of mortality, nor within any city or town corporate, nor within the distance of 1 mile from the place used at the last election as the place of election or polling place of any town returning a member to parliament, provided that the population, determined according to the last parliamentary census taken in such city, town, &c., shall exceed 5,000: provided, that no licence for the sale of beer, ale, porter, cider, or perry by retail on the premises in the cities of London and Westminster, or in any parish within the bills of mortality, or in any such city or town corporate, or town returning a member to parliament as before mentioned, shall be granted after the 5th day of April, 1836, unless the house or premises specified as those in which beer or cider is intended to be sold shall be of the value of 10*l.* per annum. — § 21.

Serving of Summons. — Summonses or orders not legally served unless by some constable or other peace officer. — § 22.

Commencement. — Act shall commence and take effect from and after the 10th day of October, 1834. — § 23.

Form of Certificate referred to in § 2.

We, the undersigned, being inhabitants of the parish [or township, as the case may be] of _____ and respectively rated to the poor at not less than 6*l.* per annum, and none of us being maltsters, common brewers, or persons licensed

To sell spirituous liquors, or being licensed to sell beer or cider by retail, do hereby certify, That A. B., dwelling in street [here specify the street, lane, &c.] in the said parish [or township, &c.] is a person of good character.

[Here insert the day of signing the certificate.]

(Signed)

E. F.

G. H.

I. K.

L. M.

N. O.

P. Q.

[Here state the residence of each of the persons signing.]

I do hereby certify, That all the above-mentioned persons whose names are subscribed to this certificate are inhabitants of the parish [or township, &c.] of rated to 6d. to the relief of the poor of the said parish.

BANKS (AMERICAN). — It appears from the statement (*Diet.* p. 110.) extracted from Mr. Gallatin's pamphlet, on the currency of the United States, that (exclusive of the Bank of the United States) there were, on the 1st of June, 1830, in the Union, 330 banking establishments, possessed of an aggregate paid-up capital of 110,101,898 dollars. During the ensuing five years, no fewer than 184 new banks were set on foot over and above those that had failed or been given up; making, on the 1st of January, 1835, a total of 514 banking establishments, which are reported to have possessed an aggregate paid-up capital of 203,553,860 dollars. We subjoin an

Account of the Number of State Banks, in each State of the Union, exclusive of Branches; with the aggregate Amount of their paid-up Capital on the 1st of January, 1835.

It should, however, be observed, that the account of capital is in some instances from estimate only; and that even when actual returns are obtained, they are not always to be depended on. — (*Circular by A. H. Palmer, 31st of Jan. 1835; Pitkin's Statistics of the United States in 1835, p. 450, &c.*)

BANK OF UNITED STATES. — Contrary to our anticipations (*Dict.* p. 109.), the President has succeeded in his struggle with this establishment. Its charter will terminate in 1836; and there is now no chance of its being renewed. Our opinion of the policy of this proceeding continues unchanged. No impartial person can doubt that the institution of the United States Bank has been productive of much advantage, by equalising the currency of the different States; and by materially mitigating the pernicious consequences resulting from the very defective state of the banking system in most parts of the Union.

BARILLA. — The duties on barilla used in the bleaching of linen are to be repaid to the persons using it, under such regulations as the commissioners of customs may issue. — (4 & 5 Will. 4. c. 89. § 14.)

BOOKS. — Under the late law, such books as might be imported were admitted, provided they were of editions printed in or since the year 1801, on payment of a duty of 5*l.* a cwt.; but this duty has been reduced to 2*l.* 10*s.* a cwt., with the additional proviso, that the books, besides being printed in or since 1801, are in *foreign living languages*. — (4 & 5 Will. 4. c. 89. § 15.) This condition was inserted principally to obviate the risk of dictionaries, or the class books used in our schools, being supplied from the Continent; the booksellers contending that the 2*l.* 10*s.* a cwt. of duty was insufficient to balance the influence of the paper duty, and the peculiar burdens incident to the getting up of books in this country. It has been alleged, indeed, that it will not effect its purpose; because, as is contended, both Latin and Greek are living languages; the former being spoken in certain parts of Hungary and Poland, and the latter in Greece! But the intention of the legislature is too obvious to admit of its being defeated by any quibbling of the sort now mentioned. By a living language is meant a language spoken by a nation or people, and not by a few learned individuals; and the dialect of the modern Greeks is abundantly different from that of their ancestors. The duty of 1*l.* a cwt. on foreign books printed prior to 1801 ought to be repealed; it throws obstructions in the way of their importation, while it is quite unproductive of revenue.

Smuggling of English Books from abroad. — Very considerable loss is sustained by literary men and booksellers, by the clandestine importation of English works printed abroad, of which the copyright has not expired. There is hardly, in fact, one of our popular authors, copies of whose works, printed in France or America, may not be readily procured in London; and as those by whom they are printed have neither copyright nor paper duty to pay, they are able materially to undersell the native article. It is surely unnecessary to say, that every practicable effort should be made to hinder such an invasion of private property; and in this view we beg to suggest, that the permission given to persons coming from abroad to bring with them single copies of all prohibited works, ought to be withdrawn. It opens a door for smuggling and fraud; and there is neither sense nor justice in allowing any individual to invade the rights of another, merely because he has been across the Channel. A specific penalty, recoverable by a summary process, ought also to be imposed on every individual offering such books for sale. This would be much more effectual in preventing such practices than the existing law. — (*See Dict.* p. 141.)

BOTTLES (STONE). — In 1812, a duty of 2*s.* 6*d.* a cwt., increased in 1817 to 5*s.*, was imposed upon stone bottles. The average nett produce of this duty has not recently exceeded 3,500*l.* a year. But, to collect this insignificant sum, the manufacture had to be placed under the surveillance of the excise, and those engaged in it subjected to various troublesome and vexatious regulations. The duty did not extend to Ireland, so that a drawback had to be granted on bottles exported to that country, and a countervailing duty charged on those imported from it. This unproductive and troublesome duty was imposed at the instance of the glass bottle manufacturers, who contended, that if stone bottles were exempted from duties, they would be used instead of glass bottles, to the injury of those engaged in manufacturing the latter. But the purposes to which stone bottles and glass bottles are applied are so very different, that it would require a much greater reduction of the price of the former than could possibly be occasioned by the abolition of the duty, to make them be substituted, to any extent worth mentioning, in the place of the latter. These views were ably enforced by the Commissioners of Excise Inquiry; and, having been adopted by government, the duty has been abolished. — (4 & 5 Will. 4. c. 77.; see also *Fifth Report by Commissioners of Excise Inquiry.*)

It is to be hoped that the duty on glass bottles may, also, be speedily put an end to. It produces about 110,000*l.* a year. We noticed (*Dict.* p. 1256.) the propriety of enacting and enforcing some regulations as to the size of bottles. The bottle is, in fact, a very important measure; a great deal of wine and other liquors being sold by the dozen. But there is, at this moment, the greatest discrepancy in the size of bottles; and it appears to us that it would be highly expedient, in order to obviate the numerous frauds arising from this source, to enact that all bottles be made to contain not less than a certain specified quantity, and to place them under the acts relating to weights and measures.

COAL. — We are glad to have to state, that the duty on coal exported in English ships has been repealed; and that the duty on all descriptions of coal exported in foreign ships has been reduced to 4*s.* a ton. The increased exportation of coal this measure will occasion, cannot fail of being highly advantageous. Ships that might otherwise have had to go out in ballast, will now have an opportunity of taking with them what may

prove a profitable cargo; at the same time that the cost of conveying the mineral abroad operates as a premium in favour of our own manufactures. The fact, too, that there is, in South Wales alone, a supply of coal sufficient to meet the present demand of the empire for more than 2,000 years, shows the futility of imagining that the measure can be injurious, by its hastening the exhaustion of the mines.

COFFEE. We pointed out (*Dict.* p. 543.) the injustice and impolicy of charging 3d. per lb. more on coffee of our Eastern dominions, when imported for home consumption, than on that imported from the West Indies. This distinction is now, however, at an end; the 5 and 6 Will. 4. c. 66. having enacted that coffee, the produce of British possessions within the limits of the East India Company's charter and of Sierra Leone, shall pay, when entered for home consumption, a duty of 6d. per lb.

Such coffee must, however, be accompanied with a *certificate of origin*, that is, a certificate subscribed by the proper officer of the place where it was shipped, bearing that he had received from the master, and examined, a declaration under the hand and seal of the shipper of the coffee, stating that it was really and *bonâ fide* the produce of some such British possession, and that he (the officer) believed such declaration to be true. The master must also, when he arrives in this country, make and subscribe a declaration before the collector or comptroller, stating that the certificate of origin was received by him at the port where the coffee was taken on board, and that the coffee imported is the same that is mentioned therein. (We believe that this is the sense of the clause (2.) relating to the certificate; but from some error of the press or otherwise, it is all but unintelligible.)

COLONIES.

Statement of the Nett Expenditure incurred by Great Britain, on account of her several Military and Maritime Stations, Colonies, and Plantations, during the Year 1833-34. — (*Parl. Paper*, No. 408. Sess. 1835.)

* We have been blamed in various publications that have appeared in Ceylon, and which have about them an official air, for saying that the revenues of the island were inadequate to defray her expenses, and that she was a drain upon this country. We may have been inaccurate in this statement; and if so, we regret it; but the blame, if there be any, does not lie at our door, but at that of government. It appears, from the official account given above, that we incurred, on account of Ceylon, in the year 1833-34, a nett expenditure, over and above the revenue derived from it, of no less than 113,540l. We do not vouch for the accuracy of this statement; but, supposing to be true, our remark was certainly well founded. We can assure our readers in Ceylon and elsewhere, that we had not, and could not have, any wish to depreciate that or any other colony or place. Our only object is to lay before them what we believe to be accurate information; and we shall carefully attend to any corrections they may send us.

COMPANIES (PUBLIC SCOTCH). — The following Table may, we believe, be safely relied on. It shows the periods when almost all the great joint stock associations now existing in Scotland were established; the amount of *paid up* capital held by each; the dividend thereon; the period when the dividend is paid; the amount of each share; and the prices the shares brought on the 1st of October, 1835.

CORN LAWS AND CORN TRADE.

An Account of the Total Quantity of Quarters of Foreign Wheat that have paid Duty for Consumption in the United Kingdom, under 9 Geo. 4. c. 60., since that Act came into force in 1828, till 5th of July, 1835, and the Total Amount of Duty received thereon; and showing, from the Total Quantity of Quarters, and the Total Amount of Duty so received thereon, what the Duty was per Quarter at an Average of the whole Period;—and,

The same Account for Foreign Barley, Oats, Rye, Pease and Beans, Wheat, Meal and Flour, Oatmeal, Maize or Indian Corn, Buck Wheat; and the same Account for all these, the Produce of, and imported from, any British Possession in North America, or elsewhere, out of Europe. — (*Part. Paper*, No. 592. Sess. 1835.)

Foreign Corn, Meal, and Flour.				Corn, Meal, and Flour, the Produce of, and imported from, British Possessions out of Europe.			
	Quantities charged with Duty for Home Consumption, under Act 9 G. 4. c. 60. from the passing of the Act (15th of July, 1828), to the 5th of July, 1835.	Amount of Duty received thereon.	Rates of Duty taken on the Average of the whole Period.		Quantities charged with Duty for Home Consumption, under Act 9 G. 4. c. 60. from the passing of the Act (15th of July, 1828), to the 5th of July, 1835.	Amount of Duty received thereon.	Rates of Duty taken on the Average of the whole Period.

CORN (PRICE OF). — The average prices of British corn in 1833 and 1834 were as follow:—

Years.	Wheat.	Rye.	Barley.	Oats.	Pease.	Beans.
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
1833.	32 11	32 11	27 6	18 5	33 2	33 2
1834.	46 2	32 9	29 0	20 11	39 4	33 3

CORN (ISLE OF MAN). — All foreign corn imported into the Isle of Man is now subject to the same duties as in the United Kingdom. — (5 & 6 Will. 4. c. 13.)

CORN (PRICE OF IN FRANCE). — We copy from the *Times* of the 16th of October, 1835, the following

Table of the average Prices of Wheat in France at the End of September of each Year, from 1819 to 1835, both inclusive, according to the official Returns, with their Equivalents in English Measure and Money: —

Years.	Per hect.	Per qr.	Years.	Per hect.	Per qr.
<i>fr. c.</i>	<i>d.</i>	<i>t. d.</i>	<i>fr. c.</i>	<i>d.</i>	<i>t. d.</i>
1819	16 1	36 8	1828	21 9	48 3
1820	19 40	41 5	1829	20 13	46 2
1821	16 9	36 10	1830	21 92	50 3
1822	16 62	33 9	1831	21 71	49 9
1823	15 41	35 3	1832	19 44	41 6
1824	16 53	33 4	1833	15 86	36 4
1825	15 22	34 10	1834	14 64	33 7
1826	15 21	34 9	1835	13 66	31 5
1827	18 31	42 0			

The average of the whole period is 17*fr.* 31*c.* per hectolitre, equal to 39*s.* 8*d.* per quarter; and it will be remarked that the average of the present year is the lowest of the whole period.

The average price of British wheat during the second week of October, 1835, was 37*s.* a quarter, being lower than it has been at any time since 1780.

COTTON.

Account of the Exports of Cotton Goods and Yarn in 1833 and 1834; specifying the Quantity and Value of those sent to each Country. — (*Papers published by Board of Trade, vol. iv. p. 197.*)

CURRANTS.—The exorbitant duty of 44s. 4d. a cwt. on currants was reduced, in 1834, to half that amount, or to 22s. 2d. a cwt. — (4 & 5 Will. 4. c. 89. § 15.) But this reduction, considerable as it is, is not enough. The duty ought not to exceed 10s., or at most 12s. The price of currants in bond usually varies from 20s. to 25s.; so that the duty, as fixed by the 4 & 5 Will. 4. c. 89., is equal to about 100 per cent. *ad valorem*. But such a duty is obviously oppressive; the more especially as currants, if low-priced, would be largely consumed by all classes in this country; and as they form the principal equivalent the inhabitants of the Ionian Islands and of the Morea have to offer in exchange for foreign products. We are satisfied, too, that had the duty been reduced to 10s. a cwt., it would, in a few years, have yielded more revenue than it will ever yield at its present rate. Such a reduction would have brought currants within the command of a much greater number of persons; and would, in fact, have gone far to render them an article of general consumption; whereas, the duty of 22s. 2d. will still confine their use to the wealthier classes.

It has been said, that a reduction of the duty from 44s. 4d. to 10s. a cwt. would not have made a corresponding reduction in the price of the article; and that the measure would have redounded more to the advantage of the growers of currants than of the consumers in this country. That such might have been in some degree the case, at the outset, we admit; but the greater advantages derived by the raisers of currants would have made them be produced in much larger quantities, so that at no distant period we should have reaped the full advantage of the reduction in the rate of duty, at the same time that our trade with the Ionian Islands and the Morea would have been increased proportionally to the increase in the imports of currants. However, we are grateful for what has been done; and it may be fairly presumed that the beneficial effect of the reductions already made will lead to others on a still greater scale.

EMIGRANTS.—It will be seen from the subjoined accounts, that the number of emigrants to Canada and the United States was very decidedly greater in 1831 and 1832 than in either of the 2 preceding or 2 following years. The falling off in 1833 seems to have been mainly a consequence of the alarms occasioned by the breaking out of cholera, during the previous year, in a very aggravated state, in some of the emigrant ships, and at Quebec. But this circumstance had less influence in 1834, and the emigration for that year was considerably greater.

Account of the Number of Emigrants, specifying the Countries whence they came, and the Numbers from each, that arrived at Quebec during the Six Years ending with 1834. — (*Parl. Paper*, No. 87., Sess. 1835.)

Total number of Emigrants, in 1833, 62,527 — in 1834, 76,022 — total, 148,749.

Passenger Acts — Policy of. — It appears from the above statement that, during 1833 and 1834, no fewer than 148,749 emigrants left the United Kingdom; 141,051 being destined for America, and 7,698 for the Australian colonies and the Cape of Good Hope. Such being the extent to which emigration is carried, the propriety, or rather necessity, of enacting some general regulations, with respect to the conveyance of emigrants to their destination, must be obvious to every one at all acquainted with the subject. The greater number of emigrants are in humble life; few among them know any thing of ships, or of the precautions necessary to insure a safe and comfortable voyage; they are, also, for the most part poor, and exceedingly anxious to economise, so that they seldom hesitate to embark in any ship, however unfit for the conveyance of passengers, or inadequately supplied with provisions, provided it be cheap. Unprincipled masters and owners have not been slow to take advantage of this; and in order to prevent the frauds that have been, and that would be, practised on the

unwary, it has been found indispensable to lay down some general regulations as to the number of passengers to be taken on board ships as compared with their tonnage, the quantity of water and provisions as compared with the passengers, &c. But this is no very easy task. If the limitations be too strict, that is, if comparatively few passengers may be carried, or if the stock of provisions to be put on board be either unnecessarily large or expensive, the cost of emigration is proportionally enhanced; and an artificial and serious impediment is thrown in the way of what ought to be made as easy as possible, consistent with security. But, on the other hand, if too many passengers be allowed, their health is liable to suffer; and should the supply of provisions be inadequate, or the quality bad, the most serious consequences may ensue. The Passage Act (6 G. 4. c. 116.) obliged too great a quantity of expensive provisions to be put on board, and was, in consequence, objected to by emigrants as well as shippers. The late act, 9 G. 4. c. 21. (*Diet.* p. 880.) avoided this error; but it, too, was defective, in as much as it made no provision with respect to the sufficiency of the ship, the having a surgeon or other properly qualified medical person on board ships carrying a certain number of passengers, and in other particulars.

These deficiencies have been in part supplied by the act of last session (5 & 6 W. 4. c. 53.), of which a full abstract is subjoined. But we doubt whether even it will completely answer the end in view. During 1834 no fewer than 17 ships, with passengers on board, bound for Quebec, were wrecked on the passage; 731 emigrants losing their lives in consequence, while many more lost most part of their property, and were reduced to the greatest difficulties. These losses principally took place in the gulf and river of St. Lawrence; but we should err if we ascribed them entirely, or principally even, to the difficulty of the navigation. Emigrants to Quebec are mostly taken out in ships engaged in the timber trade; and it is well known that, speaking generally, these are a very inferior class; it being the usual practice to turn worn-out ships, unfit to carry dry cargoes, into this department. Most part of the catastrophes alluded to may, we are assured, be ascribed to this circumstance, and to the misconduct of the masters and crews. We doubt whether the clause (7th) in the present act as to the sea-worthiness of the ship will be sufficient to obviate the disasters arising from the use of improper vessels. And we incline to think that, in addition to what is stated in the act, it should be further provided that all British ships, not standing in the class A. or the class *Æ*. of the new register (see *post*), should be prohibited from undertaking to carry passengers; and that either some similar regulation should be adopted with respect to foreign ships, or that they should be prohibited from clearing out with passengers, unless reported as sea-worthy and suitable for their conveyance by government surveyors appointed for that purpose. There can be no question as to its being the bounden duty of government to take every reasonable precaution for obviating shipwreck. And, even if higher considerations did not make an effectual interference imperative, it is pretty certain that the check given to emigration to Canada, by the shipwrecks and destruction of life that have recently taken place, is much greater than any that could be given by the trifling addition that the adoption of some such plan as has now been suggested would make to its cost.

The subjecting of captains of ships to an examination, and the exclusion of spirits (see art. SHIPS in this Supplement), would go far to obviate the other causes of loss. The absolute prohibition of ardent spirits in emigrant ships, except as a medicine, has been strongly recommended by Mr. Buchanan, the agent for emigrants in Canada. This recommendation should, we think, be adopted. It is partially, indeed, carried into effect by the 10th clause of the subjoined act. But the better way would be, not to allow any spirits of any sort to be taken on board ships conveying emigrants, except a few gallons to be used as a cordial, in case it should be recommended by the doctor. If more than this be allowed, it will afford facilities for the clandestine introduction of a still greater quantity; and cannot be otherwise than injurious.

The new act does not make it imperative on ships conveying passengers to America to have a surgeon on board; and, perhaps, when bound for New York, he may not be required. But the voyage to Quebec is often very tedious; and much suffering and loss of life have frequently arisen from no medical officer being on board emigrant ships destined for that port.

It has been said, that if we lay restrictions on the conveyance of emigrants to Quebec, it will make New York the great landing port, and throw the business of their conveyance entirely into the hands of the Americans. But the regulations enforced in the subjoined act, and those we have suggested, apply equally to both parties. And it is, besides, true that a continuance of the old system, attended as it, no doubt, would have been by a repetition of the most appalling disasters, would have had the very effect falsely ascribed to judicious regulations. It would have prevented any one not compelled by necessity — who was not, in fact, a beggar — from sailing in a vessel bound for Quebec. We subjoin the new act: —

Repeat, &c. — The act 9 Geo. 4. c. 21. directed to be repealed. — § 1.

No Ship to sail with more than Three Persons on board for every Five Tons. — No ship carrying passengers from any port or place in the U. K., or in Guernsey, Jersey, Alderney, Sark, or Man, on any voyage for any port or place out of Europe, and not within the Mediterranean, shall proceed on her voyage with more than 3 persons on board for every 5 tons of the registered burden of such ship, the master and crew being included in, and forming part of, such prescribed number; and no ship, having more than one deck, shall carry any passengers upon any such voyage, unless she be of the height of 5½ feet at least between decks; and no ship, having only one deck, shall carry any passengers upon any such voyage, unless a platform be laid beneath such deck, so as to afford a space of the height of at least 5½ feet, and no ship shall have more than 2 tiers of berths; and no ship, having 2 tiers of berths, shall carry any passengers, on any such voyage, unless there be an interval of 6 inches, at least, between the deck or platform and the floor of the lower tier, throughout the whole extent thereof: provided, that whatever be the tonnage of the ship, no greater number of persons shall be taken on board, as passengers, than shall be after the rate of one person for every 10 superficial feet of the lower deck or platform unoccupied by goods or stores, not being the personal luggage of such persons, if such ship shall not have to pass the line on her voyage, or after the rate of one such person for every 15 clear superficial feet, if such ship have to pass the line. — § 2.

Quantity of Water and Provisions to be carried by Vessels with Passengers. — No ship carrying passengers on any voyage, as aforesaid, shall be cleared out for such voyage from any port in the U. K., or in the islands of Guernsey, Jersey, &c., unless there be actually laden and on board such ship good and wholesome provisions for the use and consumption of the said passengers, over and above the victualling of the crew, to the amount or in the proportion following; viz. a supply of 5 gallons of pure water to every week of the computed voyage for every passenger on board such ship, such water being carried in tanks or sweet casks, and a supply of 7 lbs. weight of bread, biscuit, oatmeal, or bread stuffs, to every week of the computed voyage for every passenger: provided, that to the extent of one third of such supply, and no more, 7 lbs. weight of potatoes may be held to be equivalent to 1 lb. weight of bread, biscuit, oatmeal, or bread stuffs, in the supply of any ship bound to any place in North America: provided, that when any ship shall be destined to call at a port or place in the course of her voyage, for the purpose of filling up her water, a supply of water, at the rate before mentioned, for every week of the computed voyage to such port or place of calling, shall be deemed to be a compliance with the provisions of this act. — § 3.

Number of Weeks requisite for Voyage of Vessel. — The number of weeks deemed to be necessary for the voyage of any such ship, according to her destination, shall be determined by the following rule of computation; viz.

For a voyage to North America, 10 weeks.

— South America, on the Atlantic Ocean, or to the West Coast of Africa, 12 weeks.

— the Cape of Good Hope, 15 weeks.

— to the Mauritius, 18 weeks.

Any other voyage, 24 weeks. — § 4.

Officers to examine Provisions and Water before Departure of Vessel. — Before any such ship shall be cleared out, the officers of customs shall survey, or cause to be surveyed by some competent person, the provisions and water before required for the consumption of the passengers, and ascertain that the same are sweet and good, and shall also ascertain that, over and above the same, there is on board an ample supply of water and stores for the victualling of the crew of the ship; and such officers shall also ascertain that the directions herein contained, in respect of the situations of berths, have been complied with. — § 5.

Table of the Prices of Provisions to be sold on board. — The master of every such ship shall cause a table to be drawn up of the prices at which any provisions or stores, to be sold by any person on board to the passengers, during the voyage, are to be supplied; and a copy of the same, printed or written in a fair and legible manner, shall be affixed in some convenient and conspicuous place on board said ship, and the same shall be maintained for continual reference, as well during the period in which passengers shall be engaged, as during the whole of the voyage; and no higher prices than are stated in such table shall in any case be charged for such provisions or stores during the voyage: but nothing herein contained shall be construed as requiring the master of any ship to provide provisions or stores for the purpose of sale to passengers who have contracted to victual themselves during the voyage. — § 6.

Seaworthiness of the Ship may be ascertained by Survey. — If doubts arise whether any ship about to proceed with passengers, as aforesaid, is seaworthy, or fit for her intended voyage, and such doubts are not removed to the satisfaction of the collector and comptroller of customs at the port from which such vessel is to be cleared out, it shall be lawful for such collector and comptroller to cause such ship to be surveyed by 2 competent persons; and if it be reported by them, that such ship is not, in their opinion, seaworthy, with reference to such voyage, such ship shall not be cleared out, unless the contents of such report be disproved to the satisfaction of the commissioners of customs, or until the ship be rendered seaworthy. — § 7.

Copies or Abstracts of this Act to be kept on board. — Two copies of this act, or abstracts of the same, provided and issued by the commissioners of customs, and authenticated by the signature of the collector or comptroller of customs at the port of clearance, shall be delivered to the master, on demand, by the collector or comptroller at the time of clearance, and shall be kept on board every ship proceeding with passengers as aforesaid, and one of such copies or abstracts shall, upon request made to the master of the ship, be produced to any passenger for his perusal. — § 8.

A Medical Practitioner to sail with every Ship carrying 100 Passengers. — No ship carrying passengers to any port or place as aforesaid, except in North America, if the number of passengers amount to or exceed 100, shall clear out from any port in the U. K., or in the islands of Guernsey, Jersey, &c. unless there be rated, and actually serving on board such ship, some person duly authorised to practise as a physician, surgeon, or apothecary, and no such ship shall put to sea, or proceed on such voyage, unless such medical practitioner be therein, and *bona fide* proceed on such voyage, taking with him a medicine chest, and a proper supply of medicines, instruments, and other things suitable to the intended voyage; and no ship carrying passengers under the provisions of this act shall clear out for any voyage as aforesaid, unless there be actually laden and on board such ship medicines and other things necessary for the medical treatment of the passengers on board, during such intended voyage, and available for that purpose, nor unless such medicines and other things shall be adequate, in amount and kind, to the probable exigencies of any such voyage; and, together with such medicines and things, shall also be put on board every such ship, previously to her clearing out for such voyage, a certificate under the hands of 2 or more medical practitioners, to the effect that such medicines and things have been inspected by them, and are, in their judgment, adequate to meet any such probable exigencies. — § 9.

Ships carrying Passengers prohibited from exporting Spirits, &c. — No ship carrying passengers as aforesaid shall be cleared out if there be laden on board her, by way of stores, over and above the stores proper for the crew, any quantity of spirits or strong waters beyond one tenth part of such quantity as would, except for this restriction, be allowed by the officers of customs upon the victualling bill of such ship for the outward voyage only, according to the number of persons going the voyage. — § 10.

Master to deliver List of Passengers to Collector of Customs. — The master of every ship carrying passengers shall, before clearing out his ship, deliver to the collector or other principal officer of customs, at such port or place, a list in writing, together with a duplicate of the same, specifying, as accurately as may be, the name, age, profession, or occupation of every passenger on board such ship, with the name of the port or place at which he hath contracted to land each passenger; and such collector or other officer

shall thereupon deliver to the said master a counterpart of such list signed by him; and the master shall exhibit this counterpart of his said list to the collector or other chief officer of customs at any port or place in H. M.'s possessions, or to H. M.'s consul at any foreign port, at which the said passengers, or any of them, shall be landed, and shall deposit the same with such collector or chief officer of customs, or such consul, at his final port of discharge in said possessions. — § 11.

Penalty on Master landing Passengers at Place not contracted for. — The master of a ship carrying passengers as aforesaid shall not, without his or her previous consent, land or put on shore any passenger at any port or place other than that at which he contracted to land or put such passenger on shore. — § 12.

How Children are to be computed. — For the purpose and within the meaning of this act, 2 children, each being under the age of 14 years, but above the age of 7 years, or 3 children, each being under the age of 7 years, shall in all cases be computed as one person only; and children under the age of 12 months shall not be included in the number of persons. — § 13.

Fines in case of Detention. — If any ship shall not actually put to sea and proceed upon any intended voyage on the day appointed for that purpose by any contract made by the owner, master, or charterer of such ship, or by their agent, with any passenger who shall on that day be on board the same, or ready to proceed on such intended voyage, then and in every such case, the master of the ship shall pay to each and every passenger as shall have contracted to victual himself, a fine at the rate of 1s. for each day during which he or she shall be detained previously to the actual clearing out and final departure of the ship on the voyage, and the same may be recovered daily; and the master of such ship shall victual each and every passenger as shall have contracted to be victualled by the ship owner on and from the day so appointed: provided that no such fine shall be payable in respect of any detention of the vessel by stress of weather or other unavoidable cause. — § 14.

Passengers to be maintained for 48 Hours after their Arrival. — At the close of any voyage every person arriving as a passenger at any port or place shall, during the space of 48 hours after arrival, be entitled to continue on board such ship, and to be provided for and maintained on board in the same manner as during the voyage, unless it have been expressly stipulated between such passenger and the master of such ship, that such passenger shall not be entitled to such maintenance during the said 48 hours, or unless, in the ulterior prosecution of her voyage, the ship quit such port or place within the said 48 hours. — § 15.

Penalties in case of Infringement of the preceding Enactments. — If any ship carrying passengers on any voyage from the U. K., or the islands of Guernsey, Jersey, &c., to or for any port or place out of Europe, and not in the Mediterranean, shall carry any number of passengers exceeding by more than 1 person in 50 the proportion authorised and allowed by this present act; or if such ship shall not be of the height between decks before required; or if such a platform as before directed shall not be laid and continued throughout the whole duration of such voyage, in the manner before required; or if there be more than 2 tiers of berths; or if there be not throughout the whole duration of such voyage such an interval, as is before prescribed, between the deck and the floor of the lower tier of berths; or if such ship shall clear out and put to sea, not having on board such water and provisions as aforesaid, for the use and consumption of the passengers, of the kind, and to the amount, and in the proportion, before required; or if a table of the prices of provisions or stores be not exhibited as before required; or if any higher prices than are named in such table shall be charged; or if there be not on board such vessel such medical practitioner as aforesaid, or such medicines and other things necessary to the medical treatment of the passengers, as is before required; or if such ship shall be cleared out before such list of passengers as before mentioned have been delivered in manner and form aforesaid to such officer as aforesaid; or if any such list be wilfully false; or if the copy or abstract of this act be not produced as before required; or if any passenger be not allowed to continue on board such ship as before provided; or if any passenger, without previous consent, be put on shore at any place other than that at which the master had contracted to land such passenger; the master of such ship shall, in respect of each and every such offence, be liable, on summary conviction, as is after mentioned, to the payment of a fine of not less than 5*l.* nor more than 20*l.* sterling British money — § 16.

The Right of Action of Passengers not taken away or abridged. — Nothing herein contained shall take away or abridge any right of suit or action which may accrue to any passenger or other person, in respect of the breach or non-performance of any contract made or entered into between or on the behalf of such passenger or person, and the master or owners of such ship. — § 17.

Prosecution and Recovery of Penalties. — These are to be sued for, proceeded with, and determined in the same manner and under the same conditions, as in the case of penalties under the smuggling acts (see *Dict.* p. 1062), or the acts relating to the customs, or to trade or navigation. Provided, that in preferring and prosecuting indictments or informations under this act, the direction and consent of commissioners of customs shall not be required, any thing in such acts of parliament to the contrary notwithstanding. — § 18.

Masters of Vessels to enter into Bond for the due Performance of Regulations. — Before any ship carrying passengers clear out from the U. K., or the islands of Guernsey, Jersey, &c. for any port or place out of Europe, and not in the Mediterranean, the master of said ship shall enter into a bond to H. M., with one good and sufficient surety, to be approved by the collector or chief officer of customs at the port of clearance, in the sum of 1,000*l.*, the condition of which bond shall be, that the said ship is seaworthy, and that all the rules and regulations prescribed by this act for the carriage of passengers shall be well and truly performed before and during such intended voyage, and that all penalties, fines, and forfeitures, which the master of such ship may be sentenced or adjudged to pay in respect of the breach or non-performance of any such rules and regulations, shall be well and truly paid: provided, that such bond shall be without stamps, and that no such bond shall be put in suit, and that no prosecution, suit, action, or information shall be brought by virtue of this act, or by reason of the breach of any of its provisions, in any of H. M.'s possessions abroad, after the expiration of 12 calendar months succeeding the commencement of any such voyage, nor in the U. K., or any of the islands before mentioned, after the expiration of 12 calendar months after the return of the master to the port whence he sailed on such voyage. — § 19.

Exception of particular Ships. — Nothing in this act shall be construed to extend to ships carrying passengers in cases in which the number of persons, computed in manner before provided, shall not exceed 1 person for every 5 tons of the registered burden of such ship; nor shall any thing in this act extend to any ship in the service of the Lords of the Admiralty, of H. M.'s Postmaster General, or of the East India Company. — § 20.

Bahamas, &c. deemed in South America. — The Bahama Islands, and all places in America southward of the same, shall be deemed to be in South America for the purposes of this act. — § 21.

FIGS. — The duty on figs has been reduced from 21*s.* 6*d.* to 15*s.* a cwt. Nearly the same may be said of this reduction as of that of the duty on currants. It is too trifling to have much effect on consumption; and there can, we apprehend, be little doubt that a duty of 10*s.* would, by stimulating the latter, be more productive of revenue than a duty of 15*s.*

FLAG. — Any of his Majesty's subjects hoisting the Union Jack in their vessels, or any

pendants, &c. usually worn in his Majesty's ships, or any flag, jack, pendant, or colours whatever in imitation of or resembling those of his Majesty, or any ensign or colours whatever other than those prescribed by proclamation, 1st of January, 1801, shall forfeit for every such offence not more than 500*l.* (*sic in orig.*) — (4 & 5 Will. 4. c. 13. § 11.)

FUNDS. — The act 4 & 5 Will. 4. c. 31. directs that the "Four per cent. annuities created 1826" — (*Dict.* p. 588.) be paid off. The holders of every 100*l.* of such 4 per cent. annuities are entitled to receive, in lieu thereof, 100*l.* new $3\frac{1}{2}$ per cent. annuities, or, if they dissent from this, 100*l.* in cash, and proportionally for every greater or less sum. The interest on the new $3\frac{1}{2}$ per cent. stock, created under this act, is to be paid half-yearly, at the Bank of England, on the 5th of January and the 5th of July each year; and the new stock is not to be redeemable till the 5th of January, 1840. The annuities so to be created are to be added to the existing *New $3\frac{1}{2}$ per cent. annuities.* — (*Dict.* p. 587.) Bonds and contracts to transfer a given amount of 4 per cent. annuities to be deemed satisfied by the transfer of an equal amount of new $3\frac{1}{2}$ per cent. annuities; but lenders of 4 per cent. annuities, on contract to replace, may demand 100*l.* in cash for every 100*l.* annuities so lent. Trusts, &c. as to 4 per cents. shall extend to $3\frac{1}{2}$ per cents. Commissioners for the reduction of the national debt may advance money to pay off dissentients.

FUNDS (AMERICAN). — The subjoined statement will not, we hope, be uninteresting. It gives a view of the most prominent facts with respect to the public funds of the principal American States; exhibiting, amongst other particulars, their respective amounts, the periods when they are redeemable, the objects for which they were created, and their price in London in October, 1835.

Account specifying the separate Debts of each State, and the Periods when the same are redeemable, &c.

* The dividends on the above Pennsylvania loans are payable half yearly, on the 1st days of February and August, at the Bank of Pennsylvania, Philadelphia, excepting the loan of 28th of March, 1851, for 120,000 dollars, which is payable at the same bank on the 1st of January and July, each year.

GLASS. — We endeavoured to show under this head, in the *Dictionary*, that the duties on glass had been practically most injurious; that they were carried to an oppressive height; that the mode in which they were imposed operated to prevent improvements in the manufacture; that they were not fairly charged; that they occasioned a great deal of fraud; and had reduced the consumption of glass far below the limit to which it would otherwise have attained. These conclusions have been corroborated to the fullest extent by the statements and reasonings in the elaborate and able *Report* of the Commissioners of Excise Inquiry on Glass. These gentlemen, after examining minutely and carefully into the whole subject, conclude their report "by urging the expediency of the repeal of the duty at the earliest possible period, and by expressing our conviction that no tax can combine more objections, or be more at variance with all sound principles of taxation, than this duty on glass!"

But though all parts of this tax be vicious in principle, and highly objectionable in their practical results, they are not all alike bad. The commissioners showed that the duty on flint glass was the most objectionable of any; and they distinctly stated, that, "unless some material change shall take place (in the amount and mode of charging the duty), the revenue from the manufacture of flint glass must, in a great degree, be sacrificed, and the persons who carry on that manufacture, under the regulations and subject to the duties prescribed by law, must either be driven out of the trade, or left to carry it on at a ruinous loss." — (13th *Report*, p. 56.)

Such a representation, coming from such a quarter, could not be disregarded; and we are glad to have to state that the duty on flint glass has been abolished, and that in lieu thereof a duty of 6*s.* 8*d.* is to be charged on every 100 lbs. weight of the fluxed material or metal from which such glass is made. Instead of the late drawback, there is to be in future a drawback of 1*s.* 9*d.* on every 100 lbs. of flint glass

exported. There are also some new regulations as to the drawback on German sheet glass, &c. — (See *Act 5 & 6 Will. 4. c. 77.*)

This alteration will, no doubt, be a material relief to the manufacturers of flint glass. Still, however, it is not such as the trade and the public had a right to expect. The total gross produce of the glass duties in 1834 was, in England, 868,927*l.*; in Scotland, 35,824*l.*; and in Ireland, 18,974*l.*; making together 923,725*l.* But from this has to be deducted, for drawbacks and other allowances, 261,305*l.*, so that there only remains 662,420*l.* of nett revenue; and even this has to be still farther reduced by deducting from it the expenses of collection, which are very heavy. Now, surely, it cannot be said, that, for the sake of a paltry sum of little more than 600,000*l.* a year, we must depress, and all but ruin, an important manufacture, capable of an indefinite extension, by burdening it with an unequal, vexatious, and most oppressive duty! Had the duties on glass produced 1,500,000*l.* or 2,000,000*l.* a year, their retention might have been excused from the impossibility of sacrificing, and the difficulty of replacing, so large an amount of revenue. But the sum which they yield might be easily dispensed with; and as they have been pronounced by the highest authorities to be, in all respects, most objectionable — to have every quality that a tax should not have, and not one that it should have — we do hope that they may be among the first to be repealed.

IMPORTATION AND EXPORTATION. — The commissioners of customs, agreeably to the powers given them to that effect by the 3 & 4 Will. 4. c. 52. § 135. (see *Diet.* p. 669.), have appointed the undermentioned places, within the several ports of the United Kingdom, at which vessels coming into or departing out of such ports shall bring to, for the boarding or landing of customs officers. Every master of a vessel failing to comply with the provisions of said act in this respect forfeits 100*l.*

ENGLAND.		Ports.	Stations for bringing to.
LONDON	-	GRAVESTEND	- Below the Custom-house.
ARRYSTWICH	-	On the bar, or a little above the junction of the rivers Rhodol and Ystwith.	
Aberdovey	-	A little to the westward of the town, in the river Dovey.	
ALDROROUGH	-	Orford haven, the entrance of the rivers Ore and Alde.	
ARUNDEL	-	The piles on the eastern side of the river, between the revenue watch-house and the Duke of Norfolk's Quay, in the harbour of Littlehampton.	
BARNSTAPLE	-	Skern and watch-house, Appledore.	
BEAUMARIS	-	Opposite the town, at Fryar's Roads.	
Amble	-	Within the harbour.	
Conway	-	In the roadstead opposite the town.	
Carnarvon	-	In the bay off the town, opposite the Bell Tower, and at Abernol.	
Pwllheli	-	At the entrance of the harbour, by the Gimblet Rock.	
Barmouth	-	In the harbour.	
Holyhead	-	In the harbour.	
BERWICK	-	At the entrance of the harbour, near the pier head.	
BIDEFORD	-	Skern and watch-house, Appledore.	
BOSTON	-	Hole Hole.	
BRIDGEWATER	-	Between Rotestall Point, on the coast of the Bristol Channel, and Black Rock, about a mile within the mouth of the river Parrott.	
BRIDGLINGTON	-	The bay or harbour.	
BRIDPORT	-	The outer buoy, distant about 500 yards, abreast of the harbour.	
BRISTOL	-	Pill and Kingsroad.	
CARDIFF	-	Penrith Road, a little to the eastward of the mouth of the river Taff.	
CARDIGAN	-	At Pwllcam, a little inside the bar or harbour's mouth.	
CARLISLE	-	Fisher's Cross.	
CHERTSWOLD	-	At the entrance of the river Wye.	
CHERTSEY	-	Downpool, 6 miles from Hovlake.	
CHICHESTER	-	Cockshush harbour.	
CLAY	-	Blackness and Clay harbour.	
COLCHESTER	-	Coin River, off Mersea Stone, Mersea Island.	
COWES (East)	-	Roadstead of Cowes, extending from east to west about 25 miles.	
DARTMOUTH	-	Between the mouth of the harbour and Sandquay Point.	
Salcombe	-	At the mouth of the harbour and Snaps Point.	
DEAL	-	In the Downs, in open roadstead.	
DOVER	-	The outer harbour.	
Folkstone	-	In the harbour.	
EXETER	-	At the Passage Way, Exmouth.	
Teignmouth	-	At the Point.	
FALMOUTH	-	In the harbour, off Kila Quay and watch-house.	
FAVERSHAM	-	Between the mouth of Faversham Creek and the Horse Sand in the East Swale.	
Milton	-	At the mouth of Milton Creek in the Swale.	
FUVEY	-	Near the Custom-house, not far from the entrance of the harbour.	
GLOUCESTER	-		
GRIMSBY	-	At the outfall, near the entrance of the harbour.	
GOOLE	-	Hull Roads.	
GWRK	-	Durgan Roads, just at the entrance of the river Hel.	
HARWICH	-	In the harbour, between the Guard and Walton Ferry.	
HULL	-	Hull Roads, between the east end of the citadel and the entrance to the Humber dock to the westward.	
ILFRACOMBE	-	In the harbour.	
IPSWICH	-	In the harbour, between the Guard and Walton Ferry.	
ISLE OF MAN	-		
Douglas	-		
Darby Haven	-		
Red	-		
Ramsey	-		
	-	In their respective bays.	
LANCASTER	-	Glasson Dock, on the river Lune.	
Poulton	-	Sea Dyke, entrance of the river Wyre.	
Ulverston	-	Pile Fowdry, near the Isle of Walney.	
LEIGH	-	Leigh Slade, Leigh Swath, which channel is formed by the spit of a sand called Marsh End, leading from the east end of Canby Island, and nearly opposite to a windmill, called the Hamlet Mill, situate upon the Cliff, about $\frac{1}{2}$ mile to the westward of Southend, and about 2 miles from Leigh.	
LIVERPOOL	-	At the entrance of the respective docks.	
LIANREL	-		
LYME	-	The basin within the pier or cobb of Lyme Regis.	
LYNN	-	Nottingham Point, intermediate space between Common Strath Quay, where the estuary narrows into a river, about 5 miles below the town, or near as circumstances permit within the point.	
MAIDON	-	Barrow Hills, opposite Blackwater River, Maldon.	
MILFORD	-	In the haven, opposite the town of Milford.	
MINEHEAD	-	The entrance of the harbour.	
NEWCASTLE	-	Opposite the watch-house, at the entrance of the river Tyne.	
Shields	-	Low Lights, North Shields.	
Blythbrook	-	At the entrance of the harbour.	
NEWHAVEN	-	In the stream, between the piers and the tide surveyor's watch-house.	
NEWPORT (Wales)	-	At the watch-house, 1 mile from the Custom-house.	
PADSTOW	-	Hawker's Cove, within the harbour.	
PENZANCE	-	Gwasys Lake.	
St. Michael's	-	St. Michael's Mount Roads.	
PLYMOUTH	-	Within the line of the breakwater, viz. the Sound, Catwater, and Hamoaze.	
POOLE	-	At the entrance of the harbour, between South Deep, opposite Browne's Castle, and the Essex buoy, opposite the castle stables.	
PORTSMOUTH	-	Between Blackmore Point and the north end of His Majesty's dock-yard.	
Langstone	-	In the roadstead, within 1 mile of the Spit Buoy.	
RAMSLEY	-	In the harbour.	
Margate	-	In the harbour.	
Sandwich	-	At the entrance of the harbour.	
ROCHESTER	-	Sheerness.	
RYE	-	The outer channel, and in Stag's Hole, in the inner channel.	
Hastings	-	In the open roadstead.	
Eastbourne	-	In the open roadstead.	
SCARBOROUGH	-	Entrance of the harbour, opposite the light-house, at the end of Vincent's Pier.	
SULLY	-		
SHOREHAM	-	Near the entrance of the harbour, in the western branch, opposite the customs watch-house and Kingston Wharf.	
SOUTHAMPTON	-	Itchen buoy, or Hursledon buoy.	
SOUTHOLD	-	Opposite the jetty, near the entrance of the harbour.	
STOCKTON	-	Ninth buoy, or opposite Cleveland Port.	
St. Ives	-	In the bay, within $\frac{1}{2}$ mile of St. Ives pier.	
Hayle	-	The same.	
SUNDERLAND	-	At the entrance of the harbour, near the watch-house on the South pier.	
SWANSEA	-	In the harbour.	
Neath	-	Briton Ferry, near the entrance of Neath River.	
TRURO	-	Falmouth harbour.	
WELLS	-	Between the entrance of the harbour and Wells Quay.	
WYEMOUTH	-	Weymouth Roads.	
WIMBORNE	-	The harbour.	
WIMBORNE	-	In the harbour, between the tongue and hulwark.	
Harrington	-		
Workington	-		
Maryport	-	In their respective harbours.	
WIMBEACH	-	At the light-houses about 3 miles below the station at Sutton Wash.	

Ports.	Stations for bringing to.
WOODBRIDGE	Bawdsey Ferry, the entrance of the river Deben.
VARMOUTH	Yarmouth Roads, between Nelson's monument and the haven's mouth — on the Burch, a short distance within the haven's mouth, at the S.E. angle of the river.

SCOTLAND.

ANABURN	That part of Aberdeen Bay which falls within a line beginning at the easternmost point of the Girdle Ness, and running north 14 mile, to a point due east of the centre of the Broad Hill.
Priesthead	The bay.
Newburgh	Within the river Ythan, opposite to the village Newburgh.
Stonehaven	Stonehaven Bay, within 800 yards of the entrance of the harbour.
AYR	South Quay at Ayr.
BANFF	The Legal Quays.
BORROWSTONES	The harbour.
Inverkeithing	The harbour.
CAMBERTOWN	The harbour.
DUMFRIES	The harbour.
DUNDEE	The harbour.
Newburgh and Perth	Caroline Roads, 14 mile to the eastward of the harbour of Dundee.
GLASGOW	Entrance of the harbour.
GRANGEMOUTH	Entrance of the harbour.
Alloa	Alloa roadstead.
Kincardine	Kincardine roadstead.
GREENOCK	From Gravel Point, to the eastward of the town of Greenock, in the county of Renfrew, to Kempeck Point, being the western point of Gourock Bay, including therein Carisdye Bay, Greenock Roads, the anchorage at the tail of the bank, and Gourock Bay.

Rothsay	Rothsay Bay, lying and being within Boyan Point, on the east of the town of Rothsay, in the Isle of Bute, county of Bute, and Ardmalish Point on the west of the said town.
Ohan	Ohan Bay, in the county of Argyle, as lies within Fishing-house Point on the eastern side, and Carrick Point on the western side of the said Bay.
Tobermory	The Bay of Tobermory, lying and being within Leidag Point to the south-east, Portmore Point to the north-west, and the Isle of Calve on the east of Tobermory, Isle of Mull, county of Argyle.
Inverary	The roadstead of Inverary, lying and being off the town of Inverary, in the county of Argyle, and extending $\frac{1}{2}$ mile north-east of the quay of the said town.
Lochgilphead	Lochgilphead Roads, at the east end of the Crinan Canal, lying and being within Ardrishag Point, on the western side of Lochgilphead and Kilmory Point, on the eastern side of the said loch.
INVERNESS	The harbour.
IRVINE	The harbour.
KIRKALDY	Entrance of the harbour.
Aberdour and Burntisland	Burntisland Roads.
Piffareen	
Dunair	Kirkaldy Bay.
Wemyss	
Methil	
Leven	Largo Bay.
Largo	
Elie	
Andruther	Entrance to their respective harbours.
St. Andrew's	St. Andrew's Bay.

Ports.	Stations for bringing to.
KIRKWALL	The Bay, or Kirkwall Roads, extending along the beach, to a north-east direction, to Thiel's Holm, and in a westerly direction to Quantness Skerry, thence in a southerly direction to the Legal Quays.
Stronness	The bay called Cairnston Roads.
LEITH	Between the martello tower and chain pier at Newhaven.
Dunbar	In the harbour.
Fisherrow	In the harbour.
LERWICK	In the bay, opposite the Custom-house.
MONTROSE	Within the bar, at the entrance of the river South Esk, which is called the Stull.
Arbroath	The harbour.
PORT GLASGOW	Port Glasgow Roads, or roadstead, commencing at the black and white chequered buoy, on the east point of the bank called the Perch, distant from the harbour about 200 yards, and extending in a south-easterly direction by the course of the river Clyde to the old ruins called Newark Castle.
STORNAWAY	The harbour.
STRANRAER	The harbour of Stranraer.
Port Patrick	The harbour.
THURSO	Thurso Bay, within Holburn Head to the anchorage ground at Scrabster Roads.
Wick	Wick Bay, when abreast or within the head land called the Old Man of Wick.

IRELAND.

BALTIMORE	Cuttle Townsend
Crook Haven	At the entrance of the harbours of Castle Townsend, Baltimore, Crook Haven, and Here Haven.
BELFAST	Here Haven.
(Floating Stn.)	Garmoyle Roads, in Belfast Lough.
COLERAINE	Port Rush Bay, outside the harbour.
COKE (COVE)	Between the Spit buoy and the town of Cove.
West Passage	Between Ferry Point to the southward and Horse Head to the north-west.
Kinsale	Upper Cove, on the eastern side of the harbour.
Yonghall	Within the entrance of the harbour, between Blackball Head to the eastward, and Ferry Point.
DROGHEDA	North Crook, at the entrance of the Boyne.
Queenborough	In the river Boyne, opposite Queenborough.
DUBLIN	Pigeon-house, between the harbour light-house and the end of the North Wall.
DUNDALK	Soldiers' Point.
GALWAY	To the eastward, or under the shelter of, Mutton Island.
LIMERICK	Tarbert's Roads, to the southward of Tarbert Island, in the county of Kerry.
LONDONDERRY	Greencastle, situate on the north side of Lough Foyle.
NEWRY	Warren Point Roads.
Strangford	Ballyheury Bay or Audley's Town Bay.
SLIGO	Oyster Island.
Killbeg	Anchorage of Killbegs.
Ballyshannon	In the river, abreast of Ward Town-house.
Ballina	Moyle Pool.
Killala	Killala Pool.
WATERFORD	Passage.
New Ross	The harbour.
Dungarvan	The anchorage ground at Annagh Head.
WESTPORT	In Clew Bay.
WEXFORD	South Bay, about 10 miles from Wexford.

LISBON. — In return for the privilege conceded to the Portuguese under the Methuen treaty (*Dict.* p. 1177.), of admitting their wines to entry for consumption in Great Britain, at 2-3ds the duty charged on French wines, British woollens were admitted into Portugal at a duty of 15 per cent. This rate of duty was afterwards extended to all British articles; and, since 1782, it has been charged according to a tariff or valuation fixed that year. But, with the exception of goods from Brazil, all other foreign goods consumed in Portugal paid a duty of 30 per cent. These distinctions are now, however, at an end; the subjoined decree having fixed the duty on *all* goods admitted to consumption in Portugal, without regard to their origin, at 15 per cent. This regulation was a good deal complained of here, but without reason. Having judiciously equalised the duties on French and Portuguese wines, we had no right or title to expect that the Portuguese should continue to render us the stipulated equivalent of what we had ourselves withdrawn. In so far, too, as we are concerned, the change is not really of any material importance, and will not sensibly affect our trade with Portugal. We subjoin the decree referred to: —

I. All goods and merchandise, of whatever nature and origin, and under whatever flag they may be imported, are admitted into the Custom-house of Lisbon and Oporto, to be despatched for consumption.

Sec. 1. Live pigs, gunpowder, and foreign olive and turnip oil, are excepted from the foregoing article.

Sec. 2. The importation of grain will be regulated by a special law; and in the mean time the existing dispositions thereto relating will continue in force.

Sec. 3. Tobacco, soap, and orchilla weed, continue subject to the laws and conditions of the state contracts.

Sec. 4. Wine, vinegar, brandy, and other spirits of whatever quality they may be, are only admitted in bottles or jars of half a canarin, Lisbon measure, and in boxes containing 2 dozens of bottles each. Rum, however, is admitted in casks of 400 pipes.

II. Goods admitted to consumption by the present decree, if imported in Portuguese vessels from the country in which they are produced, or in ships of that country coming direct, will pay 15 per cent. levied upon the tariff valuation, and where there is no tariff, *ad valorem*. In the contrary case, will pay the duty hereby established increased by $\frac{1}{2}$ of the same duty.

Sec. 4. Vinegar, wine, brandy, and all other spirits will pay 300 reis per bottle or jar. The decree of the 7th of December, 1825, remains in full force as regards rum, whatever place it comes from. The goods comprehended in this paragraph remain subject to the clauses of the preceding article, as far as they are applicable.

Palace of Necessidades, 18th of April, 1834.

OLIVE OIL. — In consequence of petitions and representations from the woollen manufacturers, setting forth the serious injury they sustained from the oppressive duty of 8*l.* 8*s.* a tun laid on olive oil (*Dict.* p. 862.), it has been reduced 50 per cent., or to 4*l.* 4*s.* a tun. — (4 & 5 Will. 4. c. 89. § 15.) The reduction does not, however, extend to oil brought from Naples or Sicily; but his Majesty is empowered, if he see cause, to reduce the duty on such oil to 4*l.* 4*s.* a tun, by an order in council. This exception is understood to have been made in the view of facilitating the negotiations now in progress with the King of Naples for a reduction of the exorbitant duties laid on pilehards and other British articles imported into his dominions. It is to be hoped that these negotiations may be speedily brought to a satisfactory conclusion; for the largest portion by far of the olive oil made use of here being brought from Naples (Gallipoli, see *Dict.* p. 863.), the continuance of the high duties on it goes far to nullify the measure. Those who take into view the importance of olive oil in the arts, particularly in the woollen manufacture, and are aware that the revenue derived from it has not exceeded 50,000*l.* a year, will probably join with us in opinion, that the duty should either be repealed, or reduced to, at most, 2*l.* 2*s.* a tun.

PAPER. — The Commissioners of Excise Inquiry have made a very important suggestion with respect to the duty on paper. They recommend that the existing distinction between first class and second class paper should be put an end to; and that a duty of 1½*l.* per lb. be charged indiscriminately on all descriptions of paper. The effect of this recommendation, were it adopted, would be to deduct a half from the duty now charged on all paper used for writing and printing; at the same time that it would allow the manufacturer of inferior or wrapping paper to make use of whatever materials he pleased. This judicious suggestion will, no doubt, be adopted. The stimulus to consumption that would be given by the fall in the price of paper consequent to a reduction of this sort, makes it abundantly certain that the revenue would lose little or nothing by the change; at the same time that the manufacturer would be relieved from several vexatious regulations, and that the gross injustice inflicted on authors and publishers by the paper duties (see *Dict.* p. 143.) would be materially mitigated. To suppose that, under such circumstances, the duty should not be reduced, would be to suppose that government was not anxious to encourage, but to discourage, the manufacture; and that it preferred dealing unjustly by authors and publishers! — (See 14th Report of Commissioners of Excise Inquiry.)

PATENTS. — The reader will find in the article **PATENTS**, in the *Dictionary*, some remarks on the grounds on which they are granted, and on the difficulty of legislating on the subject. The object in giving a patent is twofold. In the first place, it is intended to stimulate and reward invention; and, in the second place, it is intended to prevent an invention from being lost, by obliging the inventor, when he takes out a patent, to describe it accurately. The difficulty in legislating on the subject is to hinder real *bonâ fide* inventors from being harassed by unfounded actions, and at the same time to prevent quacks and pretenders from appropriating discoveries already made, to the injury of the public. To be useful, any law on such a subject must be drawn up with great care and circumspection. But such certainly has not been the case with the act as to patents (5 & 6 Will. 4. c. 77.), passed in 1835, of which a copious abstract is subjoined. It is altogether one of the crudest and most bungling attempts at legislation that has ever come under our notice. It gives to the patentee a right to make constant alterations in his specification; so that it will be next to impossible to learn from it what the invention really is for which the patent is granted. Under the old law, a patentee, who made any material improvements on his invention, was entitled to get a new patent for the improvements, so that no injury was done him by obliging him to make his specification quite accurate, at the same time that the public interests were secured. But every one naturally wishes to conceal his inventions; and, instead of counteracting this principle, the new law really offers a bonus on inaccurate specifications, by enabling the patentee to disclaim some parts and to amend others; and he may do this over and over again, provided he obtain leave from the attorney or solicitor general, to whose "good pleasure" the most important interests would thus seem to be left! It is not easy to imagine any thing more absurd. But we have little doubt, that the inconveniences that will result from it will lead to its speedy repeal or amendment. Some of the other clauses seem also to be highly questionable.

Any Person having obtained Letters Patent for any Invention may enter a Disclaimer. — Any person who hath obtained or shall hereafter obtain letters patent, for the sole making, exercising, &c. of any invention, may, if he think fit, enter with the clerk of the patents of England, Scotland, or Ireland, respectively, as the case may be, having first obtained the leave of the attorney-general or solicitor-general in case of an English patent, of the lord advocate or solicitor-general of Scotland in the case of a Scotch patent, or of the attorney-general or solicitor-general for Ireland in the case of an Irish patent, a disclaimer of any part of either the title of the invention or of the specification, stating the reason for such disclaimer, or may, with such leave as aforesaid, enter a memorandum of any alteration in the said title or specification, not being such disclaimer or such alteration as shall extend the exclusive right

granted by the said letters patent; and such disclaimer or memorandum of alteration, being filed by the said clerk of the patents, and enrolled with the specification, shall be taken to be part of such letters patent or such specification in all courts whatever: provided that any person may enter a caveat, as caveats are now entered, against such disclaimer or alteration; which caveat shall give the party entering a right to have notice of the application being heard by the attorney-general or solicitor-general or lord advocate respectively: provided also, that no such disclaimer or alteration shall be receivable in evidence in any action or suit (except in any proceeding by *scire facias*) pending at the time when it was enrolled, but in every such action or suit the original title and specification alone shall be given in evidence, and taken to be the title and specification of the invention for which the letters patent have been granted: provided also, that it shall be lawful for the attorney-general or solicitor-general or lord advocate, before granting such fiat, to require the party applying for the same to advertise his disclaimer or alteration, as to the said attorney-general, &c. shall seem right, and shall, if he require such advertisement, certify in his fiat that the same has been duly made. — § 1.

Mode of Proceeding where Patentee is proved not to be the real Inventor. — If in any suit or action it shall be proved or found by the verdict of a jury that a person who has obtained letters patent for any invention or supposed invention was not the first inventor thereof, or of some part thereof, by reason of some other person or persons having invented or used the same, or some part thereof, before the date of such letters patent, or if such patentee or his assigns shall discover that some other person had, unknown to such patentee, invented or used the same, or some part thereof, before the date of such letters patent, it shall be lawful for such patentee or his assigns to petition H. M. in council to confirm the said letters patent or to grant new letters patent, the matter of which petition shall be heard before the judicial committee of the privy council; and such committee, upon examining the said matter, and being satisfied that such patentee believed himself to be the first and original inventor, and being satisfied that such invention or part thereof had not been publicly and generally used before the date of such first letters patent, may report to H. M. their opinion that the prayer of such petition ought to be complied with, whereupon H. M. may, if he think fit, grant such prayer; and the said letters patent shall be available to give to such petitioner the sole right of using, making, and vending such invention; provided, that any person opposing such petition shall be entitled to be heard before the said judicial committee: provided also, that any person, party to any former suit or action touching such first letters patent, shall be entitled to have notice of such petition before presenting the same. — § 2.

If in any Action or Suit a Verdict pass for the Patentee, the Judge may certify, &c. — If any action at law or suit in equity shall be brought in respect of any alleged infringement of such letters patent heretofore or hereafter granted, or any *scire facias* to repeal such letters patent, and if a verdict pass for the patentee, or if a final decree or order be made for him, upon the merits of the suit, it shall be lawful for the judge who tried such action to certify on the record, or the judge who shall make such order to give a certificate under his hand, that the validity of the patent came in question before him, which record or certificate being given in evidence in any other suit or action touching such patent, if a verdict pass, or order be made, in favour of such patentee, he shall receive treble costs in such suit or action, to be taxed at three times the taxed costs, unless the judge making such second or other order, or trying such second or other action, certify that he ought not to have treble costs. — § 3.

Mode of Proceeding in case of Application for the Prolongation of the Term. — If any person who hath or shall hereafter obtain letters patent shall advertise in the London Gazette 3 times, and in 3 London papers, and 3 times in some country paper published in the town where or near to which he carried on any manufacture of any thing made according to his specification, or near to or in which he resides in case he carried on no such manufacture, or published in the county where he carries on such manufacture or where he lives in case there shall not be any paper published in such town, that he intends to apply to H. M. in council for a prolongation of his term of sole using and vending his invention, and shall petition H. M. in council to that effect, it shall be lawful for any person to enter a caveat at the council office; and if H. M. refer such petition to the judicial committee of the privy council, and notice shall first be by him given to any person who has entered such caveats, the petitioner shall be heard by his counsel and witnesses to prove his case, and the persons entering caveats shall likewise be heard by their counsel and witnesses: whereupon the judicial committee may report to H. M. that a further extension of the term in the said letters patent should be granted, not exceeding 7 years; and H. M. is hereby authorised and empowered, if he think fit, to grant new letters patent for the said invention for a term not exceeding 7 years after the expiration of the first term: provided that no such extension shall be granted if the application by petition be not made and prosecuted with effect before the expiration of the original term in such letters patent. — § 4.

In case of Action, &c. Notice to be given. — In any action brought for infringing any letters patent, the defendant on pleading thereto shall give to the plaintiff, and in any *scire facias* to repeal such letters patent the plaintiff shall file with his declaration a notice of any objections on which he means to rely at the trial of such action, and no objection shall be allowed to be made in behalf of such defendant or plaintiff at such trial, unless he prove the objections stated in such notice: provided always, that it shall be lawful for any judge at chambers, on summons served by such defendant or plaintiff on such plaintiff or defendant respectively to show cause why he should not be allowed to offer other objections whereof notice shall not have been given, to give leave to offer such objections, on such terms as to him shall seem fit. — § 5.

Costs in Actions for infringing Letters Patent. — In any action brought for infringing any letters patent, in taxing the costs thereof regard shall be had to the part of such case proved at the trial, which shall be certified by the judge, and the costs of each part of the case shall be given according as either party has succeeded or failed therein, regard being had to the notice of objections, as well as the counts in the declaration, and without regard to the general result of the trial. — § 6.

Penalty for using, unauthorised, the Name of a Patentee, &c. — If any person shall write, paint, or print, or mould, cast, or carve, or engrave or stamp, upon any thing made, used, or sold by him, for the sole making or selling of which he hath not obtained letters patent, the name or any imitation of the name of any other person who hath obtained letters patent for the sole making and vending of such thing, without leave in writing of such patentee or his assigns, or if any person shall upon such thing, not having been purchased from the patentee or some person who purchased it from him, or not having the licence in writing of such patentee or his assigns, write, paint, or otherwise mark the word "patent," the words "letters patent," or the words "by the king's patent," or any words of the like kind, meaning, or import, with a view of imitating or counterfeiting the stamp mark or other device of the patentee, he shall for every such offence be liable to a penalty of 5*l.*, to be recovered by action of debt, bill, &c. in any court of record at Westminster or in Ireland, or in the court of session in Scotland, one half to H. M. and the other to any person who shall sue for the same: provided, that nothing herein contained shall be construed to extend to subject any person to any penalty in respect of stamping or in any way marking the word "patent" upon any thing made, for the sole making or vending of which a patent before obtained has expired. — § 7.

POST-OFFICE. — The inconveniences complained of in *Diet.* p. 936., with respect to the transmission of newspapers by post, have been almost entirely obviated by the acts 4 & 5 Will. 4. c. 44. and 5 & 6 Will. 4. c. 25.

Previously to the 1st October, 1834, 1*ld.* each was charged on all British and Irish newspapers sent by packet to any of the colonies; and 3*d.* on all colonial newspapers sent by packet to Great Britain and

Ireland. But these charges ceased at the above-mentioned period; and since that date the Post-office has received British and Irish newspapers duly stamped, and conveyed them to the colonies free of postage; and the colonial postmasters have received newspapers printed within the colonies, and transmitted them by packet to Great Britain and Ireland; the General Post-office delivering them to their address within the Kingdom free of postage. — 4 & 5 Will. 4. c. 44. § 2. and 3. *

This act did not, however, interfere with the conveyance of newspapers to and from the colonies by private ships, which were chargeable with a postage of 3d. each; but this charge is repealed by the act 5 & 6 Will. 4. c. 25., and a postage of 1d. each on every paper conveyed outwards or homewards by any private ship, is imposed in its stead.

The following are the regulations respecting the conveyance of newspapers to foreign parts by packet:—
Newspapers to and from Foreign Parts.—From and after the 1st day of October, 1834, the Post-office shall receive any printed newspapers duly stamped for conveyance by packet boats from Great Britain and Ireland to any foreign port, and forward the same accordingly free of postage; and newspapers printed in any foreign kingdom or state, and brought into the U. K. by packets, shall (if printed in the language of the foreign kingdom or state from which the same shall be forwarded, but not otherwise) be delivered by the General Post within the U. K. free of postage; provided, that before any newspapers to or from any foreign port be conveyed or delivered free of postage, under the provisions of this clause, satisfactory proof be laid before the postmaster-general that printed newspapers sent from Great Britain or Ireland are allowed to pass by post within such foreign kingdom or state free of postage, and also that newspapers addressed to any person or place in Great Britain or Ireland from the same are allowed to pass by post within it free of postage; and it is hereby declared, as to every newspaper put into the post-office within Great Britain or Ireland for conveyance by packet, addressed to any foreign kingdom or state in which printed British newspapers are not allowed to pass by post free of postage, the postmaster-general (until such satisfactory proof be laid before him) and his deputies shall demand and take 2d. for the conveyance of every newspaper to any foreign port, to be paid when it is put into the post-office; and as to every newspaper addressed to Great Britain or Ireland, and brought into the U. K. from any foreign kingdom or state in which such newspapers are not allowed to pass by post free of postage, it is declared that the postmaster-general (until such satisfactory proof be laid before him) and his deputies shall demand and take for the conveyance of every such newspaper by post 2d., to be paid on delivery thereof to its address, over and above any postage charged thereon by any foreign Post-office, provided such paper be in the language of the kingdom or state from which it is forwarded. — 4 & 5 Will. 4. c. 44. § 4.

Re-imposition of Postage.—The postmaster-general, with consent of the Lords of the Treasury, is authorised to re-impose the duty of postage in the event of the conditions as to reciprocity not being complied with. — § 5.

Newspapers to be sent in Covers, open at Sides, &c.—Every newspaper sent by post under this act, must either be sent without a cover, or in a cover open at the sides; nothing is to be printed on the paper after it has been published, nor is any writing or mark to be made upon such paper, or the cover thereof, other than the name and address of the person to whom it is sent, nor is any paper or thing to be enclosed or concealed in such paper or its cover. — § 6.

Limitation of Time for Postage.—Newspapers to be posted within 7 days after the date of the same; otherwise may be detained, or charged with postage as a letter. — § 7.

Newspapers addressed to Persons who have removed may be re-directed, and sent to them free of Extra Charge.—But if any newspaper shall have been opened or used, it shall, on re-direction, be charged with the rate of a single letter, from the place at which it shall be re-directed to the place at which it shall be ultimately delivered. — § 8.

Postmaster-general, with Consent of the Treasury, may contract with Editors, &c. of unstamped Publications for forwarding the same by Post, on Payment of a yearly Sum for each Publication.— § 9.

Power to search.—The postmaster and his deputies may examine and search printed papers sent in covers, open at the sides; and in case any words or communication be found to be printed on any such paper after the same was published, or any writing or mark be found on it or the cover thereof other than the name and address of the person to whom it is sent, or any other paper or thing be enclosed or concealed in or with it, or any printed words or communication be found upon its cover, or in case any newspaper brought into the U. K. from any foreign kingdom or state be not printed in the language of such kingdom or state, every such packet shall be charged with treble the duty of letter postage; and as to every paper or packet going out of the U. K., the postmaster-general or his deputies may either detain it, or forward it by post, charged with letter postage; and in case any newspaper printed and posted in the U. K., and sent by post under this act, shall appear not to be duly stamped, it shall be stopped and sent to the commissioners of stamps at London or Dublin. — § 10.

The late act has enacted several new regulations with respect to the conveyance of letters to and from foreign parts, &c. The Post-office has issued a summary of the regulations in the act, which, being clearer, and more easily apprehended by general readers than the act itself, we take the liberty to subjoin:—

By the act 5 & 6 Will. 4. c. 52., passed in the present session of parliament, intituled “An Act to extend the Accommodation by the Post to and from Foreign Parts, and for other Purposes relating to the Post-Office,” it is enacted:—

After an agreement shall have been made with the Post-office of any foreign kingdom or state, it shall be optional with persons sending letters by post to such foreign kingdom, to pay both the British and foreign postage thereof, at the time of sending the same, or to send the same without payment of any part of the postage, or to pay the British postage only, as heretofore.

Persons residing in such foreign kingdoms will have the same option, with regard to letters addressed to the U. K.

No letters liable to any foreign rates of postage can be sent or received free from the duties of postage, save and except the public despatches of his Majesty’s secretaries of state to and from the British embassies and legations abroad, being bona fide on the public service.

The postmaster-general is empowered at any time hereafter, at his discretion, to register letters and packets sent by the post, on payment of certain additional rates; but such registration will not render the postmaster-general or the post-office revenue liable for the loss of any such letters or the contents thereof.

The above enactments will not take effect until after the necessary arrangements have been made with the post offices of foreign countries, of which due notice will be given to the public.

The following enactments come into immediate operation:—

The postage on letters between Dover and Calais, which was heretofore the same as between London and Calais, is reduced 6d. each single letter.

LETTERS BY PRIVATE SHIPS.—The present rates of ship-letter postage from the U. K. for places beyond the seas are repealed, and in lieu thereof, letters posted at the port from which the ship shall sail are made liable to the reduced rate of 8d. — single; if posted at any other part of the U. K., 1s. — single; and so on in proportion, to be paid at the time of posting the same.

* N. B. — The old regulations still continue in force as to all newspapers conveyed to and from the colonies otherwise than by packet.

Letters may be sent from any port, by any ship or vessel, to any place out of the U. K., otherwise than through the post-office, except by vessels carrying mails; but this provision does not extend to the inland conveyance of letters otherwise than by post, or to any collection of letters contrary to the laws now in force.

Letters may be sent through the post-office, by private ship or vessel, from any port or place in Great Britain or Ireland to any other port or place within the same or either of them, on payment of a rate of postage of 8d. — single, in addition to any rates for inland conveyance. Persons desirous of availing themselves of this mode of conveyance must specify the same on the direction of their letters, or on delivering them to the postmaster. The payment of postage at the time is optional with the sender.

SHIP LETTERS — IRELAND. — The ship letter laws in Great Britain and Ireland are assimilated; and the provisions of the former acts of parliament for regulating the conveyance of letters to and from the East Indies, at a reduced rate of postage, are extended to Ireland.

Letters to and from Great Britain and Ireland, by private ships, are liable to a sea postage of 8d. over and above any inland rate, the previous payment of which is optional with the sender.

There is no alteration in the law with respect to letters brought into Great Britain by private ships, nor those sent to the Cape of Good Hope, the East Indies, and New South Wales.

NEWSPAPERS. — The rate of postage of 3d. on each newspaper, brought by private ships into the U. K., from his Majesty's colonies and possessions beyond seas, is repealed.

Newspapers to and from his Majesty's colonies and possessions by private ships, are liable to a rate of postage of 1d. each. The postage on those from the U. K. is to be paid at the time of putting them into the post.

Newspapers to and from his Majesty's colonies and possessions beyond seas by packet, are not liable to any postage. There is no alteration in the postage upon newspapers to the Cape of Good Hope, the East Indies, and New South Wales.

Newspapers to and from foreign parts, by private ships, if to and from those countries which have agreed to circulate newspapers to and from Great Britain free, are liable to a postage of 1d. only, to be paid to the master of the vessel conveying the same. Newspapers to or from those countries with which there is no such agreement, are liable to a postage of 2d. each.

There is no alteration in the law with regard to newspapers conveyed to and from foreign parts by packet.

Newspapers from foreign countries, to be conveyed at the rates above mentioned, must be printed in the language of such countries. No newspaper must contain any enclosure whatever, or any writing or marks on the papers or the covers other than the address. Those from the U. K. must be put into the post within 7 days from the date thereof.

Inland North American Postage. — The act 4 Will. 4. c. 7. places the regulation of the inland postage of the North American Colonies, and the appropriation of the revenue arising from the same, wholly in the power of the provincial or colonial legislatures.

RAISINS. — The duty on *all* raisins, without distinction of quality, brought from a foreign country, has been reduced to 15s. a cwt.; and to half that sum on those brought from a British possession. — (4 & 5 Will. 4. c. 89. § 15.) This measure will, no doubt, materially increase the consumption of raisins. The tax ought, however, to have varied with the quality. A duty of 15s. a cwt. is not too much on Malaga muscatels; but, to be in proportion, the duty on Smyrna blacks should not exceed 5s. a cwt. For the quantities imported, exported, and cleared for consumption in 1833 and 1834, see *post*.

SANDWICH ISLANDS. — This secluded but interesting group of islands is situated in the midst of the Pacific Ocean, nearly under the tropic of Cancer, and in about the 160th degree of west longitude. There are, in all, 13 or 14 islands; but with the exception of Owyhee, where Cook was killed, the rest are but of inconsiderable size. The islanders are honourably distinguished among the Polynesian nations by the advances they have made in civilisation; and particularly by their progress in manufactures and commerce. But they are principally entitled to notice, in a work of this sort, from their being frequently visited by English and American ships engaged in the southern whale-fishery, or in the commerce of the Pacific.

The principal port is Honorable, on the south side of the island of Woahoo, in lat. 21° 18' 3" N., long. 158° 1' W. It has several good houses; with a considerable population, among which are from 150 to 250 English and Americans. The anchorage is good; and it is a very favourable place for refitting. In 1831 two ships, one of 180, and another of 190 tons, were hove-down, caulked, and coped in five days. Water is good and plentiful; and fresh provisions may generally be had on very reasonable terms. Recently, however, Mowee, on the island of that name, has been preferred by many as a place for refitting. In 1831, there belonged to the Sandwich Islands, 24 ships of the burden of 2,630 tons; of these, 10 ships, burden 765 tons, were the property of natives, and the remainder of foreigners established in the islands. The following table was drawn up by a gentleman long resident at Honorable: —

Account of the Number of Ships that touched at Woahoo, one of the Sandwich Islands, during the eight Years ending with 1831, distinguishing between English and American, and between Whale and Merchant Ships.

Years.	English.						American.						Under other Foreign Flags.			
	Whalers.			Merchant.			Whalers.			Merchant.			Total.		Total.	
	<i>Ships.</i>	<i>Tons.</i>		<i>Ships.</i>	<i>Tons.</i>		<i>Ships.</i>	<i>Tons.</i>		<i>Ships.</i>	<i>Tons.</i>		<i>Sh.</i>	<i>Tons.</i>	<i>Ships.</i>	<i>Tons.</i>
1824	15	5,798	2	50	17	6,298	50	15,688	16	5,165	66	18,851	5	1,550	88	26,479

The decrease in the amount of American ships at Woahoo is accounted for by the fact of many of them now touching in preference, at Mowee. — (We have these details entirely from private sources.)

SEAMEN (CONSOLIDATION OF LAWS RELATING TO).—During last session an Act was passed (5 & 6 W. 4. c. 19.) of great importance to seamen, and to persons connected with navigation. It is intitled “An Act for amending and consolidating the Laws relating to Merchant Seamen, and for forming and maintaining a Register of all the Men engaged in that Service.” It lays down the various forms and regulations to be observed in hiring, paying, and discharging seamen; establishes an office for their registry; and prescribes the mode in which lists of crews are to be transmitted to the registrar. It also regulates the number of apprentices to be taken on board ship; the conditions under which seamen may, in certain cases, be left in foreign parts; with a variety of other interesting particulars. As any infraction of the provisions of the Act incurs, in most cases, the forfeiture of heavy penalties, it should be carefully attended to both by masters and men. After declaring that the prosperity, strength, and safety of the kingdom principally depend on a large, constant, and ready supply of seamen, as well for carrying on the commerce as for the defence thereof, and that it is necessary, by all practicable means, to increase the number of such seamen, and to give them all due encouragement and protection; and that, in furtherance of this end, it is expedient to amend and consolidate the laws relating to their registration and government, the statute goes on to enact:—

Repeat of different Acts.—From and after the 31st of July, 1835, from which day this act shall take effect, the act 2 & 3 Ann. c. 6. for the increase of seamen, &c.; the act 2 G. 2. c. 36. for the better regulation, &c. of seamen in the merchant service; the act 2 G. 3. c. 31. for perpetuating the last-mentioned act, &c.; the act 31 G. 3. c. 39. for the better regulation, &c. of seamen in the coasting trade of the kingdom; the act 45 G. 3. c. 81. for amending the last-mentioned act; the act 37 G. 3. c. 73. for preventing the desertion of seamen from British merchant ships in the West Indies; the act 58 G. 3. c. 38. to extend and render more effectual the regulations for the relief of seafaring men and boys, &c., subjects of the U. K. in foreign parts; and the act 4 G. 4. c. 25. for regulating the number of apprentices to be taken on board British merchant vessels, &c.; and the act 5 & 6 W. 4. c. 88. for continuing the 59 G. 3. c. 58., for facilitating the recovery of the wages of seamen in the merchants’ service, are hereby repealed: provided that all offences committed and penalties and forfeitures incurred previous to the commencement of this act, against the provisions of the said acts, shall be punishable and recoverable under the said acts as if they had not been repealed. — § 1.

No Seaman to be taken to Sea without a written Agreement.—It shall not be lawful for any master of any ship or vessel belonging to any subject of the U. K. trading to parts beyond seas, or of any British registered ship of the burden of 80 tons or upwards employed in the fisheries of the U. K., or in trading coastwise or otherwise, to carry to sea, from this kingdom or any other place, any seaman or other person as one of his crew or complement (apprentices excepted), without first entering into an agreement in writing with every such seaman, specifying what monthly or other wages such seaman is to be paid, the capacity in which he is to act, and the nature of the voyage in which the ship is intended to be employed, so that the seaman may have some means of judging of the probable period for which he is likely to be engaged; and the said agreement shall contain the day of the month and year in which the same shall be made, and shall be signed by the master in the first instance, and by the seamen respectively at the port or place where such seamen shall be respectively shipped; and the master shall cause the same to be, by or in presence of the party who is to attest their respective signatures thereto, truly and distinctly read over to every such seaman before he shall be required to sign the same, in order that he may be enabled to understand the purport and meaning of the engagement he enters into and the terms to which he is bound. — § 2.

Regulations respecting Forms of Agreements.—In the cases of ships bound to parts beyond seas, except as herein-after provided, every agreement shall be in the form and shall contain true entries under their respective heads of the several particulars set forth in the schedule marked (A.) at the end of this act, so far as the same can be ascertained; and the owners and the master of every such ship, or one of them, shall, on reporting his ship’s arrival at her port of destination in the U. K., deposit with the collector or comptroller of customs at such port a true copy of such agreement, attested by the signature of the master, that every person interested in such agreement may at all times know the terms and conditions thereof; and in the cases of ships employed in fishing on the coasts of the U. K., and of ships regularly trading from one part of the U. K. to another, and of ships regularly trading or making regular voyages to any of the islands of Jersey, Guernsey, Alderney, Sark, and Man, or to any port on the continent of Europe between the river Elbe inclusive and Brest, the agreement to be entered into as aforesaid shall be in the form and shall contain due entries under their respective heads of the particulars set forth in the schedule (B.) at the end of this act, so far as the same can be ascertained; and the owner or one of the owners of every such ship employed in fishing or in trading in any of the cases last mentioned shall, within 10 days next after the expiration of every 6 months ending the 30th of June and the 31st of December each year, deposit with the collector or comptroller of the customs of the port to which the ship belongs a true copy of every agreement entered into with any person composing part of the crew within the preceding 6 months, attested by the signature of such owner; and all copies of agreements required to be deposited as aforesaid shall, when the same have been deposited, and be required to be produced in evidence on the part of any seaman, be received and taken as legal proof of the contents of the agreement. — § 3.

Penalty for Default.—If any master of any ship as aforesaid carry out to sea any seaman (apprentices excepted) without having first entered into the agreement hereby required, he shall for every such offence forfeit and pay the sum of 10*l.* in respect of each and every seaman carried out contrary to this act; and if any master neglect to cause the agreement to be distinctly read over to each seaman, as enjoined above, he shall for every such neglect forfeit and pay the sum of 5*l.*; and if any master neglect to deposit a copy of the agreement with the collector or comptroller of the customs as is hereby required, or shall wilfully deposit a false copy of such agreement, he shall for every such neglect or offence forfeit and pay the sum of 50*l.*. — § 4.

Seamen not to be deprived of legal Remedies, &c.—No seaman, by entering into or signing such agreement as aforesaid, shall forfeit his lien upon the ship, nor be deprived of any remedy for the recovery of his wages which seamen are now lawfully entitled to against either the ship, the master or the owners thereof; nor shall any agreement made contrary to or inconsistent with the provisions of this act, or any clause whereby a seaman shall consent to forego the right which the maritime law gives him to wages in the case of freight earned by ships subsequently lost, or containing any words to that effect, be valid or binding on any seaman signing the same; and in cases in which it may be necessary that the agreement should be produced to sustain a claim on the part of a seaman, no obligation shall lie upon the seaman to produce the same, nor shall any seaman fail in any suit or proceeding for the recovery of his wages for want of the production of such agreement, or of any deposited copy thereof as aforesaid, or for the want of any notice to produce the same; any law or usage to the contrary notwithstanding. — § 5.

Seamen refusing to join or to proceed in the Ship, &c. may be committed to Gaol.—In case a seaman shall, after having signed an agreement as before mentioned, neglect or refuse to join the ship on board of which he had engaged to serve, or refuse to proceed to sea in her, or absent himself therefrom without leave, it shall be lawful for any justice of the peace, at home or abroad, near the place, upon complaint of the fact made upon oath by the master, mate, or owner thereof, and such justice is required, by his warrant to cause such seaman to be apprehended and brought before him; and in case such seaman shall not give a reason to the satisfaction of such justice for his neglect, refusal, or absence, upon due proof thereof it shall be lawful for such justice to commit such seaman to the house of correction, to be kept to hard labour for a period not exceeding 30 days: provided that in case such seaman, on being brought before said justice, shall consent to join the ship and proceed on the voyage for which he has agreed, it shall be lawful for said justice, at the request of the master, instead of committing such seaman, to cause him to be conveyed on board the said ship, or be delivered to the master, for the purpose of proceeding on the voyage, and also to award to the master such costs as shall seem reasonable, not exceeding in any case the sum of 40s., which shall be chargeable against and may be abated from the wages to grow due to such seaman. — § 6.

Forfeiture for temporary Absence from Duty.—If any seaman, after having signed the aforesaid agreement, or after the ship on board which he has agreed to serve has left her first port of clearance, and before the period for which he has agreed to serve be completed, shall wilfully and without leave absent himself from the ship, or from his duty, he shall (in all cases not of absolute desertion, or not treated as such by the master,) forfeit out of his wages to the master or owner of such ship the amount of 2 days' pay for every 24 hours of such absence, and in a like proportion for any less period of time, or, at the option of the said master, the amount of such expenses as have been necessarily incurred in hiring a substitute to perform his work; and in case any seaman while he belongs to the ship shall without sufficient cause neglect to perform such reasonable duty as is required of him by the master or other person in command, he shall be subject to a like forfeiture in respect of every such offence, and of every 24 hours' continuance thereof; and in case a seaman, after signing such agreement, or after the ship's arrival at her port of delivery, and before her cargo be discharged, shall quit the ship without a previous discharge or leave from the master, he shall forfeit 1 month's pay out of his wages. But no such forfeitures shall be incurred unless the fact of the seaman's temporary absence, neglect of duty, or quitting the ship be duly entered in the ship's log-book, which entry shall specify truly the hour of the day at which the same shall have occurred, and the period during which the seaman was absent or neglected his duty, the truth of which entry the owner or master must, in all cases of dispute, substantiate by the evidence of the mate or some other credible witness. — § 7.

How Amount of Forfeiture is ascertained when Seamen contract for the Voyage.—In all cases where the seaman has contracted for wages by the voyage or by the run, and not by the month or other stated period of time, the amount of forfeitures incurred under this act shall be ascertained as follows; viz., if the whole time spent in the voyage agreed upon shall exceed 1 calendar month, the forfeiture of 1 month's pay, expressed in this act, shall be taken to be a forfeiture of a sum of money bearing the same proportion to the whole wages as a calendar month shall bear to the whole time spent in the voyage, and in like manner a forfeiture of 2 days' pay or less shall be accounted and taken to be a forfeiture of a sum bearing the same proportion to the whole wages as the same period of time shall bear to the whole time spent in the voyage; and if the whole time spent in the voyage shall not exceed 1 calendar month, the forfeiture of 1 month's pay shall be taken to be a forfeiture of the whole wages contracted for; and if such time shall not exceed 2 days, the forfeiture of 2 days' pay shall be accounted and taken to be a forfeiture of the whole wages contracted for; and the master is authorised to abate the amount of all such forfeitures enacted out of the wages of any seaman incurring the same. — § 8.

Forfeiture for Desertion.—Every seaman who absolutely deserts the ship to which he belongs shall forfeit to the owner or master all his clothes and effects left on board, and all wages and emoluments to which he might otherwise be entitled, provided the circumstances attending such desertion be entered in the log-book at the time, and certified by the signature of the master and mate or other credible witness; and an absence of a seaman from the ship for any time within the space of 24 hours immediately preceding the sailing of the ship without permission from the master, or for any period however short, under circumstances plainly showing that it was his intention not to return, shall be deemed an absolute desertion; and in case any such desertion take place in parts beyond seas, and the master be under the necessity of engaging a substitute for the deserter at a higher rate of wages than that stipulated in the agreement to be paid to the seaman deserting, the owner or master shall be entitled to recover from the deserter by summary proceeding, in the same manner as wages are hereby made recoverable, any excess of wages which he shall pay to such substitute beyond the amount payable to the deserter, had he duly performed his service pursuant to agreement. — § 9.

Penalty for harbouring Deserters.—If any person shall, on shipboard or on shore, harbour or secrete a seaman who has signed an agreement to proceed on a voyage to parts beyond seas, and has deserted or absented himself without leave from his ship, knowing or having reason to believe him to be a deserter or to be absent without leave, he shall for every seaman so harboured or secreted forfeit 10*l.*; and no debt exceeding 5*s.*, incurred by any seaman after he has signed any agreement as aforesaid, shall be recoverable until the voyage agreed for has been concluded; nor shall it be lawful for any keeper of a public-house, or of a lodging house for seamen to withhold or detain any chest, bed or bedding, clothes, tools, or other effects of any seamen, for any debt alleged to have been contracted by such seaman; and in case any chest, bed, &c., or other effects as aforesaid, be withheld contrary to this act, it shall be lawful for any justice of the peace in any part of H. M.'s dominions, upon complaint upon oath made by such seaman or on his behalf, to inquire into the matter, and if he see right to cause such property or effects so withheld or detained to be seized and delivered over to the seaman. — § 10.

The Period within which Wages are to be paid.—The master or owner of every ship is hereby required to pay to every seaman entered as aforesaid his wages, if the same be demanded within the periods following; viz., if the ship be employed in trading coastwise, the wages shall be paid within 2 days after the termination of the agreement, or at the time when such seaman is discharged, whichever shall first happen; if the ship be employed in trading otherwise than coastwise, then the wages shall be paid at the latest within 3 days after the cargo is delivered, or within 10 days after the seaman's discharge, whichever shall first happen; in either of which last-mentioned cases of payment being delayed, the seaman at the time of his discharge is entitled to be paid on account a sum equal to one fourth part of the estimated balance due to him; and in case any master or owner neglect or refuse to make such payment, he shall for every such neglect or refusal forfeit and pay to the seaman the amount of 2 days' pay for each day not exceeding 10 days, during which payment shall without sufficient cause be delayed beyond the period at which such wages or part wages are hereby required to be paid; for recovery of which forfeiture the seaman has the same remedies as he is entitled to for recovery of his wages: provided that nothing in this clause contained shall extend to the cases of ships employed in the southern whale fishery, or on voyages for which seamen by the terms of their agreement are compensated by shares in the profits of the adventure. — § 11.

Payment of Wages to be valid notwithstanding Bill of Sale, &c.—Every such payment of wages to a seaman shall be valid and effectual in law, notwithstanding any bill of sale or assignment made by any seaman of such wages, or of any attachment or incumbrance thereon; and no assignment or sale of wages made prior to the earning thereof, nor any power of attorney expressed to be irrevocable for the receipt of such wages, shall be valid or binding upon the party making the same. — § 12.

Masters to give Seamen Certificates on Discharge.—Upon the discharge of a seaman from ship, he

SEAMEN (CONSOLIDATION OF LAWS RELATING TO). 21

shall be entitled to receive from the master a certificate, signed by him, of his service and discharge, specifying the period of service and the time and place of his discharge; and any master refusing to give such certificate, without reasonable cause, shall for every such offence forfeit and pay to such seaman the sum of 5*l.* — § 13.

For obtaining immediate Payment of Wages of Seamen in certain Cases. — If after a seaman has been discharged from any ship or vessel 3 days he shall be desirous of proceeding to sea on another voyage, and in order thereto requires immediate payment of the wages due to him, any justice of the peace in any part of H. M.'s dominions may, on application from such seaman, and on satisfactory proof that he would be prevented from employment by delay, summon the master or owner of such ship or vessel before him, and require cause to be shown why immediate payment of such wages should not be made; and if it appear to the satisfaction of such justice that there is no reasonable cause for delay, he shall order payment to be made forthwith, and in default of compliance with such order such master or owner shall forfeit and pay the sum of 5*l.* — § 14.

*Summary Mode of recovering Wages not exceeding 20*l.** — And whereas seamen, in cases of dispute, may be exposed to great inconvenience, expense, and delay in obtaining payment of their wages; for remedy thereof it is enacted, in all cases of wages not exceeding 20*l.*, which is due and payable to a seaman for service in any ship, it shall be lawful for any justice of peace in any part of H. M.'s dominions residing near the place where the ship has ended her voyage, cleared or discharged her cargo, or near the place where the master or owner upon whom the claim is made shall be or reside, upon complaint on oath made to such justice by any seaman or on his behalf, to summon such master or owner to appear before him to answer such complaint, and upon his appearance, or in default thereof, on proof of his having been summoned, such justice is empowered to examine upon the oath of the parties and their witnesses (if there be any) touching the complaint and the amount of wages due, and to make such order for payment as shall appear reasonable and just; and in case such order be not obeyed within 2 days after making thereof, it shall be lawful for such justice to issue his warrant to levy the amount of the wages awarded as due, by distress and sale of the goods and chattels of the party on whom such order for payment shall be made, rendering to such party the overplus (if any shall remain of the produce of the sale) after deducting thereout all charges and expenses incurred by the seaman in making and hearing the complaint, as well as those incurred by the distress and levy and in the enforcement of the justice's order; and in case sufficient distress cannot be found, it shall be lawful for the said justice to cause the amount of the said wages and expenses to be levied on the ship in respect of the service on board which the wages are claimed, or the tackle and apparel thereof; and if such ship be not within the jurisdiction of such justice, then he is empowered to apprehend and commit the party upon whom the order for payment shall be made to the common goal of the county, there to remain without bail until payment of the amount of wages awarded, and of all costs and expenses attending their recovery; and the award and decision of such justice shall be final and conclusive as well on every seaman as on the owner and master of the ship. — § 15.

In what Case Costs of Suit for Recovery of Wages not to be allowed. — If any suit for the recovery of a seaman's wages be instituted against the ship, or the master or owner thereof, in the court of admiralty or in any vice-admiralty court, or in any court of record in H. M.'s dominions, and it shall appear to the judge that the plaintiff might have had as effectual a remedy for the recovery of his wages by complaint to a justice of the peace as herein-before provided, then and in every such case such judge is hereby required to certify to that effect, and thereupon no costs of suit shall be awarded to the plaintiff. — § 16.

If Ship is sold at a Foreign Port, Crew to be sent Home at the Expense of the Master or Owners. — When any ship whatever belonging to any subject of the U. K., except in cases of wreck or condemnation, is sold at any port out of H. M.'s dominions, the master in all such cases (unless the crew in the presence of the British consul or vice-consul, or if there be none such, then in the presence of 1 or more British resident merchants at such port, shall signify their consent in writing to be there discharged), is hereby required, besides paying them the wages to which they shall be entitled under the agreement, either to provide them with adequate employment on board some other British vessel homeward bound, or to furnish the means of sending them back to the port in H. M.'s dominions at which they were originally shipped, or to some port in the U. K., as shall be agreed upon, by providing them with a passage home, or depositing with the consul or vice-consul such money as he shall deem reasonably sufficient to defray the expenses of their subsistence and passage; and if the master refuse or neglect to do so, such expenses shall be a charge upon the owner whose ship is so sold, except in cases of barratry, wreck, or condemnation, and may be recovered as so much money paid and expended on his account, together with full costs, at the suit of the consul or other person defraying such expenses, or of the attorney-general, in case the same has been allowed to the consul out of the public moneys. — § 17.

Supply of Medicines to be kept on board, &c. — Every ship sailing from the U. K. to any place out of the same shall have and keep constantly on board a sufficient supply of medicines, suitable to accidents and diseases arising on voyages; and in case any default be made in providing such medicines, or in case any of the seamen receive any hurt or injury in the service of the ship, the expense of providing the necessary surgical and medical advice, and attendance and medicines which the seaman shall stand in need of until he be cured or be brought back to the U. K., shall be borne and defrayed by the owner and master of the ship, or one of them, without any deduction whatever on that account from the seaman's wages. — § 18.

Sections 19 and 20 provide for the establishment of an office at the Custom-house, London, for the general register of merchant seamen, consisting of a registrar, &c., under the direction of the lords of the admiralty; and authorise letters and packets, on the business of the office, addressed to the registrar, to go free of postage.

Masters of Ships to deliver Lists of their Crews on their Return. — Whereas by the act 4 & 5 W. 4. c. 52. (see post, p. 28.), a certain book by way of muster-roll is required to be kept on board merchant ships; and whereas it is expedient for the better effecting the objects of this act, that a return should be made to the registrar of merchant seamen of many of the said particulars, it is enacted, that the master of every British ship bound to parts beyond seas, except in the cases herein-after provided, shall not only keep the book required by the said recited act, but shall, on reporting his ship on her arrival at her port of destination in the U. K., deliver to the collector or comptroller of customs at such port an account, signed by himself, of all the seamen and others, including apprentices, who have belonged to the ship at any time during her absence from the U. K., containing a true and correct return under their respective heads of the several particulars expressed in the form set forth in the schedule marked (C.), at the end of this act. — § 21.

Masters of Ships in the Home Trade to return like Lists. — Within 21 days after the 30th of June and the 31st of December in each year, the owner or one of the owners of every ship employed in fishing on the coasts of the U. K., or in regularly trading from one part of the U. K. to another, and of every ship regularly trading to any of the islands of Jersey, Guernsey, Alderney, Sark, and Man, or to any port on the continent of Europe between the river Elbe inclusive and Brest, shall deposit with the collector or comptroller of the customs of the port to which the ship belongs, or with the registrar in London, an account, signed by the owner, or master, of the voyages in which such ship has been engaged during the half year ending on the days above mentioned, and setting forth the Christian and surnames of the several persons (including the master and apprentices) who belonged to the ship at any time during such periods, which account shall be in the form and shall contain a true and correct return, under their respective heads, of the several particulars expressed in the schedule marked (D.), at the end of this act. — § 22.

22 SEAMEN (CONSOLIDATION OF LAWS RELATING TO).

Return to be made in case of Ship lost or sold Abroad. — In case any ship be lost or sold while absent from the U. K., then an account containing a similar return as in the cases before mentioned, made out up to the period of such loss or sale, by the persons who were at that time owner and master thereof, or by one of them, shall be transmitted to the registrar in the port of London so soon as he shall be able to make such return after the loss, and within 12 calendar months at farthest after the sale of the ship.

— § 23.

Lists to be certified, &c. — The said accounts and returns required by this act to be delivered to the collector or comptroller of customs, shall be transmitted by them to the registrar; and every owner or master of a ship who shall refuse or wilfully neglect to deliver such list or account as is hereby required, shall for every such refusal or neglect forfeit and pay the sum of 25l. — § 24.

Disposal of the Effects of Seamen dying Abroad. — Whenever a British seaman abroad dies elsewhere than on board a British ship, leaving any money or effects within the limits of any British consulate, H. M.'s consul there is hereby required to claim and take charge of such money and effects, and to dispose of the effects for the benefit of the next of kin of the deceased or other person who may be entitled to the same; and in case no claim be made to the same within 3 calendar months after the death of such seaman, the consul shall, after abating the amount of any expenses incurred in getting in the assets of the deceased, remit the balance of such monies as either have arisen or shall hereafter arise to the president and governors of the corporation "for the relief and support of sick, maimed, and disabled seamen, and of the widow and children of such as shall be killed, slain, or drowned in the merchant service," to be by them paid over and disposed of in the manner and under the regulations provided by the act 4 & 5 W. 4. c. 52; and in case any seaman dying as last mentioned leave on board the ship to which he belonged any monies, clothes, or other effects, and the same be not claimed, within 1 month after the ship's return to the U. K. by the executor or administrator of the deceased, then the master of the ship is hereby required to deposit the same or the proceeds arising therefrom with the president and governors aforesaid, to be disposed of in the manner provided by the said act with respect to the wages of deceased seamen. — § 25.

Parish Boys may be put out Apprentices in the Sea Service. — Overseers of the poor or other competent persons are hereby empowered to bind by indenture and put out any boy having attained the age of 13 years, and of sufficient health and strength, who or whose parent or parents is or are maintained by any parish or township, or who shall beg for alms therein, with his consent, but not otherwise, an apprentice in the sea service to any of H. M.'s subjects being master or owner of any ship registered in any port of the U. K., for so long time and until such boys shall respectively attain the age of 21 years, which binding shall be as effectual as if such boy had been bound by virtue of any statute now in force respecting the binding of parish apprentices, or as if such boy were of full age and had bound himself an apprentice, and notwithstanding the residence of the master or owner to whom he may be bound be more than 40 miles distant from such parish or place: provided that every such binding shall be made in the presence of 2 justices acting for the county, riding, borough, or place within which such parish or township is situate, which justices shall execute the indenture in testimony of their being satisfied that such boy hath attained the age and is of sufficient health and strength as required by this act; and that the period when the service under such indenture shall expire may the more certainly appear, the age of every such boy shall be inserted in his indenture, the same being truly taken from the entry of his baptism in the register book of the parish in which he was born (where the same can be obtained), a copy of which shall be given and attested by the officiating minister of such parish without fee or reward; and where no such entry of baptism can be found the justices shall inform themselves as fully as they can of the boy's age, and from such information shall insert the same in his indenture, and the age of every such boy so inserted therein shall (in relation to the continuance of his service) be taken to be his true age without any further proof thereof. — § 26.

Parish Apprentices may be turned over to the Sea Service. — It shall be lawful for any person to whom any parish apprentice is bound to a service on shore according to the statutes already in force relating to such apprentices, or for the executors or administrators; or, there being none such, for the widow of any such deceased person, with the concurrence of two or more justices residing in or near to the place where such poor boy shall be bound apprentice, to assign and turn over such boy, with his consent, but not otherwise, apprentice to any master or owner of any ship not having her complement of apprentices as herein required, to be employed by such master or owner in the sea service during the unexpired period of his apprenticeship. — § 27.

Indentures may be assigned on the Death of the Master. — In the event of the death of the master of any parish apprentice to the sea service, it shall be lawful for the widow, executor or administrator of such deceased master to assign his indenture for the residue of the unexpired term to any master or owner of any ship not having the complement of apprentices herein required; all which assignments, if executed within the port of London, shall be attested by the registrar or one of his assistants or clerks, and if at any other port by the collector or comptroller of the customs thereof. — § 28.

Parish Officers to prepare Indentures. — Such overseers, &c. shall cause the indentures of apprenticeship to be prepared and transmitted in duplicate, if the master or owner of the ship to whom such apprentice is bound be or reside within the limits of the port of London, to the registrar, and if at any other port to the collector or comptroller of customs at such port; and the said overseers or other persons shall cause each poor boy to be conducted and conveyed to such port or place by the constable and at the expense of the parish or township sending him thither, and shall also, upon the execution by the master of the counterpart of the indentures, cause to be paid down to the master the sum of 5l., to be expended in providing such boy with necessary sea clothing and bedding; which sum, with the other expenses, are to be allowed in their accounts in relation to the poor. — § 29.

How Counterparts of Indentures to be attested. — The counterparts of all indentures shall, if the master be or reside within the limits of the port of London, be executed in the presence of and attested by the registrar or one of his assistants or clerks, and if at any other port by the collector or comptroller of the customs at such port, and also in both cases by the constable or other officer who shall convey such apprentices thither, and such indentures shall bear date respectively on the days on which they are executed; and the constable on his return shall deliver such counterpart to the overseers or other competent persons to be registered and preserved. — § 30.

Every Ship to have Apprentices according to her Tonnage. — The master of every ship belonging to any subject of the U. K., and of the burden of 80 tons and upwards, shall have on board, at the time of clearing out from any port of the U. K., 1 apprentice or more, in the following proportions to the ship's measurement, according to the certificate of registry; viz., every ship of 80 tons and under 200 tons shall have 1 apprentice at the least, every ship of 200 tons and under 400 tons shall have 2 apprentices at the least, every ship of 400 tons and under 500 tons shall have 3 apprentices at the least, every ship of 500 tons and under 700 tons shall have 4 apprentices at the least, and every ship of 700 tons and upwards shall have 5 apprentices at the least, all of whom at the period of their being bound shall have been under 17 years of age, and shall have been duly bound for the term of 4 years at the least; and if any master neglect to have on board his ship the number of apprentices hereby required, he shall, for every such offence, forfeit and pay the sum of 10l. in respect of each apprentice so deficient. — § 31.

Apprentices exempt from Contributions. — No apprentice bound or assigned pursuant to this act, nor any master or owner in respect of any such apprentice, shall be liable to the payment of any contribution for the support of any hospital or institution. — § 32.

Indentures and Assignments to be registered. — The registrar in London, and the collector and comptroller of customs at each other port, shall, in a book to be kept for that purpose, enter all indentures

and assignments of parish apprentices, specifying the dates thereof, the names and ages of the apprentices, the parishes or places from whence sent, the names and residences of the masters to whom bound or assigned, and the names, ports, and burden of the respective ships to which such masters belong, and shall make and subscribe on each indenture or assignment an indorsement purporting that the same hath been duly registered pursuant to this act; and every collector and comptroller shall also at the end of each quarter of the year transmit a list of the indentures and assignments registered by him within the preceding quarter, containing all the particulars aforesaid, to the registrar in London. — § 33.

Indentures of Apprentices to be registered. — In every case of a person voluntarily binding himself apprentice to the sea service, the indentures to be executed on such occasions shall be registered in a book to be kept for that purpose by the registrar in London, and by the collector and comptroller of customs at each other port at which the indenture shall be executed, in which book shall be expressed the dates of the several indentures, the names and ages of the apprentices, the names and residence of their masters, and (if known) the names, port, and burden of the several ships on board which they are to serve; and such registrar and collector or comptroller shall indorse and subscribe upon each indenture a certificate purporting that the same hath been duly registered pursuant to this act, and the said collector and comptroller shall also at the end of each quarter of the year transmit a list of the indentures so registered by them within the preceding quarter, containing all the particulars aforesaid, to the said registrar, for the purposes of this act; and it shall be lawful for the master, or his executor or administrator, with the consent of the apprentice if of the age of 17 years or upwards, and if under that age with the consent of his parent or guardian, to assign or transfer his indenture to any other master or owner of any registered ship; and all such voluntary apprentices may, during the term for which they are bound, be employed in any ship of which the master of any apprentice is master or owner: provided that every such assignment be registered and indorsed by the said registrar, or by the collector or comptroller of customs at the port where the master is resident, or to which his ship belongs, in which latter case the said collector or comptroller shall notify the same to the registrar as is provided with regard to the indenture of such apprentice. — § 34.

No Stamp Duty on Agreements. — Agreements with the crew of a ship made in conformity with this act, and all indentures of parish and voluntary apprentices to the sea service, and all counterparts and assignments of such indentures executed after the passing of this act, shall be wholly exempt from stamp duty. — § 35.

Penalty on Masters neglecting to register Indentures, &c. — If any master to whom any apprentice mentioned in this act shall be bound or assigned neglect to cause the indenture or the assignment thereof (as the case may be) to be registered as required by this act, or shall, after the ship has cleared outwards on the voyage upon which such ship may be bound, suffer his apprentice to quit his service (not entering into that of H. M.), except in case of death, desertion, sickness, or other unavoidable cause, to be certified in the log-book of the ship, every such master shall for every such offence forfeit and pay the sum of 10*l.* — § 36.

Justices to determine Complaints. — Two or more justices residing at or near to any port at which any ship, having on board any sea apprentice, shall at any time arrive, shall have full power and authority to inquire into and examine, hear and determine, all claims of apprentices upon their masters under their indentures, and all complaints of hard or ill usage exercised by their masters towards their apprentices, or of misbehaviour on the part of any apprentice, and to make such orders therein as they are empowered to do in other cases between masters and apprentices. — § 37.

Common Assaults may be summarily punished by 2 Justices. — In case of any assault or battery which shall, after the commencement of this act, be committed on board any British merchant ship in any place at sea, or out of H. M.'s dominions, it shall be lawful for any 2 justices in any part of H. M.'s dominions, upon complaint of the party aggrieved, to hear and determine any such complaint, and to proceed and make such adjudication thereon as any 2 justices are empowered to do by the act 9 Geo. 4, c. 31, subject however to such provisos and limitations as are contained in the said act with respect to the cases of assault and battery therein mentioned; and the fine or forfeiture to be imposed in such case shall be payable to the Merchant Seamen's Hospital or institution at or nearest to the port or place where such adjudication is made. — § 38.

Masters entitled to receive the Wages of Apprentices entering into the Navy. — No parish or voluntary apprentice to the sea service shall be at liberty to enter into H. M.'s naval service during his apprenticeship without the consent of his master; but if nevertheless he voluntarily enter on board any of H. M.'s ships of war, and be allowed by his master to continue therein, such master, in case he give notice to the secretary of the admiralty of his consent to his apprentice remaining in H. M.'s service during the residue of his apprenticeship, shall, upon the production of his indenture, be entitled, at the time of paying off the ship, to receive to his own use any balance of wages that may be then due and payable to such apprentice up to the period of expiration of his indenture. — § 39.

Facing on Shore, &c. any Person belonging to the Crew a Misdemeanor. — If any master of a British ship force on shore and leave behind, or shall otherwise wilfully and wrongfully leave behind on shore or at sea, in any place in or out of H. M.'s dominions, any person belonging to his crew, before the arrival of such ship in the U. K., or before the completion of the voyage or voyages for which such person was engaged, whether such person have formed part of the original crew or not, every person so offending shall be deemed guilty of a misdemeanor, and shall suffer such punishment by fine or imprisonment, or both, as to the court before which he is convicted shall seem meet; and the said offence may be prosecuted by information at the suit of the attorney-general, or by indictment or other proceeding in any court of criminal jurisdiction in H. M.'s dominions at home or abroad, where such master or other person shall happen to be, although the place where the offence may have been committed be out of the ordinary local jurisdiction of such court; and such court is hereby authorised to issue a commission for the examination of any witnesses absent or out of its jurisdiction; and at the trial the depositions so taken, if such witnesses be then absent, shall be received in evidence. — § 40.

Seamen not to be discharged Abroad, without Sanction. — No master shall discharge any individual person of his crew, whether British subject or foreigner, at any of H. M.'s colonies or plantations, without the previous sanction in writing of the governor, lieutenant-governor, secretary, or other officer appointed in that behalf by the government there, or in the absence of all such authorities at or near the port or place at which the ship is then lying, then of the chief officer of customs resident at or near to such port or place; nor shall he discharge any person at any other place abroad without the like previous sanction in writing of H. M.'s minister, consul, or vice-consul there, or in the absence of any such functionary, then of two respectable merchants resident there; all which functionaries are hereby required, and all which merchants are hereby authorised, in a summary way to inquire into the grounds of such proposed discharge by examination on oath, and to grant or refuse such sanction according to their discretion, having regard to the objects of this act. — § 41.

Not to be left Abroad on the Plea of Incapacity to proceed. — No master shall be at liberty to leave behind abroad, either on shore or at sea, any person of his crew, on the plea of such person not being in a condition to proceed on the voyage, or having deserted from the ship, or otherwise disappeared, unless upon a previous certificate in writing of one of such functionaries or merchants as aforesaid, if there be any such at or within a reasonable distance from the place where the ship shall then be, if there be time to procure the same, certifying that such person is not in such condition, or has deserted or disappeared, and cannot be brought back; and all such functionaries are hereby required, on the application of any such master, to inquire by examination on oath into the circumstances, and to give or refuse such certificate according to the result of such examination. — § 42.

24 SEAMEN (CONSOLIDATION OF LAWS RELATING TO).

If any of the Crew are left behind, the Proof of Sanction shall be on the Master.—If any master shall leave behind any one of his crew contrary to this act, in any indictment or proceeding, the proof of his having obtained the sanction or certificate aforesaid shall be upon him, it being the intention hereof that, except in the case of entering into H. M.'s naval service, no person of the crew shall be discharged, either with or without his consent, in any place abroad where such functionary can be found, unless he have given his sanction thereto.—§ 43.

Seamen when allowed to be left behind to be paid their Wages.—Every master who shall leave any person of his crew on shore at any place abroad, under certificate of his not being in a condition to proceed on the voyage, shall deliver to one of the said functionaries, or if there be none such to any two respectable merchants there, or if there be but one then to such one merchant, a just and true account of the wages due to such person, and pay the same to the seaman, either in money or by a bill drawn upon the owner of his ship; and if by bill, then such functionary or merchant, is hereby required by certificate indorsed on such bill to testify that the same is drawn according to this act for money due on account of wages of a seaman, or to that effect; and any master who shall deliver a false account, or refuse or neglect to deliver a just and true account of the wages due to such person, and to pay the amount in money or by bill as aforesaid, shall for every such offence forfeit and pay, in addition to the wages due, the penal sum of 25*l.*—§ 44.

Act not to prevent Seamen from entering into the Navy.—Nothing in this act or in any agreement shall prevent any seaman or person belonging to any merchant ship whatever from entering or being received into H. M.'s naval service, nor shall any such entry be deemed a desertion from the merchant ship, nor incur any penalty or forfeiture whatever, either of wages, clothes, or effects, or other matter or thing, notwithstanding any agreement made to the contrary; and all masters and owners of ships are strictly prohibited from introducing into any ship's articles or agreement with the crew any clause or matter by which any penalty or forfeiture of any kind is agreed to be incurred by a seaman upon his entry into H. M.'s service.—§ 45.

Seamen entering into the Navy from Merchant Ships entitled to the immediate Delivery of Clothes, &c.—When any seaman quits a merchant ship in order to enter into H. M.'s naval service, and is actually received into such service, not having previously committed any act amounting to and treated by the master as a total desertion, he shall be entitled immediately upon entry to the delivery up of all his clothes and effects on board such merchant ship, and (in case the ship shall have earned freight) to receive from the master the payment of the proportionate amount of his wages up to the period of such entry, in money or by a bill on the owner; all which clothes, effects, money, and bill such master is required to deliver up to him accordingly, under a penalty of 25*l.* for any refusal or neglect, to be recovered with full costs of suit, by such seaman: provided, that if no freight have been earned at the time of such entry, then the master shall be required to give the seaman so entering a bill upon the owner for his wages to the period of such entry, payable on the ship's safe arrival at her destined port; but in case the master shall have no means of ascertaining the balance justly due, he shall make out and deliver to such seaman a certificate of the period of his services and the rate of wages he is entitled to, producing at the same time to the commanding officer of H. M.'s ship the agreement entered into with the seaman for the voyage; and every master, upon the delivery up of such clothes and effects, and the settlement, as now directed, of such wages, shall be entitled to receive from the officer in command of H. M.'s ship into which such seaman has entered, a certificate signed by the officer, which he is hereby required to give upon the request of the master, testifying that such seaman has entered into H. M.'s ship to serve, as proof that the master had not parted with the seaman contrary to the provisions of this act.—§ 46.

Power to H. M. to sue for the Amount advanced for Seamen left Abroad.—In all cases where any master has forced on shore or left behind any person against the provisions of this act, and such person shall become distressed and be relieved under the provisions of the act 11 Geo. 4. c. 20., or under any act hereafter to be passed, then, in addition to the wages due from, and the penalties imposed on such master, H. M. shall be entitled to sue him or the owner of the ship, at the option of the lords of the admiralty, for all charges and expenses incurred on the subsistence, necessary clothing, and conveyance home of such person, as so much money paid and expended to the use of the defendant, which, together with full costs of suit, may be recovered in the same manner as other debts due to H. M. are recoverable; and in any proceeding for that purpose proof of the account furnished to the said commissioners by any one of such functionaries, or by such two merchants or one merchant, according to the case, as provided by the said act of the 11 Geo. 4. c. 20., shall, together with proof of payment by the said lords or by the treasurer of the navy, of the charges incurred on account of such person, be sufficient evidence that he was relieved and conveyed home, at H. M.'s expense; and the court in which any proceeding for the recovery of the said money is instituted is authorised to issue a commission for the examination of witnesses abroad, and the depositions so taken shall be received as evidence.—§ 47.

Ship's Agreement on Arrival at a Foreign Port to be deposited with the Consul.—Every master of a British ship, on his arrival at any foreign port, where there is a British consul or vice-consul, shall deliver to such functionary the agreement with his ship's crew, to be preserved by him during the ship's stay there, and to be returned to the master before his leaving the port, without any fee or charge for the same; and if any master refuse or neglect to deliver such agreement to the consul or vice-consul, as is hereby required, he shall for every such offence forfeit and pay the sum of 25*l.*—§ 48.

No Seaman to be shipped at a Foreign Port without the Privity of the Consul.—During the ship's stay at any foreign port no seaman shall be shipped by any master except with the privity of the consul or vice-consul, indorsed or certified on the agreement, under a penalty of 25*l.* for every seaman shipped in breach of this act.—§ 49.

Masters to produce Agreements to Officers of King's Ships.—The master of every British ship is hereby required to produce and show the muster-roll of the ship, and the agreement with his crew, to the captain, commander, or other commissioned officer of any of H. M.'s ships requiring a production and sight thereof; and it shall be lawful for any such officer in H. M.'s naval service, if he think it necessary, to muster the crew and passengers (if any) of any British ship, in order to be satisfied that the provisions of this act, and the laws relating to navigation with respect to the crews of merchant ships, have been duly complied with; and if any master shall, upon being required by any such officer, neglect or refuse to produce the muster-roll or agreement, or obstruct any officer in mustering the said crew or passengers, or produce any false muster-roll, he shall for every such offence forfeit and pay the sum of 25*l.*—§ 50.

Registrar and Officers of Customs empowered to require Production of the Agreement, &c.—For the better carrying into effect the purposes of this act it shall be lawful for the registrar and his assistants, and also for the collectors or other chief officers of customs, at the several ports of the U. K. and of the British possessions abroad, to demand from the master of every ship required to enter into an agreement with his crew, the production of the muster-roll of the ship, and also of such agreement, with liberty to take a copy of either or both, and to muster the crew and apprentices of such ship, for the purpose of ascertaining whether the provisions of this act, and of the laws relating to navigation, have been complied with; and if any master, on such demand being made, refuse or neglect to produce such muster-roll or agreement, or refuse to allow a copy of either document to be taken, or refuse to permit, or prevent his crew and apprentices from being mustered, he shall for every such neglect, refusal, or offence, forfeit and pay the sum of 50*l.*—§ 51.

Definition of the Terms Master, Seaman, Ship, and Owner.—Every person having the charge or command of any British ship shall, within the meaning and for the purposes of this act, be deemed and taken to be the master of such ship; and every person (apprentices excepted) employed or engaged to serve in

Place and Time of Entry.			Men's Names.	Age.	Place of Birth.	Quality.	Amount of Wages per Calendar Month, Share, or Voyage.	Witness to Signature.	Name of Ship in which the Seamen last served.
Day.	Month.	Year.							

Note.—Any embezzlement or wilful or negligent loss or destruction of any part of the ship's cargo or stores may be made good to the owner out of the wages (so far as they will extend) of the seaman guilty of the same; and if any seaman shall enter himself as qualified for a duty to which he shall prove to be not competent, he will be subject to a reduction of the rate of wages hereby agreed for in proportion to his incompetency.

SCHEDULE (C.)

Ship _____, of the Port of _____, whereof _____ was Master.
 A List of the Crew (including the Master and Apprentices) at the Period of her sailing from the Port of _____, in the United Kingdom, from which she took her first Departure on her Voyage to _____, and of the Men who joined the Ship subsequent to such Departure and until her Return to the Port of _____, being her Port of Destination in the United Kingdom.

Name.	Age.	Place of Birth.	Quality.	Ship in which he last served.	Date of joining the Ship.	Place where.	Time of Death or leaving the Ship.	Place where.	How disposed of.

Note.—If any one of the crew has entered his Majesty's service, the name of the king's ship in which he entered must be stated in the account under the head of "How disposed of."

Note.—This list, to be filled up, and being signed by the master, is to be delivered by him to the collector or comptroller of the customs, on reporting his ship inwards, on her arrival at her port of destination in the United Kingdom.

SCHEDULE (D.)

An Account of the Voyages in which the Ship _____, of _____, has been engaged in the Half Year commencing on the _____ Day of _____, One thousand eight hundred and _____, and ending on the _____ Day of _____, One thousand eight hundred and _____, and of all the Persons (Master and Apprentices included) who have belonged to such Ship during that Period.

ACCOUNT OF THE VOYAGES.

[Here the several Voyages and the Periods of such Voyages are to be described.]

ACCOUNT OF THE CREW.

Name.	Age.	Place of Birth.	Quality.	Ship in which he last served.	Date of joining the Ship.	Place where.	Time of Death or leaving the Ship.	Place where.	How disposed of.

Note.—If any one of the crew shall have entered his Majesty's service, the name of the king's ship in which he entered must be stated in his account under the head of "How disposed of."

Note.—This account, when filled up, is to be signed by the owner, and deposited with the collector or comptroller of the customs of the port to which the ship shall belong, or with the registrar of merchant seamen in London.

SEAMEN (ESTABLISHMENT FOR).—The reader will find in the body of this work, p. 1015., a notice of the corporation established by the act 20 Geo. 2. c. 38. for the relief and support of maimed and disabled merchant seamen, and of the widows, children, &c. of such seamen as were killed or drowned in the merchant service. But, as the funds at the disposal of the corporation have been very limited, it has not been much heard of. Under previous acts, 6*d.* per month was deducted from the wages of all seamen in the merchant service; the produce of which assessment was paid over to the trustees of Greenwich Hospital, in the benefit of which institution such seamen were to be allowed to participate. But this arrangement has latterly been much objected to, and apparently not without good reason; for it appears from the official returns (*Dict.* pp. 1016, 1017.), that, though the contributions from merchant ships to Greenwich Hospital in 1828 and 1829 exceeded 20,000*l.* a year, there was not on the establishment a single individual who had been exclusively employed in the merchant service! The heavy expenses attending the collection of the duty were, also, much objected to.

*Repeal of the 6*d.* a Month Greenwich Duty.*—To obviate these complaints, the 4 & 5 Will. 4. c. 34. directs that the contribution of 6*d.* per month by seamen in the merchant service to Greenwich Hospital shall cease from the 1st of January, 1835; and that 20,000*l.* a year shall be advanced from the consolidated fund to the Hospital, to make good the deficiency caused by the cessation of such contribution.

New Establishment for Support of Merchant Seamen, &c.—And to provide still more effectually for the relief and support of maimed and disabled merchant seamen, and

of the widows, &c. of those killed or drowned in the merchant service, the act 4 & 5 Will. 4. c. 52. has been passed. This act repeals the 20 Geo. 2. c. 38., except in so far as it relates to the establishment of the corporation of president and governors for the relief of maimed, &c. merchant seamen, and of the widows and children of seamen killed or drowned in the merchant service; and it also repeals as much of the act 37 Geo. 3. c. 73. as relates to the wages of seamen dying while employed in ships trading to the West Indies. Having thus cleared the way for a new system, it goes on to enact :—

President and Governors empowered to relieve disabled Seamen, &c.—The said president and governors and their successors are authorised to provide, in their hospital, for such seamen as are rendered incapable of service by sickness, wounds, or other accidental misfortunes, and those who shall become decrepit or worn out by age, or to allow them certain pensions, or otherwise, as the president and governors deem meet and most for the advantage of the said charity; and also to relieve the widows and children of such seamen as shall be killed, slain, or drowned in the said service; and also to relieve the widows and children of seamen dying after having contributed during a term of 21 years to the funds of this corporation: provided such children are not of the age of 14 years, or if of that age or upwards, not capable of getting a livelihood by reason of lameness, blindness, or other infirmities, and are proper objects of charity; and also to relieve the widows and children (such children being proper objects of charity) of such seamen as at the time of their death shall have been receiving or been entitled to pensions, under and by virtue of this act, from the fund hereby to be created, as decrepit or worn-out seamen: provided that no widow shall be entitled to any benefit under this act, who shall not have been the wife of such seaman or pensioner before he became entitled to relief under its provisions: provided nevertheless, that no seaman shall be entitled to any provision or benefit of this act, on account of any hurt or damage received on board any ship or vessel, unless he produce, or cause to be produced, a certificate of the said hurt or damage from the master, mate, boatswain, and surgeon, or so many of them as were in the vessel to which he belonged at the time of his receiving such hurt or damage, or of the master and 2 of the seamen, if there be no other officer, or in case the master shall die, or be killed or drowned, then of the person who shall take upon him the care of the ship or vessel, and 2 of the seamen on board the same, under their hands and seals, thereby signifying how and in what manner such seaman received such hurt or damage, whether in fighting, defending, working, loading, or unloading the said ship or vessel, where and when he entered, and how long he had served on board the same; and the parties so signing and sealing such certificate are hereby required to make oath to the truth thereof before some justice of the peace, if given in Great Britain or Ireland, or the chief officer of the customs of the port or place where there is no justice of the peace, or before the British consul or resident in any foreign country where such certificate is executed (who are respectively authorised and required to administer the same without fee or reward); and in case of sickness, whereby such seaman shall be rendered incapable of service, a certificate signed, sealed, and authenticated in like manner, signifying that he was healthy when he entered on board such ship or vessel, and that such sickness was contracted on board the same, or on shore in doing his duty in the service of the ship, and not otherwise, and expressing the time and place he entered on board such ship or vessel, and how long he had served therein; and that no widow, child, or children of any seaman killed, slain, or drowned in the said service, shall be relieved or entitled to any allowance by virtue of this act unless she or they, or some person on her or their behalf, shall produce a certificate, signed, sealed, and authenticated in like manner, signifying how and in what manner such seaman lost his life in the service of the said ship or vessel, the time and place he entered on board, and how long he had served therein; and that no widow, child, or children of any seaman in the said service shall be entitled to any relief by virtue of this act, unless she or they shall produce, or cause to be produced, a certificate under the hands and seals of the minister and churchwardens and overseers of the poor of the parish, township, or place, or any 2 of them, or under the hands and seals of the minister and overseers of the poor of the parish, township, or place, or any 2 of them, where there are no churchwardens, or if in Scotland, by the minister and elders, or if in Ireland, by a justice of the peace for the parish, township, or place where such widow, &c. shall at the time reside, and if such widow, &c. are some of the people called Quakers, then by any 2 reputable persons of that persuasion, of the parish, township, or place where such widow, &c. have a legal settlement, or do inhabit and reside, to be attested by 2 or more credible witnesses, that such widow was the lawful wife and real widow, and that such child or children was or were the lawful child or children of such deceased seaman as aforesaid, and that such child or children is and are under the age of 14 years, or if of that age or upwards, not capable of getting a livelihood by reason of lameness, blindness, or other infirmities, and is or are proper objects of charity; and that no seaman shall be provided for by a pension or otherwise, as decrepit or worn out, unless he have served in the merchant service for the space of 5 years, and have during that time paid the monthly duty out of his wages, imposed by the act 20 Geo. 2. c. 38., or by this act required to be henceforward paid and deducted, as the case may happen, for the uses and purposes herein provided. — § 2.

Forgery of Certificate.—Forged certificates to be null and void; and those knowingly using them to be liable to the punishment of an incorrigible rogue. — § 3.

Courts.—The president and 5 assistants to make a court, who are to meet weekly. The court may apply the monies of the corporation, and appoint the officers and their salaries, and do all other matters and things necessary. — § 4.

All Masters and Owners of Merchant Ships or Vessels, &c. to pay 2s. per Month.—For effecting the ends and purposes aforesaid, every master of any merchant ship or vessel belonging to any British subject, and every owner, being a British subject, navigating or working his own ship or vessel, whether the said ship or vessel be employed on the high sea, or coasts of Great Britain or Ireland, or in any port, bay, or creek of the same, shall, from and after the 31st day of December, 1831, pay 2s. per month, and proportionably for a lesser time, during the time he or they shall be employed in such merchant ship or vessel, for the uses and purposes aforesaid: provided always, that such masters or owners, or their widows and children under 14 years of age, or being objects of charity as aforesaid, shall be entitled to a proportionate increase of the pension or allowance, by this act provided, according to the difference between the amount of the monthly duty paid by other seamen, mariners, and pilots, in case such master or owner shall have paid the 2s. per month for a period of 5 years or 60 months before any application to the said president and governors for relief under this act; but in case any such master or owner be killed or drowned, or become decrepit, maimed, or disabled, before he or they shall have paid such increased rate of 2s. per month for the full period of 5 years or 60 months as aforesaid, then such masters or owners, or their widows and children, shall be entitled to such smaller pension or allowance as the said president and governors, or the trustees to be appointed, shall think fit. — § 5.

All Seamen, or other Persons serving on board such Ships or Vessels, to pay 1s. per Month.—Every seaman or other person whatsoever who shall serve or be employed in any merchant ship, or other private ship or vessel, belonging to any British subject, whether employed on the high sea, or coasts of Great Britain or Ireland, or in any port, bay, or creek of the same, and every pilot employed on board any such ship or vessel, shall, from and after the 31st day of December, 1831, pay 1s. per month, and proportionably for a lesser time, during the time he or they shall be employed in or belong to the said ship or vessel, for the uses and purposes aforesaid: provided that this act shall not be construed to extend to any person

employed in taking fish, in any boat upon any of the coasts of Great Britain or Ireland, or the islands of Guernsey, Jersey, Alderney, Sark, and Man, nor to any person employed in boats or vessels that trade only from place to place within any river of Great Britain or Ireland. — § 6.

Masters of Ships to keep in their Hands 1s. per Month out of Seamen's Pay. — The master, owner, or commander of every such merchant or private ship or vessel is hereby required to deduct out of the wages, shares, or other profits payable to seamen or other persons employed on board such ship or vessel (other than those hereby excepted), the said monthly duty, and shall pay the same, together with the amount of the duty owing from himself, to such officer or officers as shall be lawfully appointed at any of the out-ports for collecting the said duty of 1s. per month, if such seamen or other persons be entitled to any such wages, shares, or profits. — § 7.

Appointment of Receivers. — President and governors, with the concurrence of commissioners of customs, to appoint such persons to receive the monthly duties at the out-ports as they may think fit, making them a reasonable allowance for their trouble, which is not, however, in any case, to exceed 5 per cent. on the gross sum collected. — § 8.

Muster Roll. — Every master is to keep a true and faithful muster roll of the crew of his ship, specifying in writing the name of every one of the crew, including apprentices, with the various particulars as to the place of each person's birth, the place and time of his entry to the ship, the place and time of his discharge from or leaving the same, and if he be discharged or left, with the other particulars specified in the subjoined formula, in the event of his being hurt, killed, &c. : —

A List and Account of the Crew (including the Master and Apprentices) of the Ship _____, of the Port of _____, whereof _____ is Master, at the Period of her Departure from the Port of _____ in the United Kingdom, and on her Return to the Port of _____ in the United Kingdom, and also of those who have joined the Ship at any Time during the Voyage.

Men's Names.	Place of Birth.	Place and Time of Entry.			Place and Time of Discharge, or leaving the Ship.			When and where received hurt or damaged.	When or where killed or drowned, or if deceased, of what cause.	Wages due at Time of Death.	What Clothes or other Effects any deceased Man has left.	Amount of Monthly Duty.
		Day.	Month.	Year.	Day.	Month.	Year.					
										L. s. d.		

Duplicates of this account are to be delivered to the collectors of the duties at the port where the vessel discharges; and any master or commander neglecting to keep such muster roll, and neglecting or refusing to deliver it to the collectors of the duties, shall forfeit for every such offence the sum of 5*l*. The collectors are to transmit to the president and governors the duplicates received from such vessels as do not belong to the port of discharge; and the latter are to transmit them to the same. Collectors neglecting to transmit such duplicates incur a penalty of 5*l*. — § 9.

Masters to deduct Penalties from Wages. — The master of every ship coming within the provisions of this act shall deduct out of the wages of the seamen thereof the amount of all forfeitures incurred by any such seamen, and every master is hereby required truly to enter the same in a book to be kept by him for that purpose, which shall be signed by the master and the person next in command, both of them certifying that it contains all the forfeitures which have been incurred by the seamen of the ship during the voyage, to the truth whereof the master shall make oath when required before the officer of the president and governors in London, or before their collectors at the out-ports; and the said book, or a true copy thereof signed and certified as aforesaid, shall, within 1 calendar month after the ship's return from her voyage, be delivered to the said officer by the master, together with extracts from the log-book of the entries therein of the causes of the several forfeitures; and every master who shall refuse or neglect to deliver such account shall forfeit and pay the sum of 20*l*. — § 10.

Examination of Masters, &c. — Collectors may summon masters of vessels, and examine them upon oath as to the truth of the muster rolls; masters refusing to appear or to answer, to forfeit 10*l*. — § 11.

Regulations as to Government Ships. — Secretaries, &c. of public government offices to give in a list of ships and vessels employed in their service, and of the seamen or other persons employed in such ships or vessels; and the treasurers, &c. of such offices are to pay no wages or freight to any master, &c. until he produce an acquittance signed by receiver of duties. — § 12.

Payment of Duties. — The said monthly duties are to be paid at the port where the ship or vessel unloads her cargo, before she be cleared inwards; and all officers are interdicted from granting any cockets, transire, &c., or permitting any vessel to go out of any port, unless it appear by the acquittances of the collectors of the said duties that they are not more than 3 months in arrear of the same; every officer acting contrary to this regulation to forfeit 10*l*. But masters or owners may agree with the trustees and collectors for half-yearly payments. — § 13.

Prevention of Delay. — To prevent unnecessary delay, it is enacted, that if masters fail to produce proper acquittance or certificate of agreement, tidewaiters to be continued on board at their expense. — § 14.

Penalties by this act recoverable before a magistrate. — § 15.

Appointment of Trustees, &c. — From and after the 1st day of October, 1834, it shall be lawful for the owners, masters, and commanders employed on board ships and vessels belonging to any of the out-ports to assemble and meet at any time and place within the same that shall be appointed by any 5 or more of them, by giving 10 days' previous notice, to be fixed at the Custom-house, wharf, quay, or other public place; and such persons, or the greater part of them, being so assembled, are authorised from time to time to nominate and appoint, by an instrument in writing under their hands and seals, 15 persons to be trustees for such out-port, for receiving, collecting, and applying the said duties, which trustees shall continue to act until the 20th day of December, 1835, and until new trustees are nominated and confirmed; and that within 10 days after the 20th day of December in each succeeding year, the owners, masters, &c. at such out-ports shall have power to meet and choose 15 persons to be trustees for the year ensuing, by an instrument in writing under their hands and seals, or the majority of them so assembled, having given previous notice in the manner before directed; which said respective trustees shall continue from time to time until new trustees are nominated, &c. as aforesaid; and the said instrument shall be sent, free of expense, to the president and assistants or committees of the said corporation, who are required to confirm the same under the common seal of the corporation, without fee or reward, within 15 days after the receipt thereof; which trustees when so confirmed (and whereof five shall be a quorum) shall have the same powers and authorities to make by-laws, and to revoke or alter the same, and to receive and apply any sums of money which shall be contributed, devised, or bequeathed by any well-disposed persons for the purposes aforesaid, and to appoint receivers and other officers, and to collect, receive, pay, and apply the said duties of 2*s*. per month and 1*s*. per month so to be allowed and paid by the seamen or other persons serving on board any ship or vessel belonging to such persons, at such out-ports, according to such rules, orders, and regulations as are or shall be established by virtue and in pursuance of this act, or have been established and continued under the provisions of the act 20 Geo. 2. c. 38., so far as the same are not inconsistent with or repealed or varied by the provisions of this act; and the said receivers and other officers shall have the same powers and authorities as the other receivers

and officers appointed in pursuance of this act, and shall be liable to the same penalties and forfeitures: provided always, that if the instrument of trust be not sent to the president and assistant or committees within 60 days after every appointment of trustees, the trust thereby created shall be considered void, and the trustees appointed under it as discharged from the same; and that the president and governors shall have power to appoint a receiver or receivers for the port or place from which such instrument of trust has not been sent, for collecting the forementioned duties and allowances payable at such port or place aforesaid; and the said president and governors shall have power to demand from the outgoing trustees of such port or place an account in writing of the former management of such void trust, and also to demand payment from such trustees of any balance which may at the time of such default be in their hands, who are hereby required to pay the same to such receiver appointed as aforesaid, together with the books of account and other books belonging to such trustees relative to such trust. — § 16.

Appointments on Default. — These are not to be revocable within 5 years. — § 17.

Former Trustees. — Trustees previously appointed at the several out-ports to be subject to the provisions of this act. — § 18.

Trustees in Bristol. — The corporation of the Merchants Venturers of Bristol are appointed trustees for the duties, &c. received there; and empowered to hold lands, &c. for the purpose of this act. — § 19.

Hull Trustees. — The guild of the Trinity-house of Kingston-upon-Hull appointed trustees for the duties, &c. received there. — § 20.

Greenock and Glasgow, &c. — The ports of Glasgow, Greenock, and Port Glasgow, &c. to be deemed one united port, and masters of ships belonging thereto to elect trustees for collecting duties, &c. — § 21.

Transmission of Accounts. — Trustees of out-ports to transmit accounts of the yearly receipts and expenditure to president and governors. — § 22.

Transmission of Muster Rolls. — Collectors appointed by trustees or corporations aforesaid, are excepted from sending duplicate of muster rolls to the president and assistants. — § 23.

Sections 24. and 25. enact that no seaman shall be entitled to the benefit of this act unless he pays the duty; and that those seamen who have served longest shall be first provided for.

Maimed Seamen to be provided for at the port where the accident happens. — § 26.

Disabled Seamen having served and paid 5 years to be provided for where they have contributed most. — § 27.

Seamen shipwrecked, or made Prisoners by the Enemy, may be relieved. — § 28.

Where regular Certificates cannot be obtained, others may be admitted. — In all cases where the certificates directed to be produced by this act for the purpose of entitling parties to relief and support cannot be obtained, such other certificates as shall be satisfactory to the president and governors or trustees respectively shall be received and allowed, so as to entitle the party producing the same to the pensions or other relief provided by this act. — § 29.

Wages of deceased Seamen to be paid to the Trustees. — All sums of money due for wages to any seaman, mariner, or other person engaged on board any British merchant ship in any port or ports in Great Britain or Ireland, who shall have died on board during the voyage, shall, within 3 months after the arrival of such ship in any port of Great Britain and Ireland, be paid to the trustees of the said port appointed in pursuance of this act, or to the receiver or collector or other authorised agent of the said president and governors, where there are no such trustees, to and for the use of the executors or administrators of the seaman or other person so dying; and in case no claim shall be made on the said trustees by such executors or administrators on account of such wages, within 1 year after the same have been paid over, then the said trustees shall remit the same to the collector or receiver, or other their authorised agent, of the president and governors at the port of London, in such manner and times as the said president, &c. shall direct, to and for the use of the executors or administrators of the seaman, or other person so dying; and in case no claim shall be made on the said president, &c. by the executors, &c. of such seaman, on account of such wages within 1 year after the same shall have been first paid over to their collector, then it shall be lawful for them to direct such wages to be paid over but without interest for the same to the widow, or if there be no widow claiming, then to the lawful issue respectively, or such persons as by virtue of the statutes of distribution of intestates' effects shall be entitled to the same; and if any master or commander of any merchant ship neglect or refuse to pay over to the said trustees, or the receiver or collector at the port aforesaid, all such sums of money within the time before limited, he shall forfeit for every such offence double the amount of the sums of money due to any seaman or other person for wages. — § 30.

Wages, if not demanded in 3 Years by representatives, to go to the use of the president and governors, or the trustees of the respective ports. — § 31.

Payment to Seamen's Hospital in London. — President and governors to pay 5 per cent. out of duties received by them from seamen in the port of London to the Seamen's Hospital Society in that port. — § 32.

Deductions from gross Amount. — It shall be lawful for the receiver or collector or other authorised agent of the president and governors at the port of London, and he is hereby authorised, to deduct and receive from the gross amount of such sums of money as shall be derived from the unclaimed wages of deceased seamen, received by him in respect of such wages, 5 per cent. in satisfaction of all expenses and trouble he may be put to in the receipt, collection, or transmission thereof. — § 33.

The contributions to the new fund will, most likely, amount to about 50,000*l.* a year; so that, if it be discreetly and economically managed, it will afford the means of suitably providing for a large number of disabled merchant seamen, as well as for the wives and children of those who have lost their lives in that service. The distressing consequences of those accidents and casualties to which seamen are so peculiarly liable, will thus be materially reduced; so that the service will, in fact, be rendered less hazardous, and more respectable.

SHARES IN JOINT STOCK COMPANIES (PRICES OF, ETC.). — The following Table may, we hope, be useful to such of our readers as have not ready access to the lists regularly published in London. It embraces the various companies of which shares are usually on sale in the London Market, exhibiting the number of shares in each, the sum paid up on account of such shares, the price which they brought in the first week of October, 1835, the then dividend on account of each share, and the periods when the dividends are payable. It is taken principally from Wettenhall's List (for the 6th of October, 1835), the most authentic record of such matters; but a few items have been supplied from other authorities. It can hardly, we think, fail to be interesting; for, though some of the particulars embodied in it will soon become obsolete, others will not easily change, and it will always be valuable as a standard of comparison.

N. B. — When the amount of a share only is mentioned, it is to be presumed that it is entirely paid up.

Table of the principal Joint Stock Companies in England and Wales, the Number of Shares in each, the Sum paid up on Account of such Shares, with their Prices, Dividends, &c., on the 6th of October, 1855.

SHIPS (CLASSIFICATION, QUALIFICATIONS OF MASTERS, OF, ETC.). — There is in the *Dict.*, p. 1268., an account of the annual average number of shipwrecks from 1793 to 1829, with a classified account of those in the last year. Since then, the number of these calamities has in no degree diminished. In 1833, no fewer than 800 ships, being about a thirtieth part of the whole number belonging to the British dominions, including the plantations, were either entirely lost or driven on shore! Nor is this much above the present average. The frequency and amount of shipwreck is, indeed, quite appalling; and has, at length, begun forcibly to arrest the public attention.

It may be thought, perhaps, that these disasters are wholly ascribable to the perils incident to navigation, and that they are not really greater than might be expected to occur to a mercantile navy of the extent of that of England, whose flag is displayed on every sea, however remote or dangerous; but such is not really the case. If we suppose that a *third part* of the wrecks that have taken place of late years have been occasioned by the dangers of the sea, we believe we shall not be within, but beyond, the mark. The other *two thirds*, or more, have originated in artificial causes, of which the principal have been the erroneous system adopted by the underwriters in the classification of ships, and the incompetency of the masters.

1. *Old System for classifying Ships.* — To insure a ship on right principles, or in such a way that the premium shall be the fair equivalent of the risk, is no easy matter. The risk depends partly on the condition of the ship and the capacity of the master and crew; partly on the nature of the cargo she is to take on board; and partly on the voyage she has to perform. The last two circumstances disclose themselves, and their influence may be appreciated, at least with sufficient accuracy for practical purposes, without any difficulty; but it is far otherwise with the condition of the ship, and the capacity of the master and crew. It is essential to the adjusting of an insurance on fair terms, that these should be known; and it is, at the same time, exceedingly difficult to acquire any accurate information with respect to them.

It is plain that there is but one mode in which any thing satisfactory can be learnt with respect to the condition of ships, and that is, by the inspection and examination of persons of competent information as to such matters. To acquire a just character at first, a ship should be repeatedly surveyed while she is being built; and to learn her condition at any subsequent period, some of the planks should be taken off, and her hull and rigging subjected to a thorough examination. This is the only method to be followed if we wish to arrive at results that may be safely depended on. The *age* of a ship should not be altogether overlooked in estimating her condition; but it is not a criterion that, taken by itself, is worth almost any thing. There is the greatest possible difference in the materials of which different ships are built, in the way in which they are built, and in the wear and tear to which they are exposed. Some have been so very bad, that they have actually gone to pieces on their first voyage; others, with difficulty, last for 3, 5, or 7 years; and others, again, run for 10, 15, and even 20 years, and upwards, with but little repair. It may be presumed that the condition of ships built of similar materials, on the same plan, and employed in the same departments of trade, will depend materially on their ages; but a thousand circumstances conspire to defeat this presumption; and it would be ludicrous to suppose that it should apply at all in the case of ships constructed of different materials, and engaged in different lines.

But notwithstanding the criterion of age is thus really worth less than nothing as a rule by which to judge of a ship's condition, it is almost the only one that has been referred to in this country. Since about the year 1760, or perhaps earlier, ships have been arranged, by the underwriters at Lloyd's, in classes marked by the letters A, E, I, and O, and the figures 1, 2, and 3; the former referring to the hull of the ship, and the latter to the rigging. A ship marked A 1. was in the highest class, that is, her hull and rigging were both declared to be in the best condition; ships marked E 1. were in the next class; those marked I 1. were in the lowest available class, or that formed of such as were fit only for carrying coals, or other goods not liable to sea damage along the coast; ships marked O were unseaworthy. But to get into the highest class, no examination of the ship, or none worthy of the name, was required. Unless some very flagrant defect were obvious in their construction, all ships were entitled, when new, to be marked in the highest class; and they were entitled, whatever might be their real condition, to stand in it for a certain number of years, varying from 6 to 12, according to the *port* in which they happened to be built! It is not easy to imagine that any thing can be more absurd than such a classification; but the whole extent of the injury arising from it is not immediately obvious. The great majority of merchants and underwriters have not, and could not be expected to have, any personal knowledge of different ships, and have nothing to trust to but the classified accounts. Suppose, now, that two ships were built at the same time in London or any other port; that one was constructed of the best materials, and in the best way, while the other was constructed of the worst materials, and in the most defective manner: these two ships were placed side by side in the class A 1.; the underwriters,

seeing them there, were ready, without further inquiry, to insure them at the *same premium*, and the merchants were, for the same reason, quite as willing to employ the one as the other! A bounty was thus given on the construction of what have been called *shop-built* ships, or ships of an inferior class. For a half, or, at most, two thirds, of what would be required to construct a good and really sufficient ship, a shipowner got an inferior vessel of an equal burthen sent to sea; and, owing to the matchless absurdity of the system of classification, the inferior was placed in the same rank with the superior ship; enjoyed all the advantages such distinction could give; and was, in the public estimation, deemed quite as good and as deserving of employment as the other. This has been a more copious source of shipwreck than all the currents, rocks, and fogs that infest our seas; but it was not the only one. At the end of a certain number of years, depending (as already stated) on the port where the ship was built, both the vessels referred to above were degraded to the class E; and yet it might happen, that the superior ship was, when so degraded, better entitled to continue in the class A than the inferior ship was ever to be in it. But even this does not exhaust the whole absurdity of this preposterous scheme; for supposing that the superior ship had been so thoroughly repaired as to be as good as the day she came off the stocks, and that the inferior ship had got no repair at all, still they were both placed, side by side, in the class E! All the annals of all the maritime nations of the world, from the Phœnicians downwards, furnish no example of a more perverse, contradictory, and absurd regulation. That it should have existed amongst us for the greater part of a century, strikingly exemplifies the power of habit to procure toleration for the most destructive practices and errors.

It may be said, perhaps, that, whatever system of classification is adopted, there must be great numbers of inferior vessels; for, though we did not, foreigners would build them; and, being consequently able to sail them cheaper, would drive us totally out of all trades in which they could come fairly into competition with us. This is true; but no one ever thought of proscribing inferior ships, or of dictating to the shipowner what sort of ships he should build, or to the merchant what sort he should employ. We do not object to inferior ships, but we do object to the *same character* being given to them that is given to superior ships. This is practising a gross fraud upon the public; and gives an unfair and unjust advantage to the owners of inferior vessels. The interests of navigation and of humanity imperatively require that ships should be correctly classified; that those that are not seaworthy should not be classed with those that are, but that the *real state* of each should be distinctly set forth in the register, and be made known to every one. If this be done, the merchant and the underwriter may be safely left to deal with them as they think fit.

In consequence mainly of the laudable exertions of Mr. Marshall, the attention of the principal merchants, shipowners, underwriters, &c. of the metropolis was some years ago directed to this subject; and in 1824 a committee, consisting of representatives from these different bodies, was appointed to inquire into and report on it. The committee collected a great deal of valuable evidence; and laid an able report before a general meeting of merchants, shipowners, &c. on the 1st of June, 1826. We subjoin an extract from this report, which more than bears out all that we have stated:—

“From the absence of all control on the original construction of ships while building, and the impossibility of ascertaining by any inspection, after completion, their real quality, it appears to be indisputably proved, by an almost uniform concurrence of testimony, that the first character, or A 1., is indiscriminately extended to ships differing widely in strength, durability of materials, and all those qualities on which character ought to be dependent; that many ships to which the first class is assigned are decidedly inferior to others which are placed, from lapse of time alone, in a lower class; that many become totally unfit for the conveyance of dry cargoes, long before the expiration of the period during which they are entitled, according to the present system, to remain on the first letter, in which they are notwithstanding continued; that instances are on record of first class ships which have been unfit from their origin for the conveyance of dry cargoes; and some are declared to have been hardly fit, when new, to proceed to sea with safety. One case is even adduced in which, from ill construction and insufficiency of fastening in a new ship, her insecurity was predicted, and she actually foundered on her first voyage; and yet this identical vessel was ranked according to the indiscriminate system pursued in the first class.

“Such, as respects new ships, appears by the evidence to be the practical results of a system which, assuming to designate by marks their intrinsic quality, provides no means of actually ascertaining that quality; but offers, in effect, a *premium for the building of inferior and insufficient ships*, by the inducement it holds forth to fraudulent construction; and by the equality of character it indiscriminately extends to the best and the worst ships built at the same port.

“Nor, your committee regret to have to report, is the evidence of the errors, inconsistencies, and evils arising from the existing system, as applied to old ships, by any means less conclusive. By the *refusal to restore character, in consequence of repairs, however extensive*, the inducement to maintain ships in an efficient state is removed; whilst, from the absence of all regular provision for stated or periodical examination, their efficiency or inefficiency is rendered dependent upon the varying views, the caprices, or the interests of the proprietors. Hence, though the second character, or E, is declared by the rules of the system to be the designation of ships which, having lost the first character from age, are kept in perfect repair, and appear, on survey, to have no defects, and to be completely calculated to carry dry cargoes with safety, the whole body of evidence distinctly proves that character to be, in very numerous instances, assigned to ships which, from original defect or want of requisite repairs, are *utterly unfit and unsafe for dry cargoes*; while others, which, from sound constitution or efficient reparation, are pronounced in the evidence to be superior to many *new ships*, are indiscriminately classed with the actually worthless and unseaworthy. Hence, too, the employment of ships, after they have passed the period prescribed by a fallacious standard of classification, becomes uncertain, precarious, and difficult; the shipowner is injured; the shipper and underwriter misled; the building of superior ships, capable of long service, is dis-

couraged, and direct inducement is held out to the construction of those of an inferior description; the general character of our mercantile marine is degraded; and it is to be feared, that, could the system be traced to its ultimate results, it would be found to be productive of a lamentable loss of property and life."

It may have seemed surprising that, despite the continued complaints of the lowness of freights, and the want of employment for shipping, so many new ships should be annually built. But this was, to a considerable extent at least, occasioned by the system of classification now described. Hitherto, instead of building a really good and durable ship, the principal object has been to construct one that should, at farthest, be, as the phrase is, *run off her legs* in about 10 years or thereby. The reason is, that, whatever might be a ship's condition, she was then degraded from the class A 1., and that it was hardly possible, in most departments of trade, to find a merchant to employ, on any thing like reasonable terms, a ship to which these symbols of imaginary excellence were not attached. Hence the shipowner, instead of repairing his 10-years-old ship, sold her for what she would fetch, and built a new one. But the person who purchased the ship degraded to E 1. forced her, though at an enormous reduction, into business; so that there were two bad or inferior ships in the field; whereas, under a reasonable system of classification, there would have been only one good ship. The injury that this has done to the shipping interest is too obvious to require to be pointed out. It has been infinitely more hostile to it than all those reciprocity treaties, and that foreign competition, about which there has been so much unfounded clamour. "If the system of classification were founded on the principle of *intrinsic merit*, if the real efficiency of the ship formed the basis on which character was given, the consequence, in numerous instances, would be, that, instead of supplying the place of those ships that at present lapse from age only into the second class, with new ones, the owners would effectually repair the existing ships, so that there would speedily be not only a material improvement in the construction of ships, but a material increase in the amount of tonnage, and a corresponding increase in the rate of freight." (*Marshall's Statements*, p. 19.)

The conclusive report and exposition referred to above did not produce the consequences that might have been anticipated. Government seems, for reasons known only to itself, to have concluded that this was not a subject with which it could interfere; and it was laid aside for some years more. But the still-increasing amount of shipwreck, and the frightful loss of life and property consequent thereon, again roused the public attention to the subject; and we are glad to have to announce, that the principal merchants, shipowners, and underwriters have at last succeeded in setting on foot machinery by which it is believed that a classified account of shipping will be obtained, founded on correct principles. Should this anticipation prove well founded, the public will owe much to the able and intelligent individuals who have imposed on themselves this difficult and important task. They will have done more than any other set of men to improve the character of our mercantile marine, and to lessen the disasters incident to a seafaring life.

2. *New System of Classification.*—This new classification is conducted under the direction and superintendence of a committee of merchants, shipowners, and underwriters. These are authorised to establish rules for classifying ships, and appoint, control, and dismiss the surveyors by whom they are inspected and examined. A classified register is annually published, which will be gradually made more and more complete; and the expenses attending the institution are to be defrayed, partly by the fees charged on making an entry in the register, partly by the profits on the sale of the book, and partly from voluntary sources. But, as the subject is of the utmost importance to every one interested in commerce and navigation, we think we shall do an acceptable service to our readers, by laying before them the statement prefixed by the Society to their Register. It fully explains their objects, the principles on which they are proceeding, and the means they have adopted for carrying their views into effect.

CLASSIFICATION OF SHIPS.

After announcing the formation of the provisional committee, the official statement goes on to say, that the following resolutions, rules, and regulations, have been adopted; viz.:—

That a society be established for obtaining an accurate classification of the mercantile marine of the United Kingdom, and of the foreign vessels trading thereto; and that a book containing a register of such classification be annually printed, to be called *Lloyd's Register of British and Foreign Shipping*.

That all persons subscribing the sum of three guineas annually, be members of the Society, and entitled (for their own use) to a copy of the register book.

That the price at which the register book be issued to public establishments, not being marine insurance companies, be 10*l.* 10*s.*

That the register books shall be periodically posted throughout the year.

That, for the convenience of members not resident in London, a monthly supplement, containing the reports of surveys upon newly built vessels, repairs, &c., be printed in such convenient form, as will admit of its transmission by post, that those parties may be furnished with the latest and most correct information; to defray the expense of which, an additional charge of 1*l.* 1*s.* per annum will be made.

Superintendence of the Society.—The future superintendence of the affairs of this Society to be en-

trusted to a committee in London, composed of 24 members, consisting of an equal proportion of merchants, shipowners, and underwriters; and that, in addition, the chairman of Lloyd's, and the chairman of the General Ship Owners' Society for the time being, shall, *ex officio*, be members of the committee.

The provisional committee, on their having completed the arrangements for establishing the society, in the first instance, to appoint the 8 members constituting the mercantile portion of the permanent committee.

The committee of the General Shipowners' Society to elect the 8 members constituting the portion of shipowners.

The committee of Lloyd's to appoint the 8 members constituting the portion of underwriters.

Six of the members, namely, 2 of each of the constituent parts of the committee, shall go out annually by rotation, but be eligible to be re-elected.

The vacancies so arising shall be filled up on all future occasions by the election of 2 shipowners and 1 merchant, to be made by the committee of the General Shipowners' Society; and 2 underwriters and 1 merchant shall be elected by the committee of Lloyd's.

The committee shall appoint from their own body, annually, a chairman and deputy-chairman.

The appointment of secretary, surveyors, and all other officers of the society, shall be made by the committee, whenever vacancies arise.

Five members of the committee shall be a quorum.

The committee shall have full power to make such by-laws for their own government and proceedings, as they may deem requisite, not being inconsistent with the original rules and regulations under which the society is established.

All elections and appointments whatever shall be made by ballot.

Surveyors.—The utmost care and discrimination have been exercised by the committee in the selection of men of talent, integrity, and firmness as surveyors, on whom the practical efficacy of the system, and the contemplated advantages, must so materially depend; the committee have in their judgment appointed those persons only, who, from the testimonials they produced, appeared to them to be most competent to discharge the important duties of their situations with fidelity and ability, and to insure strict and impartial justice to all parties whose property shall come under their supervision.

No surveyor will be permitted to receive any fee, gratuity, or reward whatsoever, to his own use and benefit, for any service performed by him in his capacity of surveyor to this Society, on pain of immediate dismission.

The surveyors to the society will be directed to attend on special surveys of ships under damage, the charge for which will be regulated according to the nature of the service performed.

Funds.—The funds will be under the authority and control of the committee, who will publish annually a statement of their receipts and expenditure.

The following fees will be charged to the owners of ships surveyed and classed:—

For the first Entry and Classification in the Register Book.				For Entering and Classing New Ships built in the United Kingdom.			
	Tons.	L.	s. d.		Tons.	L.	s. d.
For each ship	- - - under 150	-	0 10 6	For each ship	- - - under 100	-	1 1 0
Ditto	- - - 150 and under 300	-	1 1 0	Ditto	- - - 100 and under 200	-	2 2 0
Ditto	- - - 300 — 500	-	2 2 0	Ditto	- - - 200 — 300	-	3 3 0
Ditto	- - - above 500	-	3 3 0	Ditto	- - - 300 — 400	-	4 4 0
				Ditto	- - - 400 and upwards	-	5 5 0
For Registering Repairs after Survey.				For Special Surveys, a charge will be made according to the service performed.			
	Tons.	L.	s. d.				
For each ship	- - - under 150	-	0 10 6				
Ditto	- - - 150 and under 300	-	1 1 0				
Ditto	- - - 300 — 500	-	2 2 0				
Ditto	- - - above 500	-	3 3 0				

RULES FOR CLASSIFICATION.

The provisional committee, assisted by the valuable information and practical knowledge of the committee of the General Ship Owners' Society, have, after much labour and mature consideration, adopted the following rules and regulations for the future classification of ships; and they trust that, when these rules have been applied, the result will be, that, instead of the uncertain standard of the port of building, and the uncontrolled decision of surveyors, which hitherto have determined the quality and character of ships, a book of reference will be compiled which may be referred to with confidence, as not only containing the report of qualified surveyors, but exhibiting that report corrected or substantiated by the committee of this society.

FIRST CLASS SHIPS.—It is proposed that ships in this class shall be divided into two denominations, to be distinguished as "First Description of the First Class," and "Second Description of the First Class."

1. *First Description of the First Class*—will comprise all ships which have not passed a prescribed age, and which are kept in the highest state of repair and efficiency; these will be designated by the letter A.

2. *Second Description of the First Class*—will comprise all ships which, having passed the prescribed age (but not having undergone the repairs that would entitle them to be continued in or restored to the first description), or which shall have been restored, and the period assigned for such restoration having expired, are still in a condition for the safe conveyance of dry and perishable cargoes: these will be designated by the diphthong Æ.

Remarks.—The period for the continuance of ships on the first class is limited. The extent of that period will be determined by reference to the original construction and quality of the vessel, the materials employed, and the mode of building.

It is desirable, on grounds of national policy and of individual justice, that, after the expiration of the prescribed period, ships shall be permitted to remain in the first description of the first class, or to be restored thereto, for a further limited period, under certain defined regulations hereafter set forth.

SECOND CLASS SHIPS.—This class will comprise all ships which shall be found, on survey, unfit for carrying dry cargoes, but which may be reported by the surveyors to this Society to be perfectly safe for the conveyance of cargoes, not in their nature liable to sea damage to all parts of the world: these will be designated by the letter E.

THIRD CLASS SHIPS.—will comprise such ships as are good in constitution, and reported by the surveyors to this society to be fit for the conveyance, on short voyages (not out of Europe), of cargoes in their nature not liable to sea damage: these will be designated by the letter I.

SHIPS' ANCHORS, CABLES, AND STORES.—The state and condition of ships' "Anchors, Cables, and Stores," will continue to be designated by the figures 1 and 2.

GENERAL REMARKS.

A report of the survey of every vessel shall be made in writing by the surveyors to this society, and submitted to the consideration of the committee, by whom alone the classification and character of all vessels shall be assigned; and not less than 3 members must be present at every meeting for that purpose.

That in assigning character to the existing tonnage, and especially in restoration to the first description of the first class of ships that have been built without a view to such a privilege, the greatest caution will be exercised, but with a rigid attention to render ample justice to the shipowner.

No member of the committee will be permitted to vote in the decision of the classification of any ship of which he is an owner, or directly or indirectly interested.

The reports of surveyors, and all documents and proceedings relating to the classification of ships, will be carefully preserved, and those parties proving themselves to be interested therein will have access thereto under certain regulations.

In all classes wherein ships are proposed, in the report of the surveyors to this society, to be removed from one class to an inferior class, notice is to be previously given, in writing, by the surveyors to the owner, master, or agent, with an intimation that, if the alteration be objected to, the committee are ready to direct a special survey, to ascertain the state of the ship; on the owner, master, or agent, agreeing to pay the expenses attending the same; provided it shall, on the survey, appear that there has been sufficient ground for such removal.

FIRST CLASS SHIPS.

New ships coming within this denomination must have been surveyed while building, by the surveyors to this Society, in the following three stages of their progress:—

First,—when the frame is completed.

Second,—when the beams are in, but before the decks are laid, and with at least two strakes of the plank of the ceiling, between the lower deck and the bilge, unwrought, to admit of an examination of the inner surface of the plank of the bottom.

Third,—when completed, and, if possible, before the plank be painted or payed.

A full statement, agreeably to a schedule prepared for that purpose, of the dimensions, scantlings, &c. of all new ships, verified by the builder, shall be transmitted by the surveyor, and will be kept as a record in the office of the society.

In building new ships, to entitle them to be ranked in this class, the following rules are to be observed:—

Timbering.—The whole of the timbering to be of English, African, or live oak, or teak, of good quality; the stern, stern-post, beams, transoms, aprons, knight heads, and hawse timbers, to be entirely free from all defects; the frame to be well squared from first foothook heads upwards, and free from sap, and also below, unless the timber is proportionally larger than the scantling hereafter described; every alternate set of timbers to be framed and bolted together. The butts of the timbers to be close, and not to be less in thickness than one third of the entire moulding at that place, and to be well chocked, with a butt at each end of the chock.

The Scantlings to be as follows:—

	Tons.	Tons.
Scantling for ships	150	500
Timber and space each to be	Inches.	Inches.
Floors sided, if square, and free from sap, to be not less at the kelson than	8	13
First foothooks, sided, if square, at floor heads	7	11
Second foothooks sided, if square, at the heads	6½	10
Third foothooks, sided, and top timbers, if square	6	9
The frame to be moulded at kelson	8	15
The frame to be moulded at floor heads	7	11
Top timbers to be moulded at their heads at the shearstrake	4	5

The intermediate dimensions for the scantling of timbers between the floor heads, and the gunwale to be regulated in proportion to the distance from the two points. Should the timber and space be increased, the siding of the timbers to be increased in proportion.

Deck Beams:—	Tons.	Tons.
For ships	150	500
	Inches.	Inches.
To be moulded in the middle (not less than)	7	9
To be moulded at the ends (not less than)	5	6½
And to be sided	7	10

Those at the after end of the ship to be reduced in proportion to their length.

Hold Beams:—	Inches.	Inches.
To be moulded in the middle (not less than)	9	15
To be moulded at the ends (not less than)	7	10
And to be sided	9	15

Those at the after end of the ship to be reduced in proportion to their length.

Keel and Kelsons:—	Inches.	Inches.
Keel, sided	9	15
Keel, moulded below the rabbet not less than	7	10
Main keelson to be sided	10	11
Main keelson to be moulded	10	11
The scarp of keelson, where only one keelson, to be 5 ft. 7 in. But where rider keelsons are added, then they may be 4½ ft. 6 in.		

Shifts of timber in ships of 200 tons, and upwards, to be not less than 1-7th the main breadth; and in ships under 200 tons, to be not less than 1-6th the main breadth.

Plank.—1. The outside plank, above the light-water mark, to be English or African oak, East Indian teak, or red cedar.
2. The planks below the light-water mark to be good white oak, elm, or beech; but the elm or beech not to be wrought higher than the first foothook heads.

3. The clamps, spirkettings, shelf pieces, and ceiling, to be English or African oak, or teak.

The outside plank to be clear of all defects; the inside to be free of all fox, dry, or decayed planks, and the whole to be properly shifted and fastened. No butts to be nearer than

General Remarks.—The scantlings and dimensions of all intermediate-sized vessels to be proportionately regulated agreeably to a scale adopted by the Society, a copy of which is in the hands of each of the surveyors; and it is to be clearly understood, that smaller dimensions will not entitle the ship to be placed in this class.

1. All ships so constructed, and having the whole of the workmanship generally performed in the best manner, will be marked in the book thus, "12 A."; thereby denoting that they are ships of the first quality, and will remain in the first description of the first class 12 years, provided they be kept in a state of efficient repair. For additional rule, see next page.

2. Ships surveyed while building, as before mentioned, the scantling of timber, thickness of plank, and size of fastenings of which shall be in no respect less than those in the foregoing specifications, but which may not be framed, nor chocked, nor the timbers so well squared, as in the manner before described, or in which live oak and red cedar alternately may have been used in the framing, or in which good foreign white oak may have been used for ceiling, shelf pieces, and clamps, will be marked in the book thus, "10 A."; denoting that they are to remain in the first description of the first class 10 years, provided they be kept in a state of efficient repair.

3. Ships surveyed while building as before mentioned, but in the frame of which foreign oak timber shall be used for floors and first foothooks only, or in which good white Dantzic oak plank shall be used

5 feet to each other, unless there be a strake wrought between them, and then a distance of 1 feet may be allowed; and no butt to be on the same timber, unless there be three strakes between.

Thickness of plank to be as under:—

For ships	Outside.	Tons.	Tons.
	Inches.	150	500
Bilge to wales not less than	2½	1	1
Short hoods	2½	3	3
Bilge planks	3	4	4
Bilge to keel	2½	3	3
Wales (average)	4	5	5
Top sides	2	3	3
Shear strake	3	4	4
Plank sheer	2½	4	4

	Inside.	Tons.	Tons.
	Inches.	150	500
Ceiling below the hold beams	2	3	3
Clamps and bilge planks	2½	1	1
Upper deck clamps and spirkettings	2½	3	3
Twist deck ceiling	2	2½	2½

	Deck.	Tons.	Tons.
	Inches.	150	500
Upper deck	2½	3	3
Water ways	4	5	5

Fastenings.—The trenails to be all of good English or African oak, locust, or other hard wood; but in no case Baltic or American oak to be used; and all planks above 9 inches in width are to be treenailed double and single, except bolts intervene; and if below that width, then to be treenailed single, and at least one half of the trenails used are required to go through the ceiling. All ships of this description of the first class are required to be copper-fastened below the wales.

Sizes of Bolts:—	Tons.	Tons.
For ships	150	500
	Inches.	Inches.

Heel, knee, and dead wood abaft	1	1
Scarp of the keel	in No. 6. 3 bolts of 1	in No. 8. 1 bolt of 1
Kelson bolts, one through each floor	0 7-8ths	1 1-8th
Bolts through the bilge and foot waling	0 5-8ths	0 7-8ths
Butt bolts	0 5-8ths	0 3-4ths
Hold beam bolts	0 7-8ths	1 1-8th
Deck beam bolts	0 3-4ths	0 7-8ths
Hooks forward at throat	0 7-8ths	1 1-8th
Hooks forward at arms	0 3-4ths	1
Transoms	0 7-8ths	1 1-8th
The lower pintle of the rudder	2½	3½

The beams to be sufficient in number, and securely fastened to the sides, with either iron or wood knees, or both, or with shelf pieces and knees; the same to be well and sufficiently bolted; and it is required that 1 bolt in each butt below the wales, and the bolts in the bilges, shall be through and clenched; and in all cases where the butt bolts are not through and clenched, 1 year will be deducted from the period that would otherwise be assigned in the classification of the vessel.

below the wales outside, whilst in other respects they are constructed in the manner set forth in the preceding descriptions, will be marked in the book thus, "9 A"; denoting that they are to remain in the first description of the first class 9 years, provided they be kept in a state of efficient repair.

4. Ships surveyed while building, as before mentioned, and framed and fastened according to the preceding descriptions, but in the planking of which good foreign white oak shall be employed in other parts than the bottom, will be marked in the book thus, "8 A"; denoting that they are to remain in the first description of the first class 8 years, provided they be kept in a state of efficient repair.

5. Ships surveyed while building, as before mentioned, and framed and fastened agreeably to the preceding descriptions, but in which good foreign white oak shall be used in the frames above the first foothook heads, or in the planking of which except the strakes through which the beam fastenings pass) good Dantzic fir shall be used, will be marked in the book thus, "7 A"; denoting they are to remain in the first description of the first class 7 years, provided they be kept in a state of efficient repair.

6. Ships surveyed while building, as before mentioned, in the frames of which, above the first foothook heads, sound old English or African oak or teak timbers shall be used, but planked agreeably to any of the preceding descriptions, or with American red pine, or yellow Baltic pine, will be marked in the book thus, "6 A"; denoting that they are to remain in the first description of the first class 6 years, provided they be kept in a state of efficient repair.

7. Ships surveyed while building, as before mentioned, in the frames of which above the first foothook heads, red pine timber, either American or Baltic, or Hackmatack, and in the bottoms of which, below that mark, the same materials are used, or black birch, elm, ash, or hard wood of like quality, and in the planking of which good yellow pine shall be used, will be marked in the book thus, "5 A"; denoting that they are to remain in the first description of the first class 5 years, provided they be kept in a state of efficient repair.

8. Ships surveyed while building, as before mentioned, the frames of which above the first foothook heads, are composed of yellow pine, elm, ash, birch, spruce, or other similar woods, will be marked in the book thus, "4 A"; denoting that they are to remain in the first description of the first class 4 years, provided they be kept in a state of efficient repair.

Ships built in the U. K. under a roof, and which shall have occupied a period of not less than 12 months in their construction, will have one year added to the period prescribed for their continuing in the first class.

Ships to be hereafter built, and not surveyed while building by the surveyors to this society, will be subjected to a special examination previously to assigning the class in which they are to be placed, according to the preceding regulations; but in all such cases, 1 year will be deducted from the period allowed to that class; in consideration of not having been submitted to such survey during the construction.

Special Exceptions.—The prohibition, in all cases, of the use of *fir* will not apply to ships the topside planking of which, between the lower paint and shear strake and the upper black strake only, shall be composed of pitch pine, or Dantzic or Rigaa fir, of the best quality.

IRON-FASTENED SHIPS.

Ships under 150 tons, though *iron-fastened*, will be admissible to any of the preceding classes except the 1st, and those above 150 tons, to any except the 1st, 2d, or 3d, provided that in other respects they be constructed in accordance with the preceding rules, and that their bottoms be not copper-sheathed.

At the expiration of the above periods, all ships will be reduced to the second description of the first class, designated by the diphthong *E*; but if not surveyed within 12 months after entering this description, such ship, having been during that time in some port of the U. K., the character will be omitted until such survey be held, or, if required by the owner, will be allowed to pass into the letter *E*.

Second Description of First Class Ships.—This class comprises ships which, having passed the prescribed age, and not having undergone the repairs that would entitle them to be continued in or restored to the first description, or which shall have been restored, and the period assigned for such restoration having expired, are still in a condition for the safe conveyance of dry and perishable cargoes; these will be designated by the diphthong *E*.

General Remarks.—For the purpose of ascertaining the competencies of ships for this description, a careful survey will be required to be made annually, or on the return from every foreign voyage, by the surveyors to this society.

The bottom of every ship of this description will be required to be caulked at least once in every 5 years; or, if wood, sheathed and felted once in every 7 years; but if any ship be stripped within these periods, the bottom to be caulked if necessary.

The surveyors in their reports to the committee, on which the continuance of ships in this letter is to be found, are required to state, distinctly and separately, the actual condition of the decks, beam is, and topsides, particularly in the way of the deck fastenings, water-ways, hatchway-comings, beams, breast-hooks, upper and lower deck fastenings, timber, plank, and treenails.

Where the surveyors to this society consider repairs to be requisite, they are respectfully to intimate the same, in writing, to the owner, agent, or master; and if such repairs are not entered upon within a reasonable time, a corresponding report will be made to the committee.

In cases where it shall satisfactorily appear to the surveyors to this society that *doubling*, of sufficient thickness and properly wrought and fastened, may be allowed as a substitute for the shifting of plank, either in the wales or bottom, the surveyor is to make a special report thereof, together with his reasons, to the committee, who will determine thereon.

SECOND CLASS SHIPS.

Will comprise all ships which shall be found, on survey, unfit for carrying *dry* cargoes, but which shall be reported by the surveyors to this society to be perfectly safe and fit for the conveyance, to *all parts of the world*, of cargoes not in their nature subject to sea damage, and they will be designated by the letter *E*.

Subject to occasional inspection, ships will continue in this class so long as their condition shall, in the opinion of the committee, entitle them thereto.

THIRD CLASS SHIPS.

Will comprise ships that are in good constitution, and which shall be found, on survey, fit for the conveyance, on *short voyages* (not out of Europe), of cargoes in their nature not subject to sea damage, and they will be designated by the letter *I*.

Additional Rules for Ships of the First Description of the First Class.

Resolved,

Committee Minute, 16th Dec. 1834.

That an intermediate class be constituted, comprising ships in which *all* the requisites for the *ten* years ships have been complied with, although *some* of those required for the *twelve* years ships may have been omitted; and that such ships are to remain in the first description of the first class *eleven* years; provided they be kept in a state of efficient repair, and that they be marked in the book thus, "11 A."

Committee Minute, 19th Dec. 1834.

Ordered,

That the rule requiring "that, in all cases where the butt bolts are not through and clenched, one year will be deducted from the period assigned in the classification of the vessel," shall *not* be applied to ships built previously to the promulgation of the regulations of this society; but that in the case of all vessels built since that period, the rule will be rigidly enforced.

RESTORATION OF SHIPS TO THE FIRST DESCRIPTION OF THE FIRST CLASS.

If at any time, before the expiration of one half of the number of years beyond the period for which ships are to remain in the first description of the first class, an owner be desirous to have his ship continued in, or restored to, that description, such restoration shall be acceded to (on his consenting to the special survey hereafter described, and performing the repairs found requisite) for a further period, but which shall not exceed two thirds of the time originally assigned for her remaining in the first description of the first class, the same to be calculated from the year of such restoration.

Requisites for Restoration.—All the bolts in the range of each deck to be driven out, and the planks taken out; the upper deck water-ways, and plank shears, and spirketting, and the strake next the water-ways on the lower deck in the midships, to be also taken out; the sheathing to be entirely stripped off the bottom; a strake in the upper course of the bottom between the wales and the light-water mark, fore and aft, and a plank in the ceiling at the floor heads, to be taken out, the timbers to be clear, and the hooks forward to be exposed; and in that state the ship to be submitted to a special survey and examination, at which the attention of the surveyors to this society is to be particularly directed to the state of the decks, the remaining plank of the topsides, the wales, upper courses, and treenails, and other fastenings; also to the state of the frame, hawse timbers, and knight heads, kelsons, floors, foothooks, ceiling, and breast hooks, the rudder in all its parts and hangings; and if, after such examination, the owner should consent to take out all planks, timbers, beams, knees, water-ways, fastenings, and other parts that may be found defective, and objected to, and replace them with materials of the same species, or of equal quality, as those of which the ship was originally constructed; such ships to be entitled to restoration to the first description of the first class for a further period proportionate to their real condition and the extent of the repairs performed, and provided that they be at all times thereafter kept in a state of efficient repair.

Additional Rule.—But if, at any age, the whole of the outside plank of a vessel should be taken off as low as the second foothook heads, and the remainder of the planking, either outside or inside, together with all the decks, be removed, *so as to expose the timbers of the frame entirely to view*, and in that state the ship be submitted to a special survey and examination by the surveyors to this society; and if, after such examination, all timbers, beams, knees, kelsons, transoms, breast hooks, remaining plank, inside or outside, or other parts to be defective, be replaced with materials of the same species, or equal quality, with those of which the ship was originally constructed, and all the treenails driven out and renewed; such ships may be restored to the first description of the first class, for so long a period as may be deemed expedient by the committee, not exceeding in any case the term of *six years*, as provided by the sixth general rule for ships, in the construction of which old timber has been used.

For Ships which comprise the existing Tonnage.—All ships comprising the existing tonnage are to undergo a very careful survey by the surveyors, prior to registration, and will be classed in the new Register agreeably to the descriptions herein before laid down for the building of new ships, unless on such survey there be found sufficient cause to assign them a less period.

On the proposed survey, especial attention is required to the following points; namely, to an examination of the state of the upper deck fastenings, water-ways, spirketting, plank shears, topsides, and upper deck, with its appendages; also the lower deck fastenings, wales, and counter, and the plank and treenails outside the water's edge; the state of the rudder, windlass, and capstan (if the latter be used for purchasing the anchors).

And if on the examination, any ship shall be found so defective as to render her unfit to continue on the first description of the first class for the remainder of such term of years, as she would be entitled to under these rules and regulations, a notice of the intention to make such a reduction at the expiration of thirty days, shall be given in writing to the surveyors to this society, to the master, owner, or agent, with an intimation that, if any of them object to the alteration, the committee will direct a special survey, to ascertain the state of the ship, on the said master, owner or agent agreeing to pay the expenses attending the same, should it be found that the proposed reduction was justifiable.

SHIPS' ANCHORS, CABLES, AND STORES.

All vessels are required to have their masts, spars, and standing rigging in good order, and the principal sails in sufficient number and good condition; and every ship is to be supplied with a good hempen stream cable, or hawser, of sufficient size and length, and with at least one good warp; and all vessels are required to be provided with anchors of proper weight, and cables of approved quality, in number and length according to the undermentioned scale:—

Anchors.—All vessels under 200 tons to have at least two bower anchors; and all vessels above that tonnage to be provided with at least three bower anchors.

Tons.	Fathoms.	Tons.	Fathoms.
Cables.—All vessels under 100 to have at least 150 if chain.		All vessels from 500 to 1000 to have at least 200 if chain.	
— 100 to 150 —	160 —	100 — 620 —	220 —
— 150 — 200 —	170 —		
— 200 — 300 —	180 —		

But in all cases where hempen cables are used, then one sixth more in length will be required.

Boats.—All vessels under 150 tons to be provided with 1 good boat; and every vessel above that tonnage to be provided with at least 2 good boats.

For Ships navigated by Steam.

All sea-going vessels navigated by steam shall be required to be surveyed *twice in each year*, when a character shall be assigned to them according to the report of survey as regards the classification of the hull and materials of the vessel.

That with respect to the boilers and machinery, the owners are required to produce to the surveyors to this society, at the above directed surveys, a certificate from some competent master engineer, describing their state and condition at those periods; and to which certificate it is desirable there should be added a description of the particulars of the same as far as may be practicable, in the manner and form annexed; to be appended to the report of survey and delivered to the committee, who will thereupon insert in the register book the letters "M. C.," denoting that the boilers and machinery have been inspected, and certified to be in good order and safe working condition; but if no certificate of their condition be furnished by the owner or master, then no character can be assigned.

The surveyors to this Society are directed to observe the following rules, with regard to vessels navigated by steam:—

Hull.—To examine and report the scantling of timbers, plank, and fastenings, where built, and by whom, in the same manner as directed for sailing vessels.

Scantlings.—The scantlings are to be deemed sufficient for a steam vessel under 500 tons register, if equal to those required by the scale prescribed in the rules for this society, for a sailing vessel of two

thirds of the registered tonnage of such steam vessel; but for a steam vessel above 300 tons register, *then* the scantlings are to be equal to those required by the scale for a sailing vessel of three fourths of the registered tonnage of such steam vessel.

Floors.—Where the vessel is not filled in solid to the floor heads in the engine-room, an exception will be specially made against any reduction of the scantling of the floors, which, in such cases, will not be permitted to be upon the reduced scale of two thirds or three fourths of the dimensions for the scantlings of sailing vessels as before stated; but the floors will then be required to be equal to the dimensions set forth in the rules for ships, of the actual registered tonnage of the steam vessel.

The surveyors are required to report the number, size, length, fastenings, and mode of arrangement of the engine and boiler sleepers, and the description of timber of which they are composed, and whether diagonally trussed with wood or iron, and to what extent; the length, size, and fastenings of shelf-pieces and paddle beams; and whether the vessel be constructed with spongings, and how they are formed; and to give the general length and shifting of the plank outside and inside.

Materials and Stores.—The surveyors are to examine and report the number and description of the masts, sails, anchors, cables, hawsers, warps, and boats, as directed to be done for sailing vessels; but the anchors and cables will not be required to exceed in number, weight, and length those of a sailing vessel of two thirds of the registered tonnage of the steam vessel.

The surveyors are to be particular in examining the boats of all vessels employed in carrying passengers.

Lloyd's Register of British and Foreign Shipping.—Certificate for Vessels navigated by Steam.

[Place and date] , 183 .
I, certify that the whole of the boilers and machinery of the steam vessel , belonging to ,
whereof is master, tons, have been
carefully inspected and examined by , at
and that find the same to be at this time in
good order and safe working condition.
Witness hand,
Master Engineer.

The following is a true account of the particulars of the machinery of the steam vessel , herein named:—

Engines.
Number - - - - -
Estimated power - - - - -
Diameter of paddle-wheels - - - - -
Length of paddles - - - - -
Breadth of paddles - - - - -
If upon the first or second motion - - - - -
Number of revolutions per minute - - - - -
Size and condition of the holding-down bolts - - - - -

Fuel.
Where stowed - - - - -
If in contact with boiler - - - - -
For what quantity room is provided - - - - -
If liable to get wetted - - - - -

Boilers.
Whether iron or copper - - - - -
Working pressure - - - - -
If it can be increased at pleasure - - - - -
If any and what means of changing the water without extinguishing the fires and blowing off - - - - -
Number of feed pumps - - - - -
How attached - - - - -
State of the boilers - - - - -

What clear space at the topside of the boiler - - -
Do. at the end - - - - -
Do. round the chimney - - - - -

Pumps.
Number of hand pumps - - - - -
If any attached to engine, their purpose and power - - - - -

Number of force pumps, with a branch and hose of sufficient length to reach to every part of the vessel - - - - -
Master Engineer.

The rules herein set forth may at all times be altered by the presiding committee, and especially to meet any acknowledged improvements which may be made in naval architecture, or in the materials used in ship-building.

No one can question the advantages that will result from carrying a plan of this sort completely into execution. We confess, however, that we doubt much whether this can be done without the co-operation of government. It is invidious to impose on one set of merchants and shipowners the task of deciding upon the condition of the ships or other property belonging to others; and, though we have every confidence in the integrity of the gentlemen composing the committee, the most honourable men are liable to be influenced by an *esprit du corps*, and by insensible biases. We, therefore, cannot help thinking that the scheme would have a much better chance of success, and that the classification would be more likely to be correct, were it managed by individuals nowise connected with business. The surveyors, on whose capacity and honesty the whole scheme must principally depend, ought to be quite independent of the good or ill-will of those on whose property they have to report. But can that be said to be the case at present? and can it be fairly presumed that merchants or shipowners will deal by the property of their friends and neighbours as it might be dealt with by officers appointed by, and responsible only to, government? We apprehend that both those questions must be answered in the negative; and hence our conviction that this is a matter in which government should interfere. No one can doubt that it is bound to do every thing in its power to promote the safety of navigation, and to preserve the lives of our seamen. In this view it erects lighthouses, and prescribes regulations as to pilotage, &c. But, how indispensable soever, these are not more essential to the interests of navigation than a proper classification of ships; and, if other means should fail to effect this desirable purpose, government will certainly neglect a most important duty if it do not interpose. — (For a further discussion of this important question, see the article on the Frequency of Shipwrecks in the 122d number of the *Edinburgh Review*. Some of the previous statements are taken from that article.)

3. *Incapacity of Masters.*—Means by which it might be obviated.— But government will not do its duty, if it do not go further than this. An erroneous classification of shipping has been one great cause of shipwreck, but it has not been the only one. The ignorance and incapacity of the masters and officers is another, and hardly a less copious, source of disaster. Officers of the navy have to go through a course of discipline, and are obliged to submit to certain examinations as to their proficiency in seamanship. This, also, was the case with the officers of the East India Company's ships, which were exceedingly well navigated. Indeed, the Company trusted entirely for protection to the goodness of their

ships, and the skill of their officers and men ; it not being their practice ever to insure. But the masters and officers of ordinary merchant-ships are not subjected to any specific training, or any regular examination. Every thing is left to mere individual investigation and selection ; and this, as every one knows, depends almost wholly on accident ; or, which is nearly equivalent to it, on the skill, industry, liberality, &c. of the shipowner. Every one must be satisfied that masters so chosen cannot fail of being, in many instances, very ill qualified for their business. Few, however, have any notion of the extent of the mischief thence arising ; but we have been assured by gentlemen of undoubted information, and extensively connected with the business of insurance, that nearly half the losses at sea may be ascribed to the ignorance, incapacity, and carelessness of the masters and crews. Perhaps, there may be some exaggeration in this ; but, supposing that only a third part, or that 266 out of the 800 vessels wrecked in 1833, were lost through the circumstances referred to, is not that enough, not merely to justify government interfering to avert so great an evil, but to make such interference a positive duty ?

The interposition of government, in a case of this sort, is not only absolutely just and necessary, but it is conformable to the highest authority. The famous French ordinance of 1681 has the following article : — “ *Aucun ne pourra ci-après être reçu capitaine, maître, ou patron de navire, qu'il n'ait navigué pendant cinq ans, et n'ait été examiné publiquement sur le fait de la navigation, et trouvé capable par deux anciens maîtres, en présence des officiers de l'Amirauté et du Professeur de l'Hydrographie, s'il y en a dans le lieu.*” (Liv. ii. tit. 1. § 1.) A similar article has been inserted in the *Code de Commerce* ; and, in 1825, the French government issued an ordinance specifying, in detail, the qualifications that are necessary before any one can obtain a certificate of his fitness to command a ship, either on a foreign or a coasting voyage ; the persons who are to examine candidates ; and the rules that are to be observed in the examination. Some similar ordeal ought certainly to be established in this country. The authority of the master is so very great, and the trust reposed in him, including not merely the ship and goods of his employers, but the lives of the crew and passengers, so very extensive, that it is the bounden duty of the public to provide that it be not committed to ignorant or incapable hands.

Perhaps it would, at first, be enough to enact, that no ship, which cleared out for an *oversea* voyage, should be deemed a British ship, unless the master and the second in command had received a certificate of fitness from the proper authorities. This would leave it to the owners to take whom they pleased as masters of coasting vessels ; but we believe that the better way would be to enact that all masters of vessels, above a specified tonnage, should be selected from among certificated persons. We do hope that the next time we may have to notice this subject will be to announce that the measure now suggested, or one of a like import, has been carried into effect. — (*Edinburgh Review*, *loc. cit.*)

4. *Disorderly Conduct of the Crews.* — Means by which it might be obviated. — Nothing, we are well assured, would do so much to obviate the disorderly bad conduct so frequently complained of, on the part of seamen, as the enforcing of sobriety on board ships. However disgraceful, there can be no doubt of the fact, that some very bad cases of shipwreck have been mainly occasioned by the drunkenness of the crew. The Americans have seen the advantage that would arise from a reform in this particular ; and large numbers of American ships, especially of those engaged in long voyages, are now sent to sea, in which the use of spirits is strictly prohibited, unless when prescribed by the surgeon as a cordial or medicine. In these ships the conditions of agreement, signed by the men, have at their head the words “ NO GROG ALLOWED,” printed in large capitals. Instead of it, the seamen are liberally supplied with coffee, cocoa, &c. ; and, it is said, that the crews of the ships fitted out on this plan are not only more orderly, but that they are more vigorous, and able to endure greater fatigue. But, to establish the superiority of this practice, it is enough to mention that the American insurance offices have, for some time past, insured “ temperance ships ” at a decidedly *lower premium* than others ! We are convinced, that nothing would do half so much to improve the character of our common seamen, as the introduction of a similar system into our merchant-service. And, notwithstanding the prejudices against it, we are glad to have to state, that some ships, fitted out on this plan, have sailed from London and Liverpool, and that (even in this its incipient stage) it has been found to answer exceedingly well.

5. *Improper Built of Ships.* — We have elsewhere noticed (article TONNAGE, in this Supplement) the act 5 & 6 Will. 4. c. 56., passed last session, for ascertaining the tonnage of ships. In the old system, the tonnage was determined by reference only to a ship's length and breadth ; which led to vessels being built of a disproportionate depth, in order that their registered tonnage, and, consequently, the charges depending on it, might be diminished as much as possible. The faulty construction of ships thence arising has, no doubt, contributed, in some degree, to occasion losses ; but the act referred to, by making the

tonnage be fairly determined according to the capacity of the ship, whatever the form may be, will completely obviate this source of defective construction and loss.

Account of the Shipping employed in the Trade and Navigation of the United Kingdom in 1834 specifying the Number and Tonnage of Vessels entering Inwards and clearing Outwards (including their repeated Voyages), and the Number of their Crews; separating British from Foreign Vessels; and distinguishing the Navigation with each Country.

SLATE. — Slate and chalk laden on board any ship or vessel bound for foreign parts shall be deemed ballast; and all such ships or vessels having on board only slate, or slate and chalk, shall be deemed to be departing in ballast; and if, on the return of any such ship or vessel, any slates or chalk be remaining on board, they shall be deemed to be her ballast. — (4 & 5 Will. 4. c. 89. § 3.)

SMUGGLING. — The 85th clause in the act 3 & 4 Will. 4. c. 53., for the prevention of smuggling (Dict. p. 1061.), authorising justices to sentence seafaring men, convicted of smuggling, to serve in the navy for 5 years, has been repealed. Persons convicted of such offences are now to be committed to the house of correction, to hard labour, for not less than 6 months for the first offence, 9 for the second, and 12 for the third. — (4 & 5 Will. 4. c. 13. § 2.)

SPELTER. — The exportation of spelter or zinc from Europe to India, which began in 1821, produced an extent of speculation, and a fluctuation of price, that could hardly have been conceived possible. — Subjoined is an account of the

Quantity, Value, and Selling Price of the Spelter imported into Calcutta from all Parts from the year 1820—21.

Years.	Quantity imported.	Value.	Average Price per Fy. Md.	Years.	Quantity imported.	Value.	Average Price per Fy. Md.
	<i>Baz. Mds.</i>	<i>Sa. Rs.</i>	<i>Cur. Rs.</i>		<i>Baz. Mds.</i>	<i>Sa. Rs.</i>	<i>Cur. Rs.</i>
1820-21	Nil.	Nil.		1827-28	185,654	1,175,611	9 3
1821-22	22,656	225,560	25 7	1828-29	155,151	711,217	7 2
1822-23	46,032	510,167	20 10	1829-30	99,795	487,287	6 1
1823-24	91,875	1,112,556	15 10	1830-31	71,116	365,208	5 10
1824-25	190,900	1,986,790	15 8	1831-32	61,351	299,585	5 8
1825-26	130,580	1,195,956	12 15	1832-33	50,710	150,918	
1826-27	188,670	1,548,758	10 15	1833-34	21,911	96,512	

This table shows the extraordinary extent to which speculation had operated on this article. The excess of imports from 1824-25 to 1828-29 was such, that recently the trade may be said to have been altogether extinct, the supplies that were carried out during the 3 years ending with 1834-35 being intended rather to serve as dead weight than as a merchantable article. The stock in the India market has now, however, been so much reduced, that a considerable rise of prices may, at no distant period, be fairly anticipated. (*Bell's Comparative View of the Commerce of Bengal* for 1830-31, and 1831-32, p. 5.; and for 1832-33, and 1833-34, p. 24.)

SPIRITS. — The reader will find, in the body of this work (art. SPIRITS, p. 1075.), a statement of the smuggling and other pernicious consequences resulting in Ireland from the oppressive duties laid on spirits previously to 1823; of the good effects of the reduction of the duty to 2s. 10d. the Imperial gallon in that year; and of the influence which the addition of 6d. to the duty in 1831 had in reviving that illicit distillation, the preceding reduction had gone far to put down. The view we took of the necessity of making a fresh reduction of the duty was approved and strongly recommended by the Commissioners of Excise Inquiry; and has, we are glad to say, been acted on by government; the act 4 & 5 Will. 4. c. 75., having reduced the duty on British spirits, entered for home consumption in Ireland, to 2s. 4d. a gallon.

It was contended, when this measure was before parliament, that the reduction should be extended to all parts of the empire; and that, by confining it to spirits used in Ireland, a new temptation would be created to smuggle from that country into England and Scotland. This no doubt will be, in some degree, the case; and we hope that no long period will be allowed to elapse till the measure be generalised. We do not, however, think that there is much probability of its giving birth to any considerable amount of smuggling; and it is not to be denied that the reduction was much more urgently required in Ireland than any where else. Scotch whisky carried to Ireland is admitted for consumption at the low duty.

Spirit Licences. — The act 4 & 5 Will. 4. c. 75. made certain additions to the duties on spirit licences, which are now as follows: —

From the 10th of October, 1834, retailers of spirits whose premises are rated under

	<i>L. s. d.</i>		<i>L. s. d.</i>
At 10 <i>l.</i> and under	2 <i>l.</i>	10 <i>l.</i> per annum, shall pay	3 5 0 per annum of licence duty.
20 <i>l.</i>	2 <i>l.</i>		6 0 0
25 <i>l.</i>	—		9 0 0
30 <i>l.</i>	—		11 0 6
40 <i>l.</i>	—		12 12 0
50 <i>l.</i>	—		11 3 6
50 <i>l.</i> and upwards	—		15 15 0

The spirit licences of grocers in Ireland, not selling spirits to be consumed on the premises of said grocers, not to be affected by this act. — § 8.

All houses licensed at the passing of the present act to continue to be deemed of the same value, so long as the present persons hold them, and the premises remained unaltered; afterwards, their annual value is to be determined according to the mode prescribed in 6 Geo. 4. c. 81. § 9. But it is ordered by the 5 & 6 Will. 4. c. 29. that the additional licence duties shall not be charged on the retailers of spirits not consuming more than 50 gallons a year. — § 1.

SPIRITS (CONSUMPTION OF).

Account of the Number of Gallons of British, Colonial, and Foreign Spirits entered for Home Consumption, specifying the Quantities separately entered for England, Scotland, and Ireland, with the Nett Revenue derived from each sort of Spirit in each Country, during the Year ended 5th of January, 1835.

Excise Office, London, 29th September, 1835.

STARCH. — The injurious influence of the duty on starch, the nett produce of which, in 1833, was only 91,517*l.* 18s. 2*d.*, was most ably exposed, and its abolition strongly recommended, by the Commissioners of Excise Inquiry, and we are glad to have to add that, agreeably to this recommendation, the duty has been abolished. — (4 & 5 Will. 4. c. 77.)

STEAM VESSELS.

Account of the Number and Tonnage of Steam Vessels, distinguishing the Countries to which they belonged, which entered Inwards and cleared Outwards, stating whether they conveyed Goods or Passengers, or both, in 1833 and 1834. — (*Parl. Paper*, No. 320. Sess. 1834.)

Note. — Vessels with passengers only are not compelled to enter and clear at the Custom-house.

STETTIN, a city of Prussia, on the left bank of the Oder, about 36 miles from its mouth, in lat. $53^{\circ} 23' 20''$ N., long. $14^{\circ} 33'$ E. It is well built, strongly fortified, and has a population, exclusive of troops, of 28,000.

Stettin is the seat of an extensive and growing commerce; and is now, indeed, the principal port of importation in Prussia. She owes this distinction mainly to her situation. The Oder, which flows through the centre of the Prussian dominions, is navigable as far as Ratisbon, near the extreme southern boundary of Prussian Silesia; and is united, by means of canals, with the Vistula, the Elbe, the Spree, &c. Stettin is, consequently, the principal emporium of some very extensive and flourishing countries; and is not only the port of Frankfurt-on-the-Oder, Breslaw, &c., but also of Berlin. Hence, at the proper seasons, its wharfs are crowded with lighters that bring down the produce of the different countries traversed by the river, and carry back colonial products, and other articles of foreign growth and manufacture. Vessels of considerable burden, or those drawing above 7 or 8 feet water, load and unload, by means of lighters, at the mouth of the river, at Swinemunde, the out-port of Stettin, on the east coast of the isle of Usedom, in lat. $53^{\circ} 55'$ N., long. $14^{\circ} 15' 15''$ E. Formerly there were not more than 7 feet water over the bar adjacent to Swinemunde; but the harbour of the latter has recently been so much improved, by the construction of piers and breakwaters, dredging, &c., that it is now the best on the Prussian coast, and admits vessels drawing from 18 to 19 feet water. A lighthouse has been erected at the extremity of the eastern pier. Stettin is a free port; that is, a port into and from which all sorts of goods may be imported and re-exported free of duty. If goods brought through the Sound be imported at Stettin, and entered for home consumption in the Prussian states, they are charged with $\frac{2}{3}$ per cent. less duty than if they had been imported through any other channel. This is intended to reimburse the merchant for the sound duties, and to encourage importation by this direct route in preference to that carried on through Hamburg and Emden. There is a great wool fair in the month of June each year.

Monies, Weights and Measures same as at Dantzic, which see. The bank of Berlin has a branch at Stettin.

Imports and Exports. — The principal articles of import at Stettin are sugar, coffee, dye-woods, wine, iron, and hardware, oil, tallow, cotton, and cotton goods, herrings, spirits, linseed, coal, salt, &c. The principal exports are linen, timber and staves, corn, wool, zinc, bottles and glass, bones, manganese, fruits, &c.

In 1833, among other articles, there were imported 32,863 tons raw sugar, 27,147 do. clayed sugar, 32,903 do. molasses, 1,596 barrels coffee, 12,895 tuns olive oil, 11,493 do. hempstead oil, 5,113 do. palm oil, 129,522 quintals dye-woods, 112,559 barrels herrings, 119,560 casks wine, 17,553 quintals iron, 68,737 do. tallow, 47,006 do. potash, 7,586 do. copper, &c. Among the exports in the same year, exclusive of linens, &c., were 1,620 quintals of wool, 4,752 lasts corn, 1,636 do. oak staves, 3,226 do. wainscot, 17,813 pieces of wood for building, 5,014 lasts of wood for ship-building, 74,192 quintals of zinc, 1,826 do. glass, 4,153 do. manganese, 58,850 do. bones, 36,016 do. milk-skins, 66,877 bottles, &c. The wheat shipped from Stettin is mostly red, and of very fine quality. The barley is also very good. The oak staves are believed to be equal, or perhaps, superior to any from any other port of the Baltic.

Account of charges incurred by a British ship, of about 200 tons burden, at Swinemunde and Stettin: —

	Rixd.	S. gr.	Pf.

Navigation. — Stettin is the principal shipping port in the Prussian dominions. In 1831, there belonged to it 252 ships, of the burden of 26,598 lasts, being about a third part of the shipping belonging to Prussia. In 1833, there arrived at the

port 876 ships, of which 630 were loaded, 66 in ballast, and 177 coasters. Of the ships with cargoes 374 were Prussian, 106 Danish, 65 English, 1 American, 3 Bremeners, 6 Hanoverians, 1 Hanoverian, 12 Dutch, 11 Norwegian, 6 Oldenburgers, 32 Swedish, 3 Russian, 5 Lestockers, 1 Lubeker. We subjoin an official

Account of the Arrivals and Departures of Shipping at Swinemunde, the out-port of Stettin, in 1830.

Port Regulations.—All vessels are prohibited entering Swinemunde, unless forced by stress of weather, without previously heaving to, and receiving, a pilot on board. But when compelled to enter without a pilot, the master is to observe the signals made from the lighthouse on the eastern pier, and to shape his course accordingly. If no flag be hoisted on the lighthouse, nor signal made, the port cannot be entered, and the master must either anchor in the roads, or stand out to sea. After the pilot has been received on board, the master is bound, in all cases, to conform to his directions. Within 24 hours after arrival, the master must deliver to the custom-house an account of the species and quantity of each article on board; and he is subjected to a heavy fine if this account should turn out to be incorrect. He is to abide by the instructions given him as to discharging his cargo, loading, &c. No gunpowder is to be kept on board, nor any inflammable matter hoisted in the ship. All ships proceeding from Swinemunde to Stettin

must have pilots. The master must produce at the police-office the muster roll of the crew, and the passports of the passengers, if there be any on board. The latter are bound to go with him to the police, and the crew if desired. All presents to pilots and custom-house officers are strictly prohibited. Vessels directed to perform quarantine must immediately hoist the yellow flag; and on no account quit their assigned berth. The master is responsible for the conduct of the crew; and if any of them be discharged or remain on shore, he must give notice thereof to the police.

We have gleaned these particulars from various works, and among others from the work (in German) of Ferber, a privy councillor of his Prussian Majesty, on the *Commercial State of Prussia*, Berlin, 1832, p. 133, &c.; the *Archives du Commerce*, tom. vi. p. 151.; *Annuaire du Commerce Maritime*, tom. ii. p. 325.; Papers printed by order of the American Congress, 3d March, 1831, vol. i. p. 351., &c.

SWEDEN.

SWEETS.—An excise duty was imposed on sweets—that is, on home-made wines, mead, or metheglin, &c.—manufactured for sale, so early as 1696. In 1803 it amounted to 49s. a barrel; the produce of the duty varying from that year to 1816 from about 21,000*l.* to about 33,000*l.* a year. But in 1816 it fell off to little more than half its previous amount. This sudden decline was doubtless occasioned by the great increase in the consumption of Cape wine, consequent to the reduction of the duty on it, in 1814, from about 6*s.* to about 2*s.* 6*d.* a gallon. In 1817 it was attempted to revive the manu-

facture of home-made wine, by taking a third from the duty on sweets; which amounted, after the reduction, to about 1s. 0 $\frac{1}{4}$ d. a gallon; and in 1826 it was further reduced to 6d. But the ease with which the article may be made by private individuals, and the decisive check given, by the introduction of Cape and other cheap foreign wines, to the use of home-made substitutes, prevented these reductions from having any material influence; and in 1832 the duty had dwindled to 3,721l. Under these circumstances, the Commissioners of Excise Inquiry wisely recommended the abolition of the duty, which has been effected by the act 4 & 5 Will. 4. c. 77. — (*Fifth Report by Commissioners of Excise Inquiry*, p. 18, &c.)

SYDNEY.

Population. — There is, in the *Dict.* p. 1099, an account of the population of the colony of New South Wales, according to the census of 1828, accompanied with an intimation that doubts were entertained as to its accuracy. These have since been fully confirmed by the returns obtained under a census taken on the 2d of September, 1833. It appears from them that the population of the colony of New South Wales, exclusive of aborigines, amounted at that date to 60,261; of which were —

	Free.	Convict.		Total.
Males	22,813	21,815	Males	44,688
Females	13,475	2,998	Females	15,573
	36,518	25,913		60,261

Of the free population, 5,265 males and 4,944 females were under 12 years of age. The total population of Sydney, in September, 1833, was 16,232, of which 13,492 were free.

The census of 1828 made the population of the colony only 36,598. The total immigrants from the 1st of July, 1828, to the 31st of December, 1833, have been, men 2,321, women 2,323, children 1,846; in all, 6,690. Now, if we add this number to the population as given by the census of 1828, it would follow, had that census been accurate, that the colonial births, during the intervening 5 years, had exceeded the deaths by about 17,000. But an increase of this sort, taking the magnitude of the female population into account, is evidently impossible; and shows that the population had been materially underrated in 1828.

Wages in New South Wales. — Every one in any degree familiar with such subjects is aware of the extreme difficulty of obtaining accurate accounts of the rate of wages. But in the case of colonies, this difficulty is materially increased; it being the object of those interested in the encouragement of emigration, to set its advantages, of which high wages are probably the greatest, in the most striking light, and conversely. Hence we did not venture to lay any details as to the rate of wages at Sydney before the reader, except those given by the late Emigration Commissioners; and as these gentlemen mentioned that their statements had been obtained from the colonial agent, and other authentic sources, we had no doubt of their accuracy. — (*Dict.* p. 1103). We regret, however, to be obliged to say that this confidence, though apparently well founded, seems to have been not a little misplaced. The Rev. Henry Carmichael, one of the professors in the Australian College, Sydney, has shown, in his valuable tract, entitled *Hints to Emigrants to New South Wales*, that the statements put forth by the Emigration Commissioners were "calculated very seriously to mislead;" and that, in point of fact, they have misled very many individuals, who, on arriving at Sydney, found the wages far below what they had been made to expect.

A committee, consisting of the most intelligent persons of the class referred to, have drawn up a report on the eligibility of New South Wales as a place of resort for emigrant mechanics, in which, among other things, they declare that the account of the rate of wages (see *Dict.* p. 1105.), published by the Emigration Commissioners, "is extravagant and ridiculous." "Common labourers," they say, "do not earn more than 1s. 6s. per week, with rations and lodgings; mechanics, out of Sydney, do not average more than 15s. to 20s. per annum, with rations, &c.; mechanics of the highest qualifications, in Sydney, do not average more than 2l. per week the year round. Agricultural labourers, capable of managing a farm in the capacity of bailiff, not more than 15s. to 20s. per annum, with rations, and hut to live in; and persons of higher grades and similar occupations cannot get more than 10s. to 60s. per annum, and rations."

In corroboration of the accuracy of these statements, Mr. Carmichael gives the substance of a letter from William M'Pherson, Esq., collector of internal revenue, and secretary of the Emigrants' Friend Society, dated the 15th of June, 1833.

"Good mechanics can earn, in Sydney, from 30s. to 40s. per week, without board or lodging; and in the country, from 20s. to 30s. per annum, with house and rations."

"Common labourers in Sydney obtain about 14s. per week, without board or lodging; and in the country, about 12s. per annum, with house (or rather hut) and rations."

"Wages given to farm servants vary with their qualifications; 50s. to 60s., with a house and rations, may be considered the highest wages given to overseers of a superior description, and 20s. to 25s. to those of humbler pretensions."

"Their being married or single makes, in general, no difference in the rate of wages, unless where the females are expected to perform any domestic duties: but rations are usually given to the wife and children of a married overseer as well as to himself."

TARIFF. — Instead of the customs duties on the undermentioned articles, imposed by the act 3 & 4 Will. 4. c. 56., given in the first column of the Table entitled **TARIFF** in the *Dictionary*, the acts 4 & 5 Will. 4. c. 89., 5 & 6 Will. 4. c. 32., &c. have substituted the following: —

	l. s. d.		l. s. d.
Apples, dried	the bushel 0 2 0	Cassava powder or starch, the produce of and imported from any British possession in America	the cwt. 0 1 0
Ashes, pearl and pot, imported from a British possession in Europe	the cwt. 0 6 0	Coffee, the produce of, and imported from Sierra Leone, or any British possession within the limits of the East India Company's charter	the pound 0 0 6
Books in the foreign living languages, being of editions printed in or since the year 1801, bound or unbound	the cwt. 2 10 0	Currants	the cwt. 1 2 2
Bottles of earth or stone, viz. empty	the dozen 0 0 6	Figs	the cwt. 0 15 0
Bronze, viz. all works of art made of bronze, the cwt.	1 0 0	Grapes, for every 100l. of the value	5 0 0
other manufactures, of bronze, for every 100l. of the value	50 0 0	Mans and maning, for every 100l. of the value imported from any British possession, for every 100l. of the value	5 0 0

"Good ploughmen, or shepherds, obtain from 15s. to 20s., with a house and rations."

"Wages of domestic servants are —

	From L. 12 to L. 20
Of a single man	8 - 15
Of a single woman	8 - 15
Of a married couple	20 - 30

"N.B. — A married pair of emigrants may easily find a small house, containing 2 apartments, to accommodate them on their arrival, at a weekly rent of from 7s. to 10s.; and an unmarried man may lodge and board for 10s. 6d. per week." — (*Carmichael's Tract*, pp. 52, 53. Lond. ed.)

These statements certainly differ very widely from those of the Emigration Commissioners. The greater mildness and salubrity of the climate appears to be the principal, or rather, perhaps, the only recommendation in favour of emigrating to Australia rather than to Canada or the United States; but whether this be a sufficient counterpoise to the vast distance of Australia from Europe, the heavy expense of the voyage thither, the chances of drought, and the high price and general bad quality of the land, is a point as to which we do not presume to decide; but it is one that deserves the serious attention of every one who is projecting a visit to the antipodes.

* The rations allowed to free labourers may be rated per week as follows, viz. —

	Lbs. oz.		Lbs. oz.
Flour	10 0	Tobacco	0 2
Beef and mutton	10 0	Salt	0 2
Tea	0 2	Soap	0 2
Sugar	1 0	Milk	7 quarts.

† This latter (the milk), being given in lieu of tea and sugar. So that labourers, if well-behaved and industrious, are sure to raise themselves above the station which they occupy at home.

TEA (TRADE IN). — We are truly glad to have to state that the results of the the first year's experience of the free trade to China have more than justified the anticipations of those who expected the greatest success from the measure. At an average of the 3 or 4 years preceding the dissolution of the Company's charter, their average annual imports of tea amounted to about 31,500,000 lbs. a year; but in 1833-34, the last year of the charter, the imports were only 29,592,310. The year 1834-35, the first year of the free trade, presents a very different result; the imports having amounted to nearly 42,000,000 lbs., exceeding by above 10,000,000 lbs., or 30 per cent., the Company's imports when largest! We subjoin an

Account of the Imports of the different sorts of Tea into Great Britain and Ireland in the year 1834-35, specifying the Ports of Importation and the Quantities brought into each; with a Statement of the Imports for 1833-34, the last Year of the Company's Trade.

Teas.	London.	Liverpool.	Bristol.	Leith.	Clyde.	Dublin.	Total Import of each Description in 1853-54.	Imported by and under the East L. Co. in 1853-54.

* Exclusive of the cargo of the Eliza (lost) and of the Sir David Scott, and one or two smaller vessels still to arrive: allowing also 2*lbs.* per picul, or 15 per cent., for difference between Canton and English weight.— (From the Circular of Weston, Moffat, and Son, 18th of September, 1855.)

The extension of the trade is not, however, the only gratifying circumstance connected with it. Notwithstanding the great additions made to the exports, there was either no rise of prices at Canton, or none worth mentioning; a fact which sets the ability of China to furnish additional supplies in the most striking point of view. The quality, too, of the free trade teas is said, by some, to be superior, and is admitted by all to be at least equal, to that of the Company's teas. Many apprehensions were entertained of disturbances taking place between the crews of the private ships and the natives, that might interrupt or stop the trade; but nothing of the sort has occurred. Under all the disadvantages of inexperience, the free traders have, with but few exceptions, conducted themselves with singular tact and address; and the captains of the different ships agree in affirming, that Canton is a port where they may unload, load, and clear out, not only without any difficulty, but with as much facility and expedition as at either London or Liverpool. It is singular, indeed, how completely the statements put forth by the Company's advocates, in favour of the monopoly, have been disproved: in fact, the only interruption of any kind given to the free traders was occasioned by the pretensions advanced by the individual sent out to watch over their interests; and, however painful the way in which that interruption was terminated, there can be no doubt that the event was a most fortunate one for the success of this great experiment.

The accounts have not yet been made up; but we can confidently state that the opening of the trade has been quite as successful as respects exports as imports. The quantity and value of the cottons shipped for China, in 1834-35, very much exceed the quantity and value of those shipped in any previous year. This, indeed, might have been anticipated; but few comparatively anticipated what has turned out to be the fact, that the cotton stuffs have met with a quick and advantageous sale; and that all descriptions of twist, with the exception of some of the higher numbers, have, also, realised good prices and profits. Indeed, we have no doubt, as well for other reasons, as

from the statements of gentlemen of great experience recently arrived from China, that the trade between that country and England is yet only in its infancy. Nor is it possible to estimate the mighty dimensions to which it may attain, should our cottons, as there seems to be a fair prospect, come into extensive use among the Chinese.

Tea (Duties on).—We mentioned in the article *TEA (Dict. p. 1148.)*, that objections had been made to the duties imposed on tea by the act 3 and 4 Will. 4. c. 101.; and that it had been proposed to repeal them, and to impose in their stead an equal duty of 2s. per lb. Had tea been of a nearly uniform quality, or had the different teas been of nearly the same value, there would have been nothing to object to in the equalisation of the duty; but, so far from this being the case, small beer does not differ more from strong than some sorts of tea from others; and while the price, in bond, of the inferior sorts, in most markets, does not exceed 10d. or 1s. per lb., that of the superior sorts is as high as 4s. or 5s. Under these circumstances, it is not easy to imagine that any thing can apparently be more oppressive or unjust than the imposition of the same rate of duty on all sorts of tea. But, admitting the injustice, it was contended that it was not really of a kind that could be obviated; that it was impossible to discriminate between different qualities of tea; that, by imposing different rates of duty, a door was opened to every species of fraud; and that teas admitted at one port at the low duty of 1s. 6d. were charged at another with the higher duties of 2s. 2d. and 3s. per lb. We believe these statements were much exaggerated; though no doubt can be entertained of their being true to a certain extent. It was evident, indeed, that considerable difficulties would have to be encountered at the outset of a new system; but it is probable that a little experience would have done much to obviate them; and it is believed by many well-informed persons, that the duties charged under the act 3 and 4 Will. 4. c. 101. might have been, at no very distant period, assessed with considerable fairness. But government, influenced partly by a wish so get rid of the clamour and outcry raised by the importers against the discriminating duties, and partly, perhaps, by a doubt whether they could ever be fairly collected, consented to their abolition; and, to accomplish it, introduced and carried through the act 5 and 6 Will. 4. c. 32. This act declares that the existing duties on tea shall cease and determine on the 1st of July 1836; and that, from and after that date, a duty of 2s. 1d. per lb. shall be charged on all teas, without exception, entered for home consumption in the United Kingdom.

We do not deny that the necessity of the case—the impossibility of fairly assessing discriminating duties—may justify a measure of this sort; but nothing short of this will afford so much as the shadow of an excuse for it. Tea is no longer, in this country at least, a luxury, but a necessary of life; and as many as 7,000,000 lbs. of Bohea have been consumed in a single year. Now, if we take the price of Bohea in bond, in London, at 1s. per lb., and of Hyson, and other fine teas, at 4s., the new duty will be equivalent to an *ad valorem* tax of above 200 per cent. on the beverage of the poor, and of little more than 50 per cent. on that of the rich! This is a grievous anomaly; and, if the difficulties in the way of assessing discriminating duties could have been obviated by the adoption of any means at the disposal of government, it is dealing most unjustly and oppressively by the poor. Perhaps it was not possible entirely to obviate the difficulties in question. But had the plan we suggested (*Dict. p. 1148.*) been adopted, that is, had a duty of 1s. 6d. (1s. 3d. would have been still better) been charged on Congou as well as on Bohea, and the duties on all the other descriptions of tea been allowed to stand as they were, there would have been but little room left for fraud; the revenue would have lost little or nothing; and the duty would have been in all other respects infinitely less objectionable.

Warehousing of Tea.—The commissioners of customs have, by a minute dated the 10th of July, 1834, issued the following regulations with respect to the warehousing of tea, and its removal from the original port of importation to any other warehousing port, for the purpose of being warehoused for home consumption:—

1. That the warehouses which may be approved for the deposit of tea, be exclusively appropriated to that purpose.
2. That the article be weighed and examined at the time of importation, the officers taking care that all the packages imported in each vessel be "scribed" with a progressive number, with the initials of the vessel's and master's names, and the gross landing weight; and that the duty be charged according to the quantity and quality then ascertained.
3. That no packages be allowed to be divided into smaller packages (except for the purpose of stores), nor the mixing of tea, of any sort or sorts, be permitted in the warehouses, either for home consumption or exportation.
4. That the packages be sorted and arranged in the warehouse by the occupier, according to their respective "chops" or "beds," so as to enable the officers to select from each the required number of packages for taring, and to ascertain the proper tare to be allowed on the packages in each "chop" or "bed;" and that the rule to be observed, as to number of chests to be turned out in each "chop" or "bed," being of the same size and description of tea, be as follows, viz:—

1 to 5—	5 chests of the same size and description of teas	1 turned out.
6 to 40—40	- - -	3 ditto
41 to 80—80	- - -	4 or 5 ditto
81 to 120—120	- - -	5 ditto
121 to 200—200	- - -	6 ditto
201 to 300—300	- - -	8 ditto
301 to 500—500	- - -	10 ditto
501 to 800—800	- - -	12 ditto
801 and upwards	- - -	16 ditto

And that, in addition to the tare, an allowance for draft be made of 1lb. upon each package exceeding 25 lbs. gross, to be deducted from the foot of the landing account.

5. That tea entered for exportation be previously weighed, and any deficiency of the landing quantity charged with duty, unless such tea be deposited in a warehouse of special security.

6. That the officers be authorised, under the 124th section of the Regulation Act, to draw samples of tea, not exceeding 3 ounces of each description and quality, unless under special circumstances, such samples to be disposed of as the Board may see fit to direct. And that the merchants or proprietors of the goods be allowed to take the like quantity as samples, under the 31st section of the General Warehousing Act.

7. That the removal of teas from the original ports of importation to any other warehousing port in the United Kingdom, for the purpose of being re-warehoused for home consumption, do take place under the regulations and conditions specified in the General Orders of the 14th of June, 1831, and 3d of November, 1832, in regard to the removal of articles the produce of the East Indies; and that tea so removed be allowed to be deposited in warehouses or floors which may have already been approved for other goods.

8. When tea, or other East India goods, shall be imported into either of those ports for the Glasgow market, and transhipped into craft properly secured, for removal to Glasgow in charge of the officers of the revenue, under such regulations for the security of the revenue as may appear necessary in such cases, the examination of the goods, for the purpose of ascertaining the duty thereon, may take place at Glasgow instead of the port of importation.

In all other cases, goods shall be examined at the time of importation, for the purpose of fixing the amount of duty to which they may be liable, and the duty so ascertained shall be assessed on the goods at whatever future period they may be delivered for home consumption.

Under these arrangements, there will be no objection to the goods being removed from the original port of importation to any other warehousing ports in the United Kingdom, for the purpose of being re-warehoused for home consumption, under the same regulations and restrictions now applicable to the removal of articles the produce of the East Indies.

The ports of London, Liverpool, Bristol, Hull, Newcastle, Leith, Glasgow, Greenock, Port Glasgow, Dublin, Belfast, and Cork, have been declared ports into which tea may be imported and warehoused.

TIMBER. — During last session (1835) a committee of the House of Commons was appointed to inquire into the operation of the existing duties on timber. Having examined several witnesses, the committee agreed to the following resolutions: —

1. *Resolved*, That it is the opinion of this committee, that the present mode of taking the duties on deals is susceptible of improvement, and that this committee would recommend that a mode be adopted which shall approach more nearly to a payment according to the contents of the deals.

2. *Resolved*, That it is the opinion of this committee, that the difference of duty of 45s., now imposed by law upon timber the produce of Europe, as compared with timber the produce of our North American colonies, is too great, and may be reduced.

3. *Resolved*, That it is the opinion of this committee, that, having a due regard to the interests which have been created in the British North American colonies by the system hitherto pursued, and to the representations of the shipping interest, a reduction of the protective duty, not exceeding 15s. per load, appears to them to be a fair arrangement.

4. *Resolved*, That it is the opinion of this committee, that such reduction be made, so far as may be consistent with the interests of the revenue, without any augmentation of the duty on colonial timber.

5. *Resolved*, That it is the opinion of this committee, that, in any alteration made, such alteration should not affect the shipments made in the year 1836.

6. *Resolved*, That it is the opinion of this committee, that there should be an uniform mode of taking the duty on deals throughout the United Kingdom.

The adoption of these resolutions will be a material improvement. Still, however, they fall far short of what the public exigencies require. An ample supply of the best and cheapest timber being, if not absolutely indispensable, of the *utmost possible importance* to a manufacturing nation, possessed of a large mercantile and warlike navy, it should be about the very last article on which duties should be imposed. But, if a tax must, on the principle of *quocunque modo rem*, be laid on timber, it is surely unnecessary to say that it ought to be laid equally on all timber imported; or that, if a distinction be made, it ought plainly to be in favour of the best, and not of the worst, article. But, for several years past, our policy, if we may so call it, has been exactly the reverse of this. We have laid high discriminating duties on the superior and cheaper timber of the north of Europe, to force the importation of a dearer and comparatively bad article from our North American possessions! Even supposing the suggestion of the committee were adopted, there would still be a discriminating duty of 30s. a load charged on the superior timber of the North of Europe over that which is laid on inferior timber from North America. The folly of thus enhancing the cost, and deteriorating the quality, of so important an article as timber, is the greater, seeing that it is by no means clear that our North American possessions derive any real advantage from the timber trade; at all events, it is certain that they do not gain by it more than a very small part of the loss it entails on us; and any injury that might be done them by the equalisation of the timber duties, would be more than made up by the repeal of the discriminating duties, that are at present charged on most articles of foreign produce imported into the colonies; duties which, without being productive of revenue, are the source of much irritation and disgust.

The shipowners would sustain more injury from an equalisation of the timber duties than any one else. But we have shown (*Dict.* p. 1156.) that, even as regards them, the inconvenience would not be very considerable. But, whatever it might be, it would be fully obviated by allowing them a bounty of 30s. or 40s. on the conveyance of emigrants to Quebec; a measure of the policy of which we are, on this as well as on other grounds, fully persuaded. — (See *Dict.* in *loc. cit.*)

For an account of the timber imported, exported, and retained for consumption in 1833 and 1834, see *post*, p. 52.

TONNAGE OF SHIPS. — We noticed in the *Dict.*, p. 1165., the inconveniences attending the old method of measuring ships, and gave some of the clauses of a bill that had been introduced for their more correct admeasurement. The subjoined statute, 5 & 6 Will. 4. cap. 56., which has embodied similar clauses, prescribes the rules according to which the tonnage of ships is to be ascertained from and after the 1st of January 1836. These rules are not so simple or easily applied as the one that has hitherto been used; but they will give the tonnage of all ships, however built, with tolerable accuracy, and will, consequently, take away the temptation, that has till now existed, to build ships of a form unsuitable for the purposes of navigation, in order that, by measuring less than their true burden, the duties charged according to the tonnage might be evaded.

Repeal of former Regulations. — The rules laid down in the act 3 & 4 Will. 4. c. 55. (see *Dict.* p. 977.) relating to the admeasurement of ships, are hereby repealed, so far as relates to the merchant ships to be hereafter registered. — § 1.

Rule by which Tonnage of Vessels is to be ascertained. — From and after the commencement of this act the tonnage of every ship or vessel shall, previous to her being registered, be measured and ascertained while her hold is clear, and according to the following rule; viz.: divide the length of the upper deck between the afterpart of the stem and the forepart of the sternpost into 6 equal parts. Depths: at the foremost, the middle, and the aftermost of those points of division, measure in feet and decimal parts of a foot the depths from the under side of the upper deck to the ceiling at the timber strake. In the case of a break in the upper deck, the depths are to be measured from a line stretched in a continuation of the deck. Breadths: divide each of those 3 depths into 5 equal parts, and measure the inside breadths at the following points; viz. at 1-5th and at 4-5ths from the upper deck of the foremost and aftermost depths, and at 2-5ths and 4-5ths from the upper deck of the midship depth. Length: at half the midship depth measure the length of the vessel from the afterpart of the stem to the forepart of the sternpost; then to twice the midship depth add the foremost and the aftermost depths for the sum of the depths; add together the upper and lower breadths at the foremost division, 3 times the upper breadth, and the lower breadth at the midship division, and the upper and twice the lower breadth at the after division, for the sum of the breadths; then multiply the sum of the depths by the sum of the breadths, and this product by the length, and divide the final product by 3500, which will give the number of tons for register. If the vessel have a poop, or half deck, or a break in the upper deck, measure the inside mean length, breadth, and height of such part thereof as may be included within the bulk-head; multiply these 3 measurements together, and, dividing the product by 924, the quotient will be the number of tons to be added to the result as above found. In order to ascertain the tonnage of open vessels, the depths are to be measured from the upper edge of the upper strake. — § 2.

Tonnage to be entered on Register. — The tonnage or burden of every ship belonging to the U. K. ascertained in the manner before directed, shall, in respect of any ship registered after the commence-

ment of this act (except as herein excepted), be inserted in the certificate of the registry thereof, and be taken and deemed to be the tonnage or burden thereof for all the purposes of the said act. — § 3.

Tonnage of Steam Vessels. — In each of the rules before prescribed, when applied to ascertain the tonnage of any ship or vessel propelled by steam, the tonnage due to the cubical contents of the engine room shall be deducted from the total tonnage of the vessel as determined by either of the rules aforesaid, and the remainder shall be deemed the true register tonnage of said ship or vessel. The tonnage due to the cubical contents of the engine room shall be determined in the following manner; viz.: measure the inside length of the engine room in feet and decimal parts of a foot from the foremost to the aftermost bulkhead, then multiply the said length by the depth of the ship or vessel at the midship division as aforesaid, and the product by the inside breadth at the same division at 2-5ths of the depth from the deck taken as aforesaid, and divide the last product by 92'4, and the quotient shall be deemed the tonnage due to the cubical contents of the engine room. — § 4.

Length and Contents of Engine Room to be set forth in Description of Steam Vessel. — The tonnage due to the cubical contents of the engine room, and also the length of the engine room, shall be set forth in the certificate of registry as part of the description of the ship or vessel, and any alteration of such tonnage due to the cubical contents of the engine room, or of such length of the engine room, after registry, shall be deemed to be an alteration requiring registry *de novo* within the meaning of the said act for the registering of ships or vessels. — § 5.

For ascertaining Tonnage of Vessels when laden. — The tonnage of all ships, whether belonging to the U. K. or otherwise, as there shall be occasion to measure while their cargoes are on board, the following rule shall be observed; viz.: measure, first, the length on the upper deck between the afterpart of the stem and the forepart of the sternpost; secondly, the inside breadth on the underside of the upper deck at the middle point of the length; and, thirdly, the depth from the underside of the upper deck down the pumpwell to the skin; multiply these 3 dimensions together, and divide the product by 130, and the quotient will be the amount of the register tonnage of such ships. — § 6.

Amount of Register Tonnage to be carved on Main Beam. — The true amount of the register tonnage of every merchant ship or vessel belonging to the U. K., ascertained according to the rule by this act established in respect of such ships, shall be deeply carved or cut in figures of at least 3 inches in length on the main beam of every such ship or vessel, prior to her being registered. — § 7.

Not to alter Tonnage of Vessels already registered. — Nothing herein contained shall extend to alter the present measure of tonnage of any ship or vessel which registered prior to the commencement of this act, unless in cases where the owners of such ships shall require to have their tonnage established according to the rule before provided, or unless there be occasion to have such ship admeasured again on account of any alteration made in the form or burden of the same, in which cases only such ships shall be re-admeasured according to the said rule, and their tonnage registered accordingly. — § 8.

Commencement of Act. — This act shall commence and take effect upon and from the 1st day of January 1835. — § 9.

Account of the Number and Tonnage of Vessels, and the Number of their Crews, belonging to the British Empire, on the 31st of December, 1832, 1833, and 1834.

TRADE OF THE UNITED KINGDOM. — The following Tables give a very complete view of the trade of the United Kingdom in 1833 and 1834. They are all derived from official sources, and their accuracy may be depended on. We congratulate our readers on the results they exhibit. They show, that all the great branches of manufacturing industry carried on in the kingdom are in a flourishing state. The progress of the cotton manufacture continues to be quite extraordinary. The imports of the raw material, and the exports of the finished articles, have increased, during the last 3 or 4 years, with a rapidity unexampled, in almost any previous period of equal duration, in the history even of this wonderful manufacture. It is not possible to say whether our present progress is destined to be lasting; but the rapid growth of wealth and population in almost all countries, the new markets that have been recently opened in the East, and the more correct ideas that are beginning to be everywhere entertained with respect to the influence of restrictions, seem to warrant the confident anticipation of a long-continued course of prosperity, and of a very great extension of our manufactures and trade. Nothing would be so likely to nullify these expectations, and to check our advance, as the growth of political agitation. It occasions an insatiable craving after change; which, though it should not end in any overt act, seldom fails, in the long run, to excite fears and apprehensions in the minds of capitalists and others that are extremely hostile to great undertakings. It is to be hoped, that nothing may occur amongst us to exemplify these remarks. Of all countries that ever existed, this, perhaps, is the one in which sudden and violent changes ought most to be deprecated. They could not, in fact, be attempted without great injury; and, if carried into effect, might be productive of the most disastrous consequences.

VAN DIEMEN'S LAND.—Population.— Including military, the total population of Van Diemen's Land amounted, on the 1st of January, 1835, to 35,250. The males are to the females in the proportion of about 23 to 10, and the free to the convict population nearly as 22 to 12½. The total estimated value of the articles of colonial produce exported from the colony in 1834 was 203,232*l.*; of which 117,323*l.* worth were shipped from Hobart Town, and the residue from Launceston, which is rapidly rising in point of commercial importance. The value of the wool exported was 103,680*l.*, being more than half the exports. The total imports into the island during the same year, consisting chiefly of British manufactures, were valued at 471,215*l.*; of which those imported into Hobart Town were supposed to be worth 355,273*l.*, and those into Launceston 115,942*l.* In 1834, there were 7 ships and 24 boats employed in the black whale fishery from Hobart Town, and 16 ships and 53 boats from Launceston, which produced in all oil and whalebone of the value of 25,294*l.* — (*Hobart Town Almanac for 1835*).

VENEZUELA.— An account of the trade of La Guayra, the principal port of this republic, in 1829, 1830, and 1831, is given in the "Dictionary" under *La Guayra*. The following details with respect to the foreign trade of the republic in 1833-34 are taken from the official statements contained in the Report of the *Secretario de Hacienda*, published at Caraccas in 1835.

Exports.— Account of the Quantities and Values of the principal Articles exported by Sea from Venezuela in 1833-34.

The trade under the head of Denmark is entirely carried on with the island of St. Thomas.

The total imports and exports from La Guayra in 1833-34 were 3,541,190 dollars, being more than half the trade of the republic. The imports and exports from Puerto Cabello during the same year were 1,445,724 dollars; the rest were from Maracaybo, Guiana, &c. The countries to which the shipping frequenting the ports of the republic belonged is not specified; but, in all, there cleared out 242 foreign ships of the burthen of 22,522 tons.

UNITED STATES (TRADE OF).— The following statements in relation to the trade and navigation of the United States have been derived from the official returns printed by order of Congress:—

I. Statement showing the Quantity and Value of the Cotton Wool annually exported from the United States since 1821.

Years.	Sea Island.	Other Sorts.	Value.	Years.	Sea Island.	Other Sorts.	Value.
	<i>Lbs.</i>	<i>Lbs.</i>	<i>Dollars.</i>		<i>Lbs.</i>	<i>Lbs.</i>	<i>Dollars.</i>
1821	11,514,066	115,519,759	20,157,184	1828	11,288,419	199,392,011	22,487,229
1822	11,230,635	153,424,460	21,035,058	1829	12,833,307	252,005,879	26,575,311
1823	12,156,688	161,586,582	20,445,520	1830	8,147,165	290,511,937	29,671,883
1824	9,525,722	152,815,911	21,947,101	1831	8,511,762	268,668,022	25,289,492
1825	9,665,278	166,781,629	36,546,619	1832	2,715,573	315,171,749	31,724,682
1826	5,972,852	198,562,565	29,025,211	1833	11,142,987	315,555,617	36,191,105
1827	15,140,798	279,169,317	29,559,515	1834	8,085,957	376,631,970	49,448,402

It appears from this statement, that both the quantity and the value of the exports in 1834 were greater than in previous years. The increase, since 1821, has been quite astonishing.

II. Account of the Quantity and Value of the Cotton Wool, Tobacco, Flour, and Rice, exported from the United States during the Year ended 30th of September, 1834; specifying the Quantities and Values of each Article shipped for each Country. — (From Papers laid before Congress, 3d March, 1835.)

WAREHOUSING SYSTEM. — The act 4 & 5 Will. 4. c. 89. § 20. has the following proviso: —

The commissioners of customs shall remit or return the duties payable or paid, on the whole or any portion of wine, spirits, or other fluid, which shall be lost by any unavoidable accident in the warehouse in which it was deposited according to the provisions in the act 3 & 4 Will. 4. c. 57., or any other act to be passed for the warehousing of goods; and the duties upon the following articles, *deposited in warehouses of special security*, viz. wine, currants, raisins, figs, hams, cheese, and mahogany, when taken out of warehouse for home use, shall be charged upon the quantities actually delivered.

Loss by Fire in Warehouses. — The 5 & 6 Will. 4. c. 66. enacts, that the clause in the general warehousing act, 3 & 4 Will. 4. c. 56 § 41. (*Dict. p. 1223.*) providing for the indemnification of the merchants for damage occasioned to merchandise in warehouses by embezzlement, waste, or spoil, or by the wilful misconduct of the officers, shall not extend, or be taken to extend, to any damage or loss occasioned by fire. — § 4.

WEIGHTS AND MEASURES. — The act 4 and 5 Will. 4. c. 49., passed in 1834, repealed some of the clauses in the acts 5 Geo. 4. c. 74. and 6 Geo. 4. c. 12., establishing the new system of weights and measures, and enacted others in their stead. But the act referred to has been itself repealed by the 5 and 6 Will. 4. c. 63. This new act contains several important provisions. It abolishes all local or customary measures, under a penalty of 40s. for every sale made by them; it prohibits the mischievous practice of selling by heaped measure; it enacts that coals shall in all cases be sold by weight; that with the exception of gold, silver, platinum, diamonds, and other precious stones (which may be sold by troy weight), and drugs (which may be sold in retail by apothecaries' weight), all other articles sold by weight shall be sold by avoirdupois weight only; and that a stone shall, in all cases, consist of 14lbs. avoirdupois; a hundred weight of 8 such stones, &c. Lead and pewter weights are not to be stamped.

The act sets out with repealing the 4 and 5 of Will. 4. c. 49. and the provisions in the acts 5 Geo. 4. c. 74. and 6 Geo. 4. c. 12., which require that all weights and measures shall be exact models or copies in shape or form of the standards deposited in the exchequer; and those allowing the use of weights and measures, not in conformity with the Imperial standard, established by said acts; or that allow goods or merchandise to be bought or sold by weights or measures established by local custom, or founded on special agreement. It then goes on to enact as follows: —

Weights and Measures stamped at the Exchequer declared legal. — Weights and measures verified and stamped at the exchequer as copies of standard weights and measures shall be taken to be legal weights and measures, to be used for comparison as copies of the Imperial standard weights and measures, although not similar in shape to those required under the provisions of the said acts; and the comptroller-general, or other duly authorised officer of the exchequer, may compare and verify, and stamp as correct standard measures of a yard, standard weights, and standard measures of capacity, any weights and measures which correspond in length, weight, and capacity with the standards, or parts or multiples thereof, deposited in the exchequer, under the 5 Geo. 4. c. 74., although such weights and measures may not be models or copies in shape or form of the standards so deposited. — § 4.

Copies of the standard Weights and Measures worn to be re-verified. — All copies of the Imperial standard weights and measures which have become defective, or have been mended, in consequence of wear or accident, shall forthwith be sent to the exchequer, for the purpose of being again compared and verified, and shall be stamped as re-verified copies of such standard weights and measures, provided the comptroller-general or other officer appointed for such verification, deem them fit for the purposes of standards; and every new comparison and verification shall be indorsed upon the original indenture of verification; and such weights and measures shall be stamped upon payment of fees of verification only; and the comptroller-general, or other officer, shall keep an account of all copies of the Imperial standard weights and measures verified at the exchequer. — § 5.

Local and customary Measures abolished. — From and after the passing of this act, the Winchester bushel, the Scotch ell, and all local or customary measures, shall be abolished; and every person who shall sell by any measure other than one of the Imperial measures, or some multiple or aliquot part thereof, shall be liable to a penalty not exceeding 40s. for every such sale: but nothing herein shall prevent the sale of any articles in any vessel, where such vessel is not represented as containing any amount of Imperial measure, or of any fixed, local, or customary measure heretofore in use. — § 6.

Heaped Measure abolished. — From and after the passing of this act, so much of the said acts as relates to heaped measure is hereby repealed, and the use of heaped measure shall be abolished, and all bargains, sales, and contracts made after the passing of this act, by heaped measure, shall be null and void; and every person who shall sell any articles by heaped measure shall be liable to a penalty not exceeding 40s. for every such sale. — § 7.

Articles sold by heaped Measure, how to be sold. — Whereas some articles heretofore sold by heaped measure are incapable of being stricken, and may not be conveniently sold by weight; it is enacted, that all such articles may henceforth be sold by a bushel measure, corresponding in shape with the bushel prescribed by the 5 Geo. 4. c. 74. for the sale of heaped measure, or by any multiple or aliquot part thereof, filled in all parts as nearly to the level of the brim as the size and shape of the articles will admit; but nothing herein shall prevent the sale by weight of any article heretofore sold by heaped measure. — § 8.

Coals to be sold by Weight. — From and after the 1st of January 1836, all coals, slack, culm, and cannel of every description shall be sold by weight, and not by measure, under a penalty of 40s. for every sale. — § 9.

All Articles to be sold by Avoirdupois, except, &c. — From and after the passing of this act, all articles sold by weight shall be sold by avoirdupois weight, except gold, silver, platina, diamonds, or other precious stones, which may be sold by troy weight; and drugs, which, when sold by retail, may be sold by apothecaries' weight. — § 10.

The Stone, Hundred Weight, &c. — From and after the passing of this act, the weight denominated a stone shall, in all cases, consist of 14 standard pounds avoirdupois, the hundred weight of 8 such stones, and the ton of 20 such hundred weights; but nothing herein shall prevent any bargain, sale, or contract being made by any multiple or aliquot part of the pound weight. — § 11.

Contents of Weights and Measures to be stamped on them. — All weights made after the passing of this act of the weight of one pound avoirdupois, or more, shall have the number of pounds contained in them stamped or cast on the top or side thereof in legible figures and letters; and all measures of capacity made after the passing of this act, shall have their contents stamped or marked on the outside thereof in legible figures and letters. — § 12.

Weights of Lead or Pewter not to be stamped. — The stamping of weights of lead or pewter, or of any mixture thereof, is prohibited after the 1st of January, 1836; but nothing herein shall prevent the use of lead or pewter, or any mixture thereof, in the manufacture of weights wholly and substantially cased with brass, copper, or iron, and legibly stamped or marked "cased," or prevent the insertion of such a plug of lead or pewter into weights as shall be *bona fide* necessary for adjusting them and affixing the stamp thereon. — § 13.

Conversion of Rents, Tolls, &c. — Clauses 14. and 15. regulate the proceedings that are to take place in England, Ireland, and Scotland, for the conversion of rents, tolls, &c. payable in weights or measures now abolished, into Imperial standard weights and measures.

Fair Prices. — In Scotland, from and after the passing of this act, the fair prices of all grain in every county shall be struck by the Imperial quarter, and all other returns of the prices of grain shall be set forth by the same, without any reference to any other measure whatsoever; and any sheriff clerk, clerk of a market, or other person offending against this provision shall forfeit not exceeding 5*l.* — § 16.

Copies of Standards, Inspectors, &c. — Clauses 17, 18, 19, and 20. prescribe the mode in which copies of the standard weights and measures shall be provided in counties, cities, boroughs, &c., the appointment of inspectors of weights and measures, &c. Clause 22. orders, that the expense of providing copies of standard weights, with the remuneration to inspectors, be defrayed out of the county rate. Clause 23. prohibits any maker or seller of weights or measures from being appointed inspector, and orders all inspectors to enter into a bond for 200*l.* for the due performance of the duties of their office, and the safe custody of the stamps and standard weights and measures committed to their care. Clause 24. orders inspectors to attend at market towns when ordered by justices. The following clauses are of general importance.

Magistrates to procure Stamps for Inspectors, for stamping all Weights, &c. — In England, the justices in general or quarter sessions assembled, and in Scotland the justices and magistrates at a meeting called by the sheriff, and in Ireland the grand juries, shall provide the inspectors with good and sufficient stamps for stamping or sealing weights and measures; and all weights and measures whatsoever, except as herein excepted, used for buying and selling, or for the collecting of any tolls or duties, or for the making of any charges on the conveyance of any goods or merchandise, shall be examined and compared with one or more copies of the Imperial standard weights and measures provided under authority of this act for such inspectors, who shall stamp, so as best to prevent fraud, such weights and measures, if they be found to correspond with the said copies; and the fees for such examination, comparison, and stamping shall be those in the schedule at the end of this act; and every person using any weight or measure other than those authorised by this act, or some aliquot part thereof, or which has not been stamped as aforesaid, except as herein excepted, or which shall be found light or otherwise unjust, shall forfeit not exceeding 5*l.*; and any contract, bargain, or sale made by such weights or measures shall be wholly null and void, and every light or unjust weight and measure shall, on being discovered by any inspector, be seized, and, on conviction, forfeited; but nothing herein shall require any single weight above 56 lbs. to be inspected and stamped; nor any wooden or wicker measure used in the sale of lime, or other articles of the like nature, or any glass or earthenware jug or drinking cup, though represented as containing the amount of any Imperial measure, or of any multiple thereof; but any person buying by any vessel represented as containing the amount of an Imperial measure, or of any multiple thereof, is authorised to require the contents of such vessel to be ascertained by comparison with a stamped measure, such measure to be provided by the person using such wooden or wicker measure, glass jug, or drinking cup; and in case the person using such last-mentioned measure or vessel refuse to make such comparison, or if, upon comparison being made, it be found to be deficient in quantity, the person using the same shall be subject to the forfeitures and penalties imposed on those using light or unjust weights or measures. — § 21.

Weights and Measures once stamped need not be re-stamped. — No weight or measure duly stamped by any inspector appointed under the 4 & 5 Will. 4. c. 49., or this act, or by any person or persons authorised to examine and stamp weights or measures, shall be liable to be re-stamped, although the same be used in any other place than that at which it was originally stamped, but shall be considered as a legal weight or measure throughout the U. K., unless found to be defective or unjust. — § 27.

Power to Justices, &c. to enter Shops and inspect Weights and Measures. — Justices, sheriffs, magistrates, and inspectors are authorised to examine weights and measures, and to order such as are light or otherwise unjust to be seized and forfeited; those using such weights and measures are subjected to a penalty of not more than 5*l.*; and a like penalty is imposed on those refusing to produce such weights and measures, or obstructing the magistrates. — § 28.

Penalties on Inspectors counterfeiting Stamps, &c. — Inspectors or other persons authorised to inspect weights or measures, who shall stamp any weight or measure without verifying the same, or who shall otherwise misconduct themselves in their office, shall for every such offence forfeit not more than 5*l.* Persons forging or counterfeiting any stamp or mark used for stamping or marking weights or measures, forfeit for every offence not more than 50*l.* and not less than 10*l.*; and persons knowingly using weights or measures marked with such counterfeit stamps, forfeit for every offence not more than 10*l.* nor less than 2*l.* — § 29, 30.

Penalty on Price Lists, &c. — From and after the 1st of January, 1836, any person printing, or clerk of any market or other person making any return, price list, price current, or any journal or other paper

containing price list or price current, in which the weights and measures quoted or referred to denote or imply a greater or less weight or measure than is denoted or implied by the same denomination of Imperial weights and measures under the provisions of this act, shall forfeit and pay not exceeding 10s. for every copy of every such return, price list, price current, journal, or other paper which they publish. — § 31.

The remaining clauses relate to the recovery of penalties; and save the rights of the Founders' Company, and of the Universities of Oxford and Cambridge.

Schedule of fees to be taken by all inspectors of weights and measures appointed under the authority of this act: —

For examining, comparing, and stamping all brass weights, within their respective jurisdictions, —

	s.	d.
Each half hundred weight	-	0 9
Each quarter of a hundred weight	-	0 6
Each stone	-	0 4
Each weight under a stone to a pound inclusive	-	0 1
Each weight under a pound	-	0 0½
Each set of weights of a pound and under	-	0 2

For examining, comparing, and stamping all iron weights, or weights of other descriptions not made of brass, within their respective jurisdictions, —

	s.	d.
Each half hundred weight	-	0 5
Each quarter of a hundred weight	-	0 2
Each stone	-	0 1
Each weight under a stone	-	0 0½
Each set of weights of a pound and under	-	0 2

For examining, comparing, and stamping all wooden measures, within their respective jurisdictions, —

	s.	d.
Each bushel	-	0 3
Each half bushel	-	0 2
Each peck, and all under	-	0 1
Each yard	-	0 0½

For examining, comparing, and stamping all measures of capacity of liquids, made of copper or other metal, within their respective jurisdictions, —

	s.	d.
Each five gallon	-	1 0
Each four gallon	-	0 9
Each three gallon	-	0 6
Each two gallon	-	0 4
Each gallon	-	0 2
Each half gallon	-	0 1
Each quart and under	-	0 0½

WHALE FISHERY (SOUTHERN). — This consists of three distinct branches; viz., 1st, the catch of the spermaceti whale; 2d, that of the common black whale of the southern seas; and, 3d, that of the sea elephant, or southern walrus.

The spermaceti whale (*Physeter macrocephalus*) is found in all tropical climates, and on the coasts of New Zealand and Japan. The ordinary duration of the voyage of a ship from England, employed in this department of the fishery, is about 3 years.

The common black whale of the southern seas (*Physeter microps*) is met with in various places, but principally on the coast of Brazil; in the bays on the west coast of Africa; and in some of the bays in New South Wales, Van Diemen's Land, &c.

Sea elephants (intermediate between the walrus of the northern seas and the seal) are principally met with in the seas round the Islands of Desolation, South Georgia and South Shetland, the coast of California, &c. Vast numbers of these animals are annually captured; vessels frequently load entirely with them; and they are believed to furnish more oil than the common South Sea whale. The oil of the black whale and that of the sea elephant, are both known in the market by the name of southern oil; and they are so very similar, that those most versed in the trade can with difficulty distinguish the one from the other. Hence ships commonly engage indifferently in either fishing as opportunity offers. The usual duration of the voyage of a ship from England in either of the last two departments, or in the two combined, varies from 12 to 18 months. We subjoin a

Statement of the Southern Whale Fishery carried on from Great Britain since 1800; exhibiting the total Number of Ships annually absent from Great Britain on whaling Expeditions; the total Number of Ships that annually returned to Great Britain; the annual Imports of Sperm and of common Oil, with the Prices of each; the Average Tonnage of the Ships at Sea; and the Average Number of Men to each Ship.

* The ships for this and the succeeding years, as for the previous ones, do not include colonial ships, but those from Britain only. From this year commenced the Imperial Measure.

We are indebted for the above valuable table, the only one of its kind that has ever been published, to a gentleman connected with a house that has been largely engaged in the trade since its commencement. The details may, therefore, be safely depended upon.

The spermaceti and southern colonial oils are principally imported from New South Wales and Van Diemen's Land. There used also to be a very considerable importation from the Cape of Good Hope; but that is now greatly fallen off. The imports of whale and seal oil from our North American possessions have been greatly augmented of late years. That, however, is mostly the product of the northern seas.

WHALE FISHERY (AMERICAN SOUTHERN). — The Americans were among the first to begin, and have long outstripped every other people, in the extent and success with which they have prosecuted the southern whale-fishery. It is principally carried on from New Bedford and other ports in the state of Massachusetts, and from Nantucket, a small island dependent on this state, celebrated for the bold adventurous character of its sailors, and for being the earliest seat of the fishery. We borrow from a Nantucket journal the following details with respect to this fishery in 1834: —

Spermaceti Whale Fishery. — The whole number of ships engaged in this valuable branch of the fisheries, is 275; of which 257 are now absent; viz. from —

New Bedford	-	94	Falmouth	-	6
Nantucket	-	63	Newport	-	6
Fairhaven	-	11	Sagharbor	-	5
Bristol	-	13	Salem	-	3
New London	-	10	Newburyport	-	3
Hudson	-	9	Poughkeepsie	-	2
Warren	-	7	Portsmouth	-	2
Edgarton	-	6	Dartmouth	-	2

and one from each of the following ports: viz. — Boston, Plymouth, Wareham, Rochester, Portland, Wiscasset, Fall River, Providence, Stonington, Newbury, New York, and Wilmington Delaware. Sixteen ships only are in port, belonging as follows: to New Bedford, 7; Nantucket, 5; Fairhaven, Plymouth, Sagharbor, and Edgartown, each 1.

The aggregate tonnage of the 257 absent ships is nearly 100,000 tons. Of these, only 61 had each at last dates obtained 1,000 brls. of oil and upwards; and about the same number are not yet reported with any oil. The number of seamen and navigators employed on board these vessels is not far from 9,000. The cost of the entire fleet, as fitted for these voyages of 3 years' duration, probably exceeds 6,000,000 dollars.

A document before us furnishes a very careful estimate of

the spermaceti oil imported into the United States during the year 1834. Since Jan. 1., there have arrived from the Pacific Ocean 55 ships; viz., into this port, 11; New Bedford, 25; Plymouth, 2; Fairhaven, 6; New London, 2; Edgartown, 2; Sagharbor, 2; Warren, 3; Falmouth, Bristol, and Hudson, 1 each. The cargoes of these ships, including that of the *Levant* and *Spartan* (just arrived, and presumed to amount to 5,000 brls.), average little more than 2,000 brls. each; being in the whole, 111,881 brls. Add to this quantity 16,000 brls. estimated to have been brought from the South Atlantic Ocean, making about 128,000 brls., and we have the entire quantity of spermaceti oil imported in the course of the last year. Of this quantity 70,577 brls. were received at New Bedford, and the residue at Nantucket and other ports.

Among the ships now abroad, there are 31 which sailed in 1831; 73 in 1832; 88 in 1833; and 65 in 1834. Should no unforeseen calamity take place, whereby this important branch of national industry may be injured or interrupted, the number of spermaceti whale ships expected to arrive within the year 1835, may be set down at 73, and their cargoes at 135,000 brls., valued at upwards of 5,000,000 dollars.

We deduce from this valuable document one fact which we repeat with some feeling of pride. It is, that more than half of the ships now engaged in the sperm whale fishery are commanded by Nantucket men; though less than one fourth of the whole fleet is owned in this place.

There are various circumstances that conspire to give the Americans advantages for the prosecution of the southern whale fishery that are not enjoyed by any European nation. It is difficult, however, to see why it should not be prosecuted with still greater advantage from the ports of New South Wales, Van Diemen's Land, &c. It is supposed by many that Rio de Janeiro would be a good station for the fishing.

We believe, however, that the southern, as well as the northern, whale fishery has passed its zenith, and from the same cause—the decreasing supply of fish. The whales are gradually becoming scarcer and more difficult to catch. They have been entirely, or almost entirely, driven from some of their old haunts; and the fishery is now very frequently prosecuted in very high latitudes.

WINE. — The Oporto Wine Company, described in the *Diet. art.* WINE, p. 1247., has been abolished by a decree dated Lisbon, 30th of May, 1834, of which the following are the principal clauses: —

Art. 1. All the privileges, authorities, prerogatives, and immunities of whatever nature or denomination granted to the Wine Company of the Alto Douro, and to the junta of its administration, from the time of its establishment to this day, are abolished.

Art. 2. The free disposal of their vineyards and wines is accordingly restored to the cultivators of the Upper and Lower Douro, as to those of all other parts of these kingdoms.

Art. 3. All imposts hitherto laid on the wines of Oporto, with the exception of the subsidio litterario, and of the duties on consumption in the city of Oporto and its district, as well as that of 12,500 reis on each pipe exported from the *Faz* of the Douro, are abolished.

Wine, Survey of Permits, &c. — The 5 & 6 Will. 4. c. 59, exempts the dealers in and retailers of wine, not being dealers in or retailers of spirits, from the obligation to allow their premises to be entered, and their stocks and premises to be surveyed by the officers. It also enacts that a *permit* shall no longer be necessary for the removal of wine. Licences may be granted by the commissioners of excise to sell wine in theatres, &c.

WOOLLEN MANUFACTURE. — The exemption from the export duty of 10s. per cent. enjoyed by woollen goods, or goods of wool and cotton or wool and linen, exported to places within the limits of the East India Company's charter, has been repealed by the 4 & 5 Will. 4. c. 89. § 18.

Art. 4. The subsidio litterario shall be received, as in every other place, by the receiver-general or his deputies.

Art. 5. The duties on consumption shall be received in the same manner; but those on exportation will be paid at the Custom-house of the city of Oporto, on the manifests which are to be presented by the sellers and exporters, under the penalties ordered in such cases.

Art. 7. All ordinances and regulations whatever contrary to the present decree are abolished, as if they were expressly mentioned. The ministers of the interior and finance are charged with the execution of the present decree.
